BIOLOGY (BIO)

BIO 500. Special Topics in Molecular and Cell Biology. 3 Credits.

BIO 501. Special Topics: Advanced Protein Methods. 4 Credits.
Offered: As needed

BIO 505. Writing and Science. 3 Credits.
This course reviews how scientific results and ideas are communicated and reviewed. Course content includes the storage and retrieval of scientific information, data presentation (table, figures, graphics), the writing of reports and papers as well as the preparation of publications for peer review. Copyright, patent law and the ethical issues involved in scientific communication also are considered. Assignments include oral and written presentations and attendance at assigned seminars and meetings.
Offered: As needed

BIO 510. Special Topics. 3-4 Credits.
Offered: As needed

BIO 515. Advanced Biochemistry. 4 Credits.
This course offers advanced insights into major areas of biochemistry, including the structure and function of biological molecules, cell and membrane structure and function, bioenergetics and enzyme function, and cellular metabolism. This is a suitable prerequisite for many graduate courses.
Offered: Every year, Spring

BIO 517. Advanced Developmental Biology. 3 Credits.
This graduate-level course is an in-depth investigation into the processes that enable a single cell to become an entire multicellular organism with specialized organs and tissues. Various model organisms are explored, compared, and integrated to illustrate key molecular and cellular mechanisms that lead to the formation of whole organisms, and how those mechanisms have been modified through evolution to generate organismal diversity. Emphasis is on a critical analysis of the primary literature related to these topics.
Offered: As needed

BIO 521. Stem Cell Biology. 3 Credits.
This course provides a comprehensive overview of stem cell biology. Participants explore the topics of embryonic and adult stem cells, stem cell characteristics, reprogramming, stem cell therapies and tissue regeneration. Primary research literature associated with each topic is discussed and students gain an understanding of the role of stem cells in health and disease.
Offered: Every year, Spring

BIO 523. Classical Genetics. 1 Credit.
This 1-credit course is aimed at graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-specifically the Biology Content Test. In this interactive course, students review foundational information pertaining to classical genetics and further develop a knowledge base by participating in in-depth examination of primary research papers.
Offered: As needed

BIO 524. Evolution. 1 Credit.
This 1-credit course is aimed at graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-specifically the Biology Content Test. In this interactive course, students review foundational information pertaining to evolution and further develop a knowledge base by participating in in-depth examination of primary research papers.
Offered: As needed

BIO 525. Diversity of Life and Organismal Biology. 2 Credits.
This 2-credit course is aimed at graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-specifically the Biology Content Test. In this interactive course, students review foundational information pertaining to organismal biology and further develop a knowledge base by participating in in-depth examination of primary research papers.
Offered: As needed

BIO 526. Ecology. 2 Credits.
This 2-credit course targets graduate students who are preparing to teach in the biological sciences and are preparing for the PRAXIS exam-specifically the Biology Content Test. In this interactive course, students review foundational information pertaining to ecology and further develop a knowledge base by participating in in-depth examination of primary research papers.
Offered: As needed

BIO 540. Cell Signaling. 3 Credits.
This course focuses on the molecular mechanisms by which cells communicate with each other. Using examples from both prokaryotes and eukaryotes, students examine how cells release signaling molecules and how target cells recognize and respond to the signals. Discussions center on how signal processing is altered in diseases such as cancer, autoimmune disorders and some bacterial infections. Emphasis is on a critical analysis of the primary literature related to these topics.
Offered: As needed

BIO 550. Graduate Journal Club - Molecular Cell Biology. 1 Credit.
This course is a graduate-level scientific journal club in which students present recent ground-breaking published research papers in the fields of Molecular Biology, Cell Biology and Biochemistry. This course will develop students’ ability to critically assess scientific literature including the interpretation of appropriate experimental design, data analysis and the broader implications of new scientific advances. Credit: 1 credit; may be taken a maximum of 3 times for credit
Offered: As needed

BIO 562. Bioinformatics. 3 Credits.
This hands-on course is for students seeking to understand methods of sequence and structural analysis using nucleic acid and protein databases. An understanding of the database format provides the basis for sequence analysis and alignment to determine common evolutionary origins, RNA secondary structure, gene prediction and regulation, protein structure prediction and classification, genome analysis and analysis of microarrays.
Offered: As needed

BIO 568. Molecular and Cell Biology. 4 Credits.
This course examines the cell from a molecular perspective. Cell composition, structure and organization are investigated in order to understand how cells grow, divide and respond to different intracellular and extracellular signals.
Offered: Every year, Fall

BIO 571. Molecular Genetics. 4 Credits.
This study of the prokaryotic and eukaryotic genetic material including transcription, translation, DNA replication and repair, gene cloning techniques, the regulation of the synthesis of gene products and genomics. Emphasis is placed on new genetic techniques that are used in industry and medicine.
Offered: Every year, Fall
BIO 589. Molecular and Cell Neurobiology.  3 Credits.
This course provides students with a detailed foundation of the basic principles of cellular and molecular neurobiology. Through lectures and interactive simulations, students become fluent in modern experimental approaches to explore and understand the properties of electrical signaling and cell-cell communication. Students apply their knowledge in independent projects investigating the physical basis of a disease of neurophysiological origin.
Offered: As needed

BIO 605. DNA Methods Laboratory.  4 Credits.
This project lab course enables students to develop hands-on experience with the basic techniques in cell and molecular biology including DNA purification, cloning, and gene expression analysis.
Prerequisites: Take BIO 571.
Offered: Every year, Spring

BIO 606. Protein Methods Laboratory.  4 Credits.
This project-based lab course enables students to develop hands-on experience with basic techniques in cell biology and protein biochemistry including protein purification, chromatographic and electrophoretic techniques, and immunoanalysis.
Prerequisites: Take BIO 515.
Offered: Every year, Fall

BIO 649. Independent Research.  2 Credits.
Students work independently to define and conduct original research. This course is required for students anticipating thesis work in Molecular and Cell Biology, and is conducted under the guidance and with the approval of a thesis adviser and thesis committee.
Offered: As needed

BIO 650. Thesis I in Molecular and Cell Biology.  4 Credits.
This course is a requirement for the thesis option within the MS in Molecular and Cell Biology. Students must demonstrate both breadth and depth of knowledge in their field of specialization. They also must demonstrate scientific research skills and present their findings to a thesis committee and the greater molecular and cell biology community.
Prerequisites: Take BIO 649.
Offered: Every year, All

BIO 651. Thesis II in Molecular and Cell Biology.  4 Credits.
Thesis II is a requirement for the thesis option MS in Molecular and Cell Biology. Students complete their independent research project, write an original thesis describing their research results, defend their thesis in front of a thesis committee, and give a presentation to the greater molecular and cell biology community.
Prerequisites: Take BIO 650
Offered: Every year, All

BIO 675. Comp Exam in Molecular and Cell Biology.  2 Credits.
The written comprehensive exam is a requirement of the non-thesis option for the MS in Molecular and Cell Biology. Students must demonstrate both breadth and depth of knowledge by illustrating a command of the subject matter obtained from individual courses into unified concepts which link the student’s own specialization to other fields of study. Students are encouraged to meet with the program director before registering for the comprehensive exam. Minimum grade of a B- is required to pass the comprehensive examination.
Prerequisites: Take a minimum of four of the following courses: BIO 515 BIO 568 BIO 571 BIO 605 BIO 606.
Offered: Every year, Fall and Spring

BIO 688. Independent Study.  1-4 Credits.
Offered: As needed
