- **BIO 500. Special Topics in Molecular and Cell Biology.** 3 Credits.
  - This course reviews how scientific results and ideas are communicated and reviewed. Course content includes the storage and retrieval of scientific information, data presentation (table, figures, graphics), the writing of reports and papers as well as the preparation of publications for peer review. Copyright, patent law and the ethical issues involved in scientific communication are also considered. Assignments include oral and written presentations and attendance at assigned seminars and meetings.
  - **Offered:** Every year, Fall

- **BIO 505. Writing and Science.** 3 Credits.
  - This course develops a knowledge base by participating in in-depth examination of primary research papers.
  - **Offered:** As needed

- **BIO 510. Special Topics.** 3-4 Credits.
  - **Offered:** As needed

- **BIO 515. Advanced Biochemistry.** 4 Credits.
  - This course offers advanced insights into major areas of biochemistry, including the structure and function of biological molecules, cell and membrane structure and function, bioenergetics and enzyme function, and cellular metabolism. This is a suitable prerequisite for many graduate courses.
  - **Offered:** Every year, Spring

- **BIO 521. Stem Cell Biology.** 3 Credits.
  - This course provides a comprehensive overview of stem cell biology. Participants explore the topics of embryonic and adult stem cells, stem cell characteristics, reprogramming, stem cell therapies and tissue regeneration. Primary research literature associated with each topic is discussed and students gain an understanding of the role of stem cells in health and disease.
  - **Offered:** Every year, Spring

- **BIO 523. Classical Genetics.** 1 Credit.
  - This course is aimed at graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-scientifically the Biology Content Test. In this interactive course, students review foundational information pertaining to classical genetics and further develop a knowledge base by participating in in-depth examination of primary research papers.
  - **Offered:** As needed

- **BIO 524. Evolution.** 1 Credit.
  - This course is aimed at graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-scientifically the Biology Content Test. In this interactive course, students review foundational information pertaining to evolution and further develop a knowledge base by participating in in-depth examination of primary research papers.
  - **Offered:** As needed

- **BIO 525. Diversity of Life and Organismal Biology.** 2 Credits.
  - This course is aimed at graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-scientifically the Biology Content Test. In this interactive course, students review foundational information pertaining to organismal biology and further develop a knowledge base by participating in in-depth examination of primary research papers.
  - **Offered:** As needed

- **BIO 526. Ecology.** 2 Credits.
  - This course is aimed at graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-scientifically the Biology Content Test. In this interactive course, students review foundational information pertaining to ecology and further develop a knowledge base by participating in in-depth examination of primary research papers.
  - **Offered:** As needed

- **BIO 562. Bioinformatics.** 3 Credits.
  - This hands-on course is for students seeking to understand methods of sequence and structural analysis using nucleic acid and protein databases. An understanding of the database format provides the basis for sequence analysis and alignment to determine common evolutionary origins, RNA secondary structure, gene prediction and regulation, protein structure prediction and classification, genome analysis and analysis of microarrays.
  - **Offered:** As needed

- **BIO 589. Molecular and Cell Neurobiology.** 3 Credits.
  - This course is designed for students anticipating thesis work in Molecular and Cell Biology, and is conducted under the guidance and with the approval of a thesis adviser and thesis committee.
  - **Offered:** As needed
BIO 650. Thesis I in Molecular and Cell Biology. 4 Credits.
This course is a requirement for the thesis option within the MS in Molecular and Cell Biology. Students must demonstrate both breadth and depth of knowledge in their field of specialization. They also must demonstrate scientific research skills and present their findings to a thesis committee and the greater molecular and cell biology community.
Prerequisites: Take BIO 649.
Offered: Every year, All

BIO 651. Thesis II in Molecular and Cell Biology. 4 Credits.
Thesis II is a requirement for the thesis option MS in Molecular and Cell Biology. Students complete their independent research project, write an original thesis describing their research results, defend their thesis in front of a thesis committee, and give a presentation to the greater molecular and cell biology community.
Prerequisites: Take BIO 650 BIO 688.
Offered: Every year, All

BIO 675. Comp Exam in Molecular and Cell Biology. 2 Credits.
The written comprehensive exam is a requirement of the non-thesis option for the MS in Molecular and Cell Biology. Students must demonstrate both breadth and depth of knowledge by illustrating a command of the subject matter obtained from individual courses into unified concepts which link the student's own specialization to other fields of study. Students are encouraged to meet with the program director before registering for the comprehensive exam. Minimum grade of a B- is required to pass the comprehensive examination.
Prerequisites: Take a minimum of four of the five following courses:
BIO 515 BIO 568 BIO 571 BIO 605 BIO 606.
Offered: Every year, Fall and Spring

BIO 688. Independent Study. 1-4 Credits.
Offered: As needed

BIO 689. Independent Study. 1-4 Credits.
Offered: As needed
