BACHELOR OF ARTS IN SUSTAINABILITY AND ENVIRONMENTAL POLICY

Program Contact: Courtney McGinnis (Courtney.McGinnis@qu.edu)
203-582-6420

Students in the Sustainability and Environmental Policy (BA) program gain understanding and practice in communicating environmental challenges and developments to a variety of audiences, while developing a particular appreciation for how policy can address these challenges. Students utilize foundational knowledge in the sciences and ethics to examine the effects of human actions on the environment from multiple perspectives, choosing from courses in economics, political science, environmental law, sustainable development and history/geography. The program emphasizes experiential learning in the classroom and in regional, national and international settings. Sustainability and Environmental Policy (BA) majors learn through research methods and statistics how to understand and conduct environmental sustainability research, which they put to work in the culminating Transdisciplinary Project capstone.

Students majoring in Sustainability and Environmental Policy must complete:

Total Credits: 120

1 All students must complete the 46 credits of the University Curriculum (http://catalog.qu.edu/academics/university-curriculum/).
2 In consultation with your academic adviser, choose two electives from the areas of Economics, Government/Policy, Law, Data Science and Analysis; Culture, Geography, History, Society; Earth Science/Geology/Physics; or Biology/Ecology/Chemistry/Environment to expand your disciplinary knowledge.

Student Learning Outcomes

Upon graduation, all Sustainability and Environmental Policy majors will be able to demonstrate the following competencies:

- **Interdisciplinary Knowledge**: A broad knowledge base of principles in natural sciences, social sciences, humanities and fine arts, with cognate knowledge in mathematics.
- **Critical/Creative Thinking and Problem Solving**: The ability to apply knowledge and skills to work toward solutions to increasingly complex problems, envision alternative approaches and identify and evaluate potential solutions.
- **Cognitive Complexity**: The ability to draw upon scientific, social scientific, humanistic and artistic methods and thought to envision and develop creative solutions to problems.
- **Analysis and Evaluation**: The ability to analyze and evaluate scientific evidence and assess ideas against available evidence.
- **Experiential Learning**: The ability to apply acquired knowledge and skills to investigate problems by working on domestic and international projects in unscripted, living contexts.
- **Effective Oral/Written Presentation**: The ability to present facts, analysis and arguments effectively to communicate to multiple audiences.
- **Technical Training**: The relevant knowledge and hands-on skills to be able to work safely and independently in laboratory and field settings to collect and record data.
- **Intercultural Awareness**: Global awareness and local sensitivity to different populations, their values and objectives, and the ways in which these populations are affected by environmental phenomena.
- **Career Preparation**: Competitive preparedness for entry-level employment in a changing marketplace or for acceptance into a graduate or professional degree program.
ENV 101. Introduction to Environmental Studies. 3 Credits.
Environmental challenges are perhaps the greatest challenges that society faces today. Decisions made today will have ramifications far into the future. Now is the time to act. This course is inherently interdisciplinary because many disciplines are necessary to address these challenges. In this course we will explore "technology traps"-that is, new technology that solves one problem but creates another unforeseen problem. This course examines environmental justice, freshwater resources, plastics, energy, air pollution, climate change, food systems, and a topic of each student's choice. The course integrates fundamental scientific principles, legal concepts, economic theory, ethical implications of human interactions with the environment, and cultural-historic perspectives. We will also evaluate technical and policy solutions.
Prerequisites: None
Offered: Every year, Fall
UC: Breadth Elective

ENV 102. Intro Environmental Studies in the Community. 1 Credit.
Supplementary course to accompany ENV101 (1 hour). Environmental challenges are perhaps the greatest challenges that society faces today. In order to address these challenges, action must start within our local community. To encourage students to engage with local initiatives, students will be required to attend local environmental and sustainability events. The course will not have a set meeting time, but students will select from a list of events, activities and programming that fits their personal interest and schedule. Must be taken in conjunction with ENV101
Corequisites: Take ENV 101.
Offered: Every year, Fall and Spring

ENV 120. Foundations of Biology and Chemistry. 3 Credits.
A one-semester introductory course designed to give the student a background of basic concepts in biology and chemistry with emphasis on characteristics of life, structure and function of cells, tissues, organs and organisms, genetics, evolution and ecology, and bonding (ions and molecules), stoichiometry, states of matter, and solutions (solubility, acids, bases, and buffers). These concepts will be applied to upper-level environmental science courses. Minimum grade for majors in Sustainability and Environmental Policy and in the Environmental Studies co-major C-
Corequisites: Take ENV 120L.
Offered: As needed
UC: Natural Sciences

ENV 120L. Foundations of Biology and Chemistry Lab. 1 Credit.
This course is designed to accompany the ENV 120 lecture. The purpose of the lab is to acquaint students with biology and chemistry laboratory equipment, procedures, and practices. The course is designed to provide an opportunity for the student to learn sampling and analysis techniques. Must be taken in conjunction with ENV 120. This course is designed for non-science majors. Minimum grade for majors in Sustainability and Environmental Policy and in the Environmental Studies co-major C-
Corequisites: Take ENV 120.
Offered: As needed
UC: Natural Sciences

ENV 150. Introduction to Geography. 3 Credits.
This course is an introduction to the basic concepts and fundamental issues in geography, focused on global interconnections and the variation in how humans use the Earth's surface. Major topics include the growth and distribution of human population; the localization and spatial characteristics of land use; geopolitics and colonialism; environmental geography; the geography of economic development; the geographic analysis of issues such as gender, racism, poverty, language, and religion.
Prerequisites: None
Offered: Every year, All

ENV 200. Special Topics. 3 Credits.
Prerequisites: Specific prerequisites vary depending on the focus of the course.
Offered: As needed

ENV 201. Lessons in Local and Global Sustainability. 3 Credits.
In this course students will experience and learn what sustainability means on both local and global levels. Such experiential learning is accomplished through a Study Abroad trip to Costa Rica, where students will engage in a series of mini-courses associated with Earth University, a four-year institution whose faculty and students are committed to changing the world through sustainable methodologies. Through these mini-courses and interactions with Earth University students, ENV 201 students will understand the interdisciplinary nature of sustainability (including cultural, historical, sociological, economical and biological), requiring multiple approaches on both local and global levels. Or other suitable and equivalent locations, as opportunity permits.
Prerequisites: Take FYS 101 EN 101 and EN 102 or take FYS 101 and EN 103H
Offered: Every year, Fall
UC: Breadth Elective, Intercultural Understand

ENV 203. Environmental Spanish. 3 Credits.
This course is taught in Spanish and introduces students to vocabulary related to nature, the environment, protecting the planet, and also to the lexicon necessary to discuss topics in environmental science and policy. Students acquire important historical and cultural environmental perspectives from various Hispanic countries to understand more precisely present-day perceptions and efforts related to conservation and sustainability. Environmental issues and concerns in Spanish-speaking nations are explored. No previous science or environmental studies background is required. It is open to any student who can speak Spanish either as a heritage language speaker or who has had at least three years of Spanish in high school or at least three semesters in college. Students with less than the Spanish minimum prerequisite should contact the professor for permission to join.
Prerequisites: None
Offered: As needed
UC: Breadth Elective
ENV 205. Global Environmental Issues. 3 Credits.
Interdisciplinary study of global environmental issues focusing on major current issues including human overpopulation, biodiversity loss, food and water scarcity, energy resources, atmospheric pollution, environmental justice and climate change. Cause and effects of environmental degradation and the interplay on human welfare will be discussed. Students will learn terminology and concepts to provide a strong knowledge base sufficient to understand everyday environmental issues on a global scale. The ultimate goal is for students to leave this course as environmentally literate citizens of the world who have a better understanding of the impact humans have on the environment and the impact environmental quality has on humans.
Prerequisites: None
UC: Natural Sciences

ENV 207. Coral Reef Diversity - An Immersive Approach. 3 Credits.
In this hands-on course, participants focus on a series of topics related to coral reef and marine ecology, with an emphasis on adaptations to underwater life, conspecific and interspecific relationships, and the role conservation and education play in developing responsible tourism practices. Students study the underwater world in a way that relatively few people do: directly via SCUBA diving in Bonaire, Netherlands Antilles. Students are expected to complete multiple dives per day and use their observations to discuss reef structure, animal behavior, conservation and eco-tourism. By the start of the course, students must either possess (at a minimum) Open Water SCUBA certification or have completed the online portion of PADI Open Water Certification with the understanding that they will complete the practicum portion in the first two days on Bonaire.
Prerequisites: None
Offered: As needed, Spring and Summer

ENV 209. Environmental Politics and Policy. 3 Credits.
Perhaps no other issue area is as potentially disruptive to stability as that which is defined by the crises in our environment. From the local, to the national and global levels, the exhaustion of natural resources, population growth and threats presented by climate change and the accumulation of toxins and trash in the atmosphere, on land and in the world’s oceans, demand the attention of government at every level. In this course, students engage with policy debate around these and other issues, such as the ways environmental issues overlap with issues of local and global justice. They explore the political factors that have influenced environmental policy debates historically and currently, in the U.S. and on comparative and international bases.
Prerequisites: Take PO 101 or FYS 101.
Offered: Every other year, Fall
UC: Social Sciences

ENV 213. The Nature Essay. 3 Credits.
This advanced writing course focuses on the history and evolution of human thinking about nature and our relationship to it. Looking first at Biblical, Greek, Roman and Medieval sources, students concentrate on American writers, beginning with Lewis and Clark and ending with a longer reading by a contemporary naturalist writer (e.g., Annie Dillard, Norman Maclean, Terry Tempest Williams, Barry Lopez). In-class journals and formal writing assignments are used to advance discussion and emphasize persuasion and argumentation.
Prerequisites: None
Offered: Every other year, Fall
UC: Humanities

ENV 215. Research Methods in Environmental Studies. 3 Credits.
Students will learn in this course how to approach and conduct research in the field of Environmental Studies, an interdisciplinary field that is exceptionally broad in terms of the types of questions posed, the cultural, social, and scientific systems involved, and the myriad methodologies that can be applied to analyzing them. Students will learn about the various types of research methodologies, data collection and analysis, and the literature review process, culminating in a proposal for a viable research project.
Prerequisites: Take ENV 120 and ENV 120L
Offered: As needed

ENV 220. Environmental Science. 3 Credits.
This course explores the natural environment through the lens of biological, chemical, and physical processes to understand pressing environmental challenges including ecology and conservation, biodiversity decline, eutrophication, water resources, energy use and alternative fuels, air quality, and climate change. Must be taken in conjunction with ENV 220L. Majors in in Environmental Science, Sustainability and Environmental Policy, and in the Environmental Studies co-major must have a minimum grade of C- in the pre-requisite course(s).
Prerequisites: Take ENV 120 ENV 120L or BIO 102 BIO 102L or BIO 151 and CHE 111 CHE 111L
Corequisites: Take ENV 220L.
Offered: As needed

ENV 220L. Environmental Science Lab. 1 Credit.
This one-credit laboratory course is designed to accompany the ENV 220 lecture. The purpose of the lab is to acquaint students with chemistry and biological laboratory equipment, procedures, and practices used in environmental science. The course is designed to provide an opportunity for the student to develop skills in experimental design, data analysis, and communication of scientific data. Must be taken in conjunction with ENV 220. Majors in in Environmental Science, Sustainability and Environmental Policy, and in the Environmental Studies co-major must have a minimum grade of C- in the pre-requisite course(s).
Prerequisites: Take ENV 120 ENV 120L or BIO 102 BIO 102L or BIO 151 and CHE 111 CHE 111L
Corequisites: Take ENV 220.
Offered: As needed

ENV 221. American Environmental History. 3 Credits.
This course examines American society’s interaction with nature since the arrival of Europeans in the 15th century. Students consider the intentions and values that guided the use of America’s natural resources and the transformation of its landscape. While this historical legacy is most apparent in America’s agricultural, industrial and conservation activities, it has been equally profound in the rise of America’s environmental movement, tourism, recreation, ecological research and global environmental awareness. Since we are located in the New England/Mid-Atlantic region, this course occasionally departs from the broad survey of American environmental history and treats issues that are particularly germane to the region.
Prerequisites: None
Offered: Every other year, Fall
UC: Humanities
ENV 222. Environmental Geography and Culture. 3 Credits.
This course provides students with an understanding of the fundamental concepts of environmental geography. It introduces students to ways in which humans affect the environment, the effect our environment has had upon humans, as well as the conceptualization and implementation of sustainability. Students are exposed to the cultures, environments, and peoples of the world.
Prerequisites: None
Offered: As needed, All

ENV 223. Plastics - Miracle Or Curse.. 3 Credits.
In this course, we will attempt to answer the following question: are plastics a miracle or a curse? We will explore the differences between natural and synthetic plastics, and how plastic production (and recycling) has changed since the 19th century. We will also evaluate our individual reliance on synthetic plastics - and consider how it is possible that plastics not only help humanity and the environment but also cause significant harm. Finally, we will study how issues associated with plastic use extend well beyond the solid waste stream in landfills to the Great Garbage Patches of the world's oceans. You will have the opportunity to inventory your plastic use and recycling and share your information and thoughts on this subject through various platforms and reflective writing assignments.
Prerequisites: None
Offered: As needed, January Term
UC: Natural Sciences

ENV 225. Water and Human Health. 3 Credits.
Water is a natural resource that is vital for human survival and health, although only a tiny fraction of the Earth's supply is available to humans and terrestrial animals. This course will focus on water as a global resource and global cycle, as well as investigating the past and current threats to this natural resource.
Prerequisites: None
Offered: Every year, Fall
UC: Natural Sciences

ENV 226. Environmental Ethics. 3 Credits.
In this course, students critically assess environmental ethical issues arising at the intersections of philosophy and the sciences, using relevant ethical theory and evidence. Issues examined include but are not limited to: climate change; climate change denialism and public engagement with scientists and the sciences; the ethics of innovations in the discrete sciences; habitat preservation and loss; resource depletion; rights of humans, non-human animals, and ecosystems; ecocentrism; pollution; health; energy; corporate responsibility; sustainability; climate justice; environmental migration; future generations. Students explore individual, societal, and global perspectives on environmental ethics, and critically assess responses to environmental injustices and inequalities, including those of race, gender, and class.
Prerequisites: None
Offered: Every other year, Spring
UC: Humanities

ENV 230. Sustainable Development. 3 Credits.
The principles of sustainable development currently unify the approach used to mediate the relationship between human societies and the natural environment. In this explicitly interdisciplinary course, students will approach the policy and management challenges associated with the environment from sociocultural, economic, legal, ethical, and political perspectives. They will use this interdisciplinary framework to interrogate and critique policy related to social, economic and political development at the local, regional and global levels.
Prerequisites: None
Offered: As needed
UC: Social Sciences, Intercultural Understanding

ENV 233. Practicing Archaeology. 3 Credits.
Archaeology is an exciting multidisciplinary field that combines approaches from the social and natural sciences to reconstruct human behavior. In this course, students explore the theories and methods that guide archaeological inquiry through lectures, class discussions and interactive laboratory and field exercises. Guest lectures will highlight various specializations and applications in the field, including geographic information systems, archaeological chemistry, bioarchaeology, museum curation, public archaeology, and cultural resource management. Archaeological case studies will focus on the Indigenous history and prehistory of southern New England including the Quinnipiac land and people.
Prerequisites: None
Offered: Every other year, Spring
UC: Social Sciences

ENV 234. Philosophy of Science and Technology. 3 Credits.
Students consider the history and nature of, and assumptions and values involved in, the scientific method; the logic of scientific explanation and theory construction; philosophical and ethical problems in selected natural, social and human sciences.
Prerequisites: Take ENV 101 or FYS 101
Offered: Every other year, Spring
UC: Breadth Elective

ENV 238. Philosophy of Technology, Environment and Social Transformation. 3 Credits.
What is technology? How do science and technology relate to human values? What role should technology play in our everyday lives? Do technological developments result in greater freedom? How should technology shape our cities and the natural environment, now and in the future? Students in this course critically examine these and other related issues, using a range of philosophical texts, science fiction and film.
Prerequisites: Take one 100-level philosophy course or FYS 101
Offered: Every other year, Fall
UC: Humanities

ENV 240. Fundamentals of Geographic Information Systems. 3 Credits.
In this course, students will learn the fundamentals of using geographic information systems (GIS) for environmental modeling and decision making.
Prerequisites: Take ENV 101 or DS 110 or GP 101.
Offered: As needed
ENV 243. Ancient Food For Thought. 3 Credits.
In this course, students explore the origins (and consequences) of food production and consumption from an anthropological perspective. Participants examine evidence for ancient diets in a variety of different societies (hunter-gatherer, pastoral and agricultural). They analyze the relationship between our diet and other aspects of culture and explore how these types of societies have changed over the past several thousand years. Students then review contemporary environmental and health problems related to food production and consumption and draw from the past to understand and potentially address these issues.
Prerequisites: None
Offered: Every year, Fall
UC: Social Sciences, Intercultural Understanding

ENV 270. Global Environmental Change. 3 Credits.
Climate change is one of the most complex, interdisciplinary problems that we all face in our lives today. Every day, we make choices that impact how we can and will mitigate and adapt. Through this course, students will learn the physical, chemical, and geological bases of climate change and understand how humans have altered Earth's equilibrium. This class addresses Earth as a system, while also addressing the components of this system and how they interact. Students will explore climate change from multiple perspectives: the past (paleoclimate), recent variability, and future. While this course will be taught to emphasize the scientific basis of climate change, like all environmental science courses, it will integrate human perspectives, stakeholders, and policies.
Prerequisites: None
Offered: As needed

ENV 272. Sh*t Happens: a Natural History of Human Waste. 3 Credits.
This course will explore the natural history of human excrement. Human waste is something that we are all intimately familiar with, yet rarely discuss (or at least, we rarely admit to discussing it). But, it tells an incredible story about our lives and our interactions with the environment. We study ancient feces to learn about diet and health in the past; we look at cross-cultural studies to understand different types of contemporary waste disposal and cultural understanding of human waste; we learn about the gut microbiome, which may influence our emotions; we study our closest living relatives and their relationship with bodily waste.
Prerequisites: None
Offered: Every year, Spring
UC: Breadth Elective

ENV 280. Environmental Issues Journal Club. 1 Credit.
This course seeks to advance interdisciplinary research on environmental issues such as climate change, environmental pollution, renewable and non-renewable resources, biodiversity and sustainability. Students will participate in a journal club where they will be responsible for presenting a published research paper on an environmental topic of their choice and will emphasize the link between the environmental issue and the social/cultural and economic issue, such as health, transport, consumption, demographic changes, production and growth. The student is not limited to these issues and is encouraged to explore topics outside of the ones listed.
Prerequisites: Take ENV 101
Offered: Every year, Fall and Spring

ENV 282. Global Environmental History. 3 Credits.
This course will provide an introduction to the major issues in global environmental history and their relevance to contemporary global environmental politics. The first half of this class will focus on how approaches to environmental management have differed across the world due to differences in culture, politics, history, and ecology. The second half of the course will focus on explaining the origins of contemporary environmentalism, as well as why global disparities in environmental regulation continue to exist.
Prerequisites: None
Offered: Every other year, All
UC: Humanities

ENV 300. Special Topics. 3 Credits.
Prerequisites: Specific prerequisites vary depending on the focus of the course.
Offered: As needed

ENV 304. Environmental Economics. 3 Credits.
This course examines environmental issues and their economic impact. Topics include economic efficiency both in market and nonmarket activities; dynamic efficiency for nonrenewable and renewable resources; how environmental problems are modeled from an economic perspective including environmental racism, pollution and poverty; and principles of environmental policy design at the state, federal, and international level.
Prerequisites: Take EC 111.
Offered: Every other year

ENV 312. Environmental Physiology. 3 Credits.
Principles of environmental physiology and animal adaptation with emphasis on mechanisms of temperature regulation and related nutritional and metabolic hormonal functions.
Prerequisites: Take BIO 102, BIO 151 or ENV 120
Offered: As needed

ENV 314. Carbon Tales. 3 Credits.
We live at an unprecedented juncture in human and natural history. The burning of greenhouse gases for energy has transformed the world, initiating a period of human abundance and environmental peril. We now tell ourselves stories about our energy and climate every day: stories filled with wild events, vast conspiracies, noble heroes, and twisted villains. In this class, we'll think critically about the fiction and film in which we communicate these tales and we'll think about the next chapters we hope to write.
Prerequisites: None
Offered: Every year, Spring

ENV 323. Human and Economic Geography. 4 Credits.
The course provides an introduction to human and economic geography through conceptual models and theories, practical application of geographic principles, and the study of the current state of the world. With regard to human geography, the course introduces students to the basic concepts involved in geographic study, including the study of human populations, the connections between human society and the natural world, and the idea of culture as a geographic construct. The course then turns to a consideration of economic aspects of geography, particularly the study of resource industries, manufacturing, and the service sector of the economy. NOTE: This 4-credit course is designed for the Online Completion Program and runs fully online over a 7-week period. Students should therefore expect to devote double the typical amount of time to fulfilling the requirements for this intensive course.
Prerequisites: None
Offered: As needed
ENV 324. Indigenous Perspectives From Latin America.  3 Credits.
This course studies indigenous cultures of Latin America, from pre-Columbian times to the present, with a focus on their interactions as communities with nature. Students gain deeper insights into relations with the environment that come from indigenous perspectives, as well as cultivate intercultural skills that apply to contemporary cultural and environmental issues. Principal readings are indigenous texts, from the Maya book of creation known as the ‘Popol Vuh’ to the autobiographical reflections of Nobel Peace Laureate Rigoberta Menchú. The course is conducted in English.
Prerequisites: Take EN 102.
Offered: As needed

ENV 325. Environmental Toxicology.  3 Credits.
Environmental Toxicology is an exciting field involving the application of toxicological principles to environmental problems associated with chemical, biological and physical poisons. We begin this course by establishing an understanding of: the classification, (target organ and mechanism of action); uptake, distribution, storage and elimination of toxicants; detoxification, biotransformation and biomagnification; and dose-response relationships. We then use this foundation to discuss biological testing, health and risk assessment, pollutant impact on environmental compartments (air, water, and soil), and remediation. Ultimately, we will investigate the ecotoxicological effects of chemical and physical disease-causing agents on wildlife and human health at the molecular level (biochemical pathways of metabolism and detoxification); the organismal level (target organs, behavioral effects); and the ecosystem level (nutrient cycling and ecosystem services).
Prerequisites: Take BIO 102 or BIO 151, and CHE 211
Offered: As needed

ENV 329. Environmental Sociology.  3 Credits.
Nature connectedness contributes to our overall quality of life by enhancing our physical and mental well-being. Research has shown that connecting with nature can lead to increased happiness as well as the development of pro-environmental attitudes and advocacy for environmental justice. This course will begin with a two-day guided forest bathing experience that is intended to foster a deeper appreciation for the healing powers of nature, the cycle of life in the natural world and your place within it. Building upon this foundation of connectedness, the remainder of this course will explore our historical detachment from the natural world and its implications for both the environment and our personal well-being. Together we will explore cultural values and priorities that drive human behavior as well as the symbiotic relationship with nature: how we affect it, and it in turn, affects us. We will end the semester by exploring the role of social activism in abating environmental degradation and we will engage in additional field work that is targeted to preserving the natural world here in Connecticut.
Prerequisites: Take ENV 101 or SO 101 or SO 225 or SO 244;
Offered: As needed

ENV 349. American Maritime History.  3 Credits.
This course examines America’s historic activities on the world’s oceans, and on the bays, rivers and Great Lakes that are within its national boundaries. Students consider the economic, cultural, political and naval uses of these bodies of water from the 16th century to the present. Within this broad framework, this course considers how Americans used marine and freshwater environments to conduct trade, build communities, engage in war and diplomacy, use nature’s bounty and participate in recreational activities. These themes illuminate the value Americans placed on maritime affairs, and provide insight into the American mariner’s world, the American maritime community alongshore and the rippling effects of maritime activity throughout wider American society.
Prerequisites: Take one 200-level history course.
Offered: Every other year, All

ENV 350. Environmental Studies Practicum.  1-4 Credits.
Environmental issues pose some of the greatest concerns facing our planet. Problems like global warming, acid rain, urban sprawl, air and water pollution, loss of biodiversity and deforestation affect all our communities. Students will study sustainability and environmental science/policy in the US or abroad, in an immersive experience where they will meet and learn from individuals from across the country and around the world. Students will explore humanity’s complex relationship with the environment and will deepen their knowledge of distinct cultures and environmental issues while arming themselves with tools for tackling unique challenges in various environments.
Prerequisites: None
Offered: As needed

ENV 355. Environmental Law.  3 Credits.
This course provides an overview of federal environmental law, the way law protects the natural environment and government policies created to protect or exploit the environment. In this class, we explore issues impacting the environment, and how the law can both benefit and disadvantage the environment. (Practice)
Prerequisites: Take ENV 101 LE 101
Offered: Every other year, Fall

ENV 356. International Environmental Law.  3 Credits.
This course gives students an overview of the legal and political framework that constitutes international environmental law. We examine the characteristics of international law and distinguish it from domestic law, looking at the various actors and their roles in the system. Students become familiar with the key principles of international environmental law such as the precautionary principle, sovereignty and sustainable development. Issues examined include climate change, the oceans, and the relationship between trade and the environment. (Alternative Perspective)
Prerequisites: Take 6 credits from legal studies courses.
Offered: Every other year, Fall

ENV 390. Environmental Writing.  3 Credits.
This course considers the rhetoric of environmental communication. How can we write to reach audiences both professional and public? Explaining scientific knowledge is tricky at the best of times, but environmental communication is now burdened by extraordinary political, social, and cultural complexities. You will develop your rhetorical sensitivity and linguistic facility by analyzing historical examples and practicing genres (both technical genres like the proposal and public facing ones like articles and essays).
Prerequisites: Take EN 101 and EN 102; or EN 103H.
Offered: As needed
ENV 396. Games, Learning & Society.  3 Credits.
This course addresses the design, use, and assessment of serious
and meaningful games in education. The class has both theoretical
and applied components. Students will conduct literature reviews to
understand current practice in a specific area of applied games, i.e.
outcomes assessment, data collection, games for physical therapy,
games for diabetes management, games to train surgeons, etc. and
then produce a research paper on their area of focus. Students will then
design, prototype, and test an applied game that addresses an actual
societal need. Partnership with outside individuals and institutions is
encouraged and supported.
Prerequisites: Take BIO 102 and CHE 111 or ENV 120
Offered: As needed

ENV 399. Interdisciplinary Independent Study Study.  1-6 Credits.
Specific prerequisites vary depending on the focus of the course.
The student is required to submit for approval an interdisciplinary
independent study proposal describing the study that will be conducted;
students may not self-register for this course and may take a total of 8
credits of interdisciplinary independent study.
Prerequisites: Specific prerequisites vary depending on the focus of the
course.
Offered: As needed

Shown below is one of many possible paths through the curriculum. Each
student’s individual academic plan is crafted in consultation with their
academic adviser.
