Students study the function of investor relations in corporations and examine the role of investor relations specialists charged with communicating financial information about companies to the financial media, SEC, financial analysts, shareholders and others in the financial community. Students learn how to integrate finance, communication, marketing and securities law compliance in efforts to maximize shareholder wealth.

Offered: As needed

STC 513. Health and Strategic Communications. 3 Credits.

In this course, students are exposed to the field of strategic health communications, with particular attention to analysis and practice of health communication relationships and messages. Issues to be discussed include, but are not limited to: history and current challenges of the health communication field; health campaign creation, implementation and evaluation; cultural issues related to health behavior change campaigns; translational research; traditional and social media training for health care professionals; and perspectives of media influence on health attitudes, norms and behaviors.

Offered: As needed

STC 514. Social and Mobile Media. 3 Credits.

This course addresses the impact of social and mobile media on public relations. It focuses on conducting public relations campaigns online and responding to public relations issues via such tools as social networking and bookmarking sites, blogs, podcasts/vodcasts, discussion boards and conferences, wikis, mobile and location-based applications.

Offered: As needed

STC 515. Special Topics in Public Relations. 3 Credits.

This course examines a specific topic or issue in public relations theory and practice. Topics might focus on specific practice areas such as sports public relations, employee relations, political public relations, public diplomacy, nonprofit public relations, or on industry issues and trends, such as the uses and impact of new technologies, professional ethics and corporate social responsibility or the integration of communication practices.

Offered: As needed

STC 516. Branding Strategies. 3 Credits.

This course explores strategies used by planners, communicators, managers and consultants to create, develop, nurture, maintain and reenergize brands. This course helps students understand the main idea of branding: developing, defending and growing brands for companies, agencies or nonprofits. It explores the essential elements of branding, including target audiences and segmentation, brand benefits, brand personality, differentiation and key brand equities. It also surveys conceptual approaches for the diagnosis of brand growth opportunities and for planning integrated brand communications.

Offered: As needed

STC 517. Strategic Communication for Health Professionals. 3 Credits.

In this course, graduate students are exposed to the field of strategic health communication. In particular, students are asked to consider the role of health communication messages in internal, organizational settings, as well as outward-facing messages. Unique to this graduate-level strategic communication course, the students are expected to have minimal to no experience in the field of strategic communication. Instead, the overview of the field provided through this course seeks to encourage understanding of how the theories, practices and evaluations of health communication should be incorporated within their areas of health expertise.

Offered: As needed

STC 518. Measurement and Evaluation. 3 Credits.

This course focuses on the development of knowledge and skills to ensure that students are able to use data to make business decisions. Students consider key concerns of measurement to determine if measurement tools are effective and appropriate for a project's goals, as well as how to make sense of data to measure success of a project and how to display findings for various audiences. The course is focused on the principles and process of utilizing research to best serve your client's or organization's goals. Main topics for the course include measurement development and refinement, online data analytics, audience segmentation, data interpretation and data visualization.

Offered: Every year, Fall and Spring

STC 519. Strategic Public Relations and Reputation Management.**3 Credits.**

The focus of this course is reputation management and its importance to business success. Students analyze the function of corporate communications and examine a range of topics including organizational identity, image and reputation; issues and crisis management; institutional ethics and corporate social responsibility; strategic public relations planning; integrated marketing communication; public relations theories and best practices; and global public engagement. The class also explores specialty public relations practice areas such as media relations, investor relations, employee relations and government relations. Class discussions, case studies, in-class exercises, team projects and essay exams help students improve their critical thinking and reasoning skills, develop research and strategic planning skills and increase diversity awareness and sensitivities that are important to professional and business success.

Offered: As needed**STC 520. Sports Public Relations.****3 Credits.**

This class is a comprehensive review of sports event planning and management. Students examine such topics as strategic planning, budgeting and time management.

Offered: As needed**STC 521. Corporate Public Relations.****3 Credits.**

This course provides students with the knowledge and skills required for positions in the corporate sector. Topics include media relations, employee communication, community relations, investor relations, and crisis communication. Students hone their written communication and critical thinking skills in this class.

Offered: As needed**STC 522. Nonprofit Public Relations.****3 Credits.**

This course is appropriate for students who want to learn how to develop and implement comprehensive public relations campaigns for nonprofit organizations. It highlights the structures and nuances of the various types of NPOs and examines case studies and present-day scenarios. The course requires the development of a public relations campaign, and culminates in crafting a case study assessing the effectiveness of an assigned NPO's public relations campaign.

Offered: As needed**STC 523. Media Systems and Planning.****3 Credits.**

In this course, students learn about traditional as well as new and emerging technologies, with particular emphasis on their strengths and weaknesses as message carriers. Discussions include an overview of commonly used metrics and sources of data in the advertising and communications industries. Students then use this knowledge to plan and budget for integrated communication plans that capitalize on paid, earned and owned outlets.

Offered: As needed**STC 525. Financial Communications and Business.****3 Credits.**

This course provides students with a holistic view of public relations and corporate communications management, as well as strategic planning for organizational change and growth. It covers various styles and functions of management and leadership theory and introduces key principles of marketing, branding, risk management, ethics, and finance. Throughout the course, students develop the ability to work between crucial agency organizational departments.

Offered: As needed**STC 531. Graduate Internship in Public Relations.****3 Credits.**

Students complete a minimum of 90 hours of professional fieldwork supervised by the program director and a qualified field supervisor. Approval of the program director is required.

Offered: Every year, All**STC 540. Strategic Communications Abroad.****3 Credits.**

This multi-section course introduces students to the worldwide development of communications, including communication practices, infrastructure, environments, and specializations. Students conduct primary and secondary research on communications in a particular country or cross-cultural context. The topics can range from international strategic communication through storytelling, global branding, and design, depending on the specialty of the instructor. This course includes a short-term study-abroad component directly related to the topic of the course, where students will be able to expand their skills and knowledge in a new environment. A strategic communication graduate-level final project is required.

Offered: As needed**STC 547. Entertainment Public Relations.****3 Credits.**

This course reviews and applies the established RPIE (Research, Planning, Implementation, and Evaluation) process to the field of entertainment public relations in the context of such industries as music, movies, TV, theater, gaming, and sports. The distinctions between and among advertising, publicity, public relations, marketing, and promotion, in addition to how they can work together to support a specific goal, are highlighted.

Offered: As needed**STC 549. Media Relations.****3 Credits.**

Course Description: This course gives students an understanding of the priorities and expectations of various types of contemporary media and how to successfully engage them through research-based strategies and tactics designed to reach key audiences. At the conclusion of the course, students should be well-practiced in various forms of working with journalists and the public via multiple media.

Offered: As needed**STC 605. Public Relations Graduate Capstone.****3 Credits.**

Students develop a professional research project under the direction of program faculty. The project work should exhibit KSAs and/or serve as PRSA Readiness Review preparation. The capstone project is a personally designed, independently conducted activity, enabling students to further their knowledge/skill in one or more of the course topics that students have found especially interesting or beneficial. Permission of instructor required.

Offered: Every year, Spring and Summer**STC 606. Independent Study.****3 Credits.**

Students develop and implement individual research projects that advance understanding of particular theoretical or practical aspects of public relations. Approval of the program director is required.

Offered: As needed

Department of Film, Television and Media Arts

The Department of Film, Television and Media Arts offers specialized programs that educate students in contemporary media practice, and demand that they excel as technically accomplished, aesthetically grounded and expressively mature professionals. These programs are dedicated to skilled storytelling and the creation of documentary and narrative works in visual and audio media as well as other informative

and entertaining programming for delivery on film, television, the Internet, mobile devices and all emerging media platforms.

To achieve these goals, students in the Department of Film, Television and Media Arts are immersed in techniques of visual storytelling that demand expertise in single and multi-camera video production and writing, directing and producing for film, television and streaming media. Because we believe that good media practice requires a solid understanding of media history, theory and criticism, this curriculum is balanced with courses that explore the role and impact of mass media in society. Formal coursework is not only taught on campus but in recent years has taken place in Los Angeles, Germany, Poland, the Czech Republic, France, and in Cape Town and Kruger National Park, South Africa.

- Bachelor of Arts in Film, Television and Media Arts (p. 382)
- Bachelor of Fine Arts in Film, Television and Media Arts (p. 383)
- Master of Arts in Cinematic Production Management (p. 720)
- Minor in Film and Television (p. 385)

Film, Television and Media Arts (FTM)

FTM 100. Special topics in Film, Television, and Media Arts. 3 Credits.

This course is only open to high school students in the QU Academy program. The content of this course is specialized and varies by semester and by section. A variety of topics in film, television, and media arts may be covered. Students should consult the course description in the schedule for details on specific offerings.

Offered: As needed

FTM 102. Understanding Film. 3 Credits.

This survey of the art, industry and techniques of global cinema introduces students to the significance of film as an international medium. By exposing students to the work of outstanding filmmakers and to the major elements of film language, the course helps students develop their critical faculties and visual literacy. The course includes some weekly 2 1/2-hour screenings of full-length theatrical feature films and other short clip screenings and lecture/discussion sessions.

Offered: Every year, All

UC: Fine Arts

FTM 110. Single Camera Production. 3 Credits.

This course gives students a thorough grounding in the basic techniques of audio and video storytelling. Students learn basic audio production, visual composition, field camera practice, lighting fundamentals and digital video editing. This is a hands-on course that requires students to produce a number of media projects throughout the semester.

Offered: Every year, All

FTM 112. Multicamera Production. 3 Credits.

This second course introduces students to the techniques of designing and producing creative and effective audiovisual communications primarily in a studio setting. Students learn to develop creative concepts and to take them from script to screen. Lighting, and principles of good composition, structure and program design are emphasized.

Prerequisites: Take FTM 110.

Offered: Every year, All

FTM 230. Animation and Mobile Media. 3 Credits.

This course introduces the concepts and production techniques that prepare students for creative work in mobile media. Students completing this course learn how to produce animated and interactive content for the web and mobile devices or kiosks. Projects may include simple animations, interactive stories, photo and video viewers, web interfaces, green screen, animations for video, and video projects optimized for the web.

Offered: As needed

FTM 240. Analysis of the Moving Image. 3 Credits.

How do we read images? This course explores the techniques used to create moving image media-including film, television and interactive media-from a formal and aesthetic perspective. Students learn to think and write critically about how the techniques of production work to communicate ideas and convey meaning and emotion to viewers. Sophomore status required.

Offered: Every year, All

FTM 245. Intermediate Production. 3 Credits.

Media messages are created to meet a variety of goals, which are tailored to appeal to defined audiences. Media can be designed to entertain, to inform, to educate, to persuade or to sell. In this course, students are challenged to discern what makes a good story or project idea for each of several different content objectives. Students work through all phases of preproduction and production including scriptwriting, scheduling and budgeting as they complete a series of projects during the semester, with special emphasis on creative conceptualization, message and writing.

Prerequisites: Take FTM 110, FTM 112 and Sophomore status required.

Offered: Every year, All

FTM 280. Visual Effects (VFX) Techniques. 3 Credits.

This is a foundational course in the field of visual effects, involving intensive hands-on production and post-production training. Topics include compositing, keying, rotoscoping, tracking, retouching, color manipulation, matching, mattes and cinematography and lighting for VFX. Preproduction concepts and techniques specific to VFX creation also are covered.

Prerequisites: Take FTM 110 and FTM 112.

Offered: As needed, All

FTM 300. Special Topics. 3 Credits.

New or experimental courses on a variety of topics in film, television and media arts that in the past have ranged from the impact of social media to visual effects.

Offered: As needed

FTM 320. History of Film I (to 1975). 3 Credits.

This course, the first in a two-semester sequence, provides a foundation in the history and aesthetics of moving image arts. Through individual films, clips, lectures and discussion, students analyze the major international film movements, their genres, directors and themes that have contributed to the development of narrative cinema. Organized thematically, films are chosen to showcase aesthetic, historical, technological and ideological concepts and their impact on the evolution of film from its inception to 1975. Sophomore status required.

Offered: Every year, Fall

UC: Fine Arts

FTM 322. History of Film (and Television) II.**3 Credits.**

This course explores the history and aesthetics of moving image arts in film and also television from 1975 to the present. Through individual films, excerpts from films and television clips, lectures and discussion, students analyze the evolution of global television and major international film movements, their genres, directors and themes to understand how they have contributed to the development of television entertainment and narrative cinema. Organized thematically, works of film and television are chosen to showcase aesthetic, historical, technological and ideological concepts and their impact on the evolution of film and television. Sophomore status required.

Offered: Every year, Spring**UC:** Fine Arts**FTM 330. Emerging Cinematography Techniques.****3 Credits.**

This course is designed to engage students in the cutting edge of cinematography and lighting. Students undertake in-depth exploration of developing concepts and become familiar with emerging technologies, equipment and narrative techniques through lectures, demonstrations and hands-on exercises.

Prerequisites: Take FTM 110 and FTM 112.**Offered:** As needed, All**FTM 342. Directing Film and Television.****3 Credits.**

Students are introduced to the history, theory and basic concepts of narrative single camera field and multicamera studio direction for current and developing distribution platforms. This course emphasizes principles of dramatic structure, script breakdown and analysis, visualization and story boarding, preproduction scheduling and casting, working with actors to effectively shape performances and working with crew. Students prepare and direct a series of short scenes.

Prerequisites: Take FTM 110, FTM 112.**Offered:** Every year, Spring**FTM 355. Documentary Production.****3 Credits.**

This course challenges students to master the conceptual and technical skills of visual storytelling to produce more advanced, single-camera field projects on selected, specialized topics that may change from semester to semester. Past course content has included documentary production in South Africa and in Ireland, as well as in the United States. The course emphasizes professional production roles, including writing and directing, scheduling and production management, production, post-production, distribution and marketing. Sophomore status required.

Offered: Every year, Spring**FTM 372. Screenwriting.****3 Credits.**

Students learn to shape stories for the screen. Emphasis is on dramatic structuring, character development, pacing and dialogue. Professional screenplays are analyzed and discussed, and final projects give students the opportunity to develop an original short screenplay.

Prerequisites: Take FTM 245 or permission of the department chair.**Offered:** Every year, All**FTM 375. Projects in Single Camera and Lighting.****3 Credits.**

This course covers such topics as the characteristics and qualities of light, lighting control, principles of visual composition and design, color, contrast, the properties of lenses, how film emulsions and image sensors react to light, filters, matte boxes and other image control devices, metering and exposure control, the effective use of various lighting instruments and accessories, electrical safety and the basics of gripping and gaffing on set and on location. Students learn in an active, hands-on workshop environment and produce a major project.

Prerequisites: Take FTM 110.**Offered:** Every year, Fall**FTM 380. Projects in Audio Production.****3 Credits.**

In this course, students learn the theory and technique behind audio capture, editing and mixing. With audio production, students learn how to record for voice, ambience and other film/radio/TV applications. In mixing, students learn how to combine disparate audio ideas in order to make meaningful expressions that can complicate and amplify visual media. Participants learn that audio storytelling goes beyond language and can be employed for emotional effect in surprising ways. Students learn the basics of working in a DAW (Digital Audio Workspace) and also learn how to "round trip" audio through the Adobe Creative Suite. Participants learn how to improve audio in their own projects while also learning about careers such as sound mixer and podcast producer. No previous musical or technical training is required to take this course.

Prerequisites: Take FTM 110.**Offered:** As needed, All**FTM 390. Projects in Multicamera Production.****3 Credits.**

Attracting and keeping the audience's attention is the first responsibility of the director. This course gives students the opportunity to explore the art and craft of directing in a multicamera, high-definition studio environment. Participants examine the roles and responsibilities of the director, including shot composition, crew motivation, calling a live production and ethics. Students are asked to visually design a television program from concept to completion in a number of genres, including news, sports, sitcoms, dramas and commercials.

Prerequisites: Take FTM 110, FTM 112.**Offered:** Every year, Fall**FTM 392. Post-Production Techniques.****3 Credits.**

In this course, students explore such topics as the expressive capability of the editing process; how editing functions to "create" time, tempo, and visual rhythm; the "building" of scenes in editing to achieve various dramatic goals; and telling the story through careful control of sound and image over time. Students gain experience in using the tools and techniques of modern digital post-production technology. Topics include post-production workflow, the art of the cut, the Rule of Six, audio mixing, sound design, foley, primary color grading, and secondary color grading. Software utilized includes the Adobe Creative Suite and DaVinci Resolve.

Prerequisites: Take FTM 110, FTM 112.**Offered:** As needed**FTM 393. Animation Techniques.****3 Credits.**

Students learn to create sophisticated 2D and 3D still and animated electronic graphics for video that are aesthetically pleasing, expressive and meaningful. Principles of good design, composition and color are stressed, as well as the ability to produce visual interest in support of communication goals.

Prerequisites: Take FTM 110, FTM 112.**Offered:** Every year, All**FTM 397. Summer Production Project.****4 Credits.**

This advanced production course is for juniors majoring in film, television and media arts. It takes place on campus or on the Nice, France, campus of a major French film and video institute (ESRA, Paris), and involves the writing, shooting and editing of a polished video project that is then presented to a professional jury.

Prerequisites: Take FTM 110, FTM 112.**Offered:** As needed, Summer**FTM 399. Independent Study.****1-6 Credits.****Prerequisites:** Take FTM 110, FTM 112.**Offered:** As needed

FTM 450. Senior Seminar in Film and Television. 3 Credits.

This seminar entails an in-depth examination of issues and research perspectives in film and television. Seminar titles vary each term and may cover subject areas such as film history, reality television, political documentaries, docudrama and contemporary trends in the media industry. Students should consult the School of Communications course bulletin for information about each semester's offerings. Senior status is usually required.

Offered: Every year, All

FTM 493. Senior Project Colloquy: Preproduction. 3 Credits.

This required 3-credit discussion, development, preproduction and production course must be taken in the semester prior to the student's undertaking of the Senior Project. Meeting collectively and individually, all fourth-year FTM students must be enrolled in this course in order to conceptualize and prepare preproduction materials essential for the successful completion of the Senior Project, and to undertake a new short production project, retrospective of their previous work. Individual class sessions are devoted to each aspect of preproduction and assignments that relate to each aspect are completed during the term. Senior status in FTM is required.

Offered: Every year, Fall

FTM 495. Senior Project Colloquy: Production. 3 Credits.

In this capstone course, students are asked to create an individual thesis project that reflects the highest level of their abilities. From pitching their individual project ideas through writing, production and post-production, students are pushed to work at the peak of their skills. The creativity, quality and professionalism of the finished projects are judged by outside professionals and faculty and staff from the School of Communications FTM program, and give graduating seniors important portfolio material. Senior status in FTM is required.

Prerequisites: Take FTM 493.

Offered: Every year, Spring

FTM 499. Independent Study. 3 Credits.**FTM 501. Production Reconstruction. 3 Credits.**

: This class will teach and expand students' understanding of all aspects of prepping a feature film through lectures, experiential role-playing and weekly assignments. Students will analyze a produced film and will "recreate" all the steps to get into production including scheduling and budgeting through the use of industry standard software.

Offered: Every year, Fall

FTM 502. Advanced Production Management Workflow. 3 Credits.

Students gain an overview of studio, independent, broadcast and streaming platforms content and management workflow needs. Contemporary practices in pre-production and production are stressed. Students pre-produce an episodic television show from the perspective of various production personnel and hold production meetings to gain an understanding of the pre-production and production process workflow for theatrical, TV episodic, TV situation comedy and documentary production including interactions with talent agencies and union signatory contracts.

FTM 503. Creative Development. 3 Credits.

Students learn to shape stories for the screen and gain a comprehensive understanding of concept development, dramatic structuring, character development and dialogue. They learn the mechanics involved in the development of new projects, including script coverage, sourcing material, script notes, creative meetings, packaging a project, and how to effectively navigate the development journey.

Offered: Every year, Spring

FTM 504. Production Scheduling and Introduction to Production Budgeting. 3 Credits.

Students are given a finished but unproduced short screenplay or television episode and learn to break down and fully schedule that project. Theory of scheduling and output of details from the program are stressed.

FTM 505. Entertainment Law and Deal Making Practice. 3 Credits.

Students gain an overview of contemporary entertainment law in regards to production including options, contracts, negotiations, copyright, IP, and licensing. Topics covers include how a producer protects themselves legally, find representation, and how to close deals.

FTM 506. Screenwriting II and Production Workshop. 3 Credits.

Students author a theatrical feature screenplay or a pilot for an episodic television series or the full production plan for a documentary television multi-part series. In addition, they will also author, pre-produce, shoot, edit and distribute a 5-minute micro film.

Offered: Every year, Spring

FTM 507. Production Budgeting. 3 Credits.

Using industry-standard software packages, students plan and budget an unproduced short film. Special attention is paid to: location(s) of shoot; union globals and fringes and non-union and union taxes; contemporary practice in completion bonds. Guild and DGA surety bonds and Insurance requirements are also stressed.

FTM 508. Domestic and Worldwide Distribution and Sales for Film and TV. 3 Credits.

Students gain an overview of contemporary domestic and international production management practices: office administration, paperwork and work flow; carnets, business visas, insurance and surety bond liability and management; industry national and international HR practices and payroll; international, state and local film, television and documentary production rules and regulations; tax incentives and responsibilities; national and international trade unions rules, rates, penalties, common regulations, compliances, visa requirements and international signatory practices.

FTM 509. Principles of Film, Television and Streaming Media Analytics, Sales and Distribution. 3 Credits.

Students gain an overview of film, television and streaming media analytics and their applications. The international sales marketplace is examined with special emphasis agreements for international advertising, distribution and marketing. Students will create a business plan for a production company.

FTM 510. Principles of Post-Production Management. 3 Credits.

Students gain an overview of post-production management including: staff roles and post production responsibilities, data storage and management, directors and authors rights and responsibilities to final cut, licensing, graphics and titling.

FTM 511. Film Finance Models. 3 Credits.

This class is an overview of film, television and streaming finance models. Emphasis is on finance for the independent film market as well as productions involving the participation of major Hollywood production entities and/or broadcast and streaming platforms. Students create a finance model and business plan for a viable project.

Offered: Every year, Spring

FTM 512. World Building and Creative Collaboration. 3 Credits.

In this course, students will narratively "build" a world that they develop as a group. World building is a powerful tool that writers use to imagine a fantastical world that requires a complexity of vision such as seen in *Star Wars* or in any film or show that creates a new narrative world such as "Breaking Bad." This practice also helps producers to understand how to think about what's "not on the page" in a script in regards to production, and how to realize the vision of the director.

Prerequisites: Take FTM 503

Offered: Every year, Spring

FTM 514. Modern Hollywood and the Future of the Industry. 3 Credits.

This course focuses on the complexities of the industry and examines the intersection of art and business in the modern technological era of Hollywood. Topics include the evolution of production practices, distribution and exhibition of media, the role of labor and unions, how new technologies have shaped the industry and what the future holds for Hollywood. Students will deliver a research paper on applicable topics.

Offered: Every year, Spring

FTM 515. Showrunning for TV. 3 Credits.

How do TV shows get on the air? Students learn about and engage in the development process for a TV series or limited series. This class will also address what it takes to actually produce a show, and how to effectively lead as a showrunner.

Offered: Every year, Spring

FTM 550. Special Topics in Cinematic Production Management. 3 Credits.

This course examines a specific topic or issue in production. Topics might focus on specific practice areas such as emerging technologies, or on industry issues and trends, such as the uses and impact of gaming platforms for virtual production pipelines, or the integrative relationship of talent management to production practices. Students may use this course to investigate a cross-listed course in a department such as Game Design, Talent Management, Public Relations, Business.

Offered: As needed

FTM 601. Production Management Thesis Production. 6 Credits.

Students polish their screenplay to final draft, schedule and budget their script, finalize their look book and produce a three to four scene sizzle reel of their script. Thesis Paper on topic of film required.

FTM 602. Production Internship/Apprenticeship. 3 Credits.

Students seek and are engaged by a commercial, theatrical, episodic television or documentary for a professional production placement. Students must complete a minimum number of work hours as well as a reflection paper. Program director approval required.

Offered: As needed

Bachelor of Arts in Film, Television and Media Arts

Program Contact: Frederick Staudmyer (Frederick.Staudmyer@qu.edu)
203-582-6554

Students in the Film, Television and Media Arts program explore sequentially all dimensions of visual and audio storytelling beginning with the historical, cultural, business and professional contexts within which their own work will develop. They learn to conceive and organize ideas clearly and forcefully through writing and to shape those ideas for expression through image and sound. After mastering a full spectrum of basic techniques, students are immersed in the complex grammar of image and sound editing and the challenging artistry of lighting for both single and multi-camera environments. Mastering the acquisition,

composition and manipulation of moving images and sound, they are expected to create and execute compelling stories—narrative or documentary—for present and future distribution platforms.

Graduates of the Film, Television and Media Arts programs are well positioned to pursue careers in the creation and distribution of a broad range of digital material for all current and emerging media platforms. They are prepared to work for corporate, entertainment and not-for-profit institutions engaged in delivering entertainment and informational programming to audiences around the world and have a firm foundation to pursue graduate (MA or MFA) work.

Programs of Study

The standard degree in Film, Television and Media Arts is the 45-credit bachelor of arts. Students enrolled in the BA in Film, Television and Media Arts are required to complete a minor (typically 18 credits) that will complement their career and/or personal interests. This minor can be from any program either inside or outside the School of Communications. However, a student majoring in Film, Television and Media Arts may not minor in film and television.

¹ All students must complete the 46 credits of the University Curriculum (p. 51). Students majoring in Film, Television and Media Arts will complete their Integrative Capstone Requirement within the major with FTM 495. In place of those credits, the student will select an additional unrestricted course in the University Curriculum.

² Core must be completed by end of sophomore year.

Minor Requirement

Students majoring in the BA in Film, Television and Media Arts program are required to take a minor (typically 18 credits) that will complement their career and/or personal interests. This minor can be from any program either within or outside the School of Communications. However, a student enrolled in the BA in Film, Television and Media Arts program may not minor in the film and television minor offered by the School of Communications.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Creative Thinking and Visual Literacy:** Develop the ability to conceptualize and produce visual stories demonstrating aesthetic competence, fluency with visual grammar, and an appreciation of the historical context from which new forms and stories are created.
- Written and Oral Communication:** Acquire the facility to create effective content for visual media, as well as an ability to demonstrate both written and oral proficiency within a variety of professional formats and delivery platforms.
- Critical Thinking and Reasoning:** Develop the skills needed to critically analyze the work of others as a means to problem-solve and better inform students' own original creative output. Achieve a proficiency in creating professional quality work within the parameters and practical limitations of a broad spectrum of production environments. Recognize works of art as visual arguments, and be able to use analytical skills to assess their effectiveness.
- Information Fluency:** Learn to plan and produce effectively across a wide array of technical contexts, demonstrating facility and expertise

with preproduction, production and postproduction phases of film, television and interactive media creation.

- Social Intelligence:** Demonstrate an ability to work effectively within groups and production teams, to understand and manage collaborations and to act ethically, constructively and responsibly in the process of achieving individual and common goals.
- Diversity Awareness and Sensitivity:** Acquire an understanding of and respect for the similarities and differences among human communities, including a recognition and appreciation for the unique talents and contributions of all individuals.
- Responsible Citizenship:** Learn to recognize and analyze media-related issues and influence decisions and actions at the local, national and global community, and to become engaged as responsible citizens.

Admission Requirements: School of Communications

The requirements for admission into the undergraduate School of Communications programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Bachelor of Fine Arts in Film, Television and Media Arts

Program Contact: Frederick Staudmyer (Frederick.Staudmyer@qu.edu)
203-582-6554

Students in Film, Television and Media Arts explore sequentially all dimensions of visual and audio storytelling beginning with the historical, cultural, business and professional contexts within which their own work will develop. They learn to conceive and organize ideas clearly and forcefully through writing and to shape those ideas for expression through image and sound. After mastering a full spectrum of basic techniques, students are immersed in the complex grammar of image and sound editing and the challenging artistry of lighting for both single and multi-camera environments. Mastering the acquisition, composition and manipulation of moving images and sound, they are expected to create and execute compelling stories—narrative or documentary—for current and developing distribution platforms.

Graduates of the Film, Television and Media Arts programs are well positioned to pursue careers in the entertainment industry in creation and distribution of a broad range of digital material for all current and emerging media platforms. They are prepared to work for corporate, entertainment and not-for-profit institutions engaged in delivering entertainment and informational programming to audiences around the world and have a firm foundation to pursue graduate (MA or MFA) work.

Programs of Study

The department offers a highly competitive 63-credit bachelor of fine arts degree. Candidacy for this degree can only be obtained through

a successful separate application that includes a portfolio review. Candidates for the BFA are selected in September or February of a student's sophomore year or by separate application after admission to Quinnipiac.

Students enrolled in the BFA program in film, television and media arts are not required to take a minor.

BFA in Film, Television and Media Arts Curriculum

Students majoring in Film, Television and Media Arts must meet the following requirements for graduation:

Code	Title	Credits
University Curriculum ¹		46
Required School of Communications core courses ²		
COM 120	Media Industries and Trends	3
COM 130	Visual Design	3
COM 140	Storytelling	3
School of Communications Requirements		
Global Issues and Cultures, select two courses		6
FTM drama requirement, select one course		
DR 150	Performance Fundamentals	3
	or DR 160 Acting I	
	or DR 220 Voice and Movement	
Any course outside the School of Communications at the 200-level or higher		3
Seminars for Success		
COM 101	Communications First-Year Seminar	1
COM 201	Media Career Development	1
Required FTM courses		
FTM 102	Understanding Film	3
FTM 110	Single Camera Production	3
FTM 112	Multicamera Production	3
FTM 240	Analysis of the Moving Image	3
FTM 245	Intermediate Production	3
FTM 320	History of Film I (to 1975)	3
FTM 322	History of Film (and Television) II	3
FTM 342	Directing Film and Television	3
FTM 372	Screenwriting	3
FTM 450	Senior Seminar in Film and Television	3
FTM 493	Senior Project Colloquy: Preproduction	3
FTM 495	Senior Project Colloquy: Production	3
COM 490	Communications Career Internship	3
Electives		
Select five of the following:		15
FTM 280	Visual Effects (VFX) Techniques	
FTM 330	Emerging Cinematography Techniques	
FTM 355	Documentary Production	
FTM 375	Projects in Single Camera and Lighting	

FTM 380	Projects in Audio Production
FTM 390	Projects in Multicamera Production
FTM 392	Post-Production Techniques
FTM 393	Animation Techniques
FTM 397	Summer Production Project
COM 491	Communications Career Internship II
Other courses with chair's approval	

Total Credits **123**

¹ All students must complete the 46 credits of the University Curriculum (p. 51). Students majoring in Film, Television and Media Arts complete their Integrative Capstone Requirement within the major with FTM 495.

In place of those credits, the student must select an additional unrestricted course in the University Curriculum.

² Core must be completed by end of sophomore year.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Creative Thinking and Visual Literacy:** Develop the ability to conceptualize and produce visual stories demonstrating aesthetic competence, fluency with visual grammar, and an appreciation of the historical context from which new forms and stories are created.
- Written and Oral Communication:** Acquire the facility to create effective content for visual media, as well as an ability to demonstrate both written and oral proficiency within a variety of professional formats and delivery platforms.
- Critical Thinking and Reasoning:** Develop the skills needed to critically analyze the work of others as a means to problem-solve and better inform students' own original creative output. Achieve a proficiency in creating professional quality work within the parameters and practical limitations of a broad spectrum of production environments. Recognize works of art as visual arguments, and be able to use analytical skills to assess their effectiveness.
- Information Fluency:** Learn to plan and produce effectively across a wide array of technical contexts, demonstrating facility and expertise with preproduction, production and postproduction phases of film, television and interactive media creation.
- Social Intelligence:** Demonstrate an ability to work effectively within groups and production teams, to understand and manage collaborations and to act ethically, constructively and responsibly in the process of achieving individual and common goals.
- Diversity Awareness and Sensitivity:** Acquire an understanding of and respect for the similarities and differences among human communities, including a recognition and appreciation for the unique talents and contributions of all individuals.
- Responsible Citizenship:** Learn to recognize and analyze media-related issues and influence decisions and actions at the local, national and global community, and to become engaged as responsible citizens.

Please note: Current high school students, transfer students and matriculated Quinnipiac University students who wish to be considered for the BFA program should download a BFA application from the Film, Television and Media Arts (<https://www.qu.edu/>

[schools/communications/programs/ba-bfa-film-television-media-arts.html#ourprograms](#)) page on Quinnipiac's website.

Admission Requirements: School of Communications

The requirements for admission into the undergraduate School of Communications programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Minor in Film and Television

Program Contacts:

Film History/Analysis Track Mary Schmitt (mary.schmitt@qu.edu)
203-582-7639

Production/Writing Track Ashley Brandon (Ashley.Brandon@qu.edu)
203-582-7277

A minor in film and television will broaden your appreciation for visual storytelling as an art form, and familiarize you with the basics of screenwriting and film production. You'll explore the rich history of cinema and television and develop a foundation in the theories and techniques that make characters and stories spring to life.

Quinnipiac's proximity to the media epicenter of New York City provides exciting opportunities to enrich your academic experience through internships. You will benefit from access to a vast network of alumni who work as media professionals and are eager to mentor you. You're also free to explore the many facets of multimedia production with the sophisticated equipment in Quinnipiac's Ed McMahon Communications Center, including our 4K digital television studio, where students create professional-caliber video content and programming as well as high-tech multimedia productions for web and mobile.

Film and Television Minor Curriculum

Students electing this minor must complete the courses under one of the following two tracks (18 credits). Either track is for students majoring from **within** or **outside** of the School of Communications.

Film and Television: Film History/Analysis Track

Code	Title	Credits
Minor requirements		
FTM 102	Understanding Film	3
FTM 240	Analysis of the Moving Image	3
FTM 320	History of Film I (to 1975)	3
FTM 322	History of Film (and Television) II	3
Film Elective ¹		3
FTM 450	Senior Seminar in Film and Television	3
Total Credits		18

¹ With permission of chairperson and minor adviser. Eligible courses may include, but are not limited to: COM 340 Holocaust and Film; COM 340 Cinema of India, COM 350 Media, Culture and Arts of Los Angeles, SO 238, Sociology Through Film, and others.

Film and Television: Production/Writing Track

Code	Title	Credits
Minor requirements		
FTM 102	Understanding Film	3
FTM 110	Single Camera Production	3
FTM 112	Multicamera Production	3
FTM 245	Intermediate Production	3
FTM 372	Screenwriting	3
FTM 450	Senior Seminar in Film and Television	3
Total Credits		18

Department of Interactive Media and Design

Interaction design involves the careful study of how people interact with products, systems and services, and how to make those experiences more usable, meaningful and persuasive. While immersed in practicing the multi-phase design process, students become skilled in typography, storytelling, sketching, prototyping and delivering design solutions that include printed matter, motion graphics, websites and mobile applications.

Each student in the program has the opportunity to specialize and distinguish his or her experience and portfolio through internships, study abroad, the Quinnipiac in LA program (p. 51), a complementary minor and a range of other experiential workshops and activities offered throughout the year.

The need for interaction designers continues to increase across all industries. Our students are highly sought after for their cutting-edge skill set—demand exceeds supply. Our capstone course prepares the students for entry into the workforce and culminates in a formal portfolio review conducted by industry professionals. Our graduates leave the program with the ability to discuss their work and process while prepared to meet any design challenge.

- Bachelor of Arts in Graphic and Interactive Design (p. 387)
- Master of Science in Interactive Media and Communications (p. 722)

Graphic and Interactive Design (GID)

GID 110. Design Research and Methods. 3 Credits.

This foundation course in research methods for art and design introduces informed strategies for problem solving and prepares students for upper-level coursework in graphic and interactive design. Emphasis is placed on the role of critical thinking in the design process. Theoretical models of design analysis are introduced. Practical hands-on methods include visual research, design journals, thumbnail sketches, mind maps, storyboards, comprehensives, diagramming, prototyping, case studies, topic and content development and other forms of conceptualization.

Offered: Every year, Fall

- GID 161. Web Design I.** **3 Credits.**
This course extends the knowledge and practice of visual design using professional-level software for the creation of web design in preparation for advanced coursework. Students produce course projects that demonstrate creativity, design concepts, critical thinking, aesthetic principles and basic technical competence.
Prerequisites: Take IDD 110 or GID 110; and COM 130.
Offered: Every year, Fall and Spring
- GID 200. Special Topics in Graphics and Interactive Design.** **3 Credits.**
Offered: As needed
- GID 205. Visual Thinking: Practice and Process.** **4 Credits.**
This course builds a foundation in visual thinking practices and cultivates a better understanding of the creative process. Students examine the ways in which images communicate meaning and how visual thinking can be used as an alternative to and enhancement of verbal and quantitative thinking. Insights and applications to different fields including psychology, art, medicine, literature and business are explored throughout. The study and practice of a variety of visual thinking techniques build the foundation for generating innovative concepts and developing personal creative and visual thinking practices. No previous art, design or drawing experience necessary.
Offered: As needed
- GID 210. Graphic Design History.** **3 Credits.**
This course surveys the historical and cultural events, movements and achievements that laid the groundwork for the contemporary practices and products of graphic design. Through lecture, video, discussion, research and studio projects, students are introduced to the visual history, the innovators and the technologies that influenced and transformed the practices of visual communication.
Prerequisites: Take IDD 110 or GID 110.
Offered: As needed
- GID 250. Web Design II.** **3 Credits.**
This intermediate web design course provides further study in current industry standards for UX/UI design. User experience and user interface methods are explored and practiced in addition to a grounding in information architecture processes and techniques. Websites are developed using responsive design requirements.
Prerequisites: Take IDD 110 and IDD 161 or GID 110 and GID 161.
Offered: Every year, Spring
- GID 270. Typography I.** **3 Credits.**
This course enables the student to both understand type and to use it as a design element. Using current computer graphics technology, topics explored include the use of type, page layout, color and the importing of graphics. Using professional page layout software, students create projects that demonstrate both design aesthetics and technical skills. Finished pieces are printed and become part of the student's portfolio.
Prerequisites: Take COM 130; and IDD 110 or GID 110.
Offered: Every year, Fall
- GID 300. Special Topics in GID.** **3 Credits.**
Prerequisites: Take IDD 161 or GID 161 or COM 130.
Offered: As needed
- GID 301. Motion Graphics I.** **3 Credits.**
This course explores aesthetic, critical and technical topics in motion graphics and 2D animation. Students produce projects that demonstrate knowledge and understanding of 2D animation and motion graphics used in the field of design.
Prerequisites: Take IDD 110 and IDD 161; or GID 110 and GID 161.
Offered: Every year, Fall and Spring
- GID 305. Digital Photography.** **3 Credits.**
This course explores the aesthetic, critical and technical topics in the creation of photographic images. Through practice, research and critique, students develop the conceptual, technical and critical skills needed to create innovative photographic projects.
Offered: As needed
- GID 315. Mobile Interaction Design.** **3 Credits.**
This course covers practical techniques for researching, designing and prototyping mobile applications and experiences. Some of the topics covered include wireframe creation, user studies and paper and digital prototyping.
Prerequisites: Take IDD 301 or GID 301.
Offered: Every year, Spring
- GID 370. Typography II.** **3 Credits.**
This course picks up where GID 270 leaves off by instructing in advanced typographic design; the use of grid structures; juxtapositions of type and image; and preparation for offset printing. Using the current computer technology, students create projects that demonstrate both an advanced knowledge of design/typography and current digital production processes. Finished pieces are printed and become part of the student's professional portfolio.
Prerequisites: Take IDD 270 or GID 270.
Offered: As needed
- GID 399. Advanced Independent Studio Work in Graphic and Interactive Design.** **1-6 Credits.**
Advanced independent studio work in graphic and interactive design.
Offered: As needed
- GID 400. Special Topics in GID.** **3 Credits.**
Prerequisites: Take IDD 301 or GID 301.
Offered: As needed
- GID 410. Web Design III.** **3 Credits.**
This course explores advanced aesthetic, critical and technical topics in website design, development, structure and information architecture. Students use problem-solving methods of design research and analysis combined with authoring and scripting environments to enhance design, interaction, usability and effective communication. Topics include current processes and technologies of web design and web standards. Senior status required.
Prerequisites: Take IDD 250 and IDD 301; or GID 250 and GID 301.
Offered: Every year, Fall
- GID 440. Motion Graphics II.** **3 Credits.**
This course explores advanced aesthetic, critical and technical topics in motion graphics and animation. Topics include typography and motion graphic design and layout, editing digital video, and audio. Students use problem-solving methods of design research and analysis to produce digital video animations that demonstrate both knowledge and understanding of motion graphics, and that provide them with professional entry into the field.
Prerequisites: Take IDD 301 or GID 301.
Offered: As needed
- GID 480. Senior Seminar and Portfolio.** **3 Credits.**
In this course, students consider critical issues in interactive design and prepare a portfolio, website, resume and other professional materials. For majors in graphic and interactive design. Senior status is required.
Prerequisites: Take GID 410.
Offered: Every year, Spring

GID 499. Advanced Independent Studio Work in Graphic and Interactive Design. 3 Credits.

Advanced independent studio work in graphic and interactive design.

Offered: As needed

Bachelor of Arts in Graphic and Interactive Design

Program Contacts: Pattie Belle Hastings (PattieBelle.Hastings@qu.edu) 203-582-8450 and Ewa Callahan (Ewa.Callahan@qu.edu) 203-582-3470

Students majoring in Graphic and Interactive Design receive in-depth, hands-on experience in the design and authoring of original interactive work for a range of media including web, print, motion graphics and mobile devices. They have the opportunity to study graphic design and interactive design, emphasizing creative thinking, visual literacy and technological proficiency. The program provides a rigorous curriculum of conceptualization, problem solving, innovation, critical thinking and visualization. It acknowledges that design is a cultural catalyst that bridges commerce and social causes. Students graduating from this program are well prepared to meet the challenges within the field of interactive and graphic design. The areas of study are always evolving and include typography, print design, motion graphics, web design and mobile interaction design.

There are a total of 33 credits in the major. The first 24 credits are derived from graphic and interactive design required courses. An additional 9 credits (three courses) are chosen from a list of graphic and interactive design electives.

¹ All students must complete the 46 credits of the University Curriculum (p. 51). Students majoring in Graphic and Interactive Design complete their Integrative Capstone Requirement within the major with GID 480.

In place of those credits, the student must select an additional unrestricted course in the University Curriculum.

² Core must be completed by end of sophomore year.

³ Substitutions to this list are permitted with prior approval of the student's adviser and the director of graphic and interactive design.

Minor Requirement

Students enrolled in the BA in Graphic and Interactive Design program are required to complete a minor (typically 18 credits) that will complement their career and/or personal interests. This minor can be from any program either within or outside the School of Communications.

Student Learning Outcomes

The BA in Graphic and Interactive Design program encompasses the full spectrum of visual communication. It acknowledges that design is a cultural catalyst that bridges commerce and social causes. The program provides a rigorous curriculum of conceptualization, problem solving, innovation, critical thinking and visualization. Students graduating from this program are well prepared to meet the challenges within the field of interactive and graphic design. The areas of study are always evolving and include typography, print design, motion graphics, web design, UI, UX, and mobile interaction design. The following competencies are critical to the effective contribution of entry-level designers in professional design practice and they construct a framework that contributes to the overall effective practice of the discipline.

Upon completion of the program, students should be able to demonstrate the following competencies:

- Solve Creative Problems:** Solve creative problems within the field of design, including research and synthesis of technical, aesthetic, and conceptual knowledge. This is demonstrated by the ability to create and develop visual responses to communication problems, including understanding of hierarchy, typography, aesthetics, composition and construction of meaningful images.

- b. **Communicate Ideas:** Communicate their ideas professionally and connect with their intended audience using visual, oral, and written presentation skills relevant to their field. This is evident in the ability to construct verbal and written arguments for solutions that address the needs of the organization or community.
- c. **Actualize Concepts:** Actualize technical, aesthetic, and conceptual decisions based on an understanding of design principles and by using appropriate tools and technology. This includes knowing how to learn technology with the recognition that technological change is constant.
- d. **Evaluate Solutions:** Evaluate work in their field, including their own work, using professional terminology and demonstrating fluency in the use of the formal vocabulary and concepts of design. This includes recognizing the influence of major cultural and aesthetic trends, both historical and contemporary, on design products and services.
- e. **Implement Processes:** Implement design processes with a strategic understanding of how communication is planned, produced and distributed. This is exhibited by the ability to solve communication problems including identifying the problem, researching, analysis, solution generating, prototyping, user testing and outcome evaluation.
- f. **Produce Professional Design:** Produce a body of design work suitable for seeking professional opportunities in their chosen branch of design. This body of work demonstrates effective use of typography, images, diagrams, motion, sequencing and color with an informed consideration of content, elements, structure and style.

Admission Requirements: School of Communications

The requirements for admission into the undergraduate School of Communications programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Department of Journalism

The Quinnipiac undergraduate program in journalism focuses on the principles and practices of news writing and reporting across multiple platforms in a perpetually evolving media landscape. Required courses provide a strong foundation in writing, reporting and diverse storytelling skills.

The wide range of elective courses enables students to focus on a specific medium (such as television, online or new media reporting) or news subject (such as sports, entertainment or visual journalism), or take courses across platforms based on their interests and career goals.

The program culminates in a capstone course during which students work on a student-run news website or TV newscast, and demonstrate their acquired knowledge and execute a sustained investigative project under the guidance of a faculty adviser.

- Bachelor of Arts in Journalism (p. 392)
- Master of Science in Journalism (p. 723)
- Master of Science in Sports Journalism (p. 726)
- Minor in Financial Communication and Business Journalism (p. 394)
- Minor in Journalism (p. 394)

Journalism (JRN)

JRN 100. Special Topics in Journalism. 3 Credits.

This course is only open to high school students in the QU Academy program. The content of this course is specialized and varies by semester and by section. A variety of topics in journalism may be covered. Students should consult the course description in the schedule for details on specific offerings.

Offered: As needed

JRN 106. Multimedia Production Techniques (SPS 106). 3 Credits.

Students learn the fundamentals of multimedia production, including the use of digital cameras and related equipment, to tell simple stories and the use of editing software to prepare them for distribution. Students learn the rudiments of video-camera use, composition and lighting, capturing audio, continuity, interviewing, voiceovers, music beds, graphics, and shooting and editing action. Students produce b-roll, features, interviews, location pieces and story packages pertaining to their concentrations or areas of interest.

Offered: Every year, All

JRN 199. Journalism Independent Study. 1-6 Credits.

JRN 200. Special Topics in Journalism. 3 Credits.

Students engage in a detailed examination of current issues in journalism in a format that may incorporate academic research, journalistic writing and multimedia presentations. Students should consult the School of Communications course bulletin for information about each semester's offerings.

Offered: As needed

JRN 205. Photojournalism Fundamentals. 3 Credits.

This hands-on course focuses on creating compelling, original news photography using the latest DSLR and Mirrorless cameras that journalists in the field are using today. Students learn about the basics of photography in this course and how to shape those technical skills into competent photojournalism.

Offered: Every other year, Spring

UC: Fine Arts

JRN 260. News Writing. 3 Credits.

This course teaches the principles and practices of news writing for digital platforms and print. Journalists must acquire skills to identify a news story and its essential elements, gather information efficiently, place it in a meaningful context, and write concise and compelling accounts. The readings, discussions, exercises and assignments for this course are designed to help students acquire such skills and understand how to utilize them wisely.

Prerequisites: Take COM 140.

Offered: Every year, All

- JRN 263. Broadcast News Writing. 3 Credits.**
Students are introduced to the fundamentals of writing for the broadcast media in a professional environment. Topics include writing for radio and television, as well as integrating sound and video into news stories. The course also provides a basic understanding of primary journalistic values such as accuracy and fairness as they apply to broadcast news.
Prerequisites: Take COM 140.
Offered: Every year, All
- JRN 275. News Reporting. 3 Credits.**
This course is focused on news reporting. Students learn how to gather, analyze and use information for journalistic stories. They learn to identify and use digital databases and resources, conduct thought-provoking interviews, and search and locate public documents in ethical and legal manners.
Prerequisites: Take JRN 260 or JRN 263.
Offered: Every year, All
- JRN 280. The Art of the Podcast (SPS 280). 3 Credits.**
This hands-on course explores creative audio storytelling via the podcast. Students learn how to research, write, record, edit and self-publish creative nonfiction and fictional stories that are both original, and emulate some of the most popular podcasts on the market. Special emphasis is placed on audio gathering techniques, storytelling techniques and interviewing for live and recorded shows.
Offered: As needed, Spring
- JRN 285. Mobile Journalism: The Future of News. 3 Credits.**
News consumption on smartphones and tablets has surpassed that of desktops and newspapers, making mobile devices key to the future of news. Students examine the impact of this trend on the future of journalism, learn about the technologies necessary to produce news on these devices, critique the user experience provided by various apps and mobile websites, and produce a news app of their own. They also learn how to cover news events using mobile technology, how to produce mobile news stories and how to work in a mobile newsroom.
Prerequisites: Take COM 140.
Offered: As needed, Spring
- JRN 291. Reporting for Television I. 3 Credits.**
Students learn the principles of producing television news packages, which they shoot and edit using HD non-linear equipment. All students cover news and sports primarily off campus. The focus is on writing, news judgment, content, interviewing, use of voice and doing stand-ups. Stories can air on the TV newscast that is broadcast live weekly.
Prerequisites: Take JRN 106 or SPS 106; and JRN 260 or JRN 263.
Offered: Every year, All
- JRN 300. Special Topics in Journalism. 3 Credits.**
Students engage in a detailed examination of current issues in journalism in a format that may incorporate academic research, journalistic writing and multimedia presentations. Students should consult the School of Communications course bulletin for information about each semester's offerings.
Prerequisites: Take COM 140.
Offered: As needed, All
- JRN 301. Special Topics. 4 Credits.**
Offered: As needed
- JRN 311. Reporting for Television II. 3 Credits.**
In this course, students produce in-depth television stories. Pieces are longer to allow the student to explore issues in greater detail. Stories can air on the TV newscast that is broadcast live weekly.
Prerequisites: Take JRN 291.
Offered: As needed
- JRN 315. The Art of Journalistic Interviewing. 3 Credits.**
Compelling stories don't just happen. They come from strong interviewing skills that tell stories people care about. Students learn how to ask questions that elicit pithy responses, emotion and expertise, using in-class and out-of-class exercises. Students also analyze and critique the interviewing styles used by professional journalists, as well as the work of their classmates.
Prerequisites: Take JRN 106 or SPS 106; and COM 140.
Offered: As needed
- JRN 325. Telling Global Stories. 3 Credits.**
Using multimedia to gather and present facts lets journalists expand the scope of their storytelling. Students in this course examine current international journalism trends and socioeconomic and political issues specific to a developing country, learn fact-gathering techniques, and travel to that country during spring break to put into practice what they have learned. After spring break, students work on an interdisciplinary multimedia project.
Offered: As needed, Spring
- JRN 341. Sporting Culture Through Nonfiction. 3 Credits.**
It has often been said that sport is a microcosm of society, but many rhetoric scholars have begun to suggest that sport plays a role in constituting society and is "defined by a range of political practices, including allocations of resources, representations of identity, projections of nationalism and globalization, activism and change." This directed readings course examines American culture, as well as comparative values, through nonfictional accounts of sport.
Offered: As needed, Summer Online
- JRN 343. Literary Journalism in the '60s. 3 Credits.**
The 1960s stand out as an era of change and turbulence in 20th-century America. Throughout the 1960s and 1970s, these nonfiction writers and journalists wrote in a personal style that became known as "Literary Journalism," or "The New Journalism." This directed reading course requires students to analyze the historical and contemporary views of major literary journalists.
Offered: As needed, Summer Online
UC: University Curriculum Ele
- JRN 359. Journalism Elective. 3 Credits.**
- JRN 360. Watchdog Reporting. 3 Credits.**
In this course, students learn and practice watchdog journalism, helping to inform our communities and keeping public figures and institutions in check. Students cover in-depth news off campus, on topics such as crime, public health, politics, education and the environment. In conversations with working journalists, students learn both innovative and proven strategies for reporting. Students also work individually and in teams to publish stories and multimedia projects based on public data, documents and interviews.
Prerequisites: Take JRN 260 or JRN 263.
Offered: As needed, Spring
- JRN 361. Sports Reporting (SPS 361). 3 Credits.**
This course introduces students to coverage of sports for the news media and includes writing game stories and sports profiles.
Prerequisites: Take JRN 260 or JRN 263.
Offered: Every year, All

- JRN 362. The Story of Football (SPS 362).** **3 Credits.**
This course traces the historical trajectory of American football and the coaches, players and media portrayals that transformed the game from a 19th-century collegiate test of manliness to what it is today: a spectator sport of immense appeal whose popularity endures despite more than a century of concerns over the game's debilitating and sometimes lethal violence.
Offered: Every year, Fall
- JRN 364. Sports Broadcasting.** **3 Credits.**
This course introduces students to the concepts and content of what makes a good sports broadcaster. Aspects of sports broadcasting, both from inside the studio and outside on the field of play are explored. Students will learn and take on all the roles involved in sports broadcasting: that of a studio host, play by play, analyst, sideline reporter, interviewer and more.
Prerequisites: Take JRN 263
Offered: Every year, All
- JRN 365. Effective Editing.** **3 Credits.**
Students learn the basics of editing online text, magazines and newspapers, with an emphasis on copyediting, headline writing, composition and story packaging.
Prerequisites: Take JRN 275.
Offered: As needed
- JRN 372. Entrepreneurial Media (The MIC Project).** **3 Credits.**
This course addresses the fiscal and distribution challenges faced by journalists and media professionals and empowers student teams to construct sustainable business models. Students experiment with the latest technology, exchange ideas with some of the industry's most prominent thinkers and developers, and create content or products for viable media business ventures. Open to all School of Communications students.
Prerequisites: Take COM 140
Offered: Every year, Fall
- JRN 375. Cultural and Entertainment Journalism.** **3 Credits.**
Students learn how to write about arts and culture by reporting on local events and developing a theoretical framework for cultural reviewing. Topics include television, music, theater and film. In addition to hands-on reporting assignments, coursework includes readings, screenings and fieldwork.
Prerequisites: Take COM 140 or permission of instructor.
Offered: Every other year, Fall
- JRN 380. Fundamentals of Digital Journalism.** **3 Credits.**
This course covers the principles and practices associated with researching and producing stories for digital media. Students are required to produce stories that include textual, audio, video and interactive elements.
Prerequisites: Take JRN 106 or SPS 106; and JRN 260 or JRN 263.
Offered: Every year, All
- JRN 388. Business Reporting:Following the money.** **3 Credits.**
Students learn methods and tactics of writing about businesses for mass communication. The course covers why and how companies operate and how to write stories about corporate news from public records and other sources.
Offered: Every other year, Spring
- JRN 395. Broadcast Performance.** **3 Credits.**
This course explores the variety of skills required to communicate effectively through broadcasting. Students learn and practice on-air presentation techniques for effective delivery and interpretation. The course focuses on voice, voice control and the phrasing interpretation of copy and body language. Study focuses on performance techniques, creativity, writing and analytical skills needed to communicate effectively. Open to broadcast and print students.
Prerequisites: Take JRN 106 or SPS 106; and JRN 263.
Offered: As needed
- JRN 399. Journalism Independent Study.** **3 Credits.**
- JRN 400. Special Topics in Journalism.** **3 Credits.**
Students should consult the School of Communications course bulletin for information regarding each semester's offerings.
Offered: As needed
- JRN 450. Senior Seminar.** **3 Credits.**
This seminar entails an in-depth examination of issues and research perspectives in journalism. Seminar titles vary each term and may include topics such as ethics in journalism, diversity in the newsroom, and international journalism practices. Students should consult the School of Communications course bulletin for information about each semester's offerings.
Offered: Every year, All
- JRN 470. Narrative Journalism.** **3 Credits.**
Students in this class learn to report and write long-form articles suitable for publication in online and print magazines. Over a series of major writing assignments, students apply their research and interviewing skills to produce exhaustively reported and elegantly written articles. Topics in the course include: lead writing, article structure, interviewing, the use of statistics and the application of narrative techniques to journalistic writing.
Prerequisites: Take JRN 275.
Offered: As needed
- JRN 480. Advanced Digital Journalism.** **3 Credits.**
Many newsrooms now combine multiple types of media to immerse readers and make complex stories more digestible. This course covers the reporting and production skills needed to build many of these new forms, including interactive graphics and maps, and advanced audio and video projects. Students also study past and present interactive journalism projects and meet with some of the professionals who designed them.
Prerequisites: Take JRN 380.
Offered: As needed
- JRN 488. The International Money Trail.** **3 Credits.**
Business and investment, regulation and corruption, fraud and philanthropy are often global, making students who can track money across borders especially valuable. This course is designed to teach journalists, financiers, investigators, and strategic communicators to use financial analysis and digging skills on the international money trail. This course builds on JRN 388 and serves as the capstone for the minor in Financial Communications and Business Journalism.
Prerequisites: Take JRN 388;
Offered: As needed, All

- JRN 495. Advanced Reporting.** **3 Credits.**
This course stresses individual enterprise reporting, in which students plan, report, write and produce stories suitable for print or multimedia that demonstrate their command of skills acquired during the course of study. Emphasis is placed on the role of the professional journalist as an ethical practitioner who represents and reflects the wider public in its economic, ethnic and racial diversity.
Prerequisites: Take JRN 380.
Offered: As needed
- JRN 496. The QNN Newscast.** **3 Credits.**
In this course students act as producers, news and sports reporters, writers, editors and anchors as they put on a live weekly newscast. Newscasts are recorded and critiqued for student portfolios.
Prerequisites: Take JRN 291.
Offered: Every year, All
- JRN 498. Journalism Capstone.** **4 Credits.**
In this capstone course for the journalism major, students work on long, in-depth pieces of journalism across platforms. The stories include numerical or statistical information, multiple interviews from a variety of diverse sources, and show the students' command of the techniques used to produce and present news in print, broadcast and digital environments. Senior status required.
Offered: Every year, All
- JRN 499. Independent Study.** **1-6 Credits.**
- JRN 500. Special Topics in Journalism.** **3 Credits.**
This course consists of seminar-based classes that consider emerging areas of scholarly research or industry developments in journalism, with a particular focus on how a specific research activity or industry development illustrates issues regarding economic, gender and social groups.
Offered: As needed
- JRN 501. Reporting and Fact-Checking.** **3 Credits.**
Students are introduced to the basic practices and tools of journalism, which include interviewing, identifying and accessing public documents, writing leads and constructing organized, balanced stories.
Offered: Every year, Fall
- JRN 504. Digital Essentials.** **3 Credits.**
The capacity to gather information and report the news remains at the core of the journalism profession. This course focuses on the fundamentals of news writing while also engaging students in emerging social media and other tools to present comprehensive news stories to all audiences.
Offered: Every year, Spring
- JRN 521. Audio Storytelling.** **3 Credits.**
Writing for the ear requires skills in preparing scripts, natural sound and audio recording and editing. This course prepares students to compose stories for radio news and podcasts, with a focus on developing the style of conversational broadcast writing common to National Public Radio.
Offered: Every year, Fall
- JRN 524. TV Reporting.** **3 Credits.**
Visual news stories as broadcast by networks, affiliates and cable news channels and in evolving digital formats require skills in both storytelling and technology for shooting and editing video. This course covers the essentials of shooting video, editing and field reporting and producing.
Offered: Every year, Fall
- JRN 528. Data Journalism.** **3 Credits.**
Information graphics are now an integral component of news, conveying big data into readily understood formats such as diagrams and charts. This course teaches students how to visually organize information and apply it to news stories for broadcast or online presentation.
Offered: As needed
- JRN 530. Independent Study (ICM530).** **3 Credits.**
This is a special course offered to accommodate students who seek advanced practical training or advanced research in an area not directly included in the curriculum. The topic and scope of the course is developed by the student in consultation with a faculty adviser, subject to approval by the dean.
Offered: Every year, All
- JRN 531. Graduate Internship.** **3 Credits.**
Experience in association with working professionals is essential to securing career opportunities. Students completing an elective internship to secure such experience are required to work in a supervised environment, approved by the graduate program director.
Offered: Every year, All
- JRN 541. Sporting Culture Through Nonfiction.** **3 Credits.**
It has often been said that sport is a microcosm of society, but many rhetoric scholars have begun to suggest that sport plays a role in constituting society and is "defined by a range of political practices, including allocations of resources, representations of identity, projections of nationalism and globalization, activism and change." This directed readings course examines American culture, as well as comparative values, through nonfictional accounts of sport.
Offered: Every year, Summer Online
- JRN 543. Literary Journalism in the '60s.** **3 Credits.**
The 1960s stand out as an era of change and turbulence in 20th-century America. Throughout the 1960s and 1970s, these nonfiction writers and journalists wrote in a personal style that became known as "Literary Journalism," or "the New Journalism." This directed reading course requires students to analyze the historical and contemporary views of major literary journalists.
Offered: Every year, Summer Online
- JRN 545. TV Production.** **3 Credits.**
This course introduces students to the technical production skills that go into a daily news telecast. Newsroom organization, story development (from idea to the air) and the principles and practices of professional producers are studied.
Offered: Every year, Fall
- JRN 546. Digital News Production.** **3 Credits.**
This course explores topics related to social media, such as the viral video clip from a Tweet or the verified source through social media. Students learn the skills, tools and best practices of digital and video content production, as well as social coordination in the news arena. They also explore logistical and ethical concerns in the social medium.
Offered: Every year, Spring
- JRN 552. Media Law and Ethics.** **3 Credits.**
A thorough knowledge of laws and ethical behavior is essential to the professional practice of journalism. As such, this course covers the legal and ethical dimensions of media communications across platforms, with an emphasis on First Amendment, privacy and copyright issues.
Offered: Every year, Spring

JRN 562. Sports Law and Ethics. 3 Credits.

Federal antitrust law and regulations show that college and professional sports are treated as special components of American culture. This course examines the legal structure that grants special privileges to sports and to the ethical challenges sports journalists confront in going beyond the games to find the story.

Offered: Every year, Spring

JRN 563. Sports Analytics. 3 Credits.

Deciphering the volumes of data produced by high school, college and professional sports teams is an essential part of sports reporting. This course introduces students to the ever-growing volumes of statistics across major sports and shows how to transform such data into useful information.

Offered: Every year, Spring

JRN 564. Presenting and Producing Radio Sports. 3 Credits.

Radio remains an essential and effective medium for listening to games and for engaging the audience with live talk shows that discuss teams, players, sports and the action of the competition. This course presents students with the principles and practices of radio sports.

Offered: Every year, Fall

JRN 565. Presenting and Producing Television Sports: Remote. 3 Credits.

Students in this course write, produce and distribute a 30-minute sports program for broadcast featuring stories that illustrate intriguing and inspiring stories of a Division I college athletic department. Every student engages in shooting, editing, writing, interviewing, presenting and distributing the final product. Additionally, students originate and perform local and national style sports highlight segments along with live in-depth interviews.

Offered: Every year, Spring

JRN 566. Presenting and Producing Television Sports: Studio. 3 Credits.

Pre-game, post-game and intermission reports are among the most important aspects of televised sports, as each reveals and promotes the storylines through which games are covered. This course introduces students to the concepts and content behind the production of studio shows.

Offered: Every year, Fall

JRN 572. Researching and Writing the News Documentary. 3 Credits.

The complexities of producing the news documentary range from finding the right story to pursue to uncovering the proper visuals to help tell it. This course provides students with the skills to research, write, and produce visual nonfiction, long-form projects rooted in history or current events.

Offered: As needed

JRN 573. Sports Literature. 3 Credits.

Sports serve as a critical metaphor for American life in nonfiction works such as "Friday Night Lights," in novels such as "End Zone," in plays such as "Death of a Salesman" and in films such as "Raging Bull." This course examines why sports are prominent in cultural works that attempt to reveal the meaning of America.

Offered: As needed

JRN 574. Crafting the Sports Feature. 3 Credits.

Feature writers capture athletes when they are most noble, frail or otherwise vulnerable or heroic. They also capture the moment when a game means more than that. This course teaches students to apply creative vitality to their ideas and writing on sports outside of game stories.

Offered: Every year, Fall

JRN 588. Business Reporting:Following the Money. 3 Credits.

Students learn methods and tactics of writing about businesses for mass communication. The course covers why and how companies operate and how to write stories about corporate news from public records and other sources.

Offered: Every other year, Spring

JRN 589. Critical Issues in Sports. 3 Credits.

From health concerns to labor conflicts, the workaday world often intrudes on the bubble that protects the mythology of sport. Through reason, analysis and writing, students interact with vital issues that emerge from the seemingly routine day-to-day coverage of games.

Offered: Every year, Spring

JRN 595. Sports Clinical. 3 Credits.

Students completing the sports journalism program must participate in the Sports Clinical. This course focuses on advanced broadcast, multimedia, documentary and long-form reporting and to deepen the experience and training in a given area of specialization in terms of platform and subject matter.

Offered: Every year, Spring

JRN 600. Capstone Proposal. 3 Credits.

Students completing the journalism program conduct research and do preliminary reporting to write a capstone project proposal based on their area of inquiry. The faculty adviser and graduate program director must approve the topic. This course is graded on a pass/fail basis.

Offered: Every year, All

JRN 601. Capstone Project. 3 Credits.

Students completing the journalism program must complete a capstone project. Under the guidance of the their faculty adviser, students create an original, in-depth, professional-quality journalism project. This course is graded on a pass/fail basis.

Offered: Every year, All

Bachelor of Arts in Journalism

Program Contact: Molly Yanity (Molly.Yanity@quinnipiac.edu)
203-582-5031

The Quinnipiac undergraduate Bachelor of Arts in Journalism program focuses on the principles and practices of news writing and reporting across multiple platforms. The program's mission is to prepare journalism professionals who are superior writers and can effectively report on the diversity of the human experience.

The wide range of elective courses enables students to focus on a specific medium (such as television, online, or new media reporting) or news subject (such as sports, entertainment, or visual journalism) or take courses across platforms based on their interests and career goals.

Minor Courses 18

Total Credits 124

¹ All students must complete the 46 credits of the University Curriculum (p. 51). Students majoring in Journalism will complete their Integrative Capstone Requirement within the major with JRN 498. In place of those credits, the student will select an additional unrestricted course in the University Curriculum.

² Core must be completed by end of sophomore year.

Minor Requirement

Students enrolled in the Bachelor of Arts in Journalism program are required to complete a minor (typically 18 credits) that will complement their career and/or personal interests. Students are encouraged to minor outside the School of Communications to acquire subject knowledge beyond their primary field of study, but may choose to minor in any program within or outside the School of Communications in consultation with their advisers.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Ability to research, report, write, shoot and edit** news stories that conform to professional journalism standards, including the ability to apply basic numerical and statistical concepts.
- Command of the techniques** used to produce and present news in digital, broadcast and print environments, and understand the interconnectedness of these systems.
- Familiarity with the history of journalism**, its social responsibility and the underpinnings of its practice in a culturally and racially diverse society.
- Understanding of the implications** of the First Amendment and the role journalism plays in a democracy.
- Engagement in the ethical practice** of journalism.

Admission Requirements: School of Communications

The requirements for admission into the undergraduate School of Communications programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Minor in Financial Communication and Business Journalism

Program Contact: Sara Silver (Sara.Silver@qu.edu) 203-582-7762

The minor in Financial Communication and Business Journalism is designed for students who want to stand out in the fields of news, public relations, non-profits, companies and government. Students will learn to understand business fundamentals, discover opportunities in public budgets, interpret financial data, articulate business strategies, research markets using journalistic tools, and think critically about business models. This specialty opens careers in investor relations, corporate communications, market research and the healthiest parts of media.

Students wishing to minor in financial communication and business journalism must complete 18 credits.

Financial Communication and Business Journalism Minor Curriculum

For students whose majors are **inside** and **outside** of the School of Communications, required minor courses are:

Code	Title	Credits
Minor requirements ¹		
EC 111	Principles of Microeconomics	3
AC 211	Financial Accounting	3
FIN 201	Fundamentals of Financial Management	3
JRN 388	Business Reporting:Following the money	3
JRN 488	The International Money Trail	3
	Complete one financial communication and business journalism elective from the list below:	3
AC 305	Intermediate Accounting I	
AC 350	Advanced Excel Programming (CIS 350)

Total Credits 18

¹ School of Business students cannot count core courses and must substitute from 300-level electives outside of their major from the electives list or others as approved by the program director.

Minor in Journalism

Program Contact: Ben Bogardus
(Ben.Bogardus@quinnipiac.edu) 203-582-3417

News media continue to evolve as the trends, tools and technologies of the digital age bring vast quantities of information to new generations of audiences. The journalism minor teaches you to harness these technologies, and to apply techniques of news gathering, interviewing and story creation. Courses expose you to the many elements of multimedia production, and develop the skills necessary to produce timely and informative content for traditional print, television, radio and digital formats.

The minor focuses on the production of quality journalistic content as well as becoming a more sophisticated consumer of it. You'll gain an understanding of the professional ethics underpinning news reporting, as well as the importance of journalism to the first amendment and the vital role it plays in a free society. A refined voice, strong storytelling capability and a sharp editorial eye are beneficial to PR specialists, advertisers, publishers and a range of other professions in the communications fields and beyond.

Students wishing to minor in journalism must complete 18 credits.

Journalism Minor Curriculum

For students whose majors are **outside** of the School of Communications, required minor courses are:

Code	Title	Credits
COM 140	Storytelling	3

Code	Title	Credits
JRN/SPS 106	Multimedia Production Techniques (SPS 106)	3
JRN 260	News Writing or JRN 263 Broadcast News Writing	3
JRN 275	News Reporting	3

Complete one writing-intensive elective	3
Complete two elective courses at the 200 level or above	6
Total Credits	18

Department of Media Studies

The breadth and flexibility of the Bachelor of Arts in Communications/Media Studies program allows students to pursue their specific media-related interests while developing the effective communication skills and critical and creative thinking abilities employers are seeking. Students learn how media industries operate and, with their adviser's assistance, craft individualized programs of study based on their personal and professional goals. Our graduates work in a variety of professional fields including film and television, music and radio, social media, news, sports, fashion, public relations, marketing, advertising and media research. The major also prepares students to pursue graduate degrees in business, law, education, journalism, public relations and interactive media.

- Bachelor of Arts in Communications (p. 397)
- Minor in Media Studies (p. 398)

Media Studies (MSS)

MSS 119. Sign Language Workshop. 1 Credit.

The course presents an introduction to basic sign language, its basic vocabulary, sentence structure and grammar. Students gain practice in reading and execution of signs.

Offered: As needed

MSS 131. Media Innovators. 3 Credits.

This course examines how media companies develop and refine media products and platforms. Learners examine how media companies anticipate and/or respond to different cultural, technological, and economic structures that create constraints and leave open the possibilities for media practitioners. Using a case study approach, the course explores how decision-makers have adapted to the dynamic media marketplace, the types of data they solicit, and the ways in which they confront the risks associated with creating and distributing media products. This course replaces MSS231; students may not receive credit for both.

Offered: Every year

MSS 139. Mass Comm Elective. 3 Credits.

Offered: Every year, All

MSS 220. Media, History and Memory. 3 Credits.

This course examines the relationship between media, history and memory, focusing on the role various media play in shaping both individual and collective memories of historical figures, events and eras. Students are introduced to historical research methods and evaluate a variety of archival media texts, including photographs, newspaper and magazine articles, newsreels, movies, TV shows and audio recordings. In the major course project, students interview a family or community member about a particular historical event. The resulting essay analyzes the connections between individual memory, collective memory, and the media's influence on both.

Prerequisites: Take EN 102 or EN 103H

Offered: Every year, Fall and Spring

UC: Humanities

MSS 231. Media and Society. 3 Credits.

The objectives for this course are twofold: to foster an understanding of the social context within which media professionals work and to provide an environment in which students develop analytical skills required for effective and ethical participation in our media-saturated culture as citizens and potential media professionals. Students create a mock proposal for a media project in which they address how different cultural, political, economic and technological structures create constraints and leave open the possibilities for media practitioners, users and audiences. They also work in teams to critique contemporary social media issues.

Prerequisites: Take COM 120.

Offered: Every year, Spring

MSS 300. Special Topics. 3 Credits.

Topics vary each semester depending on faculty and student interests.

Offered: As needed

MSS 311. Diversity in the Media (WGS 311). 3 Credits.

This course examines the role of media in the construction of social categories such as gender, race, class and sexual orientation. Students learn about the media as one of a number of social institutions—including religion, education and family—that influence our understanding of cultural difference. The course presents a variety of perspectives that address diversity in relation to both print and electronic media, emphasizing popular culture. Media diversity issues are analyzed in relation to ownership, representation, audience reception and the media workforce. Junior status required.

Prerequisites: Take WGS 101 or COM 120.

Offered: Every other year

MSS 320. Communication Technologies: Evolution and Impact. 3 Credits.

This course explores the rapid spread of technology in the 21st century. Students examine the development, diffusion, and cultural impact of older technologies (e.g. the telephone, radio, television) for lessons that can be applied to more recent technological developments (e.g. the smartphone, streaming media, and social media). This blueprint is then used to predict, evaluate, and critique emerging technologies and the effects that they may have on culture, politics, economics, and everyday life in the next 10-20 years.

Prerequisites: Take COM 120.

Offered: As needed

MSS 332. Media Research Methods. 3 Credits.

The course introduces students to a variety of media research methods through readings and hands-on exercises. Goals include helping students become knowledgeable and critical readers of media-related research produced in both industry and academic settings, and teaching students fundamental aspects of conducting media research and leading-edge strategies for effectively communicating research findings. Students perform original research using techniques including interviews, focus groups, content analysis and surveys. They also learn about statistics, social media tracking and research ethics. Junior status required.

Prerequisites: Take COM 120, MSS 131 or MSS 231.

Offered: Every year, Fall

MSS 340. Communications Law and Policy. 3 Credits.

This course helps students to develop an awareness and understanding of laws, regulations and professional standards of practice that apply to the work of communications practitioners. Attention is given to First Amendment guarantees, libel, privacy, journalist's privilege, copyright, media and advertising regulation. Selected cases are highlighted as examples of opinions handed down by state and federal courts. Junior status is required.

Prerequisites: Take MSS 131 or MSS 231 or STC 101 or STC 102.

Offered: Every year, Fall and Spring

MSS 345. Media Users and Audiences (WGS 345). 3 Credits.

This course considers popular, institutional and academic perspectives on media users and audiences in the U.S. and abroad. Students develop an understanding of how people choose and interpret media content, how marketers and media producers perceive audiences, popular assumptions about media effects on audiences and how social media use blurs boundaries between audiences and producers. Students develop and apply critical thinking and written and oral communication skills in assignments that address contemporary debates surrounding audiences and media users, including an in-depth analysis of fan cultures.

Prerequisites: Take EN 102 or EN 103H; and COM 120 or WGS 101.

Offered: Every year

MSS 346. Global Communication. 3 Credits.

The course analyzes the roles information media and popular culture play in modern debates about political power, global economy and cultural identity. The relative influences of different communication technologies in relationships among global, transnational and local cultures also are examined.

Prerequisites: Take COM 120.

Offered: Every other year

MSS 349. Political Communication (PO 349). 3 Credits.

This course explores the relationship between media and politics in the U.S. Students learn about the history of political communication, the role of image-making and image-management in political communication, the impact of the media on public policy, and the current state of our mediated political culture. In the major course project, student teams develop a comprehensive campaign communication strategy for a political candidate.

Prerequisites: Take COM 120 or PO 101.

Offered: Every other year

MSS 400. Special Topics. 3 Credits.

Topics vary each semester depending on faculty and student interests.

Offered: As needed, Fall and Spring

MSS 420. Sports, Media and Society (SPS 420). 3 Credits.

This course examines the social, political, economic and historical significance of the intersection of sports, media and society. Participants examine such questions as: What role have sports played in shaping cultures throughout history? What is the relationship between sports and media? How do sports, through the media, influence U.S. culture today? What is the role of sports media professionals in U.S. culture? Junior status required.

Prerequisites: Take COM 120 or SPS 101.

Offered: Every year, Spring

MSS 441. Celebrity Culture. 3 Credits.

This seminar explores modern communication networks through the lens of celebrity. Through a variety of readings and videos, including pieces using media effects and cultural studies approaches, the course addresses the following questions: How, and by whom, is the idea of celebrity shaped? What cultural meanings are conveyed by celebrity? How does celebrity change the way we think about important social issues? What is the impact of celebrity on the industry? How is the concept of celebrity shifting? And just why are we so fascinated by celebrity? The final course project involves creating a plan for a celebrity to rehabilitate/reshape their public image.

Prerequisites: Take MSS 131 or MSS 231.

Offered: Every other year

MSS 442. Media Critics and Influencers. 3 Credits.

In this course, students learn what it takes to be a professional media critic and/or a social media influencer. Students analyze and produce criticism of TV, movies, music, apps, games, etc. and study what makes today's top social media influencers so successful. Students examine some of the best practices in popular media criticism/influence while developing their own voices. They also learn to produce content aimed at engaging their target audience. In their final project, students create their own blog, vlog, or podcast.

Prerequisites: Take MSS 131 or MSS 231.

Offered: Every other year

MSS 443. Crime, Media and Culture. 3 Credits.

This course examines the role of industrialized media in the social construction of crime, criminals, victims, social order, and deviance. We also consider why crime is represented so frequently in a variety of mainstream media genres, including news, docudramas, video games, popular music, and fictional dramas in both television and film. The course also discusses ways in which social media and digital surveillance technologies have been harnessed in relation to crime. Central themes of the course include theoretical debates related to media effects and critical media consumers, as well as how crime narratives can either demonize or glamorize segments of society.

Prerequisites: Take MSS 131 or MSS 231.

Offered: Every other year

MSS 444. Popular Music. 3 Credits.

Despite its salience as a mass medium, popular music remains understudied in the discipline of media studies. Therefore, in order to provide students with a better understanding of popular music, this seminar involves the following: critically listening to and writing about popular music; considering music's role in identity (class, gender and sexuality, racial and ethnic, etc.) formation; examining the influence of media and technology on popular music; and understanding the music industry.

Prerequisites: Take MSS 131 or MSS 231.

Offered: Every other year

MSS 450. Senior Seminar. 3 Credits.

This seminar includes an in-depth examination of issues and research perspectives in media studies. Topics vary each term, focusing on the different media and current literature in the field. Senior status required.

Offered: Every year, Fall and Spring

MSS 491. Research Project. 3 Credits.

Students conduct an in-depth research project under faculty supervision.

Prerequisites: Take MSS 332.

Offered: As needed

MSS 495. Media Trend Forecasting and Strategy. 3 Credits.

In this media studies capstone course, students analyze the various forces impacting media industries, professionals, and users, tracking current trends and forecasting future influences. Students study the issues facing media producers/users and strategize creative responses to the challenges of operating in an ever-changing media environment, applying critical thinking, research and creative problem-solving skills to real-world situations in their capstone project, a Media Consultant Report. Students also are expected to demonstrate professional oral and written communication skills in their final project and a weekly Media Trends blog. Senior status required.

Prerequisites: Take MSS 131 or MSS 231; and MSS 332 or STC 332

Offered: Every year, Spring

MSS 499. Independent Study.**1-6 Credits.**

Students may arrange to do an in-depth study of a topic under faculty supervision.

Offered: As needed

Bachelor of Arts in Communications

Program Contact: Nancy Worthington (Nancy.Worthington@qu.edu)
203-582-8059

The BA in Communications program aims to equip students with an adaptable approach to the rapidly evolving nature of media-related careers. The breadth and flexibility of the major enables a strategic integration of courses in which students learn professional practices, analytical techniques and expertise on the media's wider social, cultural and economic relationships.

Communications students obtain positions in diverse professional environments, including television networks, the music industry, social media, public relations and marketing firms, advertising agencies and media research organizations. The program also prepares students to enter graduate training in business, law, journalism, public relations and education.

BA in Communications Curriculum (Media Studies)

Students majoring in Communications/Media Studies must meet the following requirements for graduation:

Code	Title	Credits
University Curriculum ¹		46
Required School of Communications core courses ²		
COM 120	Media Industries and Trends	3
COM 130	Visual Design	3
COM 140	Storytelling	3
School of Communications Requirements		
Global Issues and Cultures: select two courses		6
Additional courses outside the SoC, one of which must be at the 200-level or higher		6
Seminars for Success		
COM 101	Communications First-Year Seminar	1
COM 201	Media Career Development	1
Required Media Studies Courses		
MSS 131	Media Innovators	3
MSS 332	Media Research Methods	3
MSS 340	Communications Law and Policy	3
MSS 495	Media Trend Forecasting and Strategy	3
COM 490	Communications Career Internship	3
Electives		
Select four of the following, one of which must be a 400-level MSS elective:		12
MSS 220	Media, History and Memory ³	
MSS/WGS 311	Diversity in the Media (WGS 311)	

MSS 320	Communication Technologies: Evolution and Impact	
MSS/WGS 345	Media Users and Audiences (WGS 345)	
MSS 346	Global Communication	
MSS/PO 349	Political Communication (PO 349)	
MSS 400	Special Topics	
MSS/SPS 420	Sports, Media and Society (SPS 420)	
MSS 441	Celebrity Culture	
MSS 442	Media Critics and Influencers	
MSS 443	Crime, Media and Culture	
MSS 444	Popular Music	
MSS 450	Senior Seminar	
And/or any FTM, GID, JRN or STC courses		
Other non-School of Communications courses with chair's approval		
Open electives		
Complete 6 credits		6
Minor Courses		18
Total Credits		120

¹ All students must complete the 46 credits of the University Curriculum (p. 51). Students majoring in Communications (Media Studies) will complete their Integrative Capstone Requirement within the major with MSS 495. In place of those credits, the student will select an additional unrestricted course in the University Curriculum.

² Core must be completed by end of sophomore year.

³ MSS 220 can also be taken as a UC Humanities under *Disciplinary Inquiry* or under Part 1 or 2 of *UC Personal Inquiry*.

Minor Requirement

All students majoring in communications are required to take a minor (typically 18 credits) that will complement their career and/or personal interests. This minor can be from any program either within or outside the School of Communications. However, a student majoring in communications/media studies may not minor in media studies.

Student Learning Outcomes

The program's required courses emphasize the skills and expertise sought by both demanding employers and competitive graduate programs, fostering students' abilities to do the following:

- Apply** knowledge gained from their coursework and creative problem-solving skills to real-world situations facing media organizations, producers and users, showing a capacity for innovation and imaginative thinking
- Plan, conduct, analyze** and **report** original media research findings based on a survey, focus group, social media tracking or content analysis
- Interpret** secondary media research for media professionals and media consumers/users
- Critically analyze** current media issues, trends and events and convey in written and oral reports their observations on how media theory relates to industry practice and audience/user interpretation

- e. **Demonstrate** a professional level of written and oral communication skills and the ability to effectively communicate ideas to various audiences through a variety of traditional and new media message delivery formats
- f. **Articulate** the importance of media literacy and how understanding the media’s influence benefits media consumers and professionals in a democracy like the U.S. and in an information-based global economy
- g. **Recognize** the diversity of groups and perspectives in a global society in relation to the media’s influence on the construction of culture and identity

Admission Requirements: School of Communications

The requirements for admission into the undergraduate School of Communications programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Seamless Transfer Agreement with Gateway Community College (GCC), Housatonic Community College (HCC) and Norwalk Community College (NCC)

Under this Transfer Agreement, GCC, HCC and NCC graduates will be guaranteed admission into a bachelor’s degree program with third year (junior) status at Quinnipiac University on the condition that they:

- Graduate with an associate in arts, an associate in science in business, College of Technology engineering science, nursing or an allied health degree with a minimum cumulative GPA of 3.0 (this may be higher in specific programs).
- Satisfy all other Quinnipiac University transfer admission requirements and requirements for intended major.

Quinnipiac University agrees to accept the general education embedded in these associate degree programs in accordance with Quinnipiac preferred choices for general education as meeting all the requirements of its undergraduate general education where courses are encumbered by the major (e.g., General Chemistry for the Disciplinary Inquiry Natural Science requirement for a Biochemistry major).

Suggested Transfer Curriculum for BA in Communications

A minimum of 60 credits is required for transfer into the BA in Communications. Below is a sample plan of study for the first two years.

Course	Title	Credits
First Year		
Fall Semester

Minor in Media Studies

Program Contact: Nancy Worthington (Nancy.Worthington@qu.edu) 203-582-8059

Media outlets have the power to influence the government, society and the business world. News stories can shape perceptions and public opinion in profound ways. This program examines how the media landscape has evolved over time and addresses the industry’s need to continually adapt to new technology to remain relevant and effective. You’ll learn to spot trends and analyze consumer behavior in ways that complement your major in fields such as political science, advertising, marketing and business.

The program is flexible and can be adapted to match your interests and career goals. You will take several required courses focused around media industries and trends, then choose from a diverse range of communications electives. Plus, you’ll have access to our Ed McMahon Communications Center—an all-digital media production environment where students create sophisticated broadcast-quality video content and programming, as well as high-tech multimedia productions for web and mobile.

Students wishing to minor in media studies must complete 18 credits.

Media Studies Minor Curriculum

For students whose majors are **outside** the School of Communications, required minor courses are:

Code	Title	Credits
COM 120	Media Industries and Trends	3
MSS 220	Media, History and Memory	3
	300- or 400-level Media Studies course	3
	Select three elective courses from Media Studies or another School of Communications department, depending on the student's interests	9
Total Credits		18

For students whose majors are **within** the School of Communications, required minor courses are:

Code	Title	Credits
MSS 131	Media Innovators	3
	300- or 400-level Media Studies course	3
	400-level Media Studies course	3
	Select three Media Studies elective courses	9
Total Credits		18

Department of Strategic Communication

The mission of the Department of Strategic Communication is to prepare our students, through theory and practice, for success in public relations, advertising and related industries. The department offers two degrees: a Bachelor of Arts in Advertising and Integrated Communications and a Bachelor of Arts in Public Relations.

The BA in Advertising and Integrated Communications program prepares students to understand and apply principles of advertising, branding and audience analytics in creating campaigns that maximize the strategic impact of content for web, social media, mobile devices and traditional media.

The BA in Public Relations program prepares students to be entry-level practitioners for careers in agency, corporate, government and nonprofit public relations. Among the most important essential learning outcomes stressed in the major are critical thinking and reasoning skills. Our graduates offer strategic counsel to their employers and clients through writing, research and implementation.

- Bachelor of Arts in Advertising and Integrated Communications (p. 403)
- Bachelor of Arts in Public Relations (p. 404)
- Master of Science in Public Relations (p. 724)
- Master of Science in Public Relations - Online/Professional Track (p. 725)
- Minor in Advertising and Integrated Communications (p. 406)
- Minor in Public Diplomacy (p. 406)
- Minor in Public Relations (p. 407)

Strategic Communication (STC)

STC 101. Principles of Public Relations. 3 Credits.

This course traces the development of the public relations discipline and examines the role of public relations in organizations and society. Students are introduced to the role that public relations plays in communicating to individuals, groups and society at large. Basic public relations principles and theories are examined. Students are introduced to critical thinking and reasoning concepts as well as the various professional roles in the field.

Offered: Every year, Fall and Spring

UC: Breadth Elective, University Curriculum Ele

STC 102. Principles of Advertising and Integrated Communications. 3 Credits.

Principles of Advertising and Integrated Communication is an introductory course that provides a comprehensive overview of the practices of advertising and integrated communication (ADIC) as they are used by organizations to maximize the impact of unified messages and promotions on consumers and other stakeholders. The course is designed to introduce students to contemporary issues and practices as well as to analyze ethical considerations involved in the basic principles within the communications campaign planning process.

Offered: Every year, Fall and Spring

UC: Breadth Elective, University Curriculum Ele

STC 201. Writing for Strategic Communications. 3 Credits.

Written communication is central to most public relations careers. Clear and persuasive writing is one of the tools used in public relations to convey clients' messages to target publics. This writing-intensive course introduces students to the world of professional public relations writing. Topics include press releases and other print tactics, online content and social media. Students are involved in both in-class and out-of-class assignments.

Prerequisites: Take STC 101 or STC 102; and COM 140.

Offered: Every year, Fall and Spring

STC 215. Web, Mobile and Interactive Design. 3 Credits.

Students learn how to create desktop and mobile multimedia elements using web development software, HTML5, CSS3 and simple scripting. Students design projects that include functional websites, animated content and interactive experiences.

Prerequisites: Take COM 130 and JRN 106 or FTM 110.

Offered: Every year, Fall and Spring

STC 309. Public Diplomacy. 3 Credits.

This course examines concepts, issues and practices in public diplomacy, or the management of a nation's communications and relationships with foreign publics who have the ability to affect national and international interests. Students examine theoretical and practical aspects of public diplomacy, looking closely at the purpose and value of public diplomacy in governments and other institutions, the roles and responsibilities of public diplomacy specialists, and principles of strategic practices. Students apply what they have learned in the development of public diplomacy materials.

Prerequisites: Take STC 101.

Offered: Every year, Spring

UC: Breadth Elective

STC 311. Sports Public Relations (SPS 311). 3 Credits.

This class is a comprehensive review of sports management and sports event planning. Students examine such topics as strategic planning, budgeting and time management.

Offered: Every year, Spring

- STC 320. Strategies for Social Media. 3 Credits.**
 This course addresses the impact of social and mobile media in an integrated profession. It focuses on strategically using social media to conduct research and monitor issues, to develop, implement and evaluate the success of public relations, advertising and integrated communication efforts. The course emphasizes strategic usage of such social media tools as social networks, social bookmarking sites, blogs, podcasts/vodcasts, discussion boards and conferences, wikis, mobile media and geolocation apps.
Prerequisites: Take STC 201.
Offered: Every year, Fall and Spring
- STC 332. Communication Research and Analysis. 3 Credits.**
 Quantitative reasoning is expected of today's strategic communication professional, and this course presents an exploration of both quantitative and qualitative research methods. Students learn how to use principles of scientific research and data analysis to establish, monitor and evaluate communication efforts.
Prerequisites: Take STC 101 or STC 102.
Offered: Every year, Fall and Spring
- STC 335. Media Systems and Planning. 3 Credits.**
 In this course, students learn about traditional as well as new and emerging technologies, with particular emphasis on their strengths and weaknesses as message carriers. Discussions include an overview of commonly used metrics and sources of data in the advertising and communications industries. Students then use this knowledge to plan and budget for integrated communication plans that capitalize on paid, earned and owned outlets.
Prerequisites: Take STC 332.
Offered: Every year, Spring
- STC 341. Corporate Public Relations. 3 Credits.**
 This course provides students with the knowledge and skills required for positions in the corporate sector. Topics include media relations, employee communication, community relations, investor relations and crisis communication. Students hone their written communication and critical thinking skills in this class.
Prerequisites: Take STC 201.
Offered: As needed
- STC 343. Nonprofit Public Relations. 3 Credits.**
 This course is designed for students who are interested in nonprofit public relations practice. Nonprofit practitioners help organizations manage their relationships by using many types of communication. This class helps students hone the skills that enable them to prosper as nonprofit public relations professionals. Written communication skills, along with other skills, are stressed.
Prerequisites: Take STC 201.
Offered: As needed
- STC 344. Global Strategic Communications Management. 3 Credits.**
 This course is designed to explore the global reach of strategic communication, its challenges, opportunities and worldwide development. It examines how various communication disciplines such as advertising, integrated marketing communication and public relations work together in various cultures, and geopolitical and socio-economic systems. Students explore strategic communication practices from a cosmopolitan perspective while focusing on understanding global, national and local audiences in order to create an integrated strategic communication plan that strengthens brand images.
Prerequisites: Take STC 101 or STC 102.
Offered: As needed
- STC 345. Investor Relations. 3 Credits.**
 This course is designed for students who may wish to enter the field of investor relations. Students are introduced to the main activities carried out by investor relations professionals and to concepts such as finance and accounting.
Prerequisites: Take STC 201.
Offered: As needed
- STC 346. Strategic Health Communication. 3 Credits.**
 The course presents a social scientific exploration of the field of strategic health communications, with particular attention to analysis and practice of health communication relationships and messages. Participants examine theories of health behavior change and media effects. Health is discussed from an ecological perspective, considering how various social structures impact community and individual health and cultural differences regarding health. Students consider examples of mediated health campaigns and research evaluating their effectiveness. They examine the interplay among theory, research and practice, with a special emphasis on how theory informs practice.
Prerequisites: Take STC 201.
Offered: As needed
- STC 348. Public Relations Event Planning. 3 Credits.**
 This course emphasizes the fundamentals of event planning, from developing the event, choosing a site and activities, promoting the event, accommodating the audience, coordinating volunteers, overseeing a safe event environment, and assessing the event after completion. At the end of the course, based upon the readings and real-life application, the student should be able to appreciate and understand how to plan a first-rate event, regardless of the client, theme or environment.
Prerequisites: Take STC 201.
Offered: As needed
- STC 349. Media Relations. 3 Credits.**
 This course gives students an understanding of the priorities and expectations of various types of contemporary media and how to successfully engage them through research-based strategies and tactics designed to reach key audiences. At the conclusion of the course, students should be well-practiced in various forms of working with journalists and the public via multiple media.
Prerequisites: Take STC 201.
Offered: As needed
- STC 400. Special Topics. 3 Credits.**
 The content of this course is specialized and varies from semester to semester. Students may inquire at the School of Communications front desk to learn more about the topic being offered.
Prerequisites: Take STC 201.
Offered: As needed
- STC 401. Bateman Competition Research. 1-3 Credits.**
 This course is designed to prepare students for advanced public relations problem-solving, the development of strategic public relations plans and the execution of a comprehensive public relations program. Students develop and implement a public relations program based on the four-step public relations process by competing in the national Public Relations Student Society of America Bateman Case Study Competition.
Prerequisites: Take STC 201 and permission of instructor.
Offered: As needed
- STC 402. Bateman Competition Campaigns. 2 Credits.**
Prerequisites: Take STC 332, STC 401.
Offered: As needed

- STC 405. The Agency. 3 Credits.**
The Agency is a student-run, interdisciplinary firm in which students produce professional work under the direction of faculty. Specializing in Public Relations, Graphic and Interactive Design, and Advertising and Integrated Communications, students collaborate on teams to manage and produce visual, written and digital work for a variety of clients in the communications field. Students apply different research methodologies, tools and techniques, and tactics to achieve desired strategic outcomes and present their projects to clients. Course is repeatable with permission of instructor.
Offered: Every year, Fall and Spring
- STC 410. Branding Strategies. 3 Credits.**
In this course, students consider how brands work and examine them as the guiding forces for integrated communication campaigns. Students identify the common characteristics of successful brands and explore the tools and techniques that are used to build brand equity.
Prerequisites: Take STC 332.
Offered: Every year, Fall
- STC 450. Crisis Communication Management. 3 Credits.**
This senior seminar for public relations majors is focused on crisis management. The course examines institutional crisis communication from a management perspective with an emphasis on crisis prevention, planning and response. Senior-level students in STC 450 apply skills they have learned throughout the program to crisis case studies. Students are called on to demonstrate oral and written communication skills along with proficiencies in such areas as critical thinking, reasoning and creative thinking.
Prerequisites: Take STC 332.
Offered: Every year, Fall and Spring
- STC 485. Advertising and Integrated Communications Campaigns. 3 Credits.**
This course is the capstone course in the advertising sequence. It utilizes a team-based, project-driven approach to advertising with real-life clients. Each team engages in the conception, research, planning and execution of a unique advertising campaign for an entire semester. Students learn to work within client guidelines, strategic creative and media planning, budgetary considerations and post-campaign analysis. In this capstone experience, students develop a full-scale integrated communications campaign, including conducting secondary and primary research, strategic planning and the production of associated creative deliverables. Students also gain experience in pitching to clients and evaluating the success and impact of the campaign.
Prerequisites: Take STC 201, STC 332.
Offered: Every year, Spring
- STC 495. Public Relations Campaigns. 3 Credits.**
STC495 is the capstone course for students preparing for a career in public relations. Students develop the mindset of a strategic communicator through case analyses, problem-solving exercises, and completion of a signature work. Attention is focused on the public relations planning process and student teams develop strategic public relations plans for actual clients. Writing, research and presentation skills are expected.
Prerequisites: Take STC 101, STC 201, STC 332.
Offered: Every year, Fall and Spring
- STC 499. Public Relations Ind Study. 1-6 Credits.**
Offered: As needed
- STC 501. Principles and Theories of Public Relations. 3 Credits.**
Students are introduced to the growing body of knowledge in the discipline and gain expertise that contributes to professional competence in public relations. Students examine the function of public relations in organizations and society, review contemporary and historical roles of public relations professionals and explore the practice of public relations in various public and private settings. Students also learn the latest theoretical approaches to public relations and apply these approaches to contemporary public relations management practices.
Offered: Every year, Fall
- STC 502. Public Relations Research Methods. 3 Credits.**
This course examines the applied use of research in public relations program development. Students learn methodologies appropriate for conducting secondary analyses and primary research. Both quantitative and qualitative methods are addressed, such as secondary analysis, content analysis, survey research, focus groups, participant observation, case study and experimentation.
Offered: Every year, Fall
- STC 504. Law and Ethics in Public Relations. 3 Credits.**
Students become familiar with legal and industry standards for legally and ethically practicing public relations. The course aims to instill an appreciation for freedom of expression and the First Amendment; to impart a functional understanding of legal rules and principles relevant to public relations practice in the U.S.; to enhance students' ability to identify the moral and ethical dimensions of issues that arise in public relations practice; and to develop analytical and critical thinking skills that encourage students to make and justify ethical decisions.
Offered: Every year, Fall
- STC 505. Public Relations Writing. 3 Credits.**
This course helps students develop professional-quality public relations writing skills. Students prepare a variety of public relations materials, such as news releases and other media materials; copy for internal magazines, reports, newsletters, brochures, institutional/advocacy advertising; video/audio scripts; web site copy; and speeches. Upon completion of this course, students have a professional portfolio of public relations writing samples.
Offered: Every year, Spring
- STC 506. Public Relations Management. 3 Credits.**
This course focuses on the business management aspects of public relations, such as policy formation, project direction, resource management, client relations, budgeting and counseling. Special emphasis is placed on public relations' contribution to an institution's mission and effectiveness.
Offered: Every year, Spring
- STC 507. Strategic Planning in Public Relations. 3 Credits.**
This course familiarizes students with the public relations strategic planning process. Students examine contemporary case studies that demonstrate the public relations planning process and apply what they have learned to the development and presentation of a public relations campaign plan for a client.
Prerequisites: Take STC 501.
Offered: As needed

STC 510. Crisis Management.**3 Credits.**

This course examines institutional crisis communication from a management perspective with an emphasis on crisis prevention, planning and response. Students are required to read and discuss selected articles from the crisis management literature, research and develop case studies of contemporary crises, and participate in simulations designed to develop professional expertise and practical skills in crisis management, including the management of information, management of public communication, strategic planning, problem solving, message production and issues management.

Offered: As needed**STC 511. Global Strategy.****3 Credits.**

This course examines concepts, issues and practices in international public relations across the borders and focuses on the challenges, opportunities, and the worldwide development of public relations. The course aims to inform you about the variables that affect public relations practice in the international realm and assist you in understanding of other countries' domestic public relations given the various cultures, geopolitical and socio-economic systems. Participants look closely at how governments, corporations, multinationals and nongovernmental organizations employ international public relations strategies around the world. Students also examine similarities between international public relations and public diplomacy and the effects of international public relations on images of nations.

Offered: As needed**STC 512. Investor Relations.****3 Credits.**

Students study the function of investor relations in corporations and examine the role of investor relations specialists charged with communicating financial information about companies to the financial media, SEC, financial analysts, shareholders and others in the financial community. Students learn how to integrate finance, communication, marketing and securities law compliance in efforts to maximize shareholder wealth.

Offered: As needed**STC 513. Health and Strategic Communications.****3 Credits.**

In this course, students are exposed to the field of strategic health communications, with particular attention to analysis and practice of health communication relationships and messages. Issues to be discussed include, but are not limited to: history and current challenges of the health communication field; health campaign creation, implementation and evaluation; cultural issues related to health behavior change campaigns; translational research; traditional and social media training for health care professionals; and perspectives of media influence on health attitudes, norms and behaviors.

Offered: As needed**STC 514. Social and Mobile Media.****3 Credits.**

This course addresses the impact of social and mobile media on public relations. It focuses on conducting public relations campaigns online and responding to public relations issues via such tools as social networking and bookmarking sites, blogs, podcasts/vodcasts, discussion boards and conferences, wikis, mobile and location-based applications.

Offered: As needed**STC 515. Special Topics in Public Relations.****3 Credits.**

This course examines a specific topic or issue in public relations theory and practice. Topics might focus on specific practice areas such as sports public relations, employee relations, political public relations, public diplomacy, nonprofit public relations, or on industry issues and trends, such as the uses and impact of new technologies, professional ethics and corporate social responsibility or the integration of communication practices.

Offered: As needed**STC 516. Branding Strategies.****3 Credits.**

This course explores strategies used by planners, communicators, managers and consultants to create, develop, nurture, maintain and reenergize brands. This course helps students understand the main idea of branding: developing, defending and growing brands for companies, agencies or nonprofits. It explores the essential elements of branding, including target audiences and segmentation, brand benefits, brand personality, differentiation and key brand equities. It also surveys conceptual approaches for the diagnosis of brand growth opportunities and for planning integrated brand communications.

Offered: As needed**STC 517. Strategic Communication for Health Professionals.****3 Credits.**

In this course, graduate students are exposed to the field of strategic health communication. In particular, students are asked to consider the role of health communication messages in internal, organizational settings, as well as outward-facing messages. Unique to this graduate-level strategic communication course, the students are expected to have minimal to no experience in the field of strategic communication. Instead, the overview of the field provided through this course seeks to encourage understanding of how the theories, practices and evaluations of health communication should be incorporated within their areas of health expertise.

Offered: As needed**STC 518. Measurement and Evaluation.****3 Credits.**

This course focuses on the development of knowledge and skills to ensure that students are able to use data to make business decisions. Students consider key concerns of measurement to determine if measurement tools are effective and appropriate for a project's goals, as well as how to make sense of data to measure success of a project and how to display findings for various audiences. The course is focused on the principles and process of utilizing research to best serve your client's or organization's goals. Main topics for the course include measurement development and refinement, online data analytics, audience segmentation, data interpretation and data visualization.

Offered: Every year, Fall and Spring

STC 519. Strategic Public Relations and Reputation Management. 3 Credits.

The focus of this course is reputation management and its importance to business success. Students analyze the function of corporate communications and examine a range of topics including organizational identity, image and reputation; issues and crisis management; institutional ethics and corporate social responsibility; strategic public relations planning; integrated marketing communication; public relations theories and best practices; and global public engagement. The class also explores specialty public relations practice areas such as media relations, investor relations, employee relations and government relations. Class discussions, case studies, in-class exercises, team projects and essay exams help students improve their critical thinking and reasoning skills, develop research and strategic planning skills and increase diversity awareness and sensitivities that are important to professional and business success.

Offered: As needed

STC 520. Sports Public Relations. 3 Credits.

This class is a comprehensive review of sports event planning and management. Students examine such topics as strategic planning, budgeting and time management.

Offered: As needed

STC 521. Corporate Public Relations. 3 Credits.

This course provides students with the knowledge and skills required for positions in the corporate sector. Topics include media relations, employee communication, community relations, investor relations, and crisis communication. Students hone their written communication and critical thinking skills in this class.

Offered: As needed

STC 522. Nonprofit Public Relations. 3 Credits.

This course is appropriate for students who want to learn how to develop and implement comprehensive public relations campaigns for nonprofit organizations. It highlights the structures and nuances of the various types of NPOs and examines case studies and present-day scenarios. The course requires the development of a public relations campaign, and culminates in crafting a case study assessing the effectiveness of an assigned NPO's public relations campaign.

Offered: As needed

STC 523. Media Systems and Planning. 3 Credits.

In this course, students learn about traditional as well as new and emerging technologies, with particular emphasis on their strengths and weaknesses as message carriers. Discussions include an overview of commonly used metrics and sources of data in the advertising and communications industries. Students then use this knowledge to plan and budget for integrated communication plans that capitalize on paid, earned and owned outlets.

Offered: As needed

STC 525. Financial Communications and Business. 3 Credits.

This course provides students with a holistic view of public relations and corporate communications management, as well as strategic planning for organizational change and growth. It covers various styles and functions of management and leadership theory and introduces key principles of marketing, branding, risk management, ethics, and finance. Throughout the course, students develop the ability to work between crucial agency organizational departments.

Offered: As needed

STC 531. Graduate Internship in Public Relations. 3 Credits.

Students complete a minimum of 90 hours of professional fieldwork supervised by the program director and a qualified field supervisor. Approval of the program director is required.

Offered: Every year, All

STC 540. Strategic Communications Abroad. 3 Credits.

This multi-section course introduces students to the worldwide development of communications, including communication practices, infrastructure, environments, and specializations. Students conduct primary and secondary research on communications in a particular country or cross-cultural context. The topics can range from international strategic communication through storytelling, global branding, and design, depending on the specialty of the instructor. This course includes a short-term study-abroad component directly related to the topic of the course, where students will be able to expand their skills and knowledge in a new environment. A strategic communication graduate-level final project is required.

Offered: As needed

STC 547. Entertainment Public Relations. 3 Credits.

This course reviews and applies the established RPIE (Research, Planning, Implementation, and Evaluation) process to the field of entertainment public relations in the context of such industries as music, movies, TV, theater, gaming, and sports. The distinctions between and among advertising, publicity, public relations, marketing, and promotion, in addition to how they can work together to support a specific goal, are highlighted.

Offered: As needed

STC 549. Media Relations. 3 Credits.

Course Description: This course gives students an understanding of the priorities and expectations of various types of contemporary media and how to successfully engage them through research-based strategies and tactics designed to reach key audiences. At the conclusion of the course, students should be well-practiced in various forms of working with journalists and the public via multiple media.

Offered: As needed

STC 605. Public Relations Graduate Capstone. 3 Credits.

Students develop a professional research project under the direction of program faculty. The project work should exhibit KSAs and/or serve as PRSA Readiness Review preparation. The capstone project is a personally designed, independently conducted activity, enabling students to further their knowledge/skill in one or more of the course topics that students have found especially interesting or beneficial. Permission of instructor required.

Offered: Every year, Spring and Summer

STC 606. Independent Study. 3 Credits.

Students develop and implement individual research projects that advance understanding of particular theoretical or practical aspects of public relations. Approval of the program director is required.

Offered: As needed

Bachelor of Arts in Advertising and Integrated Communications

Program Contact: Antoaneta Vanc (antoaneta.vanc@qu.edu)
203-582-3836

The BA in Advertising and Integrated Communications program prepares students to understand and apply principles of advertising, branding and audience analytics in creating campaigns that maximize the

strategic impact of content for web, social media, mobile devices and traditional media. Students use their knowledge of planning, media systems, audience and consumer trends, principles of storytelling, visual design and multimedia production to strategize and create content appropriate for such environments as advertising, public relations and social media agencies, branded content newsrooms, media organizations and corporate communications.

BA in Advertising and Integrated Communications Curriculum

Students majoring in Advertising and Integrated Communications must meet the following requirements for graduation:

Code	Title	Credits
University Curriculum ¹		46
Required School of Communications core courses		
COM 120	Media Industries and Trends	3
COM 130	Visual Design	3
COM 140	Storytelling	3
School of Communications requirements		
Global Issues and Cultures, select two courses		6
Additional courses outside the SoC, one of which must be at the 200-level or higher		6
Seminars for Success		
COM 101	Communications First-Year Seminar	1
COM 201	Media Career Development	1
Required major courses		
STC 102	Principles of Advertising and Integrated Communications	3
JRN/SPS 106	Multimedia Production Techniques (SPS 106) or FTM 110 Single Camera Production	3
STC 201	Writing for Strategic Communications	3
STC 215	Web, Mobile and Interactive Design	3
STC 320	Strategies for Social Media	3
STC 332	Communication Research and Analysis	3
STC 335	Media Systems and Planning	3
STC 410	Branding Strategies	3
STC 485	Advertising and Integrated Communications Campaigns	3
COM 490	Communications Career Internship	3
Open elective		
Any School of Communications elective		3
Minor courses		18
Total Credits		120

¹ All students must complete the 46 credits of the University Curriculum (p. 51). Students majoring in Advertising and Integrated Communications will complete their Integrative Capstone Requirement within the major with STC 485. In place of those credits, the student will select an additional unrestricted course in the University Curriculum.

Minor Requirement

All students majoring in advertising and integrated communications are required to complete a minor (typically 18 credits) that will complement their career and/or personal interests. This minor can be from any program either within or outside the School of Communications. However, a student majoring in advertising and integrated communications may not minor within the Department of Strategic Communication in advertising and integrated communications or public relations.

Student Learning Outcomes

Upon completion of this program, students will be able to demonstrate the following competencies:

- Information fluency and analysis** – Analyze, assess and strategically employ data related to audiences and media content.
- Media Literacy** – Understand the modern media landscape and how to capitalize on the strengths of different media technologies.
- Social intelligence** – Demonstrate an ability to work effectively and responsibly within groups and manage relationships with clients, team members, and audiences to achieve individual and common goals.
- Design thinking and production** – Implement basic multimedia production techniques and work effectively with content creators to produce deliverables related to campaigns.
- Effective communication** – Write effectively in a variety of formats for maximum audience impact.
- Critical and creative thinking** – Understand the principles of branding, cohesive messaging, and reputation management to apply how communication strategies and tactics integrate for a large-scale campaign from concept to delivery.

Admission Requirements: School of Communications

The requirements for admission into the undergraduate School of Communications programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Bachelor of Arts in Public Relations

Program Contact: Antoaneta Vanc (antoaneta.vanc@qu.edu)
203-582-3836

The Bachelor of Arts in Public Relations program prepares entry-level practitioners for various careers in agency, corporate, government and nonprofit public relations. Among the most important essential learning outcomes stressed in the major are critical thinking and reasoning skills. Our graduates must have the ability to be more than just communicators. They need to be able to offer strategic counsel to their employers and clients. Coursework culminates in the capstone experience, in which students carry out activities for a real-world client including conducting primary research, reviewing secondary research, proposing strategies and

objectives, and producing a full campaign plan that includes collateral materials and evaluation methods.

BA in Public Relations Curriculum

Students majoring in Public Relations must meet the following requirements for graduation:

¹ All students must complete the 46 credits of the University Curriculum (p. 51). Students majoring in Public Relations will complete their Integrative Capstone Requirement within the major with STC 495. In place of those credits, the student will select an additional unrestricted course in the University Curriculum.

Minor Requirement

All students majoring in public relations are required to take a minor (typically 18 credits) that will complement their career and/or personal interests. This minor can be from any program either within or outside the School of Communications. However, a student majoring in public relations may not minor within the Department of Strategic Communication in public relations or advertising and integrated communications.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Information Fluency and Analysis:** Plan, conduct, analyze and report primary research findings based on a survey, focus group or other appropriate research means, as well as interpret secondary industry research for a client.
- Critical and Creative Thinking:** Propose measurable, attainable objectives for a client based on primary and secondary research findings and produce a campaign strategy designed to help the client achieve its goals.
- Effective Communication:** Demonstrate both written and oral proficiency within a variety of traditional and new industry communication vehicles and message delivery formats.
- Social Intelligence:** Demonstrate an ability to work effectively and responsibly within groups and manage relationships with clients, team members and publics to achieve individual and common goals.
- Quantitative and Qualitative Literacy:** Propose an evaluation of a campaign to measure the campaign's effectiveness.

Admission Requirements: School of Communications

The requirements for admission into the undergraduate School of Communications programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

Minor in Advertising and Integrated Communications

Program Contact: Antoaneta Vanc (antoaneta.vanc@qu.edu)
203-582-3836

This minor teaches the foundational elements of advertising and integrated communications. Students are able to think creatively and strategically about digital and social media strategy, content production, media buying and planning, branding and writing for diverse audiences.

This program perfectly complements majors inside and outside the School of Communications, such as psychology, marketing, political science, media studies or journalism. Students take required courses, such as Principles of Advertising, and Writing for Strategic Communications, and then select elective courses that focus on their own particular areas of interest in the field.

Students wishing to minor in advertising and integrated communications must complete 18 credits. This minor is not available to public relations majors.

Advertising and Integrated Communications Minor Curriculum

Students wishing to minor in advertising and integrated communications must complete 18 credits. This minor is not available to public relations majors.

For students whose majors are **outside** the School of Communications, required minor courses are:

Code	Title	Credits
COM 140	Storytelling	3
STC 102	Principles of Advertising and Integrated Communications	3
STC 201	Writing for Strategic Communications	3
STC 332	Communication Research and Analysis	3
Select two elective courses from Strategic Communication (STC).		6
Total Credits		18

For students whose majors are **within** the School of Communications, required minor courses are:

Code	Title	Credits
STC 102	Principles of Advertising and Integrated Communications	3
STC 201	Writing for Strategic Communications	3
STC 332	Communication Research and Analysis	3
Select three elective courses from Strategic Communication (STC).		9
Total Credits		18

Minor in Public Diplomacy

Program Contact: Antoaneta Vanc (antoaneta.vanc@qu.edu)
203-582-3836

This minor will introduce students to the field of public diplomacy and its many strategic aspects, such as country image building and reputation, nation branding, corporate diplomacy, cultural diplomacy, sports diplomacy, media diplomacy, celebrity diplomacy, tourism diplomacy, etc. The minor aims to highlight the multidisciplinary approaches of how nations build their image, brand and reputation; how corporate social responsibility is used not only to engage with foreign publics, but also participate in a country's public diplomacy efforts; how sports are used to break diplomatic barriers; how pop culture celebrities, such as actors, musicians or athletes, are used to bring countries together; and how the future of public diplomacy is inextricably tied to the future of media.

The minor will prepare students interested in careers that require knowledge and application of global affairs, international relations and foreign policy, as well as cross-cultural understanding and communication, global strategic communication management, digital media, brand and reputation management, and project management.

Students wishing to minor in public diplomacy must complete 18 credits.

Public Diplomacy Minor Curriculum

For students whose majors are **outside** Public Relations, required minor courses are:

Code	Title	Credits
STC 101	Principles of Public Relations	3
PO 211	Introduction to International Relations	3
STC 309	Public Diplomacy	3
STC 344	Global Strategic Communications Management	3
Select two elective courses from Legal Studies (LE), Media Studies (MSS), Political Science (PO), or Strategic Communication (STC), from the electives list below.		6
Total Credits		18

For students whose majors are **within** Public Relations, required minor courses are:

Code	Title	Credits
PO 131	Introduction to American Government and Politics	3
PO 211	Introduction to International Relations	3
STC 309	Public Diplomacy	3
STC 344	Global Strategic Communications Management	3
Select two non Strategic Communication (STC) elective courses from the electives list below.		6
Total Credits		18

Elective courses in Public Diplomacy are:

Code	Title	Credits
Legal Studies (LE)		
LE 317	International Law (PO 317)	3
LE 318	Human Rights Law and Global Justice	3
LE 370	Negotiation	3
Media Studies (MSS)		
MSS 346	Global Communication	3
Political Science (PO)		
PO 209	Environmental Politics and Policy (ENV 209)	3
PO 211	Introduction to International Relations	3
PO 245	Politics of Global Capitalism	3
PO 247	Actors and Processes in U.S. Foreign Policy	3
PO 313	Development, Globalization and Colonialism	3
PO 319	International Interventions	3
PO 321	Comparative Government	3
PO 325	Political Psychology and Public Opinion	3
PO 331	Topics in Comparative Government	3
PO 334	Topics in African Politics	3
Strategic Communication (STC)		
STC 311	Sports Public Relations (SPS 311)	3
STC 320	Strategies for Social Media	3
STC 348	Public Relations Event Planning	3
STC 349	Media Relations	3
STC 410	Branding Strategies	3

Minor in Public Relations

Program Contact: Antoaneta Vanc (antoaneta.vanc@qu.edu)
203-582-3836

This minor provides a solid foundation in the principles of public relations and teaches you to think strategically when crafting a media relations plan. You'll also learn to write persuasively for a diverse audience.

This program perfectly complements majors inside and outside the School of Communications, such as those in marketing, political science or journalism, but it also can be customized. You will take required courses, such as the Principles of Public Relations, and Writing for Strategic Communications, and then select elective courses that focus on your own particular areas of interest, such as sports public relations, international public relations and event planning.

Students wishing to minor in public relations must complete 18 credits.

Public Relations Minor Curriculum

For students whose majors are **outside** the School of Communications, required minor courses are:

Code	Title	Credits
COM 140	Storytelling	3
STC 101	Principles of Public Relations	3

STC 201	Writing for Strategic Communications	3
STC 332	Communication Research and Analysis	3
Select two elective courses from Strategic Communication (STC).		6
Total Credits		18

For students whose majors are **within** the School of Communications, required minor courses are:

Code	Title	Credits
STC 101	Principles of Public Relations	3
STC 201	Writing for Strategic Communications	3
STC 332	Communication Research and Analysis	3
Select three elective courses from Strategic Communication (STC) other than the student's major.		9
Total Credits		18

Communications Accelerated Dual-Degree Bachelor's/Master's Programs (3+1)

The accelerated dual-degree program is designed for outstanding students. Traditionally those students who have a cumulative high school GPA of 3.5 or higher on a 4.0 scale and a combined SAT score of 1200 (or ACT of 25) are invited to the program as first-year students and complete the bachelor's degree at an accelerated pace, finishing undergraduate work in three years. The fourth year of study is dedicated to the master's program.

Undergraduate programs available include:

- Advertising and Integrated Communications (p. 403)
- Communications (Media Studies) (p. 397)
- Film, Television and Media Arts (BA) (p. 382)
- Film, Television and Media Arts (BFA) (p. 383)
- Graphic and Interactive Design (p. 387)
- Journalism (p. 392)
- Public Relations (p. 404)

Options for the graduate year include master's degree programs in:

- Cinematic Production Management (p. 720)
- Interactive Media and Communications (p. 722)
- Journalism (p. 723)
- Public Relations (p. 724)
- Sports Journalism (p. 726)

In certain cases, the MBA program also may be an option. Students who are interested in pursuing the MBA as their graduate degree should discuss it with their academic adviser for approval.

More information about the accelerated dual-degree program can be found on the Quinnipiac website, Communications Accelerated Dual-Degree Bachelor's/Master's Degree (3+1) (<https://www.qu.edu/schools/>)

communications/programs/accelerated-dual-degree/accelerated-dual-degree-ba-or-bfa-ma-or-ms-program/) page.

Communications Dual-Degree Bachelor's/Master's Programs (4+1)

The School of Communications offers a variety of dual-degree (4+1) programs, which enable a student to earn both a bachelor's degree and a master's degree in five years.

Dual-Degree Programs

- Dual-Degree Bachelor's/Master's in Cinematic Production Management (4+1) (p. 727)
- Dual-Degree Bachelor's/Master's in Interactive Media and Communications (4+1) (p. 729)
- Dual-Degree Bachelor's/Master's in Journalism (4+1) (p. 730)
- Dual-Degree Bachelor's/Master's in Public Relations (4+1) (p. 731)
- Dual-Degree Bachelor's/Master's in Sports Journalism (4+1) (p. 733)

Career Development

In the School of Computing and Engineering, various career development personnel work with students to plan the academic and professional

components of each student's education. They explore career interests, guide students through a career development process and provide assistance with internships, resume preparation and employment interviews.

Internship Program

School of Computing and Engineering students gain valuable career experience by participating in a professional experience. The professional experience may be either an internship, typically paid, or a research project.

Mission Statement

Educate and inspire students in a high-quality computing and engineering learning community that facilitates their transformation into professionals, leaders, citizens and lifelong learners.

Student Outcomes

Graduates of the engineering programs are prepared for professional practice in engineering and industry as well as for advanced study at the graduate level. Specifically graduates of the engineering programs will have:

- an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science and mathematics
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors
- an ability to communicate effectively with a range of audiences
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Graduates of the computer science program are prepared for professional practice as well as advanced study at the graduate level. Specifically graduates of the computer science program will have an ability to:

- analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions
- design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline
- communicate effectively in a variety of professional contexts
- recognize professional responsibilities and make informed judgements in computing practice based on legal and ethical principles
- function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline

- f. apply computer science theory and software development fundamentals to produce computing-based solutions

Bachelor of Science

- Bachelor of Science in Civil Engineering (p. 428)
- Bachelor of Science in Computer Science (p. 430)
- Bachelor of Science in Industrial Engineering (p. 432)
- Bachelor of Science in Mechanical Engineering (p. 434)
- Bachelor of Science in Software Engineering (p. 436)

Bachelor of Arts

- Bachelor of Arts in Computer Science (p. 426)

Master of Science

- Cybersecurity (p. 737)

Minors

- Minor in Computer Science (p. 441)

Dual-Degree Programs

- Accelerated Dual-Degree Bachelor's/Master's (p. 440) (3+1)
- Dual-Degree BA/MS or BS/MS in Cybersecurity (p. 440) (4+1)

Double-Degree Program

- Double-Degree BS in Industrial Engineering and BS in Health Science Studies (p. 482)

Badges

- Enterprise Cybersecurity Risk Management in Healthcare (p. 737)
- Ethical Hacking and Penetration Testing (p. 737)
- Hands-On HIPAA Compliance Risk Management (p. 737)
- Hands-On HIPAA Security Risk Analysis and Risk Management (p. 737)

Certificate Programs

- Certificate in Lean Six Sigma – Green Belt (p. 439)
- Certificate in Six Sigma – Black Belt (p. 439)

Department of Engineering

The Department of Engineering prepares students for careers that allow them to change the world for the better. The challenges of the 21st century for both the U.S. and the world are great, but for engineers and computer scientists, they offer exciting challenges and a world of possibilities. Our programs are aimed at developing creative problem solvers, who learn math, science and fundamentals so that they can apply them in solving the ever-changing problems of tomorrow. Our emphasis on application and learning by doing, all in a small class setting, prepares our graduates to successfully enter the workforce or pursue further education.

Quinnipiac's Bachelor of Science programs in Civil, Industrial, Mechanical and Software Engineering and Computer Science are accredited by the Engineering Accreditation Commission of ABET, [abet.org](http://www.abet.org) (<http://www.abet.org>).

Civil Engineering (CER)

CER 210. Infrastructure Engineering.

3 Credits.

This course identifies, analyzes and assesses built infrastructure, which is the foundation for modern society. The complex and interconnected lifecycles are investigated and demands on critical components are calculated. Students explore the nontechnical factors necessary for the functioning of infrastructure including supplies, trained personnel, public policy, ethics and cross-sector dependencies. The course provides a basis for understanding the complexity and cost of maintaining, rebuilding and developing infrastructure. Topics include general infrastructure concepts, water and wastewater, transportation, energy and buildings and cities. Several in-class scenarios are provided to synthesize the connectivity between the major items of infrastructure.

Offered: Every year, Fall

- CER 220. Civil Engineering Site Design. 3 Credits.**
This course provides students with the necessary background to select and develop sites for civil engineering projects as well as review the work of others. Proper site selection and engineering have a significant impact on the economics of a project and long-term utility of the constructed facility. Specifically, the course covers the skills of determining site layout and access, zoning requirements, establishing site contour and drainage, installation of utilities, elementary surveying, creation of drawings using a computer-aided drafting package, and the development of environmental impact statements.
Prerequisites: Take MA 152 or MA 153 and MA 154; or Sophomore standing in the major.
Corequisites: Take CER 220L.
Offered: Every year, Spring
- CER 220L. Civil Engineering Site Design Lab. 0 Credits.**
Lab to accompany CER 220.
Prerequisites: Take MA 153 and MA 154 Sophomore standing in the major.
Corequisites: Take CER 220.
Offered: Every year, Spring
- CER 300. Special Topics in Engineering. 3 Credits.**
Offered: As needed
- CER 310. Structural Analysis. 3 Credits.**
This course addresses the analysis and design of basic structural forms such as beams, trusses and frames, which are found in bridges and buildings. Classical deflection techniques such as direct integration and virtual work; and indeterminate analysis techniques such as the force method and displacement methods (slope deflection, direct stiffness and moment distribution) are used to determine forces and deflections in elastic structures. Structural analysis computer programs are introduced and directly applied in the solution of graded analysis and design problems. Approximate analysis techniques are used to check the general accuracy of computer-based results.
Prerequisites: Take MER 220.
Offered: Every year, Spring
- CER 315. Surface Water Hydrology. 3 Credits.**
This course covers hydrologic processes relevant to surface water hydrology, including precipitation, evapotranspiration, infiltration, surface runoff and streamflow. Global issues, including climate change and sustainable development, are discussed.
Prerequisites: Take MER 310.
Offered: As needed
- CER 325. Concrete Materials. 1 Credit.**
This course introduces the design and control of concrete mixtures. Topics include Portland cement, cement hydration, aggregates, supplementary cementitious materials, fresh and hardened concrete, and concrete durability
Prerequisites: Take MER 220 or MER 220L.
Corequisites: Take CER 325L.
Offered: Every year, Fall
- CER 325L. Concrete Materials Lab. 0 Credits.**
This laboratory uses concrete mix design and strength testing labs to proportion the constituents of quality concrete and to provide a background in materials testing techniques, quality control and sound construction practices.
Corequisites: Take CER 325.
- CER 330. Fundamentals of Environmental Engineering. 3 Credits.**
This course introduces students to the field of environmental engineering with an emphasis on basic principles, design, problem solving, analytical skills and sustainable solutions to environmental engineering problems. Topics include water chemistry, mass balance, water treatment, water quality and pollution control.
Prerequisites: Take CHE 110, MA 153 and MA 154.
Corequisites: Take CER 330L.
Offered: Every year, Fall
- CER 330L. Fundamentals of Environmental Engineering Lab. 0 Credits.**
Lab to accompany CER 330.
Prerequisites: Take CHE 110.
Corequisites: Take CER 330.
Offered: Every year, Fall
- CER 340. Introduction to Geotechnical Engineering and Foundation Design. 3 Credits.**
Soil mechanics is the study of soil properties, which govern the use of soil as a construction or foundation material. The course is devoted to describing soils, analyzing soil stresses, determining consolidation settlement, designing earth embankments, determining earth pressures and designing foundations based on applicable engineering principles and recognition of the fundamental concepts of soil behavior.
Prerequisites: Take MER 210.
Offered: Every year, Fall
- CER 340L. Introduction to Geotechnical Engineering and Foundation Design Lab. 1 Credit.**
In this laboratory course, students examine soil properties and extract necessary parameters for design. This course focuses on the common testing methods of soils in geotechnical engineering practice following ASTM standards for classification of soils and basic design of foundations.
Prerequisites: Take MER 210.
Corequisites: Take CER 340.
Offered: Every year, Fall
- CER 350. Hydrology/Hydraulic Design. 3 Credits.**
This course studies both hydrology, which is the study of occurrence, movement and distribution of rainfall, and hydraulic design, which is the application of fluid mechanics, physical science and engineering disciplines in the design of structures and development of water resources. Hydrologic principles are applied to model and analyze the distribution and movement of rainfall in a watershed. Hydraulic principles are applied to analyze and design flow-through systems of reservoirs, channels and culverts. The course makes extensive use of computer simulation models used in engineering practice.
Prerequisites: Take MER 310.
Offered: Every year, Spring
- CER 350L. Hydrology/Hydraulic Design Lab. 1 Credit.**
This lab supports and reinforces concepts from the Hydrology/Hydraulic Design course. Hands-on laboratory and field activities are performed for the measurement of pipe flow and headloss, evaluation of pipe networks, pump characterization, rainfall measurement, open channel weirs and orifices and streamflow measurement. Various industry-standard software packages for water distribution systems, open channel hydraulics and stormwater management are introduced.
Prerequisites: Take MER 310.
Corequisites: Take CER 350.
Offered: Every year, Spring

CER 360. Construction Management.**3 Credits.**

This course focuses on the implementation of various projects in which a civil engineer may be engaged, including planning and feasibility studies, design and construction. Students study topics relating to the management of construction, including scope of work, rough order-of-magnitude estimating, scheduling, planning, progress reporting, resource constraining and quality control. The roles of the contractor, owner, public entities and designer are explained.

Prerequisites: Take ENR 210.**Offered:** As needed**CER 370. Materials Engineering for Civil Engineers.****3 Credits.**

This course introduces the fundamental properties of civil engineering materials, including mechanical, chemical, physical, surface, fracture and rheological properties. The materials discussed are cements, metals, asphalt, wood and composites. Special effort is directed at learning new sustainable construction materials and practices, including alternative binders for concrete and methods for increasing the service life of civil engineering infrastructure.

Prerequisites: Take CHE 110.**Corequisites:** Take MER 220.**Offered:** As needed**CER 405. Ecological Engineering.****3 Credits.**

Ecological engineering is the design of sustainable ecosystems that integrate human society with its natural environment for the benefit of both. This course explores the basic concepts of ecological engineering for design applications including green infrastructure, wetland creation and restoration, restoration/rehabilitation of forests, grasslands, lakes, reservoirs and rivers and the development of engineered sustainable ecosystems.

Prerequisites: Take MER 310 or permission of instructor.**Offered:** As needed**CER 410. Design of Steel Structures.****3 Credits.**

The course synthesizes the fundamentals of statics, mechanics of materials and structural analysis and applies them to the design of structural members, with emphasis on satisfying real-world needs. Topics include an introduction to the design of structural systems, steel tension and compression members, beams and beam-columns and connections. All design is performed in accordance with codes and specifications used in current engineering practice. A comprehensive design problem requires development of a design methodology, consideration of alternative solutions and design of an optimal steel structure to meet stated functional requirements.

Prerequisites: Take CER 310 or permission of instructor.**Offered:** As needed**CER 415. Advanced Structural Analysis.****3 Credits.**

This course builds on the material covered in CER 310 to develop a better understanding of structural behavior. Matrix analysis methods, including an introduction to finite elements, are developed as the basis for modern, computer-based structural analysis. These and other advanced analytical techniques are used to analyze and design trusses, beams and frames. Coursework involves extensive use of the computer as an analytical tool. Students use state-of-the-art structural engineering analysis and design software.

Prerequisites: Take CER 310.**Offered:** As needed**CER 420. Design of Concrete Structures.****3 Credits.**

This course introduces the behavior and failure mechanisms of structural concrete. Current codes and industry standards are used to guide the practical design of beams, slabs and columns.

Prerequisites: Take CER 310.**Offered:** Every year, Fall**CER 435. Geotechnical Aspects of Transportation Infrastructure.****3 Credits.**

Students are exposed to the geotechnical aspects of transportation systems, with a strong focus on pavement design (both rigid and flexible). Basic transportation topics necessary for the geotechnical design of roads are covered.

Prerequisites: Take CER 340.**Offered:** As needed**CER 445. Advanced Geotechnical Engineering and Foundation Design.****3 Credits.**

This course focuses on the analysis and design of shallow and deep foundations. Other topics include field testing, structural design of footings, and the geotechnical aspects of retaining wall design and excavations.

Prerequisites: Take CER 340.**Offered:** Every year, Spring**CER 450. Water and Waste Water Technology.****3 Credits.**

Students study technical engineering solutions to problems regarding water processing, water distribution, wastewater collection, and wastewater treatment. Advanced technical topics include: water distribution and sewerage system design, unit process design and environmental biotechnology.

Prerequisites: Take CER 330.**Offered:** As needed**CER 455. Advanced Environmental Engineering.****3 Credits.**

Students extend what they learned in the Fundamentals of Environmental Engineering course. This course provides a more in-depth look at environmental policies and regulations concerning water and air and their implications on design. Case studies and design projects allow students to focus on both technical and nontechnical issues associated with environmental projects. Advanced technical topics include: biological treatment, cell growth kinetics, sludge treatment/disposal, landfills, air pollution control, hazardous waste, contaminant transport, quantitative risk assessment and advanced water treatment.

Prerequisites: Take CER 330.**Corequisites:** Take CER 455L.**Offered:** Every year, Spring**CER 455L. Advanced Environmental Engineering Lab.****0 Credits.**

Lab to accompany CER 455.

Prerequisites: Take CER 330.**Corequisites:** Take CER 455.**Offered:** Every year, Spring

CER 465. Hazardous Waste and Environmental Site Assessment. 3 Credits.

This course provides an introduction to hazardous waste management and preliminary site investigations for environmental hazards. Topics include identification of wetlands, title searches, air photo interpretation for environmental hazards, visual site surveys, operation of environment monitors, current EPA regulations regarding site assessment and investigation, and sampling of surface materials. Additional coursework focuses on hazardous waste; in particular, the legal framework, chemistry, quantitative risk assessment and remediation.

Prerequisites: Take CER 330.

Offered: As needed

CER 470. Water Quality. 3 Credits.

This course introduces basic chemical principles and applications to the analysis and understanding of aqueous environmental chemistry in natural waters and wastewaters. Topics include modeling of chemical systems, dissolved oxygen, nutrients, temperature and toxic substances with applications to groundwater, rivers, lakes, estuaries and coastal waters.

Prerequisites: Take CER 330.

Offered: As needed

CER 475. Groundwater Hydrology and Contaminant Transport. 3 Credits.

Students analyze groundwater flow and contaminant transport in the subsurface. Topics include geologic and physical factors affecting the movement of water and contaminants, sources of pollution, mathematical formulation and solution of groundwater flow and transport problems, remediation methods and an introduction to computer simulation models.

Prerequisites: Take CER 330, CER 340, CER 350.

Offered: As needed

CER 485. Slope and Earth Structures Stability. 3 Credits.

Students deepen their understanding of the mechanical behavior of slopes and earthen structures. The focus of this course is on the design, construction and performance of slopes and earthen structures.

Prerequisites: Take CER 340.

Offered: As needed

CER 490. Engineering Professional Experience. 0-1 Credits.

Students gain experience by employing engineering skills in a professional setting under the guidance of practicing engineers. Students must obtain departmental approval and register prior to starting the experience.

Prerequisites: Take ENR 395 or permission of the instructor.

Offered: Every year, All

CER 497. Design of Civil Engineering Systems I. 3 Credits.

The first half of a two-semester sequence, this course is part of the culminating senior design sequence for students in the civil engineering program. This course focuses on the implementation of civil engineering projects, including the senior design project. Students study topics related to the stages and structure of construction, costing and take-off, scheduling, ethics, safety, sustainable construction and project planning. In the context of the senior design project, students investigate the project, develop functional requirements, and prepare a draft project schedule in preparation for the second half of the sequence.

Prerequisites: Take ENR 210, and Senior Standing.

Offered: Every year, Fall

CER 498. Design of Civil Engineering Systems II. 3 Credits.

This course provides an opportunity for students to apply and synthesize their knowledge of civil engineering. Multidisciplinary teamwork is emphasized. Coursework from the various subdisciplines of civil engineering provides the foundation for this course. Students develop requirements, generate alternatives, make practical engineering approximations, analyze feasibility and make decisions leading to a completed design. The design includes principles of sustainability taking into account realistic constraints. These may include economic, environmental, legal and cultural issues. Deliverables include a comprehensive design report including drawings and a client briefing. This course provides an integrative experience that supports the overarching academic program goal.

Prerequisites: Take CER 310, CER 330, CER 340, CER 350 or permission of instructor.

Offered: Every year, Spring

CER 499. Independent Study in Civil Engineering. 3 Credits.

On an individual or small group basis, students pursue advanced study of a research or design topic in civil engineering. The scope of the course is tailored to the needs of the project and desires of the student, in consultation with the faculty adviser. The student is required to define and analyze the problem, study the fundamentals involved, organize an approach, determine a procedure, perform research and/or achieve a solution, submit a written report and give a formal briefing. Requires permission of the instructor.

Offered: Every year, Fall and Spring

Computer Science (CSC)

CSC 105. Introduction to Computer Science. 3 Credits.

This course is an introduction to the field of computer science. Students learn about the history of computers and computing and explore the many disciplines that comprise this dynamic field such as operating systems, graphics and artificial intelligence. The algorithmic thinking necessary in the creation of computer programs is covered as students create 3D "movies" by providing instructions to characters in an animation.

Offered: As needed

CSC 106. Introduction to Programming for Engineers. 3 Credits.

This course serves as an introduction to computer science and computer programming for engineers. Topics include fundamental programming constructs, problem-solving techniques, basic data and control structures, and simple data structures and arrays. This course is for non-CSC and non-SER majors.

Offered: Every year, Fall and Spring

CSC 107. Structured Programming Techniques. 1 Credit.

The main purpose of this course is to fill any gaps between Programming and Problem Solving course (CSC 110) and the Introduction to Programming for Engineers course (CSC 106). Topics include a basic programming refresher (in Java), binary number representation, debugging strategies and simple recursion.

Prerequisites: Take CSC 106; Minimum grade C-.

Offered: As needed

CSC 109. Special Topics. 3 Credits.

Offered: As needed, All

CSC 109H. Special Topics. 3 Credits.

Offered: As needed, All

- CSC 110. Programming and Problem Solving. 3 Credits.**
This course serves as an introduction to computer science and computer programming. Topics include fundamental programming constructs; problem-solving techniques; basic data and control structures; testing; debugging; arrays; and an introduction to object-oriented programming. A lab is included.
Corequisites: Take CSC 110L.
Offered: Every year, Fall and Spring
- CSC 110L. Programming and Problem Solving Lab. 1 Credit.**
Students gain experience in the practice of programming and problem solving by completing a series of hands-on activities, which increase in complexity, covering a range of topics from the CSC 110 course. This course is taken in conjunction with CSC 110.
Corequisites: Take CSC 110.
Offered: Every year, Fall and Spring
- CSC 111. Data Structures and Abstraction. 3 Credits.**
This course is a continuation of CSC 110. Topics include advanced data structures (linked lists, stacks, queues, trees, hash tables), recursion, abstract data types, introductory algorithms, and intermediate object-oriented programming. A lab is included.
Prerequisites: Take CSC 110 and CSC 110L; or CSC 107 with program director approval; Minimum grade C-.
Corequisites: Take CSC 111L.
Offered: Every year, All
- CSC 111L. Data Structures and Abstraction Lab. 1 Credit.**
Students gain experience in data structures programming by completing a series of activities, which increase in complexity, covering a range of topics from the CSC 111 course. This course is taken in conjunction with CSC 111.
Prerequisites: Take CSC 110 and CSC 110L; or CSC 107 with program director approval; Minimum grade C-.
Corequisites: Take CSC 111.
Offered: Every year, All
- CSC 175. Introductory Topics in Computer Science. 1-3 Credits.**
This course explores introductory computer science topics not available in other courses as well as new topics as they emerge in this rapidly evolving discipline. Topics may be interdisciplinary. This course does not count as an elective in the major.
Prerequisites: Take CSC 110 CSC 106 or GDD 140; Minimum grade C-;
Offered: As needed
- CSC 199. Independent Study. 1-6 Credits.**
Offered: As needed
- CSC 205. Introduction to Discrete Mathematics (MA 205). 3 Credits.**
This course introduces students to basic concepts and structures of discrete mathematics. Topics can include propositional and predicate logic, sets and set operations, functions, proof techniques, counting problems, probability and basic number theory. Applications include computer science, biology, social sciences, law and the physical sciences.
Prerequisites: Take CSC 110, CSC 110L or MA 110 or higher; Minimum grade C-.
Offered: Every year, Spring
- CSC 210. Computer Architecture and Organization. 3 Credits.**
Students are introduced to the organization and architecture of computers. Topics related to computer organization include digital logic, data representation, computer arithmetic, data path and control unit implementation, memory system organization and I/O communications. Architecture topics include machine language programming, instruction set design, and factors affecting processor performance. A lab component is included.
Prerequisites: Take CSC 111, CSC 111L; Minimum grade C-.
Offered: Every year, Spring
- CSC 210L. Computer Architecture and Organization Lab. 1 Credit.**
Students design and implement digital circuits of increasing complexity using abstraction to manage complexity. Students implement Assembly Language programs that demonstrate the instruction set architecture interface between hardware and software. This course is taken in conjunction with CSC 210.
Corequisites: Take CSC 210.
Offered: Every year, Spring
- CSC 215. Algorithm Design and Analysis. 3 Credits.**
This course presents a study of the design and analysis of algorithms. Topics include asymptotic analysis, complexity theory, sorting and searching, underlying data structures, recursion, greedy algorithms, divide and conquer, dynamic programming, and NP-completeness. Additional topics may include graph algorithms, probabilistic algorithms, distributed computing and parallel algorithms.
Prerequisites: Take CSC 111, CSC 111L; and CSC 205 or MA 205; Minimum grade C-.
Offered: Every year, Fall
- CSC 225. Introduction to Software Development. 3 Credits.**
This course presents introductory software development concepts including group development, large-scale project work and theoretical aspects of object-oriented programming. The course expands on material from previous courses. Professional behavior and ethics represent an important component of this course.
Prerequisites: Take CSC 111 CSC 111L; Minimum grade C-.
Offered: Every year, Fall
- CSC 240. Introduction to Computer Security. 3 Credits.**
This course introduces the general principles of computer security from an applied perspective. Topics covered include various forms of physical and cyber attacks, recognizing and defending against machine and network vulnerabilities, the basic building blocks of secure systems, basic cryptography and the social aspects of security.
Prerequisites: Take CSC 111, CSC 111L; Minimum grade C-.
Offered: As needed
- CSC 275. Topics in Computer Science. 1-3 Credits.**
This course explores general computer science topics not available in other courses as well as new topics as they emerge in this rapidly evolving discipline. Topics may be interdisciplinary.
Prerequisites: Take CSC 111; Minimum grade C-;
Offered: As needed
- CSC 299. Independent Study. 1-6 Credits.**
Offered: As needed
- CSC 300. Special Topics. 3 Credits.**
Prerequisites: Take CSC 215.
Offered: As needed, All

- CSC 310. Operating Systems and Systems Programming. 3 Credits.**
Students are introduced to operating systems and the software to support these systems. Topics include operating system principles, concurrency, scheduling and dispatch, virtual memory, device management, security and protection, file systems and naming, and real-time systems.
Prerequisites: Take CSC 210, CSC 225; Minimum grade C-.
Offered: Every year, Fall
- CSC 315. Theory of Computation (MA 315). 3 Credits.**
This course provides an introduction to the classical theory of computer science. The aim is to develop a mathematical understanding of the nature of computing by trying to answer one overarching question: "What are the fundamental capabilities and limitations of computers?" Specific topics include finite automata and formal languages (defining a model of computation), computability (determining what can be computed and how to prove that something cannot be computed), and complexity (determining what makes some problems so much harder than others to solve, and examining what is the P versus NP question and why it is important).
Prerequisites: Take CSC 215 or MA 301; Minimum grade C-.
Offered: Every other year, Spring
- CSC 318. Cryptography (MA 318). 3 Credits.**
Students study methods of transmitting information securely in the face of a malicious adversary deliberately trying to read or alter it. Participants also discuss various possible attacks on these communications. Students learn about classical private-key systems, the Data Encryption Standard (DES), the RSA public-key algorithm, discrete logarithms, hash functions and digital signatures. Additional topics may include the Advanced Encryption Standard (AES), digital cash, games, zero-knowledge techniques and information theory, as well as topics chosen by the students together with the instructor for presentations.
Prerequisites: Take MA 229 or CSC 215; Minimum grade C-.
Offered: Every other year, Spring
- CSC 320. Compilers. 3 Credits.**
This course presents a study of the design and implementation of compilers. Topics include translators and compilers, lexical analysis, syntax analysis and parsing, runtime environments and code generation.
Prerequisites: Take CSC 210, CSC 215, CSC 225; Minimum grade C-.
Offered: Every other year, Spring
- CSC 325. Database Systems (SER 325). 3 Credits.**
Students are introduced to the theory and application of database systems. Topics include data modeling and the relational model, query languages, relational database design, transaction processing, databases and physical database design.
Prerequisites: Take CSC 215 and; CSC 225 or SER 225; Minimum grade C-.
Offered: Every other year, Fall
- CSC 340. Networking and Distributed Processing. 3 Credits.**
This course introduces students to net-centric computing, the web as an example of client-server computing, building internet and web applications, communications and networking, distributed object systems, collaboration technology and groupware, distributed operating systems and distributed systems.
Prerequisites: Take CSC 215, CSC 225; Minimum grade C-.
Offered: Every other year, Spring
- CSC 345. Computer Graphics. 3 Credits.**
This course is an introduction to theory and programming in computer graphics. Topics include graphic systems, fundamental techniques in graphics, basic rendering, basic geometric modeling, visualization, virtual reality, computer animation, advanced rendering and advanced geometric modeling.
Prerequisites: Take CSC 215 CSC 225; Minimum grade C-.
Offered: As needed
- CSC 350. Intelligent Systems. 3 Credits.**
Artificial Intelligence is an umbrella topic covering efforts in a variety of fields all searching for one goal: to get computers to perform well at tasks at which humans excel. Topics include fundamental issues in intelligent systems, search and optimization methods, knowledge representation and reasoning, learning, agents, computer vision, natural language processing, pattern recognition, advanced machine learning, robotics, knowledge-based systems, neural networks and genetic algorithms.
Prerequisites: Take CSC 215, CSC 225; Minimum grade C-.
Offered: Every other year, Spring
- CSC 375. Advanced Topics in Computer Science (SER 300). 3 Credits.**
This course explores advanced computer science topics not available in other courses, as well as new topics as they emerge in this rapidly evolving discipline. Topics may be interdisciplinary.
Prerequisites: Take CSC 215, CSC 225; Minimum grade C-.
Offered: Every year, Spring
- CSC 399. Independent Study. 1-6 Credits.**
- CSC 490. Computer Science Internship. 1-6 Credits.**
Offered: As needed
- CSC 491. Senior Project I. 3 Credits.**
Senior Project I is the first part of a two-semester, capstone experience for computer science students. Students analyze and develop a solution to a major project that requires integration and application of knowledge and skills acquired in earlier coursework. Students develop professional experience by working on a team and communicating progress and results to a variety of audiences. Students explore the ethical and legal responsibilities of a computing professional.
Prerequisites: Take CSC 215, CSC 225; Minimum grade C-.
Offered: Every year, Fall
- CSC 492. Senior Project II. 3 Credits.**
Senior Project II is the second part of a two-semester, capstone experience for computer science students. Students implement and evaluate a solution to a major project that requires integration and application of knowledge and skills acquired in earlier coursework. Students continue to develop professional skills in teamwork and communications, and knowledge of their responsibilities as computing professionals.
Prerequisites: Take CSC 491; Minimum grade C-.
Offered: Every year, Spring

CSC 493. Senior Thesis I.**1 Credit.**

This course is the first part of a two-semester series in which students work independently under the guidance of a faculty member on the development of a senior thesis. The CSC 493/CSC 494 course sequence provides students with an opportunity to synthesize their knowledge of computer science. Students explore the profession of computing by engaging in the professional literature and exploration of professional ethics. Students meet regularly to present and discuss progress. During the first course in the sequence, students develop a proposal for their thesis, including a literature review, and submit to their adviser for approval.

Prerequisites: Senior status in the major.**Offered:** Every year, Fall**CSC 494. Senior Thesis II.****3 Credits.**

This course is the second part of a two-semester series in which students work independently under the guidance of a faculty member on a significant thesis culminating in the development of a senior thesis. The CSC 493/CSC 494 course sequence provides students with an opportunity to synthesize their knowledge of computer science. Students explore the profession of computing by engaging in the professional literature and exploration of professional ethics. Students meet regularly to present and discuss progress. During the second part in the sequence, students complete the thesis proposed in CSC 493.

Prerequisites: Take CSC 493; Minimum grade C-.**Offered:** Every year, Spring**CSC 499. Independent Study.****1-6 Credits.**

Cybersecurity (CYB)

CYB 501. Foundations of Cyber Security.**1 Credit.**

This course introduces students to fundamental security principles and security defense. Students learn the concepts of information security risks, vulnerabilities, assets and threats.

Offered: Every year, Fall and Spring**CYB 502. Introduction to Cyber Threats.****1 Credit.**

This course introduces students to the analysis of cyber threats. Students learn to identify bad actors in cyberspace and assess their resources, capabilities, techniques and motivations. Students learn to describe different types of cyber attacks and their characteristics.

Corequisites: Take CYB 501.**Offered:** Every year, Fall and Spring**CYB 503. Introduction to Cyber Defense.****1 Credit.**

Students learn about cyber defense tools and techniques. This course covers how to apply cyber defense tools and techniques to prepare a system to repel attacks.

Corequisites: Take CYB 502.**Offered:** Every year, Fall and Spring**CYB 506. Introduction to Programming for Security Professionals.****1 Credit.**

This course introduces students to basic scripting and programming concepts needed for security defense. Course topics include writing scripts for Windows and Linux; understanding basic programming security concepts; basic programming constructs, such as variables, types, loops, functions and data structures.

Offered: Every year, Summer**CYB 509. Operating Systems Security.****1 Credit.**

This course introduces students to operating systems and the software to support these systems. Topics include operating system security configuration, control objectives, control maintenance and forensics. The course includes hands-on implementation of security controls, including access management, file and process security configuration, and security monitoring.

Offered: Every year, Spring**CYB 517. Introduction to Cryptography.****1 Credit.**

This course introduces students to cryptography algorithms, protocols and applications. Topics include history; applications, such as SSL and SSH; and protocols, such as hash functions, symmetric and asymmetric cryptography, and attack-vectors for systems.

Offered: Every year, Spring**CYB 524. Relational Database Security.****1 Credit.**

This course introduces students to different relational database management systems (DMS) and DMS security concerns and methods. Topics covered include hashing and encryption, database access controls, unauthorized access, data corruption and injection.

Offered: Every year, Spring**CYB 526. Non-Relational Database Security.****1 Credit.**

This course introduces students to the theory, application and security of nonrelational database systems. It focuses on data management, query and security aspects of nonrelational databases. Topics include a comparison between relational and nonrelational database models, NoSQL storage types for different databases such as MongoDB, Hadoop, Amazon DynamoDB, document-based databases and graph databases.

Corequisites: Take CYB 524;**Offered:** Every year, Spring**CYB 540. Introduction to Secure Networking.****1 Credit.**

This course introduces students to the theoretical and practical aspects of designing, developing and defending computer networks. Topics include network models, media, architectures, devices, protocols, services, applications and use of network security tools.

Offered: Every year, Spring**CYB 550. Cyber Policy.****3 Credits.**

There are three parts to this course. The first part covers the applicable federal and state laws and policies related to cyber defense, pertaining to the storage and transmission of data. In the second part, students analyze and develop enterprise security policies. Finally, students learn how to implement machine security policies.

Corequisites: Take CYB 503.**Offered:** Every year, Fall and Summer**CYB 610. Hands-on HIPAA Compliance Risk Management.****1 Credit.**

This course introduces students to the HIPAA Privacy, Security and Breach Notification Regulations. The focus is on regulations and compliance. Students will be able to assess the HIPAA privacy, security and breach notification compliance of their own organizations or a model healthcare organization described within the course. Students will get hands-on experience using cloud-based security and privacy assessment tools.

Prerequisites: Rising senior status minimum. Previous exposure to health organizations necessary, either through academic course work or professional work.**Offered:** Every year, Summer

CYB 611. Hands-On HIPAA Security Risk Analysis and Risk Management. 1 Credit.

This course will teach the theory and practice of Enterprise Cybersecurity Risk Management. The focus will be on risks associated with healthcare organizations. These risks go beyond compliance risks and include risks related to safeguarding the exploding quantities of healthcare data, systems, and devices. Students will learn best practices for risk analysis, what the Office for Civil Rights demands in a risk analysis and will conduct a risk analysis of a model healthcare organization created for the course. Students will get hands-on experience using cloud-based risk analysis tools.

Prerequisites: Rising senior status minimum. Previous exposure to health organizations necessary, either through academic course work or professional work.

Offered: Every year, Summer

CYB 612. Enterprise Cybersecurity Risk Management in Healthcare. 1 Credit.

This course will cover what it takes to establish, implement, and mature an Enterprise Cybersecurity Risk Management (ECRM) program. ECRM is a part of enterprise risk management and supports the business needs and mission of the organization. We will cover case studies of healthcare organizations and how they did or did not secure their health information. Lessons learned from actual breach events will be discussed along with lessons learned from organizations with effective ECRM programs. Students will learn how to organize for effective security defense including: governance, people, process, technology, and engagement. Students will get hands-on experience using cloud-based risk management tools.

Prerequisites: Rising senior status minimum. Previous exposure to health organizations necessary, either through academic course work or professional work.

Offered: Every year, Summer

CYB 660. Programming for Security Analytics. 1 Credit.

This course introduces students to basic command-line methods used in machine data analytics. Student learn how to collect machine logs, search log data, and identify anomalies in logs.

Corequisites: Take CYB 506.

Offered: Every year, Summer

CYB 661. Programming for Security Automation. 1 Credit.

This course focuses on programming methods that are applicable to security automation. Students gain experience in automation using Python and Cloud native CLI to facilitate such tasks as automated code scanning; automated application scanning in testing and staging; automated network, server, container configuration checks; and continuous monitoring of development pipeline components and job scheduling.

Corequisites: Take CYB 660.

Offered: Every year, Summer

CYB 662. Secure Web Applications Design. 1 Credit.

This course covers the design and architecture of secure web applications, such as: traditional three-tier architectures, SOA, microservices, FaaS; application protocols; authentication and session management; client and server-side controls; input-based vulnerabilities and web application attack trends.

Corequisites: Take CYB 661.

Offered: Every year, Summer

CYB 663. Secure Web Applications Engineering. 1 Credit.

In this course, students learn processes and practices needed to secure applications within the Software Development Life Cycle (SDLC). The course covers traditional SDLC processes and methods to secure modern Cloud native development processes and using concepts of DevSecOps.

Corequisites: Take CYB 662.

Offered: Every year, Summer

CYB 664. Web Applications Security Testing. 1 Credit.

This course introduces students to web application security testing. Topics include application security metrics, selecting the right testing tool and integrating the results into the development life cycle. Students gain hands-on experience using these tools in practical settings.

Corequisites: Take CYB 663.

Offered: Every year, Summer

CYB 665. Workforce Access Security. 1 Credit.

This course focuses on authentication and user access technologies and practices within the enterprise. Topics include Active Directory services and architecture, and enterprise network access protocols.

Offered: Every year, Fall

CYB 667. B2C Access Security. 1 Credit.

This course focuses on authentication and user access technologies and practices within B2C access. Topics include standards-based B2C authentication and access management protocols.

Corequisites: Take CYB 665.

Offered: Every year, Fall

CYB 669. B2B Access Security. 1 Credit.

This course covers access concepts based on B2B communication APIs, such as standard-based protocols and B2B on-boarding, for mobile, social and IoT applications.

Corequisites: Take CYB 667.

Offered: Every year, Fall

CYB 670. IoT Security. 1 Credit.

This course covers security as it pertains to embedded devices, embodied by the growth of the Internet of Things (IoT). Students learn about the specific security issues related to embedded devices, including Linux malware, DDoS attacks, botnets, cryptography and personal privacy.

Corequisites: Take CYB 526.

Offered: Every year, Spring

CYB 675. Ethical Hacking and Penetration Testing. 2 Credits.

This course will introduce students to concepts and practices of ethical hacking and penetration testing. Students will learn how to plan, organize, and perform penetration testing on a simple network.

Offered: Spring

CYB 680. Introduction to Cloud Security. 1 Credit.

In this course, students learn fundamentals of Cloud computing and Cloud security. This course covers topics such as shared responsibility models for IaaS, PaaS, SaaS and FaaS, and Cloud Security Alliance CCM. Students get hands-on experience creating secure systems within a commercial Cloud vendor environment.

Offered: Every year, Fall

CYB 681. Securing Workloads in AWS. 1 Credit.

This course covers concepts and practices for securing AWS workloads. Students are introduced to security controls, such as access controls using IAM, logging and auditing, and other AWS security services.

Corequisites: Take CYB 680.

Offered: Every year, Fall

CYB 682. Securing Workloads in Azure. 1 Credit.

This course covers concepts and practices for securing Azure workloads. Students are introduced to security controls, such as access controls using IAM, logging and auditing, and other AWS security services.

Corequisites: Take CYB 680.

Offered: Every year, Fall

CYB 683. Resilient System Design and Development. 1 Credit.

This course introduces students to the concepts of secure system design and cyber resilience. The content of this course includes best security processes recommended in NIST 800-160 and techniques and technologies needed for secure system design and development.

Prerequisites: Take CYB 680.

Offered: Every year, Spring

CYB 684. Resilient System Testing. 1 Credit.

This course introduces students to state-of-the-art concepts and methods to evaluate cyber resiliency. Topics include breach and attack simulation, configuration assessment and compliance. Hands-on experience with systems testing tools is part of this course.

Corequisites: Take CYB 683.

Offered: Every year, Spring

CYB 685. Operating Resilient Systems. 1 Credit.

This course includes hands-on experience with tools for security activities such as intrusion detection and cloud security monitoring. Other topics this course covers include Site Reliability Engineering (SRE), maintaining situational awareness and dynamic threat.

Corequisites: Take CYB 684.

Offered: Every year, Spring

CYB 691. MS Cybersecurity Capstone. 3 Credits.

This capstone course is designed to enable students to directly utilize what has been learned in the tools and applications courses in order to analyze and offer solutions for a major cybersecurity challenge. A definition of the problem, analysis of options and a comprehensive presentation of findings and solutions are required components of the course.

Prerequisites: Permission of the Program Director.

Offered: Every year, Spring and Summer

Engineering (ENR)

ENR 105. Learning Strategies Seminar. 0-1 Credits.

The purpose of this course is to introduce students to evidence-based learning strategies and to help students become self-regulated learners who are capable of achieving their full academic potential. Students reflect upon the fundamental nature of learning and what types of learning activities best facilitate their learning process. In addition, students also explore topics related to achievement motivation and growth mindset. The ultimate goal of this course is to help students not only develop a deeper understanding of these topics, but learn ways that the strategies and tools discussed in class readings and discussions can inform their personal study habits.

Offered: Every year, Fall and Spring

ENR 110. The World of an Engineer. 3 Credits.

This course introduces students to the study and practice of engineering, including overviews of specific disciplines. Participatory focus involves group design projects, hands-on learning, computer work, team building and engineering ethics discussions. In an inquiry-based learning framework, students are introduced to the Grand Challenges for Engineering, as defined by the National Academy of Engineering, to consider global issues from a multidisciplinary perspective.

Offered: Every year, Fall

UC: Breadth Elective

ENR 189. Independent Study. 3 Credits.

Offered: As needed

ENR 210. Engineering Economics and Project Management. 3 Credits.

This course provides an introduction to the concepts of economics/finance/costing and explains how these affect the functioning of engineering projects and contribute to decision making in engineering operations. A portion of the course covers the concepts of project management, team building and leading teams that are used throughout the program and in professional practice.

Prerequisites: Take MA 141 or MA 151.

Offered: Every year, Spring

ENR 300. Special Topics in Engineering Project Management (CAPM) Designation. 1-3 Credits.

Offered: As needed

ENR 395. Professional Development Seminar. 1 Credit.

Through discussions, case studies and guest speakers, students are introduced to topics on engineering professionalism, ethics and licensure as well as relevant innovations in engineering to prepare them to enter the workplace as engineering professionals.

Prerequisites: Junior status in the major or permission of adviser.

Offered: Every year, Fall

ENR 410. School of Engineering Integrative Capstone. 3 Credits.

This course provides students with a culminating and integrative learning experience grounded in their University Curriculum, their major classes, and co-curricular activities. Students explore and evaluate potential solutions to an aspect of one of the 14 Grand Challenges for Engineering, with a focus on the global dimension of the solution. The course may include a service learning or study abroad component.

Prerequisites: Senior status in the major required.

Offered: Every year, Fall and Spring

ENR 490. Engineering Professional Experience. 0-1 Credits.

Students gain experience by employing engineering skills in a professional setting under the guidance of practicing engineers. Students must obtain departmental approval and register prior to starting the experience.

Prerequisites: Take ENR 395 or permission of the adviser.

Offered: As needed

ENR 490H. Engineering Professional Experience. 0-1 Credits.

Students gain experience by employing engineering skills in a professional setting under the guidance of practicing engineers. Students must obtain departmental approval and register prior to starting the experience.

Prerequisites: Take ENR 395 or permission of the adviser.

Offered: As needed

Industrial Engineering (IER)

IER 220. Production Systems (MER 225). 3 Credits.

This course provides an introduction to production systems, classification, general terminology, technical aspects, economics and analysis of manufacturing systems. Students learn the fundamentals of automation and control technologies as well as manufacturing support systems.

Prerequisites: Sophomore status or permission of the instructor.

Offered: Every year, Fall

IER 230. Lean Systems Engineering (MER 235). 3 Credits.

This course provides a comprehensive and hands-on introduction to Lean Systems and its wide applications, with special emphasis on the Toyota Production System.

Corequisites: Take IER 320 or IER 220 or MER 225.

Offered: Every year, Fall

IER 235. Systems Engineering and Management. 3 Credits.

This course discusses the theory and methods used to design, analyze and manage engineered systems. Students review the principles of system life-cycle management including requirements analysis, system design, functional decomposition, configuration management and systems evaluation. Topics of engineering management emphasizing human relationships, motivational theory and human-systems integration also are addressed.

Offered: Every year, Spring

IER 240. Physical Human Factors and the Workplace (MER 245). 1 Credit.

This course analyzes the impacts of the physical factors of the human decision makers on workflow and efficiency. Basic concepts of anthropometry, biomechanics, work physiology, stress and workload as well as work measurement are introduced. Special emphasis is placed on the capabilities and limitations of humans, in human-centered design of systems and products.

Prerequisites: Sophomore status or permission of the instructor.

Offered: Every year, Fall

IER 265. Cognitive Human Factors and the Workplace (MER 265). 2 Credits.

This course analyzes the impacts of the cognitive factors of the human decision makers on workflow and efficiency. Basic concepts of cognition, as well as sensory systems, such as visual and auditory, are introduced, leading to the analysis of design topics, including displays, controls, shiftwork and work-rest schedules. Special emphasis is placed on the capabilities and limitations of humans, in human-centered design of systems and products.

Prerequisites: Sophomore status or permission of the instructor.

Offered: Every year, Fall

IER 280. Data Analytics I. 3 Credits.

The course presents basic techniques of decision making concentrating on both theoretical and modeling aspects. This course integrates the art and science of decision making for single and multiple objective environments to support the decision-making phase of the Systems Decision Process (SDP). The focus of the course is modeling problem structure, uncertainty, risk and preference in the context of decision making.

Corequisites: Take MA 285.

Offered: Every year, Spring

IER 310. Operations Research I (MER 315). 3 Credits.

This course provides a rigorous introduction to the principles of operations research with a focus on linear programming models and simplex method, duality and sensitivity analysis; transportation and assignment problems; network models; integer and nonlinear programming; an introduction to queuing theory and Markov Chains.

Prerequisites: Take one of the following: Take MA 153; or MA 151 and MA 229; or MA 141 and MA 229; or MA 142; or MA 152.

Offered: Every year, Fall

IER 315. Fundamentals of Six Sigma - Black Belt. 3 Credits.

Define-Measure-Analyze-Improve-Control (DMAIC) approach in Six Sigma is an organizational improvement strategy used widely in business applications and Black Belt is the highest belt level among white, yellow, green, and black belts. Students are introduced to the DMAIC steps for improvement of a process and using data-driven measuring, analysis, improvement and controlling techniques to solve the defined problem at Black Belt level. Topics include quality improvement philosophies, modeling process quality, statistical process control, lean techniques, human factors, analysis of data sets, data analytics applications on collected data by using sampling strategies, design of control charts, use of statistical distributions for data analysis and process capability. This course is not for Industrial Engineering majors.

Prerequisites: Take MA 170 EC 272 PS 206 MA 206 MA 285 or another statistics course approved by the instructor. Minimum Grade C-;

Offered: As needed

IER 360. Operations Planning and Control. 3 Credits.

This course focuses on analytical techniques for work scheduling and materials planning in the manufacturing, service and health care industries. The main objective is to develop the ability to use engineering tools for industrial engineering practice in operations and materials management. Topics include forecasting, production and material planning, inventory analysis and scheduling techniques.

Prerequisites: Take MA 285.

Offered: As needed

IER 365. Scheduling in Manufacturing and Health Care with Machine Learning Applications. 3 Credits.

This course introduces students to several scheduling techniques and improvement methodologies utilized in manufacturing and health care. Improvement of manufacturing scheduling by using deterministic optimization modeling for single and parallel machine workflow as well as various shop models such as job shops, flow shops, and open shops are covered. The health care scheduling coverage of the course is based on accessibility to health care systems, scheduling of operations, and wait times of patients. Optimization of health care operations by using mathematical formulation is emphasized. Additionally, machine learning concepts such as supervised learning, unsupervised learning, decision trees, and random forest concepts are covered with applications in manufacturing and health care.

Prerequisites: Take MA 151.

Offered: As needed

IER 370. Industrial Robotics (MER 375). 3 Credits.

Students are introduced to robotics and their use in industrial applications. The topics covered in this course include robotics basic programming, types of robots, drive systems for robots, sensors' use in robotics, robot and computer interaction, improvement and analysis of systems' design using robotics, analysis of systems' design using robotics, and robotics applications in manufacturing, health care and service areas.

Prerequisites: Take CSC 110, CSC 110L, CSC 106 or CSC 109.

Offered: As needed

- IER 375. Statistical Process Control. 3 Credits.**
The main focus in this course is to understand and implement the Define-Measure-Analyze-Improve-Control (DMAIC) approach in Six Sigma. Therefore, defining a problem for improvement of a process and using data-driven measuring, analysis, improvement and controlling techniques to solve the defined problem are the essentials of this course. Topics include quality improvement philosophies, modeling process quality, statistical process control, control charts for variables and attributes, single- and multivariable regression analysis of data sets, sampling strategies, economic design of charts, use of statistical distributions for data analysis and process capability.
Prerequisites: Take MA 285.
Offered: Every year, Fall
- IER 380. Data Analytics II. 2 Credits.**
This course focuses on analytical skill development for extracting meaningful information from data sets by using technology. Analytical skills includes linear and non-linear regressions, ANOVA, hypothesis testing, and predictive data analysis. The technological skillset development includes reading, analyzing and interpreting data sets by learning how to use a software package.
Prerequisites: Take IER 280.
Corequisites: Take IER 381.
Offered: As needed
- IER 381. Data Analytics and Advanced Programming. 1 Credit.**
This course focuses on analytical skill development for extracting meaningful information from data sets by using technology. Analytical skills includes linear and non-linear regressions, ANOVA, hypothesis testing, and predictive data analysis. The technological skillset development includes reading, analyzing and interpreting data sets by learning how to use a software package.
Prerequisites: Take CSC 110, CSC 110L; or CSC 106.
Corequisites: Take IER 380.
Offered: As needed
- IER 400. Special Topics in Industrial Engineering. 1-4 Credits.**
Offered: As needed
- IER 410. Designing and Managing the Supply Chain. 3 Credits.**
This course provides an introduction to the techniques of supply chain management, focusing on logistics, purchasing and product development processes. The main objective is develop competence in quantitative methods for analyzing and solving supply chain problems in a variety of industries that include manufacturing, services and health care. Topics include supply chain performance, network design, product availability and sustainable supply chain management.
Prerequisites: Take IER 360.
Offered: As needed
- IER 420. Industrial Control Systems (MER 425). 3 Credits.**
Students explore classical control systems through modern control methods based on state variable models, feedback models, controllers and full-state observers. Students gain experience in computer-aided design and analysis using Matlab.
Prerequisites: Take IER 220 or MER 225.
Offered: As needed
- IER 425. Quality Engineering and Inspection Systems. 3 Credits.**
The focus of this course is to select and implement quality control solutions for industrial processes. Practical quality control systems are examined for applicability and relevance. Topics include the costs of quality, automated and manual measurement, quality control integration, sampling requirements, ANSI and ISO blueprint reading and geometric dimensioning along with the tolerance calculations. The course demonstrates various systems used in quality control plans and key factors required in developing a quality conscious atmosphere.
Prerequisites: Take IER 230.
Offered: As needed
- IER 440. Simulation. 3 Credits.**
This course includes a simulation of complex systems with applications in industrial engineering. Topics include modeling and developing custom solutions in one or more high-level computer packages; input distribution modeling; emphasizing examples, applications and cases.
Prerequisites: Take MA 285.
Offered: Every year, Spring
- IER 450. Health Care Systems Engineering. 3 Credits.**
This course introduces students to health care organizations, including hospitals, clinics, multihospital systems and other facilities as an integrated delivery system. By emphasizing practical application of diverse operations involved in such a system, various quantitative modeling and optimization techniques are discussed and applied to solve problems.
Prerequisites: Take IER 230
Offered: Every year, Spring
- IER 460. Facilities Layout and Material Handling. 3 Credits.**
The focus of this course is the design of industrial facilities with consideration of work organization and layout. Students study product and process designs as a part of facilities planning, material handling systems, flow systems, departmental planning and layout algorithms, space requirements for facilities, and receiving and shipping principles. The course also covers the engineering techniques used for determining the best location of a brand new facility.
Prerequisites: Take IER 320 or IER 220.
Offered: Every year, Fall
- IER 470. Industrial Robotics and Advanced Programming. 3 Credits.**
Students continue to develop and advance their robotics knowledge introduced in IER 370 - Industrial Robotics - by adding more to their basic robotics programming knowledge. Participants of this course continue to learn about advanced robotics applications in manufacturing, health care, service and systems design.
Prerequisites: Take IER 370.
Offered: As needed
- IER 475. Human Reliability. 1 Credit.**
This course focuses on the principles, methods and tools for the analysis, design and evaluation of human decision making within human-centered systems. The impacts of human perceptual and cognitive factors are analyzed, leading to design principles for error-prevention. This course is complementary to IER 265, Cognitive Human Factors and the Workplace. Sophomore status required.
Offered: Every year, Fall

IER 485. System Reliability. 2 Credits.

This course provides an introduction to failure rates, failure risk analysis and system configurations, such as series, parallel and redundant systems. It also discusses design for reliability and optimal maintenance and replacement policies.

Prerequisites: Take MA 285, MA 142 or MA 152.

Offered: Every year, Fall

IER 489. Advanced Independent Study in IE. 1-6 Credits.

This is a tutorial course or an individual project in which the student pursues advanced study in systems engineering or engineering management. The scope of the course is tailored to the desires of the student in consultation with a faculty adviser. Communication skills are developed with both written reports and oral presentations. Requires approval of faculty member.

Offered: Every year, Fall and Spring

IER 490. Engineering Professional Experience. 0-1 Credits.

Students gain at least 240 hours of experience by employing industrial engineering skills in a professional setting. Students must obtain departmental approval and register prior to starting the experience. Prerequisite may be waived with permission of adviser.

Prerequisites: Take ENR 395.

Offered: Every year, All

IER 491. Capstone Project I. 3 Credits.

This is the first part of a two-semester capstone design experience for senior industrial engineering students. Students apply knowledge gained throughout the curriculum to a significant project. Furthermore, this course aims to strengthen the students' oral and written communication skills as well as teamwork and conflict resolution. Students work in teams to formulate issues and collect data at an external organization before beginning to perform analysis and propose solutions in the subsequent course—IER 498.

Corequisites: Take IER 330 or IER 230; IER 430 or IER 375.

Offered: Every year, Fall

IER 492. Six Sigma - Black Belt Project Experience I. 3 Credits.

This is the first part of a two-semester Six Sigma - Black Belt project experience for students. Students apply knowledge gained throughout IER 315 to a significant project. Furthermore, this course aims to strengthen the students' oral and written communication skills as well as teamwork and conflict resolution. Students work in teams to formulate issues and collect data at an external organization before beginning to perform analysis and propose solutions in the subsequent course IER 497.

Prerequisites: Take IER 315;

Offered: As needed

IER 497. Six Sigma - Black Belt Project Experience II. 3 Credits.

This is the second part of a two-semester capstone design experience for industrial engineering students. The purpose of a capstone project is to give senior students the opportunity to apply knowledge gained throughout the curriculum to a significant project. After formulating the problem and commencing data collection in IER 492, the student teams continue their project in IER 497 by completing data collection, performing analysis and modeling, and finally recommending solutions to help address the client issue(s).

Prerequisites: Take IER 492;

Offered: As needed

IER 498. Capstone Project II. 3 Credits.

This is the second part of a two-semester capstone design experience for industrial engineering students. The purpose of a capstone project is to give senior students the opportunity to apply knowledge gained throughout the curriculum to a significant project. After formulating the problem and commencing data collection in IER 491, the student teams continue their project in IER 498 by completing data collection, performing analysis and modeling, and finally recommending solutions to help address the client issue(s).

Prerequisites: Take IER 491.

Corequisites: Take IER 280 IER 310 IER 360;

Offered: Every year, Spring

Mechanical Engineering (MER)

MER 110. 3D Solid Modeling and Printing for Innovators. 3 Credits.

This course introduces students to 3D solid modeling, allowing users to develop full solid models in a simulated environment for both design and analysis. 3D modeling software finds worldwide use across many disciplines by students, designers, engineers, inventors, artists, and other professionals to produce simple and complex parts, assemblies, and drawings. One can fabricate the models using 3D printing. Students build their own 3D models and use 3D printing to produce a physical prototype. Students also explore applications for this technology, from the biomedical field to architectural design to fashion, gaining an appreciation for its impact in their own lives. No experience is required.

Offered: Fall and Spring

MER 210. Fundamentals of Engineering Mechanics and Design. 3 Credits.

This course provides a foundation in the principles of statics and mechanics of materials while introducing the engineering design process to prepare students for further engineering studies. Equilibrium principles are used to analyze forces on statically determinate rigid bodies and structures.

Corequisites: Take MA 151 (can be taken previous or concurrent).

Offered: Every year, Spring

MER 210L. Fundamentals of Engineering Mechanics and Design Lab. 1 Credit.

Students learn and practice hands-on techniques relevant to statics, such as equilibrium, friction, truss analysis and tension/compression. All experimental results obtained in the lab are analyzed in the context of the theoretical framework presented in the course.

Corequisites: Take MER 210.

Offered: As needed

MER 220. Mechanics of Materials. 3 Credits.

Students study the behavior of materials under normal, shear, torsional, bending and combined loads. Loading, geometry, functional environment and material properties of machine or structural elements are used to relate the forces applied to a body to resulting internal forces and deformations in order to evaluate performance. Practical applications involving the design of mechanical and structural elements under various loading conditions are emphasized.

Prerequisites: Take MER 210; Minimum grade C-.

Offered: Every year, Fall and Spring

MER 220L. Mechanics of Materials Lab. 1 Credit.

Students learn and practice hands-on techniques relevant to mechanics of materials, such as tension, torsion, and bending. All experimental results obtained in the lab are analyzed in the context of the theoretical framework presented in the course.

Corequisites: Take MER 220.

Offered: Every year, Fall and Spring

- MER 221. Dynamics. 3 Credits.**
Dynamics examines the motion of particles, systems of particles and rigid bodies under the influence of forces. It focuses on the use of Newton's Second Law, the Work-Energy Principle and the Impulse-Momentum Principle. The course progresses from rectilinear and curvilinear motion of single particles, through vector motion of systems of particles, to general motion of rigid bodies.
Prerequisites: Take MER 210; Minimum grade C-; and PHY 121.
Offered: Every year, Fall and Spring
- MER 225. Production Systems (IER 220). 3 Credits.**
This course provides an introduction to production systems, classification, general terminology, technical aspects, economics and analysis of manufacturing systems. Students learn the fundamentals of automation and control technologies as well as manufacturing support systems.
Prerequisites: Sophomore status or permission of the instructor.
Offered: Every year, Fall
- MER 230. Engineering Materials. 3 Credits.**
This course explores the relationship between the microscopic structure and macroscopic properties of materials used in engineering applications. The origin of mechanical and physical properties is studied. Emphasis is placed on an understanding of the fundamental aspects of atomic and microstructural concepts for proper materials selection and enhancement of engineering properties. Materials studied are metals, ceramics, polymers and composites.
Prerequisites: Take MER 220, CHE 110.
Offered: Every year, Fall
- MER 230L. Engineering Materials Lab. 1 Credit.**
Students learn and practice hands-on techniques relevant to engineering materials, such as measuring mechanical and physical properties and strengthening mechanisms. All experimental results obtained in the lab are analyzed in the context of the theoretical framework presented in the course.
Corequisites: Take MER 230.
Offered: Every year, Fall
- MER 235. Lean Systems Engineering (IER 230). 3 Credits.**
This course provides a comprehensive and hands-on introduction to Lean Systems and its wide applications, with special emphasis on the Toyota Production System.
Corequisites: Take IER 320 or IER 220 or MER 225.
Offered: Every year, Fall
- MER 240. Introduction to Mechanical Engineering Design. 1 Credit.**
This course introduces mechanical engineering design as an iterative decision-making process. An engineering design problem reinforces the design process instruction and culminates in a student competition.
Prerequisites: Take MER 250.
Offered: Every year, Spring
- MER 245. Physical Human Factors (IER 240). 1 Credit.**
This course analyzes the impacts of the physical factors of the human decision makers on workflow and efficiency. Basic concepts of anthropometry, biomechanics, work physiology, stress and workload as well as work measurement are introduced. Special emphasis is placed on the capabilities and limitations of humans, in human-centered design of systems and products. Sophomore status required.
Prerequisites: Sophomore status or permission of the instructor.
Offered: Every year, Fall
- MER 250. Computer Aided Design. 3 Credits.**
Students explore the use of computer methods as an aid to solving engineering problems. Topics include 3D solid modeling, graphical presentation of information, engineering analysis and engineering computer programming. Students learn to apply a variety of engineering-related programs or routines. Students write, document, and use programs of their own in design scenarios. Considerable emphasis is placed on use of the computer as a tool in the engineering design process.
Prerequisites: Take MA 154 CSC 106 or CSC 110;
Offered: Every year, Fall and Spring
- MER 265. Cognitive Human Factors and the Workplace (IER 265). 2 Credits.**
This course analyzes the impacts of the cognitive factors of the human decision makers on workflow and efficiency. Basic concepts of cognition, as well as sensory systems, such as visual and auditory, are introduced, leading to the analysis of design topics, including displays, controls, shiftwork and work-rest schedules. Special emphasis is placed on the capabilities and limitations of humans, in human-centered design of systems and products. Sophomore status required.
Prerequisites: Sophomore status or permission of the instructor.
Offered: Every year, Fall
- MER 310. Fluid Mechanics. 3 Credits.**
This course focuses on fluid mechanics while introducing and integrating corresponding topics of thermodynamics. Properties of fluids and hydrostatics as well as conservation principles for mass, energy and linear momentum are covered. Principles are applied to incompressible flow in pipes, external flows, Bernoulli's equation, dimensional analysis, Navier-Stokes, boundary layer development, lift and drag. Laboratory exercises are incorporated into classroom work.
Prerequisites: Take MA 251, PHY 121, MER 210.
Corequisites: Take MA 365 or MA 265.
Offered: Every year, Fall
- MER 315. Operations Research I (IER 310). 3 Credits.**
This course provides a rigorous introduction to the principles of operations research with a focus on linear programming models and simplex method, duality and sensitivity analysis; transportation and assignment problems; network models; integer and nonlinear programming; an introduction to queuing theory and Markov Chains
Prerequisites: Take MA 153; or MA 151 and MA 229; or MA 141 and MA 229; or MA 142; or MA 152;
Offered: Every year, Fall
- MER 320. Thermodynamics. 3 Credits.**
This course focuses on thermodynamics, while incorporating and building upon fluid mechanics topics covered in MER 310. It applies conservation principles for mass, energy and linear momentum as well as the second law of thermodynamics. Principles are applied to power generation systems, refrigeration cycles and total air conditioning. Thermodynamic principles also are applied to the automotive system to examine engine performance (Otto and Diesel cycles) and to high performance aircraft to examine the Brayton cycle.
Prerequisites: Take CHE 110; MER 310, Minimum grade C-.
Offered: Every year, Spring

- MER 330. Introduction to Circuits. 3 Credits.**
Students are introduced to DC circuit analysis, DC circuit design and AC circuit analysis. The course also includes electrical engineering topics required to prepare students for the Fundamentals of Engineering examination as a part of professional licensure. Students learn the language, tools and problem-solving techniques used in basic electrical circuit analysis.
Corequisites: Take PHY 122
Offered: Every year, Fall and Spring
- MER 330L. Introduction to Circuits Lab. 1 Credit.**
Students learn and practice hands-on techniques relevant to circuit analysis, such as bread board prototyping, voltage and current measurements, soldering, and basic data acquisition. All experimental results obtained in the lab are analyzed in the context of the theoretical framework presented in the course.
Corequisites: Take MER 330.
Offered: Every year, Fall and Spring
- MER 340. Manufacturing/Machine Component Design. 3 Credits.**
This course introduces machine component design and manufacturing, relating fundamental engineering science to machine components. It covers load, stress and strain analyses, and fatigue. The course progresses to the study of machine component design, including mechanical components such as linkages, fasteners, springs, bearings, gears and shafts.
Prerequisites: Take MER 220, MER 221 MER 250; Minimum grade C-.
Offered: Every year, Fall and Spring
- MER 340L. Manufacturing/Machine Component Design Lab. 1 Credit.**
Working primarily in the machine shop, this laboratory provides experiential learning in the context of manufacturing. Students learn techniques, use tools and operate machines used in a manufacturing environment under appropriate supervision. A series of measurement and fabrication exercises culminate in the team-oriented design and manufacture of a mechanical engineering product.
Corequisites: Take MER 250 Must be of Junior Standing;
Offered: Every year, Fall
- MER 350. Mechanical Engineering Design. 3 Credits.**
This course is the first in a two-course sequence which integrates all previously acquired knowledge and skills. Students begin their major design experience project, applying the mechanical engineering design process to a real-world engineering problem addressing social, political, economic, technical, global and environmental issues. Students continue their project in MER 498.
Prerequisites: Take MER 240 MER 250 MER 340 MER 340L MER 330 MER 330L Minimum grade C-;
Offered: Every year, Fall
- MER 360. Heat Transfer. 3 Credits.**
The three modes of heat transfer—conduction, convection and radiation—are studied in detail, and these concepts are applied to analyze various engineering systems. The principles of conduction, and convection are applied to the analysis of heat exchangers and all three modes of heat transfer are applied together to study scenarios of multi-mode heat transfer.
Prerequisites: Take MER 320 MER 310;.
Offered: Every year, Fall
- MER 375. Industrial Robotics (IER 370). 3 Credits.**
Students are introduced to robotics and their use in industrial applications. The topics covered in this course include robotics basic programming, types of robots, drive systems for robots, sensors' use in robotics, robot and computer interaction, improvement and analysis of systems' design using robotics, analysis of systems' design using robotics, and robotics applications in manufacturing, health care and service areas.
Prerequisites: Take CSC 110, CSC 110L, CSC 106 or CSC 109.
Offered: As needed
- MER 387. Introduction to Applied Aerodynamics. 3 Credits.**
The fundamental laws of fluid mechanics are used to develop the characteristic forces and moments generated by the flow about aerodynamic bodies. Lift, drag and aerodynamic moments are studied for airfoils (2D) and finite wings (3D) in the subsonic flow regime. Aircraft performance and design parameters are developed in both the classroom and laboratory sessions. The laboratory sessions include low-speed wind tunnel testing.
Prerequisites: Take MER 221, MER 310.
Corequisites: Take MER 320.
Offered: Every year, Spring
- MER 388. Helicopter Aeronautics. 3 Credits.**
This course examines the aerodynamics of helicopter flight in relation to hover, translating and partial power flight. Theory and experimental results are used to predict aircraft performance. The course analyzes the dynamic response of the rotor system and the performance aspects of the vehicle as a whole. This is followed by a design workshop, during which students complete the initial sizing of a helicopter to meet specific mission requirements. The course includes a laboratory examining rotor power and thrust utilizing a whirl stand apparatus, and one field trip to a commercial helicopter company.
Prerequisites: Take MER 210, MER 250, MER 310.
Offered: Every year, Spring
- MER 399. Special Topics. 1-3 Credits.**
Offered: As needed
- MER 425. Industrial Control Systems (IER 420). 3 Credits.**
Students explore classical control systems through modern control methods based on state variable models, feedback models, controllers and full-state observers. Students gain experience in computer-aided design and analysis using Matlab.
Prerequisites: Take IER 220 or MER 225.
Offered: As needed
- MER 450. Environmentally Conscious Design and Manufacturing. 3 Credits.**
Students learn to identify, quantify and reduce environmental impacts caused by products. Impact reduction methods form the course's core subject matter. Such methods include: design for recycling, design for remanufacture, life cycle assessment, biomimetics and others. The course also provides an overview of motivational legislation from North America and Europe. Through lecture, discussion, assignments, case studies, and a semester project, students achieve a critical understanding of the role environmental issues play in mechanical engineering.
Prerequisites: Take MER 340.
Offered: Every year, Fall

MER 460. Mechanical Measurement and Data Acquisition. 3 Credits.

In this course, students learn how to perform computer-based measurements of various mechanical phenomena such as displacement, temperature, force, strain, torque, pressure, flow, vibration and acceleration. This is a hands-on course that starts with the basics of sensors and transducers, and walks the students through signal conditioning electronics, instrumentation, data acquisition and signal analysis. A significant portion of this course focuses on LabVIEW, an industry-standard graphical programming language that is widely used for data acquisition and analysis.

Prerequisites: Take CSC 110, CSC 110L or CSC 106; and MER 330, MER 330L.

Offered: Every year, Fall

MER 470. Dynamic Modeling and Control. 3 Credits.

This course covers dynamic modeling and control of linear systems. It includes an overview of classical control theory as the foundation for control applications in mechanical, electrical and aeronautical systems. Mathematical models are developed for various physical systems, and represented in time-domain, Laplace domain, and State-Space. Control system analysis and design techniques are studied within the context of transient and steady-state response.

Prerequisites: Take MER 221, MER 330, MER 330L, MER 250; and MA 265 or MA 365.

Offered: Every year, Spring

MER 470L. Dynamic Modeling and Controls Lab. 1 Credit.

Laboratory exercises include electronic instrumentation of sensors and actuators and microcontroller-based control-system implementations (open-loop and closed-loop). In addition, students learn to simulate dynamic models and controllers using MATLAB and Simulink and perform experimental validation of simulated models.

Prerequisites: Take MER 330L.

Corequisites: Take MER 470.

Offered: Every year, Spring

MER 475. Mechatronics. 3 Credits.

This course presents an introduction to the field of mechatronics. Mechatronics combines elements of mechanics, electric circuits, programming and engineering design in order to create useful electro-mechanical and robotic devices. This is a hands-on, project-based course where students learn basic electronic and programming techniques to integrate various sensors, motors and actuators into moving mechanical platforms.

Prerequisites: Take CSC 110 or CSC 109 or CSC 106; and MER 330, MER 330L, MER 340, MER 340L.

Offered: As needed

MER 489. Advanced Study in Mechanical Engineering. 3 Credits.

The student pursues advanced study of a topic in mechanical engineering on an individual or small-group basis, independent of a formal classroom setting. Similar to graduate level research, the scope of the selected project is tailored to the interests of the student, based on resources and in consultation with a faculty adviser. To develop research skills, the student is integral in all phases of project completion by defining objectives, studying fundamentals and background material, outlining the approach, conducting analysis and communicating results. Requires permission of the instructor.

Offered: Every year, Fall and Spring

MER 490. Engineering Professional Experience. 0-1 Credits.

Students gain experience by employing engineering skills in a professional setting under the guidance of practicing engineers. Students must obtain departmental approval and register prior to starting the experience.

Prerequisites: Take ENR 395 or permission of instructor.

Offered: Every year, All

MER 491. Biomedical Engineering. 3 Credits.

In this introductory course to biomedical engineering, students analyze biomedical implantable and prosthetic devices and explore topics such as biocompatibility, biomechanical properties of biological tissue, device design, as well as factors that go into medical device development and testing. Hands on labs are incorporated into the course to provide a more in-depth immersion into specific course topics. This course focuses on developing lifelong learning skills and service learning. As part of this focus area, students develop a STEM activity to teach a biomedical engineering topic to elementary students.

Prerequisites: Take MER 220.

Offered: Every year, Spring

MER 498. ME Major Design Experience. 3 Credits.

This course integrates math, science and engineering principles using a comprehensive engineering design project. Open-ended, client-based design problems emphasize a multidisciplinary approach to total system design. Design teams develop product specifications, generate alternatives, make practical engineering approximations, perform appropriate analysis to support technical feasibility, and make decisions leading to designs that meet stated requirements. System integration, computer-aided design, maintainability and fabrication techniques are addressed.

Prerequisites: Take MER 350.

Offered: Every year, Spring

MER 499. Senior Design Project II. 3 Credits.

A two-semester, six credit capstone design experience for mechanical engineering students involving analysis and synthesis of unstructured problems in practical settings. Students work in teams to formulate issues, propose solutions, and communicate results in formal written and oral presentations.

Prerequisites: Take MER 340.

Offered: Every year, Spring

Software Engineering (SER)

SER 120. Object-Oriented Design and Programming. 3 Credits.

This course serves as an introduction to the principles of design and development using object-oriented techniques such as inheritance, polymorphism and encapsulation. Students apply OO techniques to develop event-driven programs. Code craftsmanship is emphasized. Students also learn to apply and recognize design patterns for OO software and to use standard application development frameworks.

Prerequisites: Take CSC 110 and CSC 110L; or CSC 107 with Program Director approval; Minimum grade C-.

Corequisites: Take SER 120L.

Offered: Every year, Fall and Spring

- SER 120L. Object-Oriented Design and Programming Lab. 1 Credit.**
Students gain experience in object-oriented programming and design by completing a series of activities, covering a range of topics from the Object-Oriented Design and Programming course (SER 120). This course is taken in conjunction with SER 120.
Prerequisites: Take CSC 110 and CSC 110L; or CSC 107 with Program Director approval; Minimum grade C-.
Corequisites: Take SER 120.
Offered: Every year, Fall and Spring
- SER 175. Introductory Topics in Software Engineering. 1-3 Credits.**
This course explores introductory software engineering topics not available in other courses as well as new topics as they emerge in this rapidly evolving discipline. Topics may be interdisciplinary. This course does not count as an elective in the major.
Prerequisites: Take CSC 110 CSC 106 or GDD 140; Minimum grade C-;
Offered: As needed
- SER 210. Software Engineering Design and Development. 3 Credits.**
This course serves as an introduction to software engineering using object-oriented analysis and design. The course emphasizes the development of robust and high-quality software systems based on object-oriented principles. Implementations are performed using state-of-the-art programming languages and application development frameworks.
Prerequisites: Take SER 120, SER 120L; Minimum grade C-.
Offered: Every year, Spring
- SER 225. Introduction to Software Development. 3 Credits.**
This course presents introductory software development concepts including group development, large-scale project work and theoretical aspects of object-oriented programming. The course expands on material from previous courses. Professional behavior and ethics represent an important component of this course.
Prerequisites: Take CSC 111, CSC 111L; Minimum grade C-.
Offered: Every year, Fall
- SER 275. Topics in Software Engineering. 1-3 Credits.**
This course explores general software engineering topics not available in other courses, as well as new topics as they emerge in this rapidly evolving discipline. Topics may be interdisciplinary.
Prerequisites: Take SER 120; Minimum grade C-;
Offered: As needed
- SER 300. Advanced Topics in Computer Science (CSC 375). 3 Credits.**
This course explores advanced computer science topics not available in other courses, as well as new topics as they emerge in this rapidly evolving discipline. Topics may be interdisciplinary.
Prerequisites: Take CSC 215, CSC 225; Minimum grade C-.
Offered: Every year, Spring
- SER 305. Advanced Computational Problem Solving. 3 Credits.**
This course presents computational problem solving and advanced algorithmic thinking techniques. It expands on material from previous courses. Students also learn about advanced APIs and software development frameworks, including APIs for advanced collections and concurrent programming, and gain additional experience with frameworks for testing and building software systems.
Prerequisites: Take CSC 215, SER 120, SER 120L; Minimum grade C-.
Offered: Every year, Fall
- SER 310. Human-Computer Interaction. 3 Credits.**
This course addresses concepts in human-computer interaction (HCI). Students learn about interaction design, information visualization, and usability. The course covers cognitive aspects of HCI and methods for evaluating user interfaces.
Prerequisites: Take CSC 215, CSC 225; Minimum grade C-.
Offered: As needed
- SER 320. Software Design and Architecture. 3 Credits.**
Students explore software design methodologies, architectural styles, design principles and design techniques. The course examines the principles and methods of architectural design and detailed design of complex, large-scale software systems and covers a number of architectural styles including classical and emerging styles.
Prerequisites: Take SER 340; Minimum grade C-.
Offered: Every year, Spring
- SER 325. Databases (CSC 325). 3 Credits.**
Students are introduced to the theory and application of database systems. Topics include data modeling and the relational model, query languages, relational database design, transaction processing, databases and physical database design.
Prerequisites: Take CSC 215 and CSC 225 or SER 225 Minimum grade C-.
Offered: Every other year, Spring
- SER 330. Software Quality Assurance. 3 Credits.**
This course acquaints students with various aspects of software quality assurance. Students learn about dynamic analysis approaches, such as testing and runtime assertions, static analysis approaches, such as reviews and finite-state verification, and processes for promoting software quality. Emphasis is placed on testing, including testing processes, such as unit, integration, system, acceptance and regression testing, and test case selection techniques, such as black-box and white-box testing. The relationship between ethics and software quality assurance is explored.
Prerequisites: Take SER 210; Minimum grade C-.
Offered: Every year, Spring
- SER 340. Full-Stack Development 1: Software Requirements Analysis. 3 Credits.**
This course covers basic concepts and principles of software requirements engineering including techniques, processes and tools for specifying software requirements. Students learn software prototyping and front-end web development using the latest technologies. Topics include: Layout and responsive design, interactive web development, and functional web programming.
Prerequisites: Take SER 210; Minimum grade C-.
Offered: Every year, Fall
- SER 341. Full-Stack Development 2: Software Design. 3 Credits.**
This course covers software design methodologies, architectural styles, design principles and design techniques. Students learn back-end web development including building a web service, non-relational databases, routing, authentication and state-of-the-art front-end frameworks.
Prerequisites: Take SER 340; Minimum grade C-.
Offered: Every year, Spring

SER 350. Software Project Management. 3 Credits.

This course acquaints students with various aspects of software project management. Students learn about project initiation and scope definition; project planning, enactment and closure; measuring and controlling software artifacts and processes; risk management; and human aspects of software project management. Students use various tools for software project management and obtain hands-on experience by acting as managers of an ongoing software project.

Prerequisites: Take SER 210 SER 225; Minimum grade C-.

Offered: Every year, Fall

SER 359. Transfer Equivalent. 3 Credits.**SER 360. Software Engineering in Health Care. 3 Credits.**

Biomedical informatics is one of the fastest growing economic sectors in the world. Software, and thus software engineering, has an important role in biomedical informatics. Students in this course explore the applicability of software engineering techniques to health care. Topics include electronic health records; modeling and analysis of medical processes with the goal of improving safety and efficiency; software solutions for providing clinical decision support; and bioinformatics.

Prerequisites: Take CSC 215, CSC 225; Minimum grade C-.

Offered: Every other year, Fall

SER 375. Advanced Topics in Software Engineering. 1-3 Credits.

Software engineering is a rapidly evolving discipline. This course explores advanced software engineering topics that are not covered in any current software engineering course, or expands on topics currently offered in the catalog. A specific course's focus may be interdisciplinary.

Prerequisites: Take SER 225; Minimum grade C-.

Offered: As needed

SER 399. Independent Study. 1-3 Credits.

Independent study courses are individual examinations of topics within the discipline not covered by conventional courses. Students who wish to engage in independent study must work with a departmental faculty. Students and faculty must agree on a topic, structure and meeting schedule.

Offered: As needed

SER 490. Engineering Professional Experience. 0-1 Credits.

Students gain practical experience in applying theory obtained in previous course experiences by employing engineering skills in a professional setting under the guidance of faculty and mentors. Students must obtain departmental approval and register prior to starting the experience. If approved, an internship could satisfy this requirement.

Prerequisite may be waived with permission of adviser.

Prerequisites: Take ENR 395; Minimum grade C-.

Offered: Every year, All

SER 491. Senior Capstone I. 3 Credits.

This is the first part of a two-semester, capstone design experience for software engineering students. It involves analysis and synthesis of unstructured problems in practical settings. Students work in teams to formulate issues, propose solutions and communicate results in formal written and oral presentations

Corequisites: Take SER 340.

Offered: Every year, Fall

SER 492. Senior Capstone II. 3 Credits.

This is the second part of a two-semester, capstone design experience for software engineering students. Students work in teams to refine software artifacts developed in SER 491 and produce a prototype of a software system. Results are communicated in formal written and oral presentations.

Prerequisites: Take SER 491; Minimum grade C-.

Offered: Every year, Spring

Bachelor of Arts in Computer Science

Program Contact: Jonathan Blake (Jonathan.Blake@quinnipiac.edu)
203-582-8539

Computers and computing have become increasingly integrated into our society and continually shape our lives. One does not have to look far to find examples of computing's significant impact, from smart phone applications to credit checking systems to self-driving cars. Society needs graduates with not only strong technical skills but also significant knowledge in these application domain areas. The Bachelor of Arts in Computer Science program offers a balanced curriculum that supports students as they combine study in computer science with other disciplines across the university. The program promotes this interdisciplinary work by providing a technical core with breadth requirements, a flexible elective structure, and required directed study outside the major. The curriculum is designed to prepare students to contribute to both established and emerging application domains.

BA in Computer Science Curriculum

Note: a minimum grade of C- is required for all computer science course prerequisites unless otherwise stated.

Within the policies of the School of Computing and Engineering, the Computer Science program enforces credit limits during the academic terms. Exceeding 18 credits in the Fall or Spring semesters, 4 credits in the January term, or 10 credits in each Summer term requires the approval of the dean's office.

Code	Title	Credits
University Curriculum		
Foundations of Inquiry:		
FYS 101	First-Year Seminar	3
EN 101	Introduction to Academic Reading and Writing	3
EN 102	Academic Writing and Research	3
Quantitative Literacy:		
MA 205	Introduction to Discrete Mathematics (CSC 205)	3
Disciplinary Inquiry:		
Take four UC courses from within Sciences (with lab), Humanities, Social Sciences, Fine Arts: ¹		13
Personal Inquiry I:		
Take three UC courses from within Sciences, Humanities, Social Sciences, Fine Arts ¹		
Personal Inquiry II:		
Choose one of the following: ²		
MA 141	Calculus of a Single Variable	
MA 229	Linear Algebra	

Take additional UC credits (the mathematics elective below could count) ⁴

Personal Inquiry I and Personal Inquiry II Total	18
Integrative Capstone	3
Additional Requirements:	
MA elective ⁵	3
ENR 395 Professional Development Seminar	1
Directed Study	
Complete minimum 18 credits of approved directed study outside Computer Science ⁶	18
Computer Science Core Requirements	
CSC 110 Programming and Problem Solving & 110L and Programming and Problem Solving Lab	4
CSC 111 Data Structures and Abstraction & 111L and Data Structures and Abstraction Lab	4
SER 120 Object-Oriented Design and Programming & 120L and Object-Oriented Design and Programming Lab	4
CSC 210 Computer Architecture and Organization	3
CSC 215 Algorithm Design and Analysis	3
CSC 225 Introduction to Software Development	3
CSC 493 Senior Thesis 1	1
CSC 494 Senior Thesis 2	3
CSC Electives (Take 9 credits of CSC elective courses) ³	9
Total Credits	102

¹ Courses must be from different areas.

² Counts in this category only if MA 141 is taken.

³ Can be a software engineering elective (SER 210 or any 300-level or above SER course).

⁴ Must meet a minimum of 18 credits in Personal Inquiry I & II.

⁵ Must be MA 140 or higher.

⁶ A minor or second major will satisfy this requirement.

Complete additional coursework to reach 120 credits. This coursework must include any missing UC credits from Personal Inquiry above.

Student Outcomes

Graduates of the program will have an ability to:

- Analyze a complex computing problem and apply principles of computing and other relevant disciplines to identify solutions.
- Design, implement and evaluate a computing-based solution to meet a given set of computing requirements at the confluence of computer science and another discipline.
- Communicate effectively in a variety of professional contexts.
- Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.

e. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.

f. Apply computer science theory and software development fundamentals to produce computing-based solutions.

Program Educational Objectives

Within four to seven years of graduation, graduates of the Computer Science BA program are expected to:

- Apply advanced computer science knowledge and skills.
- Communicate complex ideas and problems to a professional audience.
- Demonstrate ethical behavior and capacity for finding computing solutions that consider both the technical and social consequences of their work.
- Demonstrate leadership and mentorship, and contribute to their profession and community.
- Pursue intellectual, personal and professional development.

Admission Requirements: School of Computing and Engineering

The requirements for admission into the undergraduate School of Computing and Engineering programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the **Admissions** page of this catalog.

Seamless Transfer Agreement with Gateway Community College (GCC), Housatonic Community College (HCC) and Norwalk Community College (NCC)

Under this Transfer Agreement, GCC, HCC and NCC graduates will be guaranteed admission into a bachelor's degree program with third year (junior) status at Quinnipiac University on the condition that they:

- Graduate with an associate in arts, an associate in science in business, College of Technology engineering science and computer science, nursing or an allied health degree with a minimum cumulative GPA of 3.0 (this may be higher in specific programs).
- Satisfy all other Quinnipiac University transfer admission requirements and requirements for intended major.

Quinnipiac University agrees to accept the general education embedded in these associate degree programs in accordance with Quinnipiac preferred choices for general education as meeting all the requirements of its undergraduate general education except for the Integrative Capstone Experience and where courses are encumbered by the major (e.g., General Chemistry for the Disciplinary Inquiry Natural Science requirement for a Biochemistry major).

Suggested Transfer Curriculum for BA in Computer Science

A minimum of 60 credits is required for transfer into the BA in Computer Science program. Below is a sample plan of study for the first two years.

Bachelor of Science in Civil Engineering

Program Contact: John Greenleaf
(john.greenleaf@quinnipiac.edu) 203-582-5018

The BS in Civil Engineering has a broad-based curriculum that provides exposure to technical issues and design in a number of civil engineering sub-disciplines including: structural, environmental, geotechnical, hydraulic/water resources and construction management. Civil engineering projects are often multidisciplinary in nature and can involve large public works. Specifically, civil engineers design, build and maintain a variety of projects including: roads, buildings, tunnels, retaining walls, dams, bridges, airports, water supplies and sewerage systems.

Through exposure to the University Curriculum, foundational coursework in science and mathematics, major field courses and extracurricular

activities, students graduating with a BS in Civil Engineering achieve intellectual proficiencies in critical thinking and reasoning, scientific literacy, quantitative reasoning, information fluency, creative thinking and visual literacy. They also achieve interpersonal proficiencies in written and oral communication, responsible citizenship, diversity awareness and sensitivity, and social intelligence.

BS in Civil Engineering Curriculum

The program requires 124 credits as outlined here:

A minimum grade of C- is required to satisfy the prerequisites of all civil engineering courses having the CER designation.

Within the policies of the School of Computing and Engineering, the Civil Engineering program enforces credit limits during the academic terms. Exceeding 18 credits in the Fall or Spring semesters, 4 credits in the January term, or 10 credits in each Summer term requires the approval of the dean's office.

Code	Title	Credits
University Curriculum		
Foundations of Inquiry:		
FYS 101	First-Year Seminar	3
EN 101	Introduction to Academic Reading and Writing	3
EN 102	Academic Writing and Research	3

ENR 110	The World of an Engineer	3
MA 151	Calculus I	4
PHY 121	University Physics	4
Two courses from Humanities, Social Science, Fine Arts (must be from two different areas)		6
Integrative Capstone:		
University Capstone		3
Intercultural Understanding		
3 credits within the breadth component of the university curriculum (everything other than foundations of inquiry) must be from classes marked as "I" (intercultural understanding).		
In addition to the University Curriculum requirements, students majoring in Civil Engineering must take the following:		
Foundational Courses for Civil Engineering		
MA 153	Calculus II: Part A	2
MA 154	Calculus II: Part B	2
MA 251	Calculus III	4

CSC 106	Introduction to Programming for Engineers	3
Science Technical Elective (Take one of the following):		4
CHE 111 & 111L	General Chemistry II and General Chemistry II Lab	
PHY 122	University Physics II	
BIO 102 & 102L	General Biology II and General Biology Lab II	
Common Engineering Curriculum		
ENR 210	Engineering Economics and Project Management	3
ENR 395	Professional Development Seminar	1
Civil Engineering Courses		
MER 210	Fundamentals of Engineering Mechanics and Design	3
MER 220 & 220L	Mechanics of Materials and Mechanics of Materials Lab	4
MER 310	Fluid Mechanics	3
CER 210	Infrastructure Engineering	3
CER 220 & 220L	Civil Engineering Site Design and Civil Engineering Site Design Lab	3
CER 310	Structural Analysis	3
CER 325	Concrete Materials	1
CER 330 & 330L	Fundamentals of Environmental Engineering and Fundamentals of Environmental Engineering Lab	3
CER 340 & 340L	Introduction to Geotechnical Engineering and Foundation Design and Introduction to Geotechnical Engineering and Foundation Design Lab	4
CER 350 & 350L	Hydrology/Hydraulic Design and Hydrology/Hydraulic Design Lab	4
CER 420	Design of Concrete Structures	3
CER 445	Advanced Geotechnical Engineering and Foundation Design	3
CER 455	Advanced Environmental Engineering	3
CER 490	Engineering Professional Experience	0
CER 497	Design of Civil Engineering Systems I	3
CER 498	Design of Civil Engineering Systems II	3
Select two Civil Engineering Electives		6
Technical Elective ¹		3
Total Credits		124

¹ Includes any CER elective or a 200-level or higher MER, IER, SER, MA, BIO or CHE course with program director approval.

Student Outcomes

Attainment of the following competencies prepares graduates to enter the professional practice of engineering:

- an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental, and economic factors.
- an ability to communicate effectively with a range of audiences.
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives.
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Program Educational Objectives

Within four to seven years following graduation, graduates of the civil engineering program shall become successful professionals recognized for their:

- Ability to apply new knowledge, tools and technology to find sustainable solutions to the problems of a rapidly changing world.
- Communication of complex ideas and problems to a professional audience.
- Professionalism and ability to consider the technical, social and ethical consequences of their work.
- Leadership, mentorship and contributions to their profession and community.
- Pursuit of intellectual, personal and professional development.

Admission Requirements: School of Computing and Engineering

The requirements for admission into the undergraduate School of Computing and Engineering programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

Bachelor of Science in Computer Science

Program Contact: Christian Duncan (Christian.Duncan@quinnipiac.edu)
203-582-3817

Pervasive and ever-changing computing technology provides the infrastructure for our globally connected world. Computer scientists are among the professionals who conceive, design, build and deploy critical software and hardware to support and advance this infrastructure. The Computer Science program prepares computer scientists who are able to contribute immediately and effectively to this project. Computer Science graduates possess a solid grounding in core knowledge that they can apply to solve new and emerging problems with innovative solutions. Since new computing knowledge is regularly generated, computer science graduates are able to independently identify, learn and apply new concepts.

BS in Computer Science Curriculum

Note: a minimum grade of C- is required for all computer science course prerequisites unless otherwise stated.

Within the policies of the School of Computing and Engineering, the Computer Science program enforces credit limits during the academic terms. Exceeding 18 credits in the Fall or Spring semesters, 4 credits in the January term, or 10 credits in each Summer term requires the approval of the dean's office.

SER 120 Object-Oriented Design and Programming & 120L and Object-Oriented Design and Programming Lab	4
CSC 210 Computer Architecture and Organization	3
CSC 215 Algorithm Design and Analysis	3
SER 225 Introduction to Software Development	3
CSC 310 Operating Systems and Systems Programming	3
CSC 315 Theory of Computation (MA 315)	3
CSC 325 Database Systems (SER 325)	3
CSC 340 Networking and Distributed Processing	3
CSC 491 Senior Project I	3
CSC 492 Senior Project II	3

CSC Electives (Take 9 credits of CSC elective courses) ³	9
Total Credits	104

¹ Must take the full-year sequence.

² Courses must be from different areas.

³ Can be a software engineering elective (SER 210 or any 300-level or above SER course).

⁴ Must meet a minimum of 18 credits in Personal Inquiry I & II.

⁵ Total math credits must equal a minimum of 15.

⁶ MA 151 (Calculus I) can also count.

Complete additional coursework to reach 120 credits. This coursework must include any missing UC credits from Personal Inquiry above.

Student Outcomes

Graduates of the program will have an ability to:

- Analyze a complex computing problem and apply principles of computing and other relevant disciplines to identify solutions.
- Design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
- Communicate effectively in a variety of professional contexts.
- Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
- Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
- Apply computer science theory and software development fundamentals to produce computing-based solutions.

Program Educational Objectives

Within four to seven years of graduation, graduates of the Computer Science BS program are expected to:

- Apply advanced computer science knowledge and skills.
- Communicate complex ideas and problems to a professional audience.
- Demonstrate ethical behavior and capacity for finding computing solutions that consider both the technical and social consequences of their work.
- Demonstrate leadership and mentorship, and contribute to their profession and community.
- Pursue intellectual, personal and professional development.

Admission Requirements: School of Computing and Engineering

The requirements for admission into the undergraduate School of Computing and Engineering programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in

the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the **Admissions** page of this catalog.

Seamless Transfer Agreement with Gateway Community College (GCC), Housatonic Community College (HCC) and Norwalk Community College (NCC)

Under this Transfer Agreement, GCC, HCC and NCC graduates will be guaranteed admission into a bachelor's degree program with third year (junior) status at Quinnipiac University on the condition that they:

- Graduate with an associate in arts, an associate in science in business, College of Technology engineering science and computer science, nursing or an allied health degree with a minimum cumulative GPA of 3.0 (this may be higher in specific programs).
- Satisfy all other Quinnipiac University transfer admission requirements and requirements for intended major.

Quinnipiac University agrees to accept the general education embedded in these associate degree programs in accordance with Quinnipiac preferred choices for general education as meeting all the requirements of its undergraduate general education except for the Integrative Capstone Experience and where courses are encumbered by the major (e.g., General Chemistry for the Disciplinary Inquiry Natural Science requirement for a Biochemistry major).

Suggested Transfer Curriculum for BS in Computer Science

A minimum of 60 credits is required for transfer into the BS in Computer Science program. Below is a sample plan of study for the first two years.

Course	Title	Credits
First Year		
Fall Semester		
English I		3
Calculus I		4

Bachelor of Science in Industrial Engineering

Program Contact: Emre Tokgoz (emre.tokgoz@quinnipiac.edu)
203-582-7909

Industrial engineers are employed throughout various industries, including manufacturing, health care and service, to determine the most effective and efficient ways to utilize resources. Industrial engineers are concerned with increasing productivity through the effective management of people, processes and technology. Through exposure to the University Curriculum, foundational coursework in science, mathematics, major field courses and extracurricular activities, students graduating with a BS in Industrial Engineering achieve intellectual proficiencies in critical thinking and reasoning, scientific literacy, quantitative reasoning, information fluency and creative thinking and visual literacy. They also achieve interpersonal proficiencies in written and oral communication, responsible citizenship, diversity awareness and sensitivity and social intelligence.

BS in Industrial Engineering Curriculum

The program requires 120 credits. Students must complete the following requirements:

Within the policies of the School of Computing and Engineering, the Industrial Engineering program enforces credit limits during the academic terms. Exceeding 18 credits in the Fall or Spring semesters, 4 credits in the January term, or 10 credits in each Summer term requires the approval of the dean's office.

Code	Title	Credits
University Curriculum		
Foundations of Inquiry:		
FYS 101	First-Year Seminar	3
EN 101	Introduction to Academic Reading and Writing	3
EN 102	Academic Writing and Research	3
Quantitative Literacy:		
MA 285	Applied Statistics	3
Disciplinary Inquiry:		
CHE 110 & 110L	General Chemistry I and General Chemistry I Lab	4
	Humanities	3
	Social Science	3
	Fine Arts	3
Personal Inquiry:		

Part 1:		
BIO 101 & 101L	General Biology I and General Biology I Lab	4
Humanities, Social Science, Fine Arts (2 classes; must be from two different areas)		6

Part 2:		
ENR 110	The World of an Engineer	3
MA 151	Calculus I	4
PHY 121	University Physics	4

Integrative Capstone:		
University Capstone		3

In addition to the University Curriculum, students majoring in Industrial Engineering must complete the following requirements:

Foundational Courses for Industrial Engineering		
MA 153	Calculus II: Part A	2
MA 154	Calculus II: Part B	2
Take one of the following CSC Courses		3-4
CSC 106	Introduction to Programming for Engineers	

or

CSC 110 & 110L	Programming and Problem Solving and Programming and Problem Solving Lab	
----------------	---	--

Select minimum of seven credits of the following Mathematics and Science Electives: 7

BIO 102	General Biology II	
BIO 208	Introduction to Forensic Science	
CHE 111	General Chemistry II	
MA 205	Introduction to Discrete Mathematics (CSC 205)	
MA 229	Linear Algebra	
MA 251	Calculus III	
MA 265	Matrix Algebra and Differential Equations ¹	
MA 301	Foundations of Advanced Mathematics	
MA 365	Ordinary Differential Equations	
PHY 122	University Physics II	

Common Engineering Curriculum		
ENR 210	Engineering Economics and Project Management	3
ENR 395	Professional Development Seminar	1

Industrial Engineering Courses		
IER 220	Production Systems (MER 225)	3
IER 230	Lean Systems Engineering (MER 235)	3
IER 240	Physical Human Factors and the Workplace (MER 245)	1
IER 265	Cognitive Human Factors and the Workplace (MER 265)	2
IER 280	Data Analytics I	3
IER 310	Operations Research I (MER 315)	3
IER 360	Operations Planning and Control	3

IER 375	Statistical Process Control	3
IER 490	Engineering Professional Experience	1
IER 491	Capstone Project I	3
IER 498	Capstone Project II	3

Industrial Engineering Electives		
IER Technical Electives ²		12
CER, IER, MER, SER Technical Electives ³		3
Open Electives		9-10

¹ Neither MA 229 nor MA 365 can be taken with MA 265.

² All IER courses that are not required for an IE degree.

³ One additional IER technical elective or any 200-level or higher ENR, CER, MER, SER courses that are not required for an IE degree.

Depending on math sequence taken, additional UC electives may be required.

Student Outcomes

Attainment of the following outcomes prepares graduates to enter the professional practice of engineering:

- an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental, and economic factors.
- an ability to communicate effectively with a range of audiences.
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives.
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Program Educational Objectives

Within four to seven years of graduation, Quinnipiac University industrial engineering program alumni are expected to:

- Attain sustained employment in professional positions of increasing responsibility and impact.
- Successfully pursue professional training, engineering certification, advanced professional degrees or graduate studies.
- Demonstrate professional and intellectual growth as managers and leaders in their profession, society and communities.

Admission Requirements: School of Computing and Engineering

The requirements for admission into the undergraduate School of Computing and Engineering programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

Bachelor of Science in Mechanical Engineering

Program Contact: Lynn Byers (lynn.byers@quinnipiac.edu) 203-582-5028

Mechanical engineers are employed in the research, design, development and manufacturing of a broad range of tools, engines, machines and other mechanical devices and components. Through exposure to the University Curriculum, foundational course work in science, mathematics, major field courses, and extracurricular activities, students graduating with a BS in Mechanical Engineering achieve intellectual proficiencies in critical thinking and reasoning, scientific literacy, quantitative reasoning, information fluency, creative thinking and visual literacy. They are prepared to enter the profession or to pursue graduate studies with a solid foundation in the breadth of mechanical engineering. They also achieve interpersonal proficiencies in written and oral communication, responsible citizenship, diversity awareness and sensitivity and social intelligence.

BS in Mechanical Engineering Curriculum

The Bachelor of Science in Mechanical Engineering program requires 126 credits.

Within the policies of the School of Computing and Engineering, the Mechanical Engineering program enforces credit limits during the academic terms. Exceeding 18 credits in the Fall or Spring semester, 4 credits in the January term, or 10 credits in each Summer term requires the approval of the dean's office.

Directed Study Electives

Select one of the following options:

Three technical electives (any MER elective or 200-level or higher CER, IER, SER, MA, BIO, CHE course)

Three graduate courses toward 3+1 or 4+1 ME/MBA

Three graduate courses toward 4+1 ME/Masters in Cybersecurity

Three electives used toward completion of a minor

Other options as approved by the ME program director

Total Credits **126**

Student Outcomes

Attainment of the following outcomes prepares graduates to enter the professional practice of engineering:

- an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental, and economic factors.
- an ability to communicate effectively with a range of audiences.
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives.
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Program Educational Objectives

Within four to seven years after graduation, mechanical engineering program alumni are expected to:

- Attain multiple positions of responsibility in which they:
 - contribute to teams
 - manage resources
 - solve complex problems

- d. communicate information
 - e. influence decisions
 - f. act ethically
 - g. balance constraints
- b. Continue self-development through formal and informal learning opportunities.
- c. Obtain sustained employment and/or further education in a technical/professional field.
- d. Develop a capacity to engage independently in meaningful creative endeavors.

Admission Requirements: School of Computing and Engineering

The requirements for admission into the undergraduate School of Computing and Engineering programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

Bachelor of Science in Software Engineering

Program Contact: Jonathan Blake (Jonathan.Blake@quinnipiac.edu)
203-582-8539

Computers are ubiquitous, and thus so is the code to run devices, applications and even the machines themselves. The most complicated artifacts built by humans are software systems, and software engineers design and develop these systems. Using cutting edge engineering principles and practices in a hands-on team-oriented environment, software engineering students learn how to build the code of the future.

Through exposure to the University Curriculum, foundational coursework in science, mathematics, major field courses and extracurricular activities, students graduating with a BS in Software Engineering achieve intellectual proficiencies in critical thinking and reasoning, scientific literacy, quantitative reasoning, information fluency and creative thinking and visual literacy. They also achieve interpersonal proficiencies in written and oral communication, responsible citizenship, diversity awareness and sensitivity and social intelligence.

BS in Software Engineering Curriculum

Note: a minimum grade of C- is required for all computer science and software engineering course prerequisites, unless otherwise stated.

Within the policies of the School of Computing and Engineering, the Software Engineering program enforces credit limits during the academic terms. Exceeding 18 credits in the fall or spring semesters, 4 credits in the January term, or 10 credits in each summer term requires the approval of the dean's office.

SER Elective: Any two additional SER courses at the 300 level or above		6
Total Credits		114-115

¹ The second Natural Science course must be a continuation of the first course.

² Courses must be from different areas.

³ Total math/science credits must equal a minimum of 30 credits.

⁴ Waived with approved minor.

Complete additional coursework to reach 120 credits. This coursework must include any missing UC credits from Personal Inquiry II above.

Student Outcomes

Attainment of the following outcomes prepares graduates to enter the professional practice of engineering:

- an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental, and economic factors.
- an ability to communicate effectively with a range of audiences.
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives.
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Program Educational Objectives

Within four to seven years of graduation, graduates of the software engineering program are expected to:

- Be models of ethical behavior in their profession and community.
- Achieve sustained employment in a professional field and/or pursue additional educational opportunities.
- Continue lifelong learning as they develop professionally and maintain currency with software engineering knowledge and skills.
- Demonstrate professional and personal growth through leadership and mentoring roles.

Admission Requirements: School of Computing and Engineering

The requirements for admission into the undergraduate School of Computing and Engineering programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

Certificate in Lean Six Sigma – Green Belt

Program Contact: Emre Tokgoz (emre.tokgoz@qu.edu) 203-582-7909

Lean Six Sigma is a set of management techniques intended to improve business processes by greatly reducing the probability that an error or defect will occur. Many employers seek personnel with Six Sigma training. This certificate program, offered through the School of Computing and Engineering, is designed to acknowledge the effort students make to learn the DMAIC (Define-Measure-Analyze-Improve-Control) phases of Six Sigma. Interested students in any undergraduate program who successfully complete three required courses with a minimum grade of C- are eligible to receive the Lean Six Sigma certificate. Course completion includes the application of knowledge in a real-world project.

Learning Objectives

- Analyze different production systems by determining and formulating performance measures, and making appropriate assumptions for performance optimization.
- Apply Lean technique to improve the efficiency of a process by empowering people, instilling a culture of continuous improvement, and eliminating waste.
- Study the theoretical principles of DMAIC (Define-Measure-Analyze-Improve-Control) approach in Six Sigma.
- Integrate principles of Production Systems, Lean Systems, and DMAIC steps to complete a team based real-life Lean Six Sigma project.

Lean Six Sigma – Green Belt Program of Study

Students pursuing this certificate take a total of three courses (9 credits) as outlined below.

Code	Title	Credits
Required		
IER 220	Production Systems (MER 225)	3
IER 230	Lean Systems Engineering (MER 235)	3
IER 375	Statistical Process Control	3
Total Credits		9

Certificate in Six Sigma – Black Belt

Program Contact: Emre Tokgoz (emre.tokgoz@qu.edu) 203-582-7909

The Six Sigma – Black Belt certificate requires extensive knowledge of Six Sigma philosophies and principles, including supporting systems and tools. A Black Belt holder should:

- demonstrate team leadership
- assign team member roles and responsibilities
- demonstrate knowledge of how to measure a process
- analyze results using statistics
- demonstrate an ability to process improvements
- quantify the resulting savings
- apply advanced analysis techniques such as simulation, data analytics and operations research for process improvement.

Many employers seek out personnel who have Six Sigma Black Belt training and certification. This certificate program, offered through the School of Computing and Engineering, is designed to acknowledge the effort students have made to learn and apply the DMAIC (i.e., Define-Measure-Analyze-Improve-Control) phases of Six Sigma through a real-life project that lasts two semesters. Students in any undergraduate program who are interested and who can successfully complete the coursework and the project are eligible to receive the certificate. This certificate reflects the commitment participants have made to process improvement by working with an organization and applying the DMAIC phases of Six Sigma in a project that lasts two semesters.

Six Sigma – Black Belt Program of Study

There are two tracks to receive the certificate. Track 1 is for industrial engineering students and Track 2 is for all others.

Selective topics related to the Six Sigma Black Belt from Track 1 courses are covered in IER 315 in Track 2. IER 492 and IER 497 courses in Track 2 have the same content as the courses IER 491 and IER 498 in Track 1, which should all be completed with a grade of B- or better in their respective tracks. In addition, the remaining below-mentioned track courses should be completed with a grade of D or better to be qualified for receiving the Six Sigma Black Belt certificate.

The two ways to receive the Six Sigma Black Belt:

Track 1. Completion of the below-mentioned eight courses (21 credits) (for BS in Industrial Engineering students) are required.

Track 2. Completion of the below-mentioned three courses (9 credits) that can be applied in any field of study.

Code	Title	Credits
Track 1 Coursework Requirements		
IER 230	Lean Systems Engineering (MER 235)	3
IER 240	Physical Human Factors and the Workplace (MER 245)	1
IER 265	Cognitive Human Factors and the Workplace (MER 265)	2
IER 280	Data Analytics I	3
IER 310	Operations Research I (MER 315)	3
IER 375	Statistical Process Control	3
IER 491	Capstone Project I	3
IER 498	Capstone Project II	3
Total Credits		21

Code	Title	Credits
Track 2 Coursework Requirements		
IER 315	Fundamentals of Six Sigma - Black Belt (*)	3
IER 492	Six Sigma - Black Belt Project Experience I	3
IER 497	Six Sigma - Black Belt Project Experience II (Track 2 coursework requirements)	3
Total Credits		9

* IER students cannot take IER 315 because of the duplication of the content from Track 1 courses.

Accelerated Computing and Engineering Dual-Degree Bachelor's/Master's (3+1)

The Accelerated Dual-Degree Bachelor's/Master's (3+1) programs are designed for outstanding students entering in one of the three computing programs – Computer Science (BA) (p. 426), Computer Science (BS) (p. 430) or Software Engineering (p. 436) – who rank in the top 20 percent of their high school class and have a combined SAT score of 1200 (or ACT of 25).

Students are invited to the program with their offer of admittance and complete the bachelor's degree at an accelerated pace (three years as opposed to the typical four). They will then complete the Cybersecurity MS (p. 737) in their fourth year.

More information about the accelerated dual-degree program can be found on the Quinnipiac website, BA or BS in Computer Science/MS in Cybersecurity (<https://www.qu.edu/schools/engineering/programs/accelerated-dual-degree/ba-or-bs-computer-science-ms-cybersecurity/>) or BS in Software Engineering/MS in Cybersecurity (<https://www.qu.edu/schools/engineering/programs/accelerated-dual-degree/bs-in-software-engineering-ms-in-cybersecurity/>) page.

Dual-Degree BA/MS or BS/MS in Cybersecurity (4+1)

Program Contact: Frederick Scholl (frederick.scholl@qu.edu)
203-582-7394

Quinnipiac students have the rare opportunity to earn a bachelor's degree in their field of interest and then continue their education to earn a Master of Science in Cybersecurity. Qualifying students can complete their undergraduate degree in four years and obtain their MS in Cybersecurity after one additional year. Students apply to the MS program in the spring of their junior year. In today's competitive market, a graduate degree is often the key to success, and there is a higher demand than ever for cybersecurity experts.

Complementary undergraduate programs include: Computer Science, Software Engineering, Criminal Justice, Political Science, Computer Information Systems, Business Administration, Data Science, plus a variety of health science programs. Qualified candidates are automatically admitted to the graduate program upon completion of their undergraduate degree. Students have access to a dedicated adviser who

is also the MS in Cybersecurity program director. Special programming and networking opportunities are available through a dedicated career development specialist.

The online MS in Cybersecurity program is the same program offered to graduate-level students. Courses are taught by world-class security experts, and cover concepts and practices in cloud security and software security. Individual 1-credit courses include emphasis on hands-on projects using real-world cybersecurity tools. Students complete a hands-on capstone project using commercial or open source security tools, and will then have the opportunity to become part of a security community, both regionally and nationally.

Dual-Degree BA/MS or BS/MS in Cybersecurity (4+1) Program of Study

The program is open to students from any major with 3.0 or higher who have taken Programming & Problem Solving (CSC 110) and Data Structures and Abstraction (CSC 111) or equivalents. In addition, it is required that students will have completed coursework or certificates in database management and networking by spring semester of their senior year.

The core of the 30-credit Master of Science in Cybersecurity is made up of coursework that embodies the knowledge units set forth by the National Centers of Academic Excellence in Cyber Defense Education (CAE-CDE). Degree coursework culminates with a capstone project that challenges students to examine the architecture of a complex system, identify vulnerabilities, and determine the specific security approaches that should be employed.

Total Credits		30

Admission Requirements: School of Computing and Engineering

The requirements for admission into the undergraduate School of Computing and Engineering programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the [Admissions](#) page of this catalog.

Minor in Computer Science

Program Contact: Jonathan Blake (Jonathan.Blake@quinnipiac.edu)
203-582-8539

Computer literacy is a vital asset in nearly every modern profession. The minor in computer science teaches you the basic computing and problem-solving expertise necessary to address a wide range of issues, from cyber-attacks to software glitches and server overload. A working knowledge of operating systems, network security and database maintenance increases not only your independence, but also your value to employers in business, media, higher education, healthcare and many other fields.

The minor's deep list of electives gives you the opportunity to focus on the topics that best complement your major and future career goals. Proficiency in programming languages and computer graphics enables you to handle web design and other creative needs for employers, while skills such as cryptography and algorithm analysis are especially useful in many engineering disciplines.

To complete a minor in computer science, a student is required to take a total of six courses (20 or 21 credits).

Computer Science Minor Curriculum

To complete a minor in computer science, a student is required to take a total of six courses (20 or 21 credits).

Code	Title	Credits
Take the following courses:		
CSC 110 & 110L	Programming and Problem Solving and Programming and Problem Solving Lab	4
CSC 111 & 111L	Data Structures and Abstraction and Data Structures and Abstraction Lab	4
CSC 205	Introduction to Discrete Mathematics (MA 205)	3
Take at least one of the following courses:		
CSC 210 & 210L	Computer Architecture and Organization and Computer Architecture and Organization Lab	4
CSC 215	Algorithm Design and Analysis	3
Take courses from the following list to complete the 6-course requirement: ¹		
CSC 225	Introduction to Software Development	3
CSC 310	Operating Systems and Systems Programming	3
CSC 315	Theory of Computation (MA 315)	3
CSC 318	Cryptography (MA 318)	3
CSC 320	Compilers	3
CSC 340	Networking and Distributed Processing	3
CSC 350	Intelligent Systems	3
CSC 375	Advanced Topics in Computer Science (SER 300)	3

¹ At least one of these courses must be at the 300 level. Additional courses not listed could be substituted with prior approval from the chair.

SCHOOL OF EDUCATION

North Haven Campus

Main Office: 203-582-3354

Administrative Officers

Title	Name	Phone	Email
Dean	Anne Dichele	203-582-3463	anne.dichele@qu.edu
Associate Dean	Beth Larkins-Strathy	203-582-3510	beth.larkins-strathy@qu.edu
Director, Master of Arts in Teaching	Christina Pavlak	203-582-3192	christina.pavlak@qu.edu

Educational Leadership	Anne Dichele	203-582-3463	anne.dichele@qu.edu

Mission Statement

The mission of the School of Education is to lead our graduates to acquire the knowledge, skills and dispositions to serve successfully in their role as *educator* and *school leader*. The school defines the concept of educator as three-dimensional in nature, and believes that successful educators are *teachers*, *learners* and *leaders*. Graduates of the School of Education are expected to be *teachers* who establish conditions for all students to learn, *learners* who continue to learn as they continue their professional careers, and *leaders* who influence the culture of their schools in ways that support best practices in teaching and learning. Inherent in our mission is a commitment to graduate educators who recognize the potential of schooling to promote social change required for social justice.

Master of Arts in Teaching

- Dual-Degree BA/MAT or BS/MAT in Elementary Education (4+1) (p. 684)
- Dual-Degree BA/MAT or BS/MAT in Secondary Education (4+1) (p. 687)
- Graduate MAT Degree in Elementary Education (p. 456)
- Graduate MAT Degree in Secondary Education (p. 458)
- Graduate MAT Degree in Special Education (p. 460)

Master of Science

- Dual-Degree BA/MS or BS/MS in Instructional Design and Technology (p. 455)
- MS in Instructional Design and Technology (p. 462) (online-only program)
- MS in Special Education (p. 463) (online-only program)

Sixth-Year Diploma

- Sixth-Year Diploma in Educational Leadership (p. 465)

Certificate

- Certificate in Social and Emotional Learning and School Climate (p. 454)
- Special Education Certificate of Completion (p. 467)
- Online Course Design Certificate (p. 465)

Education (ED)

ED 140. Introduction to Public Education and the Teaching Profession.

1 Credit.

This course is open to all first-year students and sophomores who are interested in public education in the United States. The course is required for students who plan to enroll in the five-year dual-degree MAT program, as it provides basic knowledge of public education and the teaching profession including current functions, trends and future expectations. The course also addresses issues related to the teaching profession including licensure, interstate certification, dual and cross-endorsements and teacher and pupil demographics across the U.S. Finally, the course provides opportunities for applicants to practice and refine writing skills essential for success in the dual-degree MAT program. Course is graded pass/fail.

Offered: Every year, Fall and Spring

ED 220. Introduction to Education Studies.

3 Credits.

This course is required for students pursuing an Interdisciplinary Studies major in the College of Arts and Sciences with a concentration in Education Studies. The course explores a multidisciplinary understanding of global and American Education. Students consider the role of education in creating a more equitable society by analyzing the policies and philosophies that have shaped and are shaping schooling in the U.S. and throughout the world. Historical changes in education, critical analyses of policy debates in current education, the effects of legal policies in the classroom, the influences of cultural shifts and contemporary issues are all considered. Students also are introduced to basic concepts and terminology in the educational discipline, and develop a critical lens for evaluating educational resources, texts and data. Only IDS majors may register for this course. Students are not allowed to receive credit for more than one of the following courses: ED 220 and ED 260.

Prerequisites: Take ED 140.

Offered: Every year, Spring

ED 250. Diversity, Dispositions and Multiculturalism.

3 Credits.

This course examines the social, economic and political organization of public education in the United States, with a particular emphasis on the implications for historically marginalized populations. This course is required for all dual-degree MAT students. The course explores diversity and multiculturalism on the individual as well as institutional level, with a focus on concepts such as privilege, discrimination, racism and social transformation.

Prerequisites: Take EN 101 or EN 103H.

Offered: Every year, Fall and Spring

UC: Social Sciences, Intercultural Understand

ED 251. Global Engagement in Education. 3 Credits.

This course provides a faculty-led opportunity for students to spend their spring break studying education in Guatemala. The course meets throughout the spring semester in preparation for the trip and post-spring break to reflect and learn from the experience. Topics include the history and culture of the country to be visited, intercultural complexity and cultural humility, frameworks of global engagement, peer-to-peer learning with local educators and the exploration of global educational models. All students must apply for this course in the fall semester through the Office of Global Engagement prior to registration. Enrollment is limited.

Prerequisites: Take ED 140.

Offered: Every year, Spring

ED 252. Antiracism and Anti Bias Through the Lens of Empathy: Broadening Perspective Through Literature Written for Children and young Adults. 3 Credits.

Participants in this course will study literature written for children and young adults through the lens of empathy using the Teaching Tolerance Social Justice Standards as a framework for considering identity, diversity, justice, and action. The course will begin with introspective work around our own identities because who we are impacts how we engage with texts. We will study books with a critical lens and analyze perspective and bias to contextualize the experiences of others in the hopes that we will become more empathetic.

Prerequisites: Take EN 101;

Offered: As needed, Fall

UC: Humanities

ED 253. Higher Education in Prison: Teaching and Learning in the Carceral Setting. 3 Credits.

This course will provide an introduction to the growing field of higher education in prison. The authors, researchers, and practitioners explored have contributed tremendously to a field that reaches back to 1877 but have only recently received mainstream attention. With the help of reflective writing, literary analysis, and guest lectures from field thought leaders across the country and globe, this course is offered to help further cultivate a solid understanding of the work being done, both domestically and internationally.

Prerequisites: Take EN 101 or ED 140;

Offered: As needed, Fall

UC: Social Sciences

ED 260. Social and Philosophical Foundations of Education. 3 Credits.

This course introduces students to the social and philosophical principles that underlie the education system in the United States. This course is required for all Dual-Degree MAT students. Education is defined in the broad sense to refer to not only what happens in schools and universities, but also in the family, when people interact with media, with their social groups and so forth. The course examines a wide range of philosophical questions related to education and schooling in the U.S., including: What is the purpose of schooling? What does it mean to be educated? And what role should educational institutions play in our lives? Students are not allowed to receive credit for more than one of the following courses: ED 220 and ED 260.

Prerequisites: Take EN 101 or EN 103H.

Offered: Every year, Fall and Spring

UC: Humanities

ED 341. Learning and Teaching the Developing Child. 3 Credits.

This course provides an introduction to the basic concepts of cognitive, social and emotional development of school-age children (ages 4-18) and how the pedagogy of learning and teaching is designed to enhance and support this development. Major topics of inquiry include brain-based learning research, motivation, engagement of learners, lesson planning and curriculum development. Enrollment in the dual-degree MAT program is required.

Prerequisites: Take ED 140, ED 250 and ED 260 or ED 220.

Corequisites: Take ED 341L.

Offered: Every year, Fall

ED 341L. Learning and Teaching: Pedagogy Field Lab I. 1 Credit.

The Pedagogy Field Lab is taken in conjunction with ED 341. Teacher candidates complete a minimum of 20 hours of classroom observation and fieldwork that coincides with topics studied in ED 341. Weekly field hours, case study analyses, observation analyses and reflective journals provide opportunities to enhance the translation of theory to practice.

Corequisites: Take ED 341.

Offered: Every year, Fall

ED 342. Advanced Learning and Teaching. 3 Credits.

This course focuses on advanced concepts and skills related to teaching and learning. Topics include elementary-level learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.

Prerequisites: Take ED 341, ED 341L.

Corequisites: Take ED 342L.

Offered: Every year, Spring

ED 342L. Advanced Learning and Teaching: Assessment Field Lab II. 1 Credit.

The Assessment Field Lab is taken in conjunction with ED 342. It provides practical applications of advanced concepts. Teacher candidates complete a minimum of 20 hours of classroom fieldwork that coincides with topics studied in ED 342. Weekly field hours, data team discussions, analyses of research-based practices, observation and case studies highlighting differentiated instructional practices, as well as reviews of standards-based curriculum are considered.

Prerequisites: Take ED 341, ED 341L.

Corequisites: Take ED 342.

Offered: Every year, Spring

ED 343. Advanced Learning and Teaching in Secondary Classrooms. 3 Credits.

This course focuses on advanced concepts and skills related to teaching and learning. Topics include adolescent learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.

Prerequisites: Take ED 341, ED 341L.

Corequisites: Take ED 343L.

Offered: Every year, Spring

ED 343L. Advanced Learning and Teaching: Secondary Assessment Field Lab II. 1 Credit.

The assessment field lab is taken in conjunction with ED 343. It provides practical applications of advanced concepts for secondary educators. Teacher candidates complete a minimum of 20 hours of classroom fieldwork that coincides with topics studied in ED 343. Weekly field hours, data team discussions, analyses of research-based practices, observation and case studies highlighting differentiated instructional practices, as well as reviews of standards-based curriculum are considered.

Prerequisites: Take ED 341.

Corequisites: Take ED 343.

Offered: Every year, Spring

ED 350. Quads Mentor Seminar. 1 Credit.

This course is for students who are QUADS Mentors (Quinnipiac University Advancing Diversity in Science) to support them in developing the mindsets and skills needed to engage in the challenging, intrapersonal work associated with addressing implicit bias, racism, and social justice. This seminar will provide shared space for growth, reflection, and problem solving as QU students simultaneously engage in facilitating a caring and student-centered learning experience at local high schools. Through the seminar, we will explore and apply equity-based science pedagogical principles (community-based phenomenon, multi-generational learning, cultural pedagogies, diverse sense-making, and place-based science education (PBSE)). Mentors will facilitate the design of meaningful after-school opportunities for local high school students to enhance and contextualize their college readiness and learn science while moving towards social justice, culminating in week-long summer experience on QU campus, with added support from high school science teachers and QU faculty.

Offered: As needed, All Online

ED 380. Research Methods in Education Studies. 3 Credits.

This course is required for students pursuing an Interdisciplinary Studies major in the College of Arts and Sciences with a concentration in Education Studies. The course is an upper-level UG education research course, intended to equip students with an understanding of the primary genres of educational research including action research, theoretical/conceptual research, case studies and ethnography. While quantitative inquiry also is addressed in the course, the focus is on qualitative research methods, given their important role and purpose in education. This course serves as an important preparatory course for ED 550, a graduate-level research course required of candidates who choose to pursue an MAT in Elementary or Secondary Education at Quinnipiac.

Prerequisites: Take IDS 200 and; ED 220 or ED 260.

Offered: Every year, Fall

ED 409. Reading and Writing Across the Curriculum. 3 Credits.

This course develops the secondary teacher's understanding of reading and writing as essential skills across the disciplines. Students explore literacy strategies that enhance the comprehension and interpretation of the various disciplines. The focus is on how to integrate literacy skills into content-based curricular instruction.

Prerequisites: Take ED 343.

Corequisites: Take ED 409L.

Offered: Every year, Spring

ED 409L. English Language Arts Field Lab III. 1 Credit.

This language arts lab is taken in conjunction with ED 409. It provides opportunities to observe and apply literacy skills to various disciplinary areas. Teacher candidates are required to complete a minimum of 20 hours of fieldwork that coincides with topics discussed in ED 409, such as comprehension development, academic vocabulary instruction, nonfiction reading and writing development and research skills.

Prerequisites: Take ED 343.

Corequisites: Take ED 409.

Offered: Every year, Spring

ED 436. Teaching Literacy in the Primary Grades. 3 Credits.

This course provides knowledge of diagnosis, assessment and instructional strategies for the development of early literacy in Grades K-3 and knowledge of the Common Core State Standards for early language arts instruction. Emphasis is on the development of teaching strategies necessary for the success of early readers and writers.

Prerequisites: Take ED 342.

Offered: Every year, Spring

ED 436L. English Language Arts Integration Field Lab IV. 1 Credit.

This language arts field lab is taken in conjunction with ED 466 and ED 436. It provides opportunities to observe and apply literacy skills while teaching social studies content. Participants are required to complete a minimum of 20 hours of fieldwork that coincides with topics discussed in ED 466 and ED 436, such as comprehension development, academic vocabulary instruction, nonfiction reading and writing development and research skills.

Prerequisites: Take ED 342.

Offered: Every year, Spring

ED 452L. Inclusive Classroom Secondary Field Lab IV. 1 Credit.

This inclusive classroom field lab is taken in conjunction with SPED 552. It provides opportunities to observe and apply the pedagogy of an inclusive classroom through the secondary candidates' fieldwork. Candidates are required to complete a minimum of 20 hours of fieldwork that coincides with the topics and understandings presented in SPED 552. For dual-degree secondary candidates only.

Corequisites: Take SPED 552.

Offered: Every year, Spring

ED 458. Teaching Science in the Primary Grades. 3 Credits.

This course focuses on the methods and materials of teaching elementary-level science. The course covers scientific concepts, scientific inquiry, active investigation methods and a deep understanding of the influence of the Next Generation Science Standards on contemporary science education.

Prerequisites: Take ED 342.

Corequisites: Take ED 468L.

Offered: Every year, Fall

ED 462. Facilitating the Arts in the Elementary Classroom. 3 Credits.

This course focuses on incorporating the arts into the elementary classroom, and the integration of the arts into other content areas. Teacher candidates explore a variety of media, materials and activities to promote an understanding of the relationship of the arts to teaching and learning.

Prerequisites: Take ED 341.

Offered: Every year, Spring

ED 466. Teaching Social Studies in the Primary Grades. 2 Credits.

This course provides elementary teacher candidates with the information, strategies and knowledge of the pedagogy of teaching social studies. The course focuses on the integration of the social studies curriculum with other disciplines to create a multidisciplinary understanding of history, economics, civics and society.

Prerequisites: Take ED 342.

Corequisites: Take ED 436L.

Offered: Every year, Spring

ED 468. Teaching Mathematics in the Primary Grades. 3 Credits.

This course introduces teacher candidates to the instructional methods and curricular materials used to enhance the instruction of mathematics in the primary grades and knowledge of the Common Core State Standards for primary-level mathematics instruction. Pre-service teachers learn to develop lesson plans and assessment methods that positively affect the learning of mathematics in grades K-3. Candidates are required to apply this knowledge within their field placement to better understand the relationship of theory and practice in the instruction of mathematics in the lower elementary grades.

Prerequisites: Take ED 342.

Corequisites: Take ED 468L.

Offered: Every year, Spring

ED 468L. Primary Math and Science STEM Field Lab III. 1 Credit.

This STEM field lab is taken in conjunction with ED 468 and ED 458. It provides opportunities to observe and apply the integrated teaching of STEM (science, technology, engineering and math) into the elementary-level curriculum. Teacher candidates are required to complete a minimum of 20 hours of fieldwork that coincides with topics discussed in ED 468/ED 458.

Prerequisites: Take ED 342.

Corequisites: Take ED 468 ED 458.

Offered: Every year, Fall

ED 477. Teaching English Language Learners in the Mainstream Classroom. 3 Credits.

This course is designed to introduce the pre-service teacher candidate to knowledge and skills needed to provide effective instruction to English language learners in the mainstream 1-12 classroom. Topics of study include instructional methods across content areas, the influence of language and culture on learning, teaching and assessment, history and legislation related to English as a Second Language and bilingual education in the U.S., and second language acquisition.

Prerequisites: Take ED 343.

Offered: Every year, Fall

ED 499. Independent Study. 1-6 Credits.

Offered: As needed

ED 500. Internship and Seminar I. 1 Credit.

This course provides the first-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching. Taken in conjunction with ED 576, Teacher Discourse in the Secondary Classroom, this course allows students to begin to acquire strategies for maintaining classroom environments that are conducive to learning. Admission to the MAT program is required.

Offered: Every year, Fall

ED 501. Internship and Seminar II. 1 Credit.

This course provides the second-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching.

Prerequisites: Take ED 500.

Offered: Every year, Spring

ED 502. Teaching Methods in Secondary Biology. 3 Credits.

This course is designed for pre-service teachers who are planning to teach high school biology. It touches on numerous aspects of biology classrooms including: assessing students' prior conceptions, designing a curriculum, planning lessons, determining and adapting appropriate teaching methods, promoting the Next Generation Science Standards three-dimensional science teaching, scientific literacy, using technology in science teaching, and assessing students' learning.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 502L. Science Laboratory Safety Course. 1 Credit.

Science activities, laboratory investigations and demonstrations are essential for high-quality science instruction. These activities provide experiences for students to engage in science as a sense-making endeavor. Inherent in conducting science activities, however, is the potential for injury. This course is designed to improve the safety awareness and increase the knowledge of relevant safety regulations, practices and procedures that directly impact biology teachers. The emphasis throughout the course is on best practices.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 503. Advanced Teaching Methods in Secondary Science. 3 Credits.

This course is designed for future science teachers prior to the onset of student teaching. The goal is to prepare students for success as a secondary science teacher. The focus is on junior high and high school science classrooms and identifying attributes of teaching and learning science that are critical to effective instruction. This course continually builds on knowledge of effective teaching strategies to plan for standards-based units of instruction. Students engage in authentic scientific investigations, design science learning experiences for students, write and implement unit plans, read and reflect. They also assemble a collection of science education resources supportive of science teaching. The course concludes with the creation of a research-based rationale for teaching science.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 504. Methods II: Teaching Secondary English. 3 Credits.

This course explores pedagogical theories and their practical application to the teaching of English language arts on the secondary level. The course prepares the teacher candidate to use a variety of strategies in the classroom instruction of reading, writing and the critical examination of literature. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of English.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 505. Methods II: Teaching Secondary History/Social Studies.**3 Credits.**

This course provides the teacher candidate with a theoretical and practical foundation for the teaching of history/social studies on the secondary level. It examines the issues, practices and materials involved with the study of the discipline. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of history/social studies, technology and the assessment of students.

Prerequisites: Take ED 573 or ED 409.**Offered:** Every year, Fall**ED 506. Methods II: Teaching Secondary Mathematics.****3 Credits.**

This course prepares teacher candidates to teach mathematics on the secondary level. Central concepts, tools of inquiry, and the structure of the discipline are addressed through the development of instructional units and lesson plans. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of mathematics, technology and the assessment of students.

Prerequisites: Take ED 573 or ED 409.**Offered:** Every year, Fall**ED 507. Methods II: Teaching a Secondary World Language.****3 Credits.**

This course examines the current philosophies, objectives and methods of teaching a world language on the secondary level. Teacher candidates examine theories of second language acquisition and develop instructional units and lesson plans across the broad range of world language curriculum. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of a world language, technology and the assessment of students.

Prerequisites: Take ED 573 or ED 409.**Offered:** Every year, Fall**ED 509. Reading and Writing Across the Curriculum.****3 Credits.**

This course presents an overview of language arts development in the secondary grades with an emphasis on reading and writing across the curriculum. Teacher candidates explore literacy strategies to help all students learn and apply current theories of integrated learning, i.e., the reading-writing-thinking connection. Attention is given to the particular needs of students for whom English is a second language.

Prerequisites: Take ED 573.**Offered:** Every year, Fall**ED 510. Adolescent Development.****3 Credits.**

The major theories of human development are studied in order to provide an understanding of the normative and exceptional development patterns of adolescents and pre-adolescents. The social, emotional, cognitive and physical changes of adolescence are addressed from the perspective of their implications for education.

Prerequisites: Take ED 500.**Offered:** Every year, Spring**ED 512. Disciplinary Core Ideas, Scientific and Engineering Practices, and Crosscutting Concepts.****2 Credits.**

In this course, students explore teaching and learning of science, especially as they connect to the implementation of the Next Generation Science Standards (NGSS) and the new vision for K-12 Science Education. This vision is described in the underlying policy document from the National Academy of Sciences: A Framework for K-12 Science Education Practices, Crosscutting Concepts, and Core Ideas. Participants inquire into the relationship among equity and diversity in science education, key concepts of the NGSS, and how each contribute to the reimagining of science teaching.

Prerequisites: Master of Arts in Teaching: take ED 573 or ED 409.**Offered:** Every year, Summer**ED 514. Internship I.****1 Credit.**

This course aims to support teacher candidates who are working as interns in secondary schools through discussion of the issues and challenges they experience. Students examine issues of leadership, ethics and social justice. The goal is to help teachers understand what it means to be a leader or change agent in schools in the current climate of educational reform.

Prerequisites: Take ED 409.**Offered:** Every year, Fall**ED 515. Internship and Career Development Seminar.****1 Credit.**

This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.

Corequisites: Take ED 601.**Offered:** Every year, Spring**ED 521. Social and Philosophical Foundations of Education.****3 Credits.**

This course is an inquiry into the institutional structures, social values and philosophical foundations of education. Teacher and student reflections focus on issues pertaining to the teaching-learning process, including freedom/authority/discipline; cultural diversity; multiplicity of learning modes; mind-body integration; community; alienation/violence; sexism/racism/elitism; and teacher/student roles. Admission to the MAT program is required.

Offered: Every year, Fall**ED 525. Diversity in the Classroom.****3 Credits.**

This course helps teacher candidates understand that teaching is a social enterprise laden with moral responsibility and that, as teachers, they must be willing to act as agents for social justice in their classrooms and in their schools. This course helps students acquire the dispositions, cultural knowledge and competencies to adapt their curriculum and instructional skills for culturally responsive classroom practice. Admission to the MAT program or permission of program director is required.

Offered: Every year, Spring**ED 535. Elementary Internship and Seminar I.****1-3 Credits.**

This course provides the first-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching. Taken in conjunction with ED 525 Diversity in the Classroom, this course allows students to study first-hand the issues surrounding diversity and multiculturalism in actual practice through their observations, reflections and participation in school settings. Admission to the MAT program is required.

Offered: Every year, Fall**ED 544. Developing Literacy in the Primary Grades.****3 Credits.**

This course is designed to provide pre-service teachers with the knowledge of the Common Core State Standards in the language arts, and diagnostic assessment and instructional strategies for the development of early literacy. Emphasis is on the development of teaching strategies necessary for the success of early readers and writers.

Prerequisites: Take ED 571.**Offered:** Every year, Spring

- ED 545. Elementary Internship and Seminar II. 1 Credit.**
This course provides the second-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching.
Prerequisites: Take ED 535.
Offered: Every year, Spring
- ED 550. Issues and Research in Education. 2 Credits.**
This course introduces students to some of the primary genres of educational research, including quantitative research, qualitative research and action-based teacher research. Special emphasis is placed on helping students become familiar with the notion of "problems of practice," and on how teachers can research these problems, analyze the evidence and design interventions to improve their teaching.
Prerequisites: Take ED 468L, ED 409L, ED 501 or ED 545.
Offered: Every year, Summer
- ED 554. Internship and Seminar I. 2 Credits.**
This course aims to support teacher candidates who are working as interns in elementary schools through discussion of the issues and challenges they experience. Students examine issues of leadership, ethics and social justice. The goal is to help teachers understand what it means to be a leader or change agent in schools in the current climate of educational reform.
Prerequisites: Take ED 575.
Offered: Every year, Fall
- ED 555. Internship and Career Development Seminar. 1 Credit.**
This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.
Corequisites: Take ED 601.
Offered: Every year, Spring
- ED 556. Teaching Literacy in Grades 4-6. 3 Credits.**
This course provides teacher candidates with the knowledge of the Common Core State Standards in the language arts, and diagnostic assessment and instructional strategies for the development of literacy in grades 4-6. Emphasis is on the development of teaching strategies necessary for the success of readers and writers in grades 4-6.
Prerequisites: Take ED 436 or ED 544.
Offered: Every year, Fall
- ED 558. Elementary School Science: Content and Pedagogy. 3 Credits.**
This course leads students to an understanding of science concepts and scientific inquiry at the elementary school level through active investigations with common phenomena and everyday materials. Topics include: inquiry-based science focused on national standards and integration with the Common Core State Standards; increased knowledge of resources for science learning; and management considerations in such areas as material preparation, groupings and safety.
Prerequisites: Take ED 571.
Offered: Every year, Summer
- ED 562. Facilitating the Arts in the Elementary Classroom. 2 Credits.**
This course focuses on the development of the teacher-as-facilitator in incorporating the arts into the elementary classroom. An emphasis is placed on the relationship of the arts to teaching, learning and the integration of the arts into other content areas. Students explore a variety of media, movement, music and theatrical skills for selecting materials and activities appropriate to a child's age/stage of development. Attention also is given to the music and art of many peoples, with particular emphasis on developing a repertoire representative of different cultures and languages.
Prerequisites: Take ED 571.
Offered: Every year, Summer
- ED 566. Elementary School Social Studies: Content and Pedagogy. 2 Credits.**
This course provides elementary teacher candidates with information, strategies and knowledge of the pedagogy of teaching social studies. The course incorporates other disciplines with Common Core State Standards and expands views of civic education. Students work collaboratively and independently to build understandings of the field of social studies and learn how to teach it creatively and effectively in a diverse community.
Prerequisites: Take ED 571.
Offered: Every year, Summer
- ED 568. Teaching Mathematics in the Primary Grades. 3 Credits.**
This course introduces teacher candidates to the Common Core State Standards in mathematics and the instructional methods and curricular materials used to enhance the instruction of mathematics in the primary grades. Candidates learn to develop lesson plans and assessment methods that positively affect the learning of mathematics in grades K-3. Students are required to apply this knowledge within their field placement to better understand the relationship of theory and practice in the instruction of mathematics in the lower elementary grades.
Prerequisites: Take ED 535 or ED 571
Offered: Every year, Spring
- ED 569. Teaching Mathematics in Grades 4-6. 3 Credits.**
This course introduces pre-service teachers to the Common Core State Standards in mathematics and the instructional methods and curricular materials used to enhance the instruction of mathematics in grades 4-6. Teacher candidates learn to develop lesson plans and assessment methods that positively affect the learning of mathematics in grades 4-6. Candidates are required to apply this knowledge within their field placement to better understand the relationship of theory and practice in the instruction of mathematics in the upper elementary grades.
Prerequisites: Take ED 468 or ED 568.
Offered: Every year, Fall
- ED 571. Learning and Teaching the Developing Child. 3 Credits.**
This course provides an introduction to the basic concepts of cognitive, social and emotional development of school age children (Ages 4-18) and how the pedagogy of learning and teaching is designed to enhance and support this development. Major topics of inquiry include brain-based learning research, motivation, engagement of learners, lesson planning and curriculum development. This course is taken during the first internship semester and includes field-based assignments and analyses. Admission to the MAT program is required.
Offered: Every year, Fall

- ED 572. Advanced Learning and Teaching. 3 Credits.**
This course focuses on advanced concepts and skills related to teaching and learning elementary-level learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.
Prerequisites: Take ED 571.
Offered: Every year, Spring
- ED 573. Advanced Teaching and Learning - Secondary. 3 Credits.**
This course focuses on advanced concepts and skills related to teaching and learning. Topics include adolescent learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.
Prerequisites: Take ED 571.
Offered: Every year, Spring
- ED 575. Teacher Discourse: Language and Communication Issues in the Elementary Classroom. 3 Credits.**
The course provides the teacher candidate with the knowledge and skills necessary to design classroom environments that enhance and support the social and emotional development of elementary-level learners. This course examines the communication systems of educational settings—in particular the communication systems of the classroom, the school/family dynamic and the individual developing child. The course analyzes and considers instructional language and its impact on the classroom community, student learning and student behavior. Candidates also focus on teacher communication with parent/guardian populations and its impact on student learning. Enrollment in the MAT program is required.
Offered: Every year, Fall and Summer
- ED 576. Teacher Discourse in the Secondary Classroom. 3 Credits.**
The course provides the teacher candidate with the knowledge and skills necessary to design classroom environments that enhance and support the social and emotional development of adolescent learners. The course analyzes instructional language, the language of discipline and how teacher language influences the climate of contemporary classrooms. The impact of teacher discourse on the classroom community, student learning and student behavior are all considered. The major focus is on managing classroom behaviors and supporting and respecting adolescent learners to enhance academic achievement. Enrollment in the MAT program is required.
Offered: Every year, Fall and Summer
- ED 577. Teaching English Language Learners in the Mainstream Classroom. 3 Credits.**
This course introduces the pre-service teacher candidate to the knowledge and skills that are needed to provide effective instruction to ELs in the mainstream 1-12 classroom. Topics of study include instructional methods across content areas, the influence of language and culture on learning, teaching, and assessment history and legislation related to ESL and bilingual education in the United States, and second language acquisition.
Prerequisites: Take ED 572, ED 573 or ED 436.
Offered: Every year, Fall and Summer
- ED 599. Independent Study. 1-6 Credits.**
Offered: As needed
- ED 601. Student Teaching. 6 Credits.**
This 10-week student teaching placement at the elementary, middle or secondary level allows students to demonstrate the skills, understandings and dispositions needed to assume full responsibility as a classroom teacher.
Prerequisites: Take ED 501, ED 514, ED 545 or ED 554.
Offered: Every year, Spring
- ED 614. Elementary Education Internship III. 1 Credit.**
This online course is designed for interns in the graduate, five-semester elementary education program. It aims to help teacher candidates develop the leadership skills needed to serve as agents of change in elementary schools. The course focuses on issues of leadership, ethics and social justice in the current climate of educational reform and increased levels of teacher accountability.
Prerequisites: Take ED 545.
Offered: Every year, Fall
- ED 615. Internship and Career Development Seminar. 1 Credit.**
This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.
Corequisites: Take ED 601.
Offered: Every year, Spring
- ED 616. Secondary Education Internship III. 1 Credit.**
This online course is designed for interns in the graduate, five-semester secondary education program. It aims to help teacher candidates develop the leadership skills needed to serve as agents of change in secondary schools. The course focuses on issues of leadership, ethics and social justice in the current climate of educational reform and increased levels of teacher accountability.
Prerequisites: Take ED 501.
Offered: Every year, Fall
- ED 617. Internship and Career Development Seminar. 1 Credit.**
This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.
Corequisites: Take ED 601.
Offered: Every year, Spring
- ED 693. Research I. 2 Credits.**
In this course, teacher candidates collaborate with an intern adviser about a problem of practice. They identify, define and begin to investigate the problem.
Prerequisites: Take ED 550.
Offered: Every year, Fall

ED 694. Research II. 2 Credits.

In this course, teacher candidates create an intervention plan based on research that was done in ED 693 and conversations with an intern adviser. They then implement the intervention plan, reflect on the results of the plan and share their results in the school setting.

Prerequisites: Take ED 550, ED 693.

Offered: Every year, Spring

Educational Leadership (EDL)

EDL 509. Leading School Improvement. 6 Credits.

This course analyzes the characteristics of effective schools and the leadership theories and concepts related to the change process. Participants examine the application of these theories and concepts to the practice of improving the work of the school and the achievement of students. Case studies focus on the analysis of schools in need of improvement, the specific issues facing the schools, data analysis techniques, effective leadership practices, strategic planning, financing improvement plans, and evaluation processes. The role of teacher-leaders within the school improvement process is emphasized.

EDL 601. Leading and Managing the Contemporary School. 6 Credits.

Introduction to leadership, management theories and concepts and how school leaders apply them to address problems and issues facing schools today. Case studies focus on the development and analysis of school policies, practices and resources related to contemporary educational issues such as social justice, diversity, student wellness and equity and the leadership and management styles required to implement them. The course includes a field-based experience involving the analysis of successful school leadership and district policies, practices and resources related to closing one or more identified opportunity gaps.

Offered: Every year

EDL 603. Leading and Managing the Instructional Program for Equitable Outcomes. 6 Credits.

Explored through the lens of equitable outcomes, this course is an examination of contemporary, standards-based curriculum designs, teaching/learning/assessment models and the leadership processes directed toward developing, implementing and supervising instructional programs to improve student learning. The course includes a field-based experience involving a curriculum audit, a formal classroom supervision, an analysis of state generated assessment data and accountability reports, and an overview of the school's technology program. It culminates in recommendations for program improvement that are attentive to differential outcomes for historically undeserved students.

Offered: Every year

EDL 605. Leading and Managing School Improvement. 6 Credits.

The course provides an analysis of the characteristics of effective schools and the leadership theories and concepts related to the change process. Emphasis of the course is on the application of these theories and concepts to the practice of improving the work of the school and the achievement of all students. Case studies focus on analysis of schools in need of improvement, the specific issues facing the schools, data analysis techniques, effective leadership practices, strategic planning, financing improvement plans and evaluation processes. The course includes a field-based project where students collect and analyze the data for improvement efforts of a school that has successfully increased achievement over time.

Offered: Every year

EDL 607. Administrative Internship in Educational Leadership. 3 Credits.

This course is a field-based administrative experience requiring the intern to assume a leadership role and authentically apply of the Connecticut Standards for Educational Leaders. The intern applies a systems perspective theory of action to strategic and equity planning. The intern builds a cultural competency with an emphasis on promoting equitable learning experiences in student-centered environments. The internship is planned, guided and evaluated by the student, the university supervisor and the field site mentor, who is a licensed practicing administrator. The course culminates in the development of an electronic portfolio, which represents the work during the internship.

Prerequisites: Take EDL 601, EDL 603, EDL 605.

Offered: Every year

EDL 609. Educational Program Evaluation. 3 Credits.

This course provides an introduction to the concepts and approaches in educational program planning and evaluation with an emphasis on the responsibilities of school leaders to use program evaluation to improve teaching and learning. The interpretation of data collected through the program evaluation process is emphasized so that decisions may be made to continue, restructure or terminate educational programs. Case studies focus on critiquing program evaluations and students are required to plan and conduct an assessment of an educational program in their school or district.

Offered: Every year

EDL 611. Educational Law. 3 Credits.

This course provides a practical analysis of constitutional law, federal and state statutes, regulations, case studies and executive agency opinions related to the rights of students and school employees. Emphasis is on the basic principles of school law and the responsibilities of teachers and administrators. Case studies focus on legal claims brought to before U.S. courts by students, parents, teachers, administrators and the public.

Offered: Every year

EDL 613. Public School Finance. 3 Credits.

This course provides a comprehensive, detailed overview of the budget development resource allocation processes derived from the planning guidelines associated with school financial operations. Theoretical and practical treatments of the budget process are examined, with a focus on the budget as a tool to accomplish school goals. Case studies and practical exercises focus on how schools can utilize the budgeting process and both competitive and entitlement grants to reallocate and manage resources to improve educational programs and student learning.

Offered: Every year

EDL 615. Conflict Resolution and Transformational Leadership. 3 Credits.

This course introduces theories and applied strategies of conflict resolution through the lens of becoming a transformational leader. The course will focus on the multiple constituencies served by the contemporary educational leader: families, colleagues, students, staff, boards of education, and broader communities, and how conflict resolution applies in such varying contexts. Focus on modes of communication, both written and oral, enhancing listening skills and providing opportunities for transformation through building supportive communities will be highlighted.

Prerequisites: Take EDL 601.

Offered: Every year, Summer

EDL 700. Connecticut Administrators Test. 0 Credits.

Instructional Design and Technology (IDN)

IDN 525. Foundations of Instructional Design. 3 Credits.

This course introduces some of the more widely used models of instructional design, including ADDIE, First Principles of Design, and the Systems Approach. Students investigate each phase of the instructional design process, along with appropriate elaboration on the concepts involved. To help you connect in-class learning and real-world applications, this course requires you to identify a local organization (e.g., school, community center, corporation), conduct a needs assessment to identify an instructional need, and design an instructional solution.

Offered: Every year, Fall and Spring

IDN 526. Cognitive Science and Educational Design. 3 Credits.

This course examines theoretical perspectives and empirical evidence on learning, instruction and the use of digital resources for education. Focus is on the application of theory to guide design decisions. Readings include empirical studies as well as theoretical material to help students become comfortable with reading, interpreting and applying theory and research to design. The final project for the course is a design proposal and prototype for an instructional media resource.

Offered: Every year, Fall

IDN 527. Society, Culture and Learning. 3 Credits.

This course examines theories, approaches, and environments that address social and cultural contexts for learning. Students investigate a range of resources that reflect the importance of society and culture in their design, analyzing the influences that shape them. Readings include both theoretical material and research studies, with an emphasis on practical applications of theory. The final project for the course is a design proposal and prototype for an instructional media resource that specifically addresses social and cultural considerations.

Offered: Every year, Spring

IDN 528. Collaborative Design of Digital Environments. 3 Credits.

This course focuses on the design of learning environments as a collaborative effort. Using a design thinking approach, students simultaneously explore the principles of remote collaborative work and apply what they learn to their own engagement in small teams. Throughout the semester, these teams engage in brainstorming, storyboarding and the creation of a web-based learning resource.

Offered: Every year, Fall

IDN 529. Educational Media Design Lab. 3 Credits.

This course examines the principles, techniques and current practices used to produce and/or deliver interactive multimedia applications for education. Through a series of project-based assignments, students gain experience with a range of software tools used to create media artifacts such as text, graphics, animation, audio and video. Course makes use of a variety of applications based on each student's specific interests, needs and level of proficiency.

Offered: Every year, Spring

IDN 530. Web Design for Instruction. 3 Credits.

What factors contribute to an effective web design that can engage users and support their learning? In this course, students investigate web-based instructional resources. They examine relevant theoretical frameworks and use these principles to analyze the design of existing web resources, including graphics and functionality. Students develop a design document and a working prototype of a web-based instructional resource using various web design tools. Topics include principles of HTML, CSS, UX, and approaches to mobile design.

Offered: Every year, Summer

IDN 531. Design of Interactive Educational Environments. 3 Credits.

This course examines the design of interactive environments, including games, simulations and microworlds, from both theoretical and practical perspectives. Topics include information representation, types of interactivity, user control and pedagogical implications of interactivity, as well as the effective design of these resources for education. Students develop proficiency in the use of an interactive authoring environment or game design platform, depending on the individual's technical background, creating a functioning prototype of their design.

Offered: Every year, Summer

IDN 532. Design and Development of Online Learning. 3 Credits.

What does it take to design a compelling online learning experience, one that engages students and fosters their construction of new understandings? This class examines current approaches to planning, development and implementation of online courses. Students apply research-based principles and methods to develop an online "mini-course," designed to support a successful learning experience for the user. This course provides excellent foundational training in Learning Management Systems.

Offered: Every year, Fall and Summer

IDN 533. Producing Educational Video and Digital Training. 3 Credits.

This course examines the use of video in education, including theoretical approaches to visual learning as well as practical considerations about planning, writing, producing and integrating video resources. Students investigate artistic and technical practices used in combining audio, still images and moving pictures into coherent messages. Additional topics include directing, cinematography, audio, lighting, editing and effective distribution. Depending on levels of technical preparation, students use a range of applications to plan and produce short video segments.

Offered: Every year, Fall

IDN 534. Implementing Digital Media for Learning. 3 Credits.

This course examines the challenges of implementing digital environments for learning in real-world contexts. Through research articles and case studies, students explore issues such as selecting, budgeting and evaluating technology resources. Within the structure of the class, students may choose to focus on implementing media in K-12 environments (in and out of school), higher education, industry or public spaces.

Offered: As needed

IDN 535. New Directions in Digital Environments for Learning. 3 Credits.

As new digital resources are developed, instructional designers need to be able to understand and evaluate their practicality and value for educational use. This course allows students to explore new and changing technologies, applications and approaches. By definition, topics in this course change each time it is offered, but may include such areas as virtual and augmented reality, handheld devices and interactive media.

Offered: Every year, Spring

IDN 536. Independent Study. 3 Credits.

This course includes supervised study of special topics in instructional design. This option is designed to allow a student to further customize his or her course of study if needed. Each student must submit a proposed course of study including assessment plan for approval prior to enrolling.

Offered: As needed

IDN 537. Designing and Utilizing Assistive Learning Technologies. 3 Credits.

This course explores the use of technology to support achievement for individuals with different learning needs. Topics include an overview of the continuum of assistive technologies, from simple to complex; a discussion of theoretical bases, support and guidelines for the use of these technologies; an examination of the principles of Universal Design for Learning; and the exploration of specific tools and devices. Course projects emphasize hands-on experience in using these approaches.

Offered: Every year, Fall and Spring

IDN 550. Capstone Experience. 3 Credits.

The capstone is the culmination of students' work in the instructional design program. It prepares students to enter the workforce as instructional designers. In this final course, students design and develop a unique project which reflects the skills and knowledge gained throughout the program. The project serves to demonstrate fluency with the elements of an instructional design analysis, technical competency, and the ability to use theory to inform design.

Offered: As needed

Social and Emotional Learning (SEL)

SEL 600. Introduction to Social and Emotional Learning (SEL) and School Climate: Academy/Orientation. 1 Credit.

This course introduces students to the basic technology used throughout the program. Students receive a preview of the contents of the other courses to gain an understanding of how they connect to the development of the capstone project. Self-paced over 12 weeks.

Offered: Every year, Summer

SEL 601. Research Deep Dive - Social and Emotional Learning and School Climate. 3 Credits.

This course provides an introduction to the foundational research in social and emotional learning and school climate, as well as an introduction to critiquing research. The research reviewed is drawn from multiple fields, including child and cognitive development, trauma-informed instruction, and learning science.

Prerequisites: Take SEL 600.

Offered: Every year, Fall Online

SEL 602. Self-Care and Resiliency for Practitioners. 3 Credits.

This course focuses on the importance of healthy adults in promoting proactive and collaborative SEL climates. Using narrative explorations to promote resiliency, this course builds awareness around multi-voiced concepts of what self-care and resiliency mean, and considers how Intersectional issues of race, class, gender, and sexuality further inform and complicate SEL curricula and school change initiatives.

Prerequisites: Take SEL 601.

Offered: Every year, Fall Online

SEL 603. Transforming Instruction with SEL Insights. 3 Credits.

This course focuses on transforming curriculum and pedagogy with insights from research relating to SEL. Students gain an understanding of culturally relevant pedagogy, whole child needs assessments, and holistic management and instruction tools.

Prerequisites: Take SEL 602.

Offered: Every year, Spring Online

SEL 604. Leadership for SEL School Communities. 3 Credits.

This course develops skills to lead school communities in the promotion of whole child well-being and supportive climates for teachers, students, staff and families. Students work to understand the effects of policy and procedures with an SEL lens, and also learn consensus, collaboration and no-fault problem-solving strategies.

Prerequisites: Take SEL 603.

Offered: Every year, Spring Online

SEL 605. SEL Capstone Planning Project. 1 Credit.

Candidates design a self-defined capstone project, which implements their study and critique of the research to an applied problem of practice in their respective school environments. Each candidate is responsible for planning the development, implementation and assessment design of the project under the guidance of a university mentor and adviser.

Prerequisites: Take SEL 604.

Offered: Every year, Summer Online

SEL 606. Capstone Implementation Project. 1 Credit.

Candidates implement the project designed in the summer SEL 605 planning capstone. Project data is collected and analyzed with the oversight of the university adviser and mentor. Project results are presented in the fall semester for certificate completion.

Prerequisites: Take SEL 605.

Offered: Every year, Fall Online

Special Education (SPED)

SPED 245. Introduction to the Exceptional Child. 3 Credits.

This course provides students with a broad overview of exceptional learners. It is a basic overview/survey of all areas and categories of special education. The purpose is to provide an introduction to students with exceptionalities for education as well as noneducation majors. Target subject areas include: knowledge of categorical labels, educational law, program planning and terminology used in the field.

Offered: Every year, Fall and Spring

SPED 370. Special Education Law. 3 Credits.

This course focuses on current and relevant federal and state legislation in the field of special education. Special attention is paid to the interplay of services and protections provided by IDEA, Section 504 of the Rehabilitation Act, and the Americans with Disabilities Act (ADA). In addition, candidates examine the materials to understand the Every Student Success Act (ESSA) that was recently signed into law. Candidates learn how the law affects the planning and delivery of services to children, adolescents and adults with special needs from birth through adulthood. Candidates learn to interpret case law as well as statutes and other legal memoranda that apply to the rights and protections afforded to people with special needs.

Offered: Every year, Spring

SPED 501. Seminar and Mentoring I. 1 Credit.

This course is the first of three seminars that you will take during your program. It is designed to help beginning special education teachers explore the issues that they will encounter in classrooms during their internship. The focus will be on developing an understanding of the laws that govern special education and how they influence the diverse student makeup of our classrooms. Students will be provided with a broad overview of exceptional learners. Knowledge of categorical labels, program planning, behavior management and terminology used in the field of special education will be targeted.

Offered: Every year, Fall

SPED 502. Seminar and Mentoring II.**1 Credit.**

This second seminar course is designed to support beginning special education teachers as they continue to gain experience in working with special needs students. The focus will be on methods of assessments, progress monitoring, data collection, and program planning. Providing appropriate accommodations and/or modifications to curriculum will also be discussed. Learning modules and other resources will be combined with class discussions on crucial topics in the field of special education.

Prerequisites: Take SPED 501**Offered:** Every year, Spring**SPED 503. Seminar and Mentoring III.****1 Credit.**

This is the final seminar that you will take during your program. It is designed to continue to help beginning special education teachers explore the issues that they will encounter in classrooms during their internship. The focus of this seminar will be on developing an understanding of the specific learning strategies used in the field of special education. Teacher candidates will learn specific strategies and how to provide instructional support to exceptional students so that they can become independent learners. Data based instructional planning will also be included. Transition planning for students planning for post-secondary schooling will also be covered.

Prerequisites: Take SPED 502**Offered:** Every year, Fall**SPED 545. Introduction to the Exceptional Child.****3 Credits.**

This course provides students with a broad overview of exceptional learners. It is a basic overview/survey of all areas and categories of special education. The purpose is to provide an introduction to students with exceptionalities for education as well as noneducation majors. Target subject areas include: knowledge of categorical labels, educational law, program planning and terminology used in the field.

Offered: Every year, All**SPED 552. Teaching in the Inclusive Classroom.****3 Credits.**

Treatment of exceptional individuals throughout history and the importance of societal values regarding their differences form the basis for students' understanding of special education from its inception to current practices. Topics of discussion include: history and philosophy, laws, guidelines and procedures related to providing special education; the needs of students with exceptionalities, including giftedness; the particular needs of students for whom English is a second language; and instructional considerations for students with exceptionalities in inclusive settings. From a philosophic perspective, students learn skills to include children with exceptionalities in their elementary classrooms.

Prerequisites: Take ED 341 or ED 571;**Corequisites:** Take ED 452L.**Offered:** Every year, Fall and Spring**SPED 564. Teaching Students with Reading and Math Disorders.****3 Credits.**

In this course, students will develop a greater understanding of reading and math disorders including dyscalculia and dyslexia. This course addresses the neuro-biological origins of dyslexia and dyscalculia and the effects on language, literacy, and mathematics development. Students will study the characteristic symptoms of each disability/disorder, implications of each disorder, diagnosis, and teaching methodologies to support students with these disorders. Students will learn how design and implement evidence-based literacy and math instruction to reach diverse learners.

Offered: Fall**SPED 565. Specific Learning Disabilities: Identification, Instruction and Assessment (LD).****4 Credits.**

In this course, students have the opportunity to increase their knowledge of specific learning disabilities. Students discuss the supports and strategies that are successful in school so that there is a continuum of strategies that are practiced not just learned. The class expands the student's understanding of the importance of responding to the learning needs of these students in a positive way to help them access the curriculum successfully. The class incorporates tools such as simulations and case studies to understand the challenges and overlaps these SLDs present. Students examine the role of SRBI in identification, as well as questions such as: what makes these disabilities so misdiagnosed/overlooked; which if any are inherited/preventable; are there hidden gifts/talents being overshadowed by LDs; how can including the family in our collaborative efforts benefit the student; how can we identify key strategies to support these students emotionally as well as academically?

Offered: Every year, All**SPED 566. Autism Spectrum Disorders.****4 Credits.**

Educational practitioners develop a knowledge base of methods for working with students diagnosed with Autism Spectrum Disorders (ASD) and associated communication disorders. Focus is on the identification of students, as well as the program planning based on instructional strategies in the areas of academic, behavioral, social-emotional and communication.

Offered: Every year, All**SPED 568. Assessment/Program Planning and Evaluation of Children with Special Needs.****3 Credits.**

In this course, candidates prepare to administer, score and interpret a wide range of criterion referenced, norm referenced and curriculum-based measurements. Candidates utilize information to identify students with specific learning disabilities, make valid recommendations for programming, design appropriate IEP goals and objectives based on the results, and share information with parents and other professionals.

Offered: Every year, Fall and Spring**SPED 570. Special Education Law.****3 Credits.**

This course focuses on current and relevant federal and state legislation in the field of special education. Special attention is paid to the interplay of services and protections provided by IDEA, Section 504 of the Rehabilitation Act, and the Americans with Disabilities Act (ADA). In addition, candidates examine the materials to understand the Every Student Success Act (ESSA) that was recently signed into law. Candidates learn how the law affects the planning and delivery of services to children, adolescents and adults with special needs from birth through adulthood. Candidates learn to interpret case law as well as statutes and other legal memoranda that apply to the rights and protections afforded to people with special needs.

Offered: Every year, Fall and Spring

SPED 571. Emotional and Behavioral Disorder Identification, Management, and Assessment. 4 Credits.

This course examines social-emotional-behavioral functioning in the educational setting. Methods of identification, assessment and instructional planning for students with social-emotional-behavioral disorders are addressed in depth. Comprehensive coverage of behavior management, discipline models and building systems of support are examined and discussed. In this way, behavior and/or different learning needs are understood, modifications and supports are put in place and the student is actively engaged in practicing them. This student-centered method results in positive outcomes across the span of the student's life because the student learns and internalizes successful strategies that work consistently.

Offered: Every year

SPED 572. Educating Young Children with Special Needs. 3 Credits.

The needs of the young child with disabilities are explored through an examination of social, adaptive, environmental and family characteristics. Candidates learn how to assess children and provide a developmentally appropriate curriculum. The differences between IEPs and IFSP are a focal point, as well as the importance of working with families and professionals in birth to three programs, preschool programs, and kindergarten through grade 2 classrooms. Community services for the young special needs child also are discussed.

Offered: Every year, Summer

SPED 573. Reading Disorders: Assessment, Planning and Instruction. 3 Credits.

This course provides candidates with the knowledge and skills needed to provide appropriate evaluation, program planning and educational experiences for students with reading disorders, including Dyslexia. Specifically, reading assessments, diagnosis of reading disorders, IEP goals/objectives and program recommendations are explored and discussed. Reading instruction at the intervention and special education identification levels are discussed to ensure students' ability to plan educational programming for students including those with Dyslexia. Further, instructional strategies to support students with reading disabilities who are included in the regular education setting are emphasized. Various methodologies to support students with Dyslexia as they access the regular education curriculum and instruction are included.

Offered: Every year, Fall and Summer

SPED 574. Understanding and Teaching Students with Intellectual Disabilities. 3 Credits.

This course provides candidates with the information necessary to provide appropriate educational experiences for students with low incidence disabilities, including intellectual impairments, physical impairments and those with multiple areas of impairment. The focus is on promoting participation in the school, home and community through developing appropriate transition goals. Emphasis is placed on the use and effectiveness of assistive technologies in working with these students.

Offered: Every year

SPED 575. Working with Gifted and Talented Students. 4 Credits.

This course focuses on characteristics of students identified as "gifted" and "talented." Attention also is paid to those who are "twice exceptional." Candidates explore the early development of these children as well as the ways in which their gifts may affect their relationships with their siblings and families. Areas of study include identification, curriculum design and understanding how to provide for their unique social and emotional development, as well as their academic achievement. (Elective)

Offered: Every year, Fall and Spring

SPED 576. Designing and Utilizing Assistive Learning Technologies. 3 Credits.

This course explores the use of technology to support achievement for individuals with different learning needs. Topics include an overview of the continuum of assistive technologies, from simple to complex; a discussion of theoretical bases, support and guidelines for the use of these technologies; an examination of the principles of Universal Design for Learning; and the exploration of specific tools and devices. Course projects emphasize hands-on experience in using these approaches. (Elective)

Offered: Every year, Fall and Spring

SPED 579. Practicum in Special Education I. 3 Credits.

This course is the first of two separate 3-credit practicums designed to provide each candidate professional practice and authentic experiences working with students who qualify under IDEA as needing special education and related services. In addition to coursework, candidates choose a single primary designation from the student(s) IEP for their Practicum. From that IEP, they select 1 or 2 goals to focus their work on as they spend 36 contact hours observing, planning, instructing and assessing the student(s). Hours and reflections are recorded in a journal daily. Candidates must design a lesson plan and teach a 10-minute mini-lesson that is filmed based on the goals from the IEP. All data collected throughout each practicum is compiled in an e-portfolio, which catalogs the activities undertaken by the candidates including an analysis and description as well as artifacts collected. The candidate is required to collaborate with the onsite special education teacher. The university professor will either visit or meet with the candidate, collaborating special education teacher, and principal during the practicum. Prerequisite: Qualifying employment in a school for the duration of the Practicum.

Offered: Every year, Fall

SPED 580. Practicum in Special Education II. 3 Credits.

This course is the second of two separate 3-credit practicums designed to provide each candidate professional practice and authentic experiences working with one or more students who qualify under IDEA as needing special education and related services. For this Practicum, candidates must choose a completely different primary disability than they chose for SPED 579. In addition to coursework, candidates must select 1 or 2 goals to focus their work on as they spend 36 contact hours observing, planning, instructing and assessing the student(s). Hours and reflections are recorded in a journal daily. Candidates must design a lesson plan and teach a 10-minute mini-lesson that is filmed based on the goals from the IEP. All data collected throughout each practicum is compiled in an e-portfolio, which catalogs the activities undertaken by the candidates including an analysis and description as well as artifacts collected. The candidate is required to collaborate with the onsite special education teacher. The university professor will either visit or meet with the candidate, collaborating special education teacher, and principal during the practicum to outline the expectations, standards and activities necessary to successfully meet the requirements. Prerequisites: Successful completion of SPED 579 Practicum I. Note: Each Practicum requires qualifying employment in a school for the duration of the Practicum

Prerequisites: Successful completion of SPED 579 Practicum I.

Offered: Every year, Spring

SPED 581. Research in Special Education. 3 Credits.

Candidates submit a proposal for research based on an area of interest in special education. Upon approval of their proposal, they conduct research, collect data and present their findings.

Offered: Every year

SPED 582. Research in Special Education. 2 Credits.

In this course candidates will collaborate with a faculty advisor to identify a problem of practice in an area of special education. Upon approval of their proposal, they will conduct research and do a modified literature review of the problem and collect data. They will develop an action plan that will improve access for individuals with special needs. Since educators are also leaders, it is important to collaborate and share resources with colleagues. For this course, candidates will design a professional development plan based upon their research that could be shared with colleagues.

Prerequisites: Take SPED 503

Offered: Every year, Spring

SPED 650. Student Teaching/Special Education. 6 Credits.

This six-credit course consists of a sixteen-week student teaching assignment. This will be accomplished through eight weeks with students of one disability and another eight weeks with students having a different disability. This assignment will be full time in a public school or an approved setting working with a trained cooperating teacher or mentor who supervises the candidate pursuing an initial certificate in special education. Teacher candidates will gain firsthand knowledge in the continuum of services in the field of special education. They will utilize strategies and best practices learned through their coursework and apply those to the students with whom they are working. The university coordinator must approve all placements and will advise the teacher candidate throughout the semester.

Prerequisites: Take SPED 680

Offered: Every year, Spring

SPED 680. Interprofessional Experience: Collaborative Special Educators & Law. 2 Credits.

Throughout this course, candidates will alternately explore landmark cases, legislation, and the continuing struggle for social justice, self-determination, and the role of advocacy in bringing about life altering changes for people who are differently abled. work in interprofessional teams that laid the historical foundations of special education as well as an experiential experience to apply new knowledge and theory into practice by working in interprofessional teams. Candidates will view the continuing struggle for social justice and equity in education for differently abled people through the historical lens of special education. It was only through advocacy, legislation, and lawsuits that differently abled students won the right to FAPE. Over time, with the reauthorization of IDEA, the ability to work in interprofessional teams that made parents equal partners became the norm. addresses key laws such as IDEA, Section 504 of the Rehabilitation Act, and the ADA.

Prerequisites: Take SPED 572

Offered: Every year, Fall

SPED 681. Advanced Interprofessional Experience Across All Levels. 2 Credits.

This course is designed to provide the pre-service special educator with experiential opportunities to learn from and collaborate with a variety of health care and social services professionals who are integral to high quality special education services. The course provides multiple hands-on opportunities, case study analyses and interprofessional participation in mock applications involving the development, recommendation, evaluation, and assessment of providing special education services through interdisciplinary teams. Focus will be on developing co-teaching skills, understanding interprofessional models of healthcare and social services, promoting the respect of and cooperation with diverse roles and responsibilities, promoting share ethics and values, communication, and teamwork skills.

Prerequisites: Take SPED 680

Offered: Every year, Spring

Certificate in Social and Emotional Learning and School Climate

The foundation for student success is the environment in which they learn. Students must feel physically and emotionally safe in the classroom and feel supported by their teacher and classmates. In light of numerous issues with bullying and violence in schools, this online certificate program addresses the pressing need in K-12 institutions to address the social and emotional needs of students and teachers through systematic changes to school climate.

The first program of its kind in the state, this program provides a unique focus on the ways that culturally responsive practices, school equity, and diversity and inclusion can better inform SEL frameworks with the whole child in mind. Our certificate draws on cross-disciplinary research to prepare teachers, administrators and other key school personnel with the knowledge and skills needed to ensure lasting structural changes to positively affect school climate. Coursework builds on itself and culminates in a hands-on capstone project, in which you will address an applied problem of practice within your respective school environment.

This graduate certificate program prepares you to facilitate the academic achievement of students, enhance the collaborative and supportive work environment of teachers, and build strong relationships with the families and communities that you serve. Coursework critically examines the foundations of social and emotional learning and builds into a self-defined capstone project that provides you the opportunity to implement and evaluate an action-research plan within your school.

Certificate in Social and Emotional Learning and School Climate Program of Study

Code	Title	Credits
SEL 600	Introduction to Social and Emotional Learning (SEL) and School Climate: Academy/Orientation	1
SEL 601	Research Deep Dive - Social and Emotional Learning and School Climate	3
SEL 602	Self-Care and Resiliency for Practitioners	3

SEL 603	Transforming Instruction with SEL Insights	3
SEL 604	Leadership for SEL School Communities	3
SEL 605	SEL Capstone Planning Project	1
SEL 606	Capstone Implementation Project	1
Total Credits		15

- Designing learning experiences for universities
- Technology for the K-12 classroom
- Training in corporate and nonprofit environments

The coursework is rounded out with a comprehensive, three-credit capstone experience that gives you the opportunity to prepare a well-developed design proposal and project, leveraging the technologies and instructional design analyses that you've learned throughout your studies.

Junior year spring start: (9 credits count towards both BS/BA and MS)

Code	Title	Credits
IDN 529	Educational Media Design Lab (Junior Year: Spring)	3
IDN 525	Foundations of Instructional Design (Senior Year: Fall)	3
IDN 527	Society, Culture and Learning (Senior Year: Spring)	3
IDN 530	Web Design for Instruction (Post-Graduation: Summer)	3
IDN 531	Design of Interactive Educational Environments (Post Graduation: Summer)	3
IDN 526	Cognitive Science and Educational Design (Post Graduation: Fall)	3
IDN 528	Collaborative Design of Digital Environments (Post Graduation: Fall)	3
IDN 532	Design and Development of Online Learning (Post Graduation: Fall)	3
or IDN 533	Producing Educational Video and Digital Training	
IDN 535	New Directions in Digital Environments for Learning (Post Graduation: Spring)	3
or IDN 537	Designing and Utilizing Assistive Learning Technologies	
IDN 550	Capstone Experience (Post Graduation: Spring)	3

IDN 525	Foundations of Instructional Design (Senior Year: Fall)	3
IDN 527	Society, Culture and Learning (Senior Year: Spring)	3
IDN 529	Educational Media Design Lab (Senior Year: Spring)	3
IDN 530	Web Design for Instruction (Post Graduation: Summer)	3
IDN 531	Design of Interactive Educational Environments (Post Graduation: Summer)	3
IDN 526	Cognitive Science and Educational Design (Post Graduation: Fall)	3
IDN 528	Collaborative Design of Digital Environments (Post Graduation: Fall)	3

Admission Requirements

Applications for the Certificate in Social and Emotional Learning and School Climate online graduate program are requested by May 8 for enrollment beginning in late July. To qualify for admission to the certificate program, applicants must have a bachelor's degree in education or a related field from an accredited institution with a minimum GPA of 3.0. Candidates also must be employed in a school-based or educational setting.

Applicants must submit:

- completed application form
- resume
- letter of intent
- official transcripts of all undergraduate and graduate work completed

Dual-Degree BA/MS or BS/MS in Instructional Design and Technology

Program Contact: Ruth Schwartz
(Ruth.Schwartz@quinnipiac.edu) 203-582-8419

The Instructional Design & Technology program prepares you to design, develop and implement powerful learning materials, such as websites, online courses and interactive presentations, for learners of all ages. By exploring learning and design theory, practical strategies and an array of digital tools, you'll learn to analyze and generate creative solutions for the complex learning problems that we encounter today, in classrooms or in business settings. Students in the program have a range of goals, including careers in health professions, private industry, non-profits, universities and K-12 schools – so you may come into the program from any major.

The dual-degree program allows you to start your Instructional Design & Technology coursework during your junior or senior year. Typically, this 30-credit program takes 5 semesters. However, by taking 9 credits (3 courses) as an undergrad, you will leave Quinnipiac with a master's degree just one year after your undergraduate commencement.

Dual-Degree BA/MS or BS/MS in Instructional Design and Technology Curriculum

The 30-credit master of science in Instructional Design & Technology curriculum is made up of 15 credits of required foundations courses that cover theoretical foundations of instructional design, learning theory and design for learning. You may then select four elective courses that allow you to customize your degree based on your particular objectives and professional needs. Electives cover instructional design applications in a variety of settings, including:

IDN 532	Design and Development of Online Learning (Post graduation: Fall)	3
or IDN 533	Producing Educational Video and Digital Training	
IDN 535	New Directions in Digital Environments for Learning (Post Graduation: Spring)	3
or IDN 537	Designing and Utilizing Assistive Learning Technologies	
IDN 550	Capstone Experience	3
Total Credits		30

Student Learning Outcomes

Upon completion of the Instructional Design and Technology program, students will demonstrate the following competencies:

- a. **Communication:** Communicate effectively in visual, oral and written form, taking into account the type of information being delivered and the diverse backgrounds, roles and varied responsibilities of the audience.
- b. **Collaboration:** Collaborate effectively with peers, including the use of consensus-building, negotiation, conflict resolution skills and constructive feedback.
- c. **Research and Theory:** Draw on their understanding of the discipline of instructional design and pertinent research to inform their design decisions, explaining and applying key concepts of instructional design approaches and models, learning theory and multimedia principles.
- d. **Ethical Issues:** Identify and respond to ethical, legal and political implications of design in the workplace.
- e. **Technology:** Analyze and apply existing and emerging technologies for instruction, with regard for the learning need, the learners and the learning context.
- f. **Planning and Analysis:** Utilize the instructional design approach to conduct a needs assessment to recommend appropriate design solutions and strategies; address the needs of the target audience and the learning context; and create a plan for the development, implementation and evaluation of instruction.
- g. **Design:** Design instructional interventions in accordance with the instructional design plan, incorporating appropriate principles of visual design, interaction design and learning strategies, and addressing social, cultural, political and individual differences that may influence learning.
- h. **Development:** Produce instructional materials in a variety of delivery formats that align with the content analyses, proposed technologies, delivery methods and instructional strategies included in the planning and design phases.
- i. **Implementation:** Use technology effectively to implement a design plan; target appropriate strategies to prepare individuals and/or the environment for implementation.
- j. **Assessment:** Design assessments; evaluate instructional interventions; utilize evaluation to guide iterative design of learning resources.

Applicants for the program must submit:

- one-page statement that explains your decision to pursue graduate education
- current resume
- 2 letters of recommendation (at least 1 from a professor in your major)

Candidates will be interviewed in person, by phone or online as appropriate.

Retention

To remain in the program, a student must maintain a GPA of 3.0. A student who receives a grade of C+ or below in a course may be asked to retake the course to earn a minimum grade of B-. Students who fail to maintain the minimum GPA in any semester may be allowed to remain in the program with probationary status at the discretion of the dean of the School of Education; however, granting of probationary status is subject to the dean's approval and is neither automatic nor guaranteed.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Graduate MAT in Elementary Education

Program Contact: Christina Pavlak
(christina.pavlak@qu.edu) 203-582-3192

The purpose of Quinnipiac's graduate Master of Arts in Teaching program is to prepare teacher candidates with perspectives, knowledge and skills to become master educators. The School of Education recognizes that the concept of educator is three-dimensional, and that successful educators must be teachers, learners and leaders. Therefore, graduates of the Master of Arts in Teaching program are teachers who lead all students to learn, learners who continue to learn as they continue to teach, and leaders who influence the culture of their schools in ways that support best practices in teaching and learning.

The program reflects the spirit and mission of Quinnipiac with close attention to the teaching standards for the state of Connecticut and to the standards of the Council for the Accreditation of Educator Preparation (CAEP). The three values of "excellence in education, a sensitivity to students, and a spirit of community," which are the heart of Quinnipiac's mission statement, are woven throughout the program.

General Information

The Quinnipiac University elementary education curriculum is an intensive five-semester program of study consisting of core certification courses that provide eligibility for teacher certification, advanced coursework in literacy, numeracy and pedagogy to satisfy master's degree requirements, and a unique internship/residency experience which provides pre-service teacher candidates the opportunity to learn about schools, students and teaching.

The graduate MAT program offers Quinnipiac teacher candidates a Master of Arts in Teaching degree leading to certification through the Connecticut State Department of Education. Consistent with the university's mission, arts and sciences studies are integrated with

professional studies to prepare graduates who have depth and breadth of content knowledge and strong pedagogical skills.

Internship/Residency

Candidates participate in an internship during the first two semesters of the program. Quinnipiac University has developed collaborative partnerships with school districts throughout central and southern Connecticut to provide graduate candidates with guided, hands-on professional practice and to defray some costs of the program. Candidates in the internship receive a tuition reduction during the internship semesters. (An optional second internship/residency is available during the final two semesters, resulting in significant additional tuition reduction.)

Interns serve in area schools in a variety of capacities and as substitute teachers with guidance from an on-site adviser and from a Quinnipiac faculty member. Each intern has the opportunity to participate in staff meetings and take part in all school operations, becoming a valued member of the school faculty. In the late afternoon and early evening, candidates continue their formal studies on the Quinnipiac campus. During a residency, teacher candidates remain in a single classroom for 10 weeks or more as a co-teacher with a cooperating teacher and a university supervisor providing guidance and support.

Elementary Education MAT Curriculum

To complete all requirements of the MAT program, a candidate must complete all coursework and successfully complete all performance tasks to qualify for teacher certification.

Code	Title	Credits
ED 521	Social and Philosophical Foundations of Education	3
ED 525	Diversity in the Classroom	3
ED 535	Elementary Internship and Seminar I	1
ED 544	Developing Literacy in the Primary Grades	3
ED 545	Elementary Internship and Seminar II	1
ED 550	Issues and Research in Education	2
ED 556	Teaching Literacy in Grades 4-6	3

SPED 552	Teaching in the Inclusive Classroom	3
Total Credits		56

Student Learning Outcomes

Upon completion of the Master of Arts in Teaching program, teacher candidates will be able to demonstrate the following competencies:

- Content Knowledge:** Identify and define the major concepts of their discipline and understand that content is dynamic and ways of knowing are constantly changing.
- Instructional Strategies:** Recognize varied instructional practices and apply appropriate instructional strategies based upon principles of effective teaching.
- Learning Differences, Learner Development:** Recognize the complexity of human diversity and provide an instructional program that is responsive to the needs of diverse students.
- Instructional Strategies:** Apply appropriate technology to enhance the teaching and learning process.
- Professional Learning and Ethical Practice:** Demonstrate the skills and commitment to engage in reflective, mindful practice.
- Assessment:** Use multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision-making.
- Professional Learning and Ethical Practice:** Recognize that since content is dynamic and ways of knowing are constantly changing, the profession requires a commitment to continuous learning.
- Leadership and Collaboration:** Recognize that education has the power to be transformative and that their role as educators includes the responsibility to advocate on behalf of their students to promote social justice.
 - Professional Learning and Ethical Practice, Leadership and Collaboration:** Demonstrate a willingness to work collaboratively with peers, practitioners in the field and/or MAT instructors to sustain a professional learning environment to support student learning.
 - Leadership and Collaboration:** Demonstrate an understanding that scholarly research is essential to improving their own practice and to enhancing the knowledge base of the profession.

Admission

Applicants are accepted for admission to the fall semester only and are expected to enroll as full-time graduate students. To ensure admission into the program with a placement in an internship, applicants should complete the application process early. Admission to the graduate MAT program is based on a holistic review by MAT program faculty of the following admission requirements:

- A 3.0 minimum overall undergraduate GPA (from all colleges and universities attended) with a subject area major or appropriate interdisciplinary major.

- b. A transcript review that indicates a “B” or better performance in courses related to mathematics as well as English/language arts. (Students whose transcripts do not meet this criteria will be required to provide proof of basic math/reading competencies as determined by the MAT program director.)
- c. At least two written recommendations from individuals who have recent knowledge (within the last two years) of the applicant’s suitability as a prospective educator.
- d. A written essay completed on-site that meets program standards.
- e. Evidence of strong basic skills in math, reading and writing. Evidence can be provided through SAT or ACT scores. Alternatively, evidence may also be provided through completion of the Praxis Core Academic Skills Test. SAT, ACT or Praxis Core results will be reviewed by the program director. Any MAT candidate whose scores indicate an area of weakness will be required to participate in a non-credit bearing remediation program that addresses any area of underperformance in math, reading or writing. Once completion of the remediation process is done by the candidate, the status of the candidate will be reviewed. All candidates will be considered probationary status until the improvement of basic skills are documented and remediated.
- f. A formal interview during which the applicant is expected to demonstrate: an ability to communicate clearly, a demeanor appropriate to the teaching profession, and a maturity and attitude necessary to meet the demands of the MAT program.
- g. Effective July 1, 2010, Connecticut law requires all teacher candidates to undergo a criminal background check prior to being placed in a public school setting for field study, internship, and student teaching. Because a clinical experience is an integral part of each semester, failure to abide by this law will make an applicant ineligible for admission to the program. The School of Education has procedures in place to assist candidates in obtaining the background check. The cost of the background check is the responsibility of the teacher candidate.

Retention

Teacher candidates in the MAT program at Quinnipiac are expected to demonstrate the professional behaviors and dispositions articulated in both the School of Education’s Professional Attributes and Dispositions document and the CT Code of Professional Responsibility for Teachers. Candidates must maintain a GPA of 3.0 or higher for graduate courses in each semester with at least a B- or better in any education course. A grade of C+ or below in any education course (including the graduate content area courses) requires the candidate to retake the course at his/her expense and earn the minimum B- grade.

If the candidate, once formally accepted into the MAT program, fails to maintain the minimum GPA, that candidate may be allowed to remain in the program for a single semester on probationary status. If a candidate on probation fails to meet the minimum GPA by the end of the single probationary semester, that candidate is dismissed from the program. Granting of probationary status is subject to the director’s approval and is neither automatic nor guaranteed.

Candidates failing to meet professional standards in the program may be subject to suspension or dismissal. In addition, candidates who exhibit a lack of effort or responsibility in the program, or who reveal interpersonal skills unsuited or inappropriate for teaching, will be required to meet with the MAT program director to discuss continuation in the program.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Note: Because the education program is subject to state review on a regular basis, prospective and current students are advised to see the School of Education for up-to-date program information.

Graduate MAT in Secondary Education

Program Contact: Christina Pavlak
(christina.pavlak@qu.edu) 203-582-3192

The purpose of Quinnipiac’s graduate Master of Arts in Teaching program is to prepare teacher candidates with perspectives, knowledge and skills to become master educators. The School of Education recognizes that the concept of educator is three-dimensional, and that successful educators must be teachers, learners and leaders. Therefore, graduates of the Master of Arts in Teaching program are teachers who lead all students to learn, learners who continue to learn as they continue to teach, and leaders who influence the culture of their schools in ways that support best practices in teaching and learning.

The program reflects the spirit and mission of Quinnipiac with close attention to the teaching standards for the state of Connecticut and to the standards of the Council for the Accreditation of Educator Preparation (CAEP). The three values of “excellence in education, a sensitivity to students, and a spirit of community,” which are the heart of Quinnipiac’s mission statement, are woven throughout the program.

General Information

The Quinnipiac University secondary curriculum consists of an intensive five-semester program of study that begins in the fall semester. Each curriculum includes core certification courses that provide eligibility for teacher certification, advanced content (discipline) courses which satisfy master’s degree requirements, and a unique internship experience which provides pre-service teachers the opportunity to learn about schools, students and teaching.

The graduate MAT program offers Quinnipiac teacher candidates a Master of Arts in Teaching degree leading to certification through the Connecticut State Department of Education. Consistent with the university’s mission, arts and sciences studies are integrated with professional studies to prepare graduates who have depth and breadth of content knowledge and strong pedagogical skills.

Internship/Residency

Candidates participate in an internship during the first two semesters of the program. Quinnipiac University has developed collaborative partnerships with school districts throughout central and southern Connecticut to provide graduate candidates with guided, hands-on professional practice and to defray some costs of the program. Candidates in the internship receive a tuition reduction during the internship semesters. (An optional second internship/residency is available during the final two semesters, resulting in significant additional tuition reduction.)

Interns serve in area schools in a variety of capacities and as substitute teachers with guidance from an on-site adviser and from a Quinnipiac

faculty member. Each intern has the opportunity to participate in staff meetings and take part in all school operations, becoming a valued member of the school faculty. In the late afternoon and early evening, candidates continue their formal studies on the Quinnipiac campus. During a residency, teacher candidates remain in a single classroom for 10 weeks or more as a co-teacher with a cooperating teacher and a university supervisor providing guidance and support.

Secondary Education MAT Curriculum

To complete all requirements of the MAT program, a candidate must complete all coursework and successfully complete all performance tasks to qualify for teacher certification.

Code	Title	Credits
ED 500	Internship and Seminar I	1
ED 501	Internship and Seminar II	1

Student Learning Outcomes

Upon completion of the Master of Arts in Teaching program, teacher candidates will be able to demonstrate the following competencies:

- Content Knowledge:** Identify and define the major concepts of their discipline and understand that content is dynamic and ways of knowing are constantly changing.
- Instructional Strategies:** Recognize varied instructional practices and apply appropriate instructional strategies based upon principles of effective teaching.
- Learning Differences, Learner Development:** Recognize the complexity of human diversity and provide an instructional program that is responsive to the needs of diverse students.
- Instructional Strategies:** Apply appropriate technology to enhance the teaching and learning process.
- Professional Learning and Ethical Practice:** Demonstrate the skills and commitment to engage in reflective, mindful practice.
- Assessment:** Use multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision-making.
- Professional Learning and Ethical Practice:** Recognize that since content is dynamic and ways of knowing are constantly changing, the profession requires a commitment to continuous learning.
- Leadership and Collaboration:** Recognize that education has the power to be transformative and that their role as educators includes the responsibility to advocate on behalf of their students to promote social justice.
 - Professional Learning and Ethical Practice, Leadership and Collaboration:** Demonstrate a willingness to work collaboratively with peers, practitioners in the field and/or MAT instructors to sustain a professional learning environment to support student learning.
 - Leadership and Collaboration:** Demonstrate an understanding that scholarly research is essential to improving their own practice and to enhancing the knowledge base of the profession.

Admission

To ensure admission into the program with a placement in an internship, applicants should complete the application process as early as possible. Admission to the graduate MAT program is based on a holistic review by MAT program faculty of the following admission requirements:

- A 3.0 minimum overall undergraduate GPA (from all colleges and universities attended) with a subject area major or appropriate interdisciplinary major.
- A transcript review that indicates a "B" or better performance in courses related to mathematics as well as English/language arts. (Students whose transcripts do not meet this criteria will be required to provide proof of basic math/reading competencies as determined by the MAT program director.)
- At least two written recommendations from individuals who have recent knowledge (within the last two years) of the applicant's suitability as a prospective educator.

- d. A written essay completed on site that meets program standards.
- e. Evidence of strong basic skills in math, reading and writing. Evidence of strong basic skills can be provided through SAT or ACT scores. Alternatively, evidence may also be provided through completion of the Praxis Core Academic Skills Test. SAT, ACT or Praxis Core results will be reviewed by the program director. Any MAT candidate whose scores indicate an area of weakness will be required to participate in a non-credit bearing remediation program that addresses any area of underperformance in math, reading or writing. Once completion of the remediation process is done by the candidate, the status of the candidate will be reviewed. All candidates will be considered probationary status until the improvement of basic skills are documented and remediated.
- f. A formal interview during which the applicant is expected to demonstrate: an ability to communicate clearly, a demeanor appropriate to the teaching profession, and a maturity and attitude necessary to meet the demands of the MAT program.
- g. Effective July 1, 2010, Connecticut law requires all teacher candidates to undergo a criminal background check prior to being placed in a public school setting for field study, internship, and student teaching. Because a clinical experience is an integral part of each semester, failure to abide by this law will make an applicant ineligible for admission to the program. The School of Education has procedures in place to assist candidates in obtaining the background check. The cost of the background check is the responsibility of the teacher candidate.

Retention

Teacher candidates in the MAT program at Quinnipiac are expected to demonstrate the professional behaviors and dispositions articulated in both the School of Education's Professional Attributes and Dispositions document and the CT Code of Professional Responsibility for Teachers. Candidates must maintain a GPA of 3.0 or higher for graduate courses in each semester with at least a B- or better in any education course. A grade of C+ or below in any education course (including the graduate content area courses) requires the candidate to retake the course at his/her expense and earn the minimum B- grade.

If the candidate, once formally accepted into the MAT program, fails to maintain the minimum GPA, that candidate may be allowed to remain in the program for a single semester on probationary status. If a candidate on probation fails to meet the minimum GPA by the end of the single probationary semester, that candidate is dismissed from the program. Granting of probationary status is subject to the director's approval and is neither automatic nor guaranteed.

Candidates failing to meet professional standards in the program may be subject to suspension or dismissal. In addition, candidates who exhibit a lack of effort or responsibility in the program, or who reveal interpersonal skills unsuited or inappropriate for teaching, will be required to meet with the MAT program director to discuss continuation in the program.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Note: Because the education program is subject to state review on a regular basis, prospective and current students are advised to see the School of Education for up-to-date program information.

Graduate MAT in Special Education

Program Contact: J (christina.pavlak@qu.edu)udith Falaro
(Judith.Falaro@quinnipiac.edu) 203-582-8868

The purpose of Quinnipiac's graduate Master of Arts in Teaching Special Education program is to prepare teacher candidates with perspectives, knowledge and skills to become master educators in the area of special education. The School of Education recognizes that the concept of educator is three-dimensional, and that successful educators must be teachers, learners and leaders. Therefore, graduates of the Master of Arts in Teaching Special Education program are teachers who lead all students to learn, learners who continue to learn as they continue to teach, and leaders who influence the culture of their schools in ways that support best practices in teaching and learning.

The program reflects the spirit and mission of Quinnipiac with close attention to the teaching standards for the state of Connecticut and to the standards of the Council for the Accreditation of Educator Preparation (CAEP). The three values of "excellence in education, a sensitivity to students, and a spirit of community," which are the heart of Quinnipiac's mission statement, are woven throughout the program.

Master of Arts in Teaching Special Education Curriculum

To complete all requirements of the MAT SPED program, a candidate must complete all coursework and successfully complete all performance tasks to qualify for teacher certification.

Student Learning Outcomes

Upon completion of the Master of Arts in Teaching program, teacher candidates will be able to demonstrate the following competencies:

- Content Knowledge:** Identify and define the major concepts of their discipline and understand that content is dynamic and ways of knowing are constantly changing.
- Instructional Strategies:** Recognize varied instructional practices and apply appropriate instructional strategies based upon principles of effective teaching.
- Learning Differences, Learner Development:** Recognize the complexity of human diversity and provide an instructional program that is responsive to the needs of diverse students.
- Instructional Strategies:** Apply appropriate technology to enhance the teaching and learning process.
- Professional Learning and Ethical Practice:** Demonstrate the skills and commitment to engage in reflective, mindful practice.
- Assessment:** Use multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision-making.
- Professional Learning and Ethical Practice:** Recognize that since content is dynamic and ways of knowing are constantly changing, the profession requires a commitment to continuous learning.
- Leadership and Collaboration:** Recognize that education has the power to be transformative and that their role as educators includes the responsibility to advocate on behalf of their students to promote social justice.
- Professional Learning and Ethical Practice, Leadership and Collaboration:** Demonstrate a willingness to work collaboratively with peers, practitioners in the field and/or MAT instructors to sustain a professional learning environment to support student learning.
- Leadership and Collaboration:** Demonstrate an understanding that scholarly research is essential to improving their own practice and to enhancing the knowledge base of the profession.

Admission

To ensure admission into the program with a placement in an internship, applicants should complete the application process as early as possible. Admission to the graduate MAT Special Education (SPED) program is based on a holistic review by program faculty of the following admission requirements:

- A 3.0 minimum overall undergraduate GPA (from all colleges and universities attended) with a subject area major or appropriate interdisciplinary major.
- A transcript review that indicates a B or better performance in courses related to mathematics as well as English/language arts.

(Students whose transcripts do not meet this criteria will be required to provide proof of basic math/reading competencies as determined by the MAT SPED program director.)

- At least two written recommendations from individuals who have recent knowledge (within the last two years) of the applicant's suitability as a prospective educator.
- A written essay completed on site that meets program standards.
- Evidence of strong basic skills in math, reading and writing. Evidence of strong basic skills can be provided through SAT or ACT scores. Alternatively, evidence may also be provided through completion of the Praxis Core Academic Skills Test. SAT, ACT or Praxis Core results will be reviewed by the program director. Any MAT SPED candidate whose scores indicate an area of weakness will be required to participate in a non-credit bearing remediation program that addresses any area of underperformance in math, reading or writing. Once completion of the remediation process is done by the candidate, the status of the candidate will be reviewed. All candidates will be considered probationary status until the improvement of basic skills are documented and remediated.
- A formal interview during which the applicant is expected to demonstrate: an ability to communicate clearly, a demeanor appropriate to the teaching profession, and a maturity and attitude necessary to meet the demands of the MAT SPED program.
- Effective July 1, 2010, Connecticut law requires all teacher candidates to undergo a criminal background check prior to being placed in a public school setting for field study, internship and student teaching. Because a clinical experience is an integral part of each semester, failure to abide by this law will make an applicant ineligible for admission to the program. The School of Education has procedures in place to assist candidates in obtaining the background check. The cost of the background check is the responsibility of the teacher candidate.

Retention

Teacher candidates in the MAT SPED program at Quinnipiac are expected to demonstrate the professional behaviors and dispositions articulated in both the School of Education's Professional Attributes and Dispositions document and the CT Code of Professional Responsibility for Teachers. Candidates must maintain a GPA of 3.0 or higher for graduate courses in each semester with at least a B- or better in any education course. A grade of C+ or below in any education course (including the graduate content area courses) requires the candidate to retake the course at their expense and earn the minimum B- grade.

If the candidate, once formally accepted into the MAT SPED program, fails to maintain the minimum GPA, that candidate may be allowed to remain in the program for a single semester on probationary status. If a candidate on probation fails to meet the minimum GPA by the end of the single probationary semester, that candidate is dismissed from the program. Granting of probationary status is subject to the director's approval and is neither automatic nor guaranteed.

Candidates failing to meet professional standards in the program may be subject to suspension or dismissal. In addition, candidates who exhibit a lack of effort or responsibility in the program, or who reveal interpersonal skills unsuited or inappropriate for teaching, will be required to meet with the MAT SPED program director to discuss continuation in the program.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of

Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Note: Because the education program is subject to state review on a regular basis, prospective and current students are advised to see the School of Education for up-to-date program information.

Master of Science in Instructional Design and Technology

Program Contact: Ruth Schwartz (Ruth.Schwartz@quinnipiac.edu)
203-582-8419

The field of instructional design applies what we know about how people learn to the thoughtful design and implementation of instructional materials, such as websites, videos, podcasts, online courses, social media sites, interactive simulations and educational games. Our fully online program prepares students for professional work or advanced study in instructional design by providing opportunities to develop a solid grounding in core competencies of the field, including instructional design models, theories of learning, principles for the design of instructional media, specific technical skills for media production, and approaches to the selection, integration and evaluation of digital materials for learning. Elective courses allow students to focus on their own particular interests and goals, such as teaching with technology in the K–12 classroom, designing digital media for museums or after-school programs, or producing instructional materials for higher education, corporate or nonprofit environments.

Courses in Theoretical Foundations of Education address learning theories; theoretical approaches to multimedia design; instructional design models; and elements of the instructional design process, including the needs assessment, generation of a design solution, and formative and summative evaluation of an instructional resource.

Courses in Design Fundamentals emphasize the application of theory to short-term design projects, fostering familiarity and essential competencies in a range of media (e.g., podcasts and videocasts, websites, social media, games and simulations, learning management systems, design for handheld devices and public spaces). The process of working in a team to plan and implement an instructional resource is also a focus.

Graduates of this program are prepared for career opportunities in settings such as higher education, schools or school districts, business environments, nonprofit groups, and educational software or media design firms.

MS in Instructional Design and Technology Curriculum

To earn the master's degree, students must complete 30 credits of coursework, with a minimum GPA of 3.0. The sequence of courses is composed of required foundational courses, electives and the Capstone Experience.

Foundations

15 credits (five courses), required for all candidates, focus on theoretical foundations of education and fundamentals of design. These courses include extensive exposure to research literature investigating the efficacy of media for educational applications, since it is the ability to

understand and apply research that allows instructional designers to bridge the gap between theory and practice.

Electives

Individuals select an additional 12 credits (four courses), according to their own areas of interest. Topics include in-depth theoretical and practical aspects of producing educational resources (e.g., web design, design of online courses, video production, interactive digital media) with hands-on use of specific software applications. Other elective options explore the process of selecting, implementing and evaluating digital resources for instruction in a range of environments (K–12, higher education, industry and nonprofit organizations, informal learning and creating accessible materials for individuals with diverse learning needs).

Capstone Experience

The required 3-credit (one course) Capstone Experience includes:

Career Exploration, including preparation of the resume and portfolio.

Throughout their coursework, students select their best work to post on an electronic portfolio for critique; in the Capstone, they further refine the portfolio. Consistent with program objectives, this allows the student to demonstrate competence with a range of software applications and serves to present student work to prospective employers.

Introduction to Project Management. To develop effective instructional design projects, students need to understand the basics of project management. In some cases, instructional designers may even be asked to serve as project managers. This component of the Capstone explores the basics of project management and the terminology used in this field.

The Thesis Project. Each student chooses a topic of personal and/or professional interest, researches existing approaches to and resources for instruction on this topic, and prepares a proposal for the design of a learning resource. The proposal includes a needs analysis, design details and an evaluation plan. The final step is the creation and presentation of a working prototype of the proposed resource. This project serves to demonstrate the candidate's fluency with elements of an instructional design analysis as well as with the use of theory to inform design.

Code	Title	Credits
Required Foundation Courses

IDN 533	Producing Educational Video and Digital Training (3 credits)	
IDN 534	Implementing Digital Media for Learning (3 credits)	
IDN 535	New Directions in Digital Environments for Learning (3 credits)	
IDN 536	Independent Study (3 credits)	
IDN 537	Designing and Utilizing Assistive Learning Technologies	
Capstone Experience		
IDN 550	Capstone Experience	3
Total Credits		30

Student Learning Outcomes

Upon completion of the Instructional Design and Technology program, students will demonstrate the following competencies:

- a. **Communication:** Communicate effectively in visual, oral and written form, taking into account the type of information being delivered and the diverse backgrounds, roles and varied responsibilities of the audience.
- b. **Collaboration:** Collaborate effectively with peers, including the use of consensus-building, negotiation, conflict resolution skills and constructive feedback.
- c. **Research and Theory:** Draw on their understanding of the discipline of instructional design and pertinent research to inform their design decisions, explaining and applying key concepts of instructional design approaches and models, learning theory and multimedia principles.
- d. **Ethical Issues:** Identify and respond to ethical, legal and political implications of design in the workplace.
- e. **Technology:** Analyze and apply existing and emerging technologies for instruction, with regard for the learning need, the learners and the learning context.
- f. **Planning and Analysis:** Utilize the instructional design approach to conduct a needs assessment to recommend appropriate design solutions and strategies; address the needs of the target audience and the learning context; and create a plan for the development, implementation and evaluation of instruction.
- g. **Design:** Design instructional interventions in accordance with the instructional design plan, incorporating appropriate principles of visual design, interaction design and learning strategies, and addressing social, cultural, political and individual differences that may influence learning.
- h. **Development:** Produce instructional materials in a variety of delivery formats that align with the content analyses, proposed technologies, delivery methods and instructional strategies included in the planning and design phases.
- i. **Implementation:** Use technology effectively to implement a design plan; target appropriate strategies to prepare individuals and/or the environment for implementation.
- j. **Assessment:** Design assessments; evaluate instructional interventions; utilize evaluation to guide iterative design of learning resources.

Admission

Successful applicants to this program come from diverse backgrounds in universities, schools, businesses or the nonprofit world, but all share an interest in using digital media for education. There are no specific technological prerequisites; all students will advance their levels of technical skills as they progress through the program.

Applications for the online Master of Science in Instructional Design and Technology program are considered on a rolling basis. Students may begin the program in fall or spring, and can complete the program in five semesters by taking two courses per semester; courses are offered in fall, spring and summer. We encourage candidates to submit applications as early as possible to ensure consideration for the semester desired.

To qualify for admission to the program, students must have earned a bachelor's degree from an accredited institution with a preferred minimum GPA of 3.0. Candidates must submit:

- a. completed application form
- b. resume
- c. letter of intent
- d. official transcripts of all undergraduate and graduate work completed
- e. two letters of recommendation (professional and/or academic)

Candidates will be interviewed in person, by phone or online as appropriate.

Retention

To remain in the program, a student must maintain a GPA of 3.0. A student who receives a grade of C+ or below in a course may be asked to retake the course to earn a minimum grade of B-. Students who fail to maintain the minimum GPA in any semester may be allowed to remain in the program with probationary status at the discretion of the dean of the School of Education; however, granting of probationary status is subject to the dean's approval and is neither automatic nor guaranteed.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Master of Science in Special Education

Program Contact: Judith Falaro (judith.falaro@qu.edu), JD 203-582-8868

The School of Education offers two tracks in the Master of Science in Special Education program. One leads to cross-endorsement in Connecticut #165, Comprehensive K-12 Special Education for those already holding an initial endorsement, and the second track is for anyone in a related field who is interested in earning a Master of Science in Special Education.

Program Description

The field of special education requires an in-depth understanding of the laws that frame it, particularly the Individuals with Disabilities Act (IDEA),

Section 504 of the Rehabilitation Act, and the Americans with Disabilities Act (ADA). The program provides certified teachers with opportunities to better understand the purposes and protections of these laws, as well as their implications for teaching and working with students with special needs and their families. Through these lenses, program candidates will understand how students identified with special needs learn, and how their particular special needs impact their lives inside and outside of school academically, socially and emotionally. The knowledge and understanding developed through the program will enable graduates to design individual programs of learning for students, with supports that allow all identified students to access the curriculum together with their non-disabled peers in inclusive settings.

The program will provide graduate candidates with two options to achieve their professional goals. Teachers who already have a valid teaching certificate will be able to pursue a cross-endorsement in comprehensive special education along with their Master of Science in Special Education (36 credits) in accordance with the requirements and regulations of the Connecticut State Department of Education. Graduate candidates who are in a related field but still desire an MS in Special Education (30 credits) will complete a similar course of study.

MS in Special Education Leading to Cross-Endorsement

SPED 581	Research in Special Education	3
SPED 576	Designing and Utilizing Assistive Learning Technologies	3

¹ Both SPED 579 and SPED 580 are required for candidates seeking a cross-endorsement in Connecticut #165 Comprehensive Special Education K-12.

Student Learning Outcomes

Upon completion of the Master of Science in Special Education, graduates will understand and be able to:

- Demonstrate a working knowledge** of federal and state laws and guidelines that govern eligibility, protections and services for students with special needs.
- Administer, score and interpret** a wide range of criterion-referenced, norm-referenced and curriculum-based measurements.
- Utilize Scientifically-Based Research Interventions (SBRI)** to identify the presence of specific learning disabilities in school-age children.
- Collaborate with other professionals** in related services to provide the supports necessary for students with special needs to access the curriculum in inclusive settings with their non-disabled peers wherever possible.
- Assume leadership positions** in Planning and Placement Team (PPT) meetings by advocating for the social, emotional and academic needs of students in order to design an appropriate Individual Education Program (or IEP) for each identified student.
- Identify and apply** interventions and strategies to meet the unique educational needs of exceptional learners and their families, including but not limited to preparing young adults to self-advocate and

develop the life skills necessary for independent living as they transition into adulthood and their respective careers.

Admission

Applications for the online Master of Science in Special Education program are considered on a rolling basis. Students may apply to enter during the fall or spring semester. We encourage candidates to submit applications as early as possible to ensure consideration for the semester desired.

To qualify for admission to the program, students must have earned a bachelor's degree from an accredited institution with a preferred minimum GPA of 3.0. Candidates must submit:

- completed application form
- resume
- letter of intent
- official transcripts of all undergraduate and graduate work completed

Foundations

The 18 credits of foundation courses are designed to provide an in-depth study of the characteristics and outcomes of four of the areas identified under IDEA. The remaining 12 credits include coursework in special education law, policy and ethics; assessment, program planning and evaluation; and evaluation and instruction in reading disorders. Those seeking the cross-endorsement are required to take a 3-credit course in educating young children with special needs.

Capstone Experience

Candidates following the cross-endorsement track are required to successfully complete two 3-credit practicums, each in a different area of special education.

Retention

To remain in the program, a student must maintain a GPA of 3.0. A student who receives a grade of C+ or below in a course will have to retake the course to earn a minimum grade of B-. Students who fail to maintain the minimum GPA in any semester may be allowed to remain in the program with probationary status at the discretion of the dean of the School of Education; however, granting of probationary status is subject to the dean's approval and is neither automatic nor guaranteed.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Online Course Design Certificate

Program Contact: Ruth Schwartz (ruth.schwartz@qu.edu) 203-582-8419

The 9-credit graduate certificate in online course design is focused on providing the knowledge and experience needed to develop online courses across a range of disciplines. The sequence of three online graduate-level courses begins with an examination of the instructional design process—using what we know about *how people learn* to help us design effective educational materials. In the following two courses, students explore best practices of online course design, create a model course, and investigate multimedia project development using a number

of tools and resources. Students may substitute other IDN courses with permission of the program director.

As K-12 programs, higher education and corporate training continue to shift online, there is a growing demand for skilled professionals who can create effective digital education resources. This online certificate program equips students with a deeper understanding of instructional design as well as the skills needed to plan, design and develop a powerful online course. Students with particular interests or goals may petition to customize the course sequence or take more than three courses.

Please note: Candidates in the Master of Science in Instructional Design program who are interested in the Certificate in Online Course Design must consult with the program director, Ruth Schwartz, for information on requirements for this credential.

Online Course Design Certificate Curriculum

Code	Title	Credits
Required Courses		
IDN 525	Foundations of Instructional Design	3
IDN 529	Educational Media Design Lab	3
IDN 532	Design and Development of Online Learning	3
Total Credits		9

Students may substitute other IDN courses with permission of the program director.

To qualify for admission, candidates must have earned a bachelor's degree from a regionally accredited institution of higher learning. The ideal candidate will have maintained a 3.0 cumulative GPA and earned no grade lower than a B- in a single class. No prior technical experience is required.

Interested individuals can apply online (<https://www.qu.edu/admissions/graduate/apply/>). Applications are accepted throughout the year; however, the admissions committee will not review an application until all of the supporting documents are received.

A complete application consists of the following:

- Application form (<https://www.qu.edu/admissions/graduate/apply/>)
- \$45 application fee
- Current resume
- Official transcripts of all undergraduate and graduate work completed

Candidates will be interviewed in person, by phone or online as appropriate.

Sixth-Year Diploma in Educational Leadership

Program Contact: Anne Dichele (anne.dichele@qu.edu), Dean 203-582-3463

Quinnipiac University's Sixth-Year Diploma in Educational Leadership prepares graduates with the perspectives, knowledge and skills to become exceptional school leaders. The School of Education recognizes an educational leader as three-dimensional, and that successful educational leaders must be teachers and learners as well as leaders.

Graduates of the Sixth-Year Diploma in Educational Leadership program develop a deeper understanding of the teaching and learning process through a lens of equity, a fuller understanding of diverse learners through a lens of cultural relevance, and a stance of advocacy as leaders, who influence the culture of their schools in ways that support best practices in teaching and learning. Addressing the challenges of contemporary school leadership while supporting school change toward a more inclusive and equitable model is at the forefront of all we do.

General Information

The Sixth-Year Diploma in Educational Leadership program is an online post-master's credential which is provided in an asynchronous delivery model. The program prepares graduates to assume a variety of school leadership roles such as department chair, assistant principal, principal, curriculum coordinator and central office administrator below the rank of superintendent. Candidates who complete the required 21 credits of the 33-credit program and pass the Connecticut Administrator Test (#6412) are able to obtain initial certification by the Connecticut State Department of Education certification for Intermediate Administrator/Supervisor (092). (Completion of the full degree program is required for the professional level license.)

While 27 credits are requirements for the program (see course outline), the remaining 6 credits to complete the degree allow candidates to choose areas of interest or desired expertise. Courses in Program Evaluation and Conflict Resolution are offered. Additionally, candidates are allowed to enroll in courses offered within the Social & Emotional Learning Certificate.

The program is fully accredited by the Connecticut State Department of Education, which participates in the NASDTEC Interstate Contract, and CAEP, the Council for the Accreditation of Educator Preparation.

Note: Because the education program is subject to state review on a regular basis, prospective and current students are advised to see the School of Education for up-to-date program information.

Internship

Candidates must participate in an internship after completing EDL 601, EDL 603 and EDL 605 to gain authentic leadership experience. The Internship in Educational Leadership (EDL 607) consists of a series of coordinated activities related to the national standards for school leaders as established by the National Educational Leadership Preparation (NELP) standards, which arose from the Educational Leadership Constituent Council (ELCC). The specific experiences are cooperatively planned by the candidate, a faculty member and a school district mentor. To demonstrate mastery of the NELP standards, each candidate compiles an internship portfolio, which includes a description and analysis of activities related to the national standards, evidence of evaluating a portion of a school program for the purpose of improving student learning, evaluations from the administrator, mentor and University supervisor, a reflection journal describing leadership strengths and needs, a weekly log of activities and hours (a minimum of 216 hours are required), and artifacts from the internship. The internship is scheduled only during the fall or spring semester to ensure the most authentic experience possible.

Sixth-Year Diploma in Educational Leadership Curriculum

Code	Title	Credits
Required Courses		
EDL 601	Leading and Managing the Contemporary School	6
EDL 603	Leading and Managing the Instructional Program for Equitable Outcomes	6
EDL 605	Leading and Managing School Improvement	6
EDL 607	Administrative Internship in Educational Leadership	3
EDL 700	Connecticut Administrators Test	
EDL 611	Educational Law	3
EDL 613	Public School Finance	3
Choose 6 credits from the following		
EDL 609	Educational Program Evaluation	3
EDL 615	Conflict Resolution and Transformational Leadership	3
SEL 601	Research Deep Dive - Social and Emotional Learning and School Climate	3
SEL 602	Self-Care and Resiliency for Practitioners	3
SEL 603	Transforming Instruction with SEL Insights	3
SEL 604	Leadership for SEL School Communities	3
Total 33 credits		

Student Learning Outcomes

Upon completion of the Sixth-Year Diploma in Educational Leadership, candidates will be able to demonstrate and sustain the following competencies:

- Vision, Mission and Goals:** Guide the development and implementation of a shared vision and mission of high quality and equitable education that is shared and supported by all stakeholders.
- Ethics and Professional Norms:** Model the leadership and ethical behaviors that promote equity and social justice.
- Culture and Relationship Building:** Advocate, nurture and sustain a school culture and climate that supports educators and meets the needs of diverse learners by guiding academic, social, developmental and emotional needs.
- Managing Organizational Systems and Safety:** Ensure school management, operation and resources to promote a safe, efficient and effective learning environment.
- Teaching and Learning:** Monitor and continuously improve teaching and learning by providing instructional programs conducive to student learning and staff professional development.
- Collaborating with Families and Stakeholders:** Promote and sustain collaboration with families and other stakeholders to respond to

diverse communities, interests and needs, and to mobilize community resources.

- g. **Change Agent:** Understand, advocate and respond to the change process to influence the political, social, economic, legal and cultural context affecting education.
- h. **Systems Thinking:** Align the school improvement plan with the district theory of action drivers for coherence, efficacy and building capacity.

Admission

Students are admitted into the Sixth-Year Diploma in Educational Leadership program upon meeting the following requirements:

- a. A master's degree in education or a related field from an accredited institution with a minimum GPA of 3.0;
- b. Evidence of four years of full-time teaching experience in a PK–12 setting;
- c. Completion of at least 36 hours (equivalent to 3 credits) of a special education course, completed within ten years¹;
- d. A record of excellent teaching as evidenced by recommendations of supervisors;
- e. Satisfactory writing skills as evidenced by a written essay; and
- f. Satisfactory leadership dispositions and a professional maturity to meet the demands of the program as evidenced during a formal interview.

¹Applicants who have not met the special education requirement may be admitted on the condition that they enroll in a state-approved course.

Retention

To remain in the program, students must maintain academic standards and honor and follow Connecticut's Code of Professional Responsibilities for Teachers in all interactions in the schools. Students must maintain a 3.0 GPA for graduate courses in each semester with at least B- or better in any leadership course. A grade of C+ or below in any program course requires the student to retake the course and earn a minimum of B-. If a student fails to maintain the minimum GPA, that student may be allowed to remain in the program for a single semester with probationary status. If a student on probation fails to meet the minimum GPA by the end of the single probationary semester, that student is dismissed from the program. Granting of probationary status is subject to the dean's approval and is neither automatic nor guaranteed. Students failing to meet professional standards in the program may be subject to suspension or dismissal.

Completion

To fulfill all requirements of the Sixth-Year Diploma in Educational Leadership program, students must complete all course work, including the internship, and successfully complete all performance tasks including passing the Connecticut Administrator Test (#6412).

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

The program is fully accredited by the Connecticut State Department of Education, which participates in the NASDTEC Interstate Contract.

Special Education Certificate of Completion

Program Contact: Judith Falaro (judith.falaro@qu.edu) 203-582-8868

The Special Education Certificate of Completion is a 12-credit option for MAT program teacher candidates or for external applicants who hold a current teaching certificate from an approved institution of higher education and/or are practicing teachers. The certificate is not a degree or licensure program. External candidates may earn the certificate by completing 12 credits of online special education courses as listed under Curriculum (p. 467). Current certified teachers interested in the Special Education Certificate of Completion online program should contact Graduate Admissions.

For internal candidates for the certificate, the 12 credits required for the Special Education Certificate of Completion are earned through three 4-credit online courses offered during the fall, J-term, spring and summer.

MAT program candidates interested in the Special Education Certificate of Completion should notify the program contact, Judith Falaro (judith.falaro@qu.edu), by February of their junior year (or the start of the first semester for candidates in the five-semester MAT program).

Career Development

In the School of Health Sciences, the assistant dean for career development works with students to explore majors and career interests through individual consultations and group sessions, and guides them through a career development process. Assistance is provided with resume and cover letter writing, interview preparation, conducting a job search and graduate school applications. Students can participate in experiential learning through community service as well as internships, part-time and summer employment. A health professions career fair is held every spring at the North Haven Campus.

Additional Requirements

Academic programs with clinical components use multiple clinical education centers. Students are responsible for their transportation to and from these clinical agencies.

Background Checks

Students should be aware that certain clinical sites or internship locations may require a criminal background check before a student is placed in the clinic or intern site. The university has procedures to assist students in obtaining such a background check. The cost of the background check is the responsibility of each individual student.

Academic and Clinical Software Package Cost

Students enrolled in certain undergraduate and graduate programs in the School of Health Sciences are required to pay for access to EXXAT, a clinical and academic software package. The cost for EXXAT is a one-time charge of \$150 (subject to change) that permits access to the software for the duration of the student's enrollment in their current major. Students in undergraduate and graduate programs that require clinical/fieldwork experiences will be required to pay for access to a documentation approval system through EXXAT. Specific information regarding documentation approval will be provided by individual programs.

Technical Standards for Admission

Students admitted to all programs in the School of Health Sciences must be able to meet their program's technical standards and or essential functions. Technical standards are developed by accreditation agencies and organizations to establish the essential qualities and standards considered necessary to achieve the skills, knowledge and competencies for entry-level practice. Information on technical standards and essential functions may be found in the catalog, on the website or by contacting the individual program chairperson.

Academic Good Standing

All undergraduate and graduate students in the School of Health Sciences are expected to maintain the required minimum GPA set forth by their respective program of study (if applicable). Each program may have additional benchmarks that must be met to progress within the program of study. The student should refer to the program's description in

the Quinnipiac University Catalog and to the program's student handbook (if applicable) for clarification for what is required to maintain their status within the program.

At the end of each semester, the program directors will compile a list of students who are deficient in meeting academic or clinical/professional achievement requirements. Utilizing the review process established by their program, the student will be notified via email of their status in the program. Deficient students may be: a) placed on probation, b) suspended or c) dismissed. Students placed on probation remain in their program but in order to progress, must meet the performance standards specified in their probation notification letter. For further clarification please see the Program Level Academic Good Standing Policy (p. 62).

Mission Statement

The Quinnipiac University School of Health Sciences offers a comprehensive spectrum of health science programs designed to address both the evolving health needs of society and the practical implementation of innovative methods and procedures based on the latest scientific discoveries. Building upon a solid foundation in the basic sciences and liberal arts, the School of Health Sciences offers a student-centered learning environment with interprofessional collaboration, innovative teaching and hands-on experience. The School of Health Sciences seeks to integrate theory, research and practice to best prepare healthcare practitioners and biomedical scientists who can demonstrate leadership in their disciplines and in the global community.

Vision Statement

The School of Health Sciences strives to develop forward-thinking, compassionate practitioners and scientists with broad professional competencies who can shape a rapidly changing biomedical and social landscape in pursuit of excellence in health care delivery. The school will be a nationally recognized school of choice for students, faculty and employers who share this vision.

Values Statement

The School of Health Sciences values an interprofessional, client/patient-centered healthcare model and the translational science that supports it. Students are held to high ethical standards as they utilize critical thinking, scientific evidence and knowledge of diverse cultures and communities to improve health outcomes. We value an experiential learning environment where faculty integrate inquiry with their professional expertise and build collaborative relationships that empower students to solve health-related challenges in a socially responsible manner.

Bachelor of Science

- Bachelor of Science in Athletic Training (p. 569)

- Entry-Level Master's Physician Assistant (p. 565) (Direct Entry)
- Entry-Level Doctor of Physical Therapy (p. 557) (Direct Entry)
 - Dual-Degree BS in Health Science Studies/DPT (3+3) (p. 559)
 - Dual-Degree BS in Health Science Studies/DPT (4+3) (p. 560)
- Dual-Degree BS/MHS in Biomedical Sciences (concentrations in Medical Sciences or Microbiology) (p. 491)
- Dual-Degree BS in Biomedical Sciences/MHS Pathologists' Assistant (4+2) (p. 489)
- Accelerated Dual-Degree BS in Health Science Studies/Master of Social Work (3+2) (p. 487)

Double-Degree Program

- Double-Degree BS in Industrial Engineering and BS in Health Science Studies (p. 482)

Minors

- Minor in Biomedical Sciences (p. 494)
- Minor in Microbiology and Immunology (p. 495)
- Minor in Nutrition (p. 496)

Graduate Programs

Master of Health Science

- Advanced Medical Imaging and Leadership (p. 790)
- Cardiovascular Perfusion (p. 796)
- Biomedical Sciences (p. 792) with concentrations in:
 - Medical Sciences
 - Microbiology
- Health Science (p. 809)
- Pathologists' Assistant (p. 815)
- Physician Assistant (p. 820)
- Radiologist Assistant (p. 824)

Master of Social Work

- Master of Social Work (p. 810)
- Advanced Standing Master of Social Work (p. 813)

Doctoral Degrees

- Post-Baccalaureate Doctor of Occupational Therapy (OTD) (p. 545)
- Online Post-Professional Occupational Therapy Doctorate (OTD) (p. 553)
- Entry-Level Doctor of Physical Therapy (DPT) (p. 558)

Department of Biomedical Sciences

The programs within the Department of Biomedical Sciences provide students with knowledge and skills of the rapidly expanding fields of basic science, medicine and research. The integration of courses from these areas with a broad range of courses taken from other disciplines—

such as the arts and sciences and business—provides the student with the maximum educational background and the critical thinking skills required to succeed in the increasingly demanding field of biomedical sciences.

The department offers five programs leading to the bachelor of science degree: Biomedical Sciences, Health Science Studies, Medical Microbiology and Immunology, a Dual-Degree Bachelor/Master of Health Science in Biomedical Sciences, plus a Dual-Degree BS/MHS Biomedical Sciences to Pathologists' Assistant. Due to the expansion of medical information and techniques, the department also offers several graduate degree programs including Cardiovascular Perfusion, Pathologists' Assistant and Biomedical Sciences (with concentrations in Medical Sciences and Microbiology). The focus of each of these programs is to educate students for the critical thinking necessary to function successfully within their chosen profession.

The Department of Biomedical Sciences integrates and coordinates the activities of related biomedical sciences programs that may be conveniently grouped under the generic title "biomedical sciences." The inclusion of these programs, which have many elements in common, under the direction of a single administrative unit encourages the mixing of ideas and disciplines. It allows both the lateral and the upward mobility of students enrolled in closely related curricula and permits the faculty to cut across traditional disciplinary boundaries.

The rapid expansion of basic medical information, methodology and technology in recent years has increased the demand for specially trained personnel to perform in the clinical and research laboratories of hospitals, medical schools and government health facilities, and in the pharmaceutical and biotechnology industries. The healthcare system has a need for development of interdisciplinary skills to keep pace with sophisticated scientific developments and their applications in the biomedical sciences.

Students in biomedical science programs can enroll in independent study courses in biomedical science, microbiology and health sciences that enable them to collaborate with faculty in research laboratories. By definition, an independent study includes course content not offered by another Quinnipiac Catalog course. However, it must involve contact hours and scholarly activities equivalent to any regularly offered course. These courses often include review of the scientific literature in the field of the research project and creation of a "product," such as a term essay, a series of short papers, laboratory or project reports, a portfolio or presentation at a scientific meeting. Students are limited to no more than 8 credits of Biomedical Science (BMS) and/or Health Science (HSC) independent studies.

Students should refer to Pre-Medical Studies (p. 47) for information about the Pre-Medical Studies Program.

Bachelor's Degree Programs

- Bachelor of Science in Biomedical Sciences (p. 471)
- Bachelor of Science in Health Science Studies (p. 474)
- Bachelor of Science in Medical Microbiology and Immunology (p. 484)

Bachelor of Science in Biomedical Sciences

Program Contact: Thomas Martin (thomas.martin@qu.edu) 203-582-3368

The curriculum for the Bachelor of Science in Biomedical Sciences program provides students with a solid foundation in the basic and biomedical sciences, which enables them to pursue many different avenues of opportunity depending on their goals and interests. Students completing this degree may qualify for employment in the pharmaceutical and biotechnology industries; the medical diagnostics industry; university-based biomedical research; and city, state and federal health/research laboratories. Additionally, students may wish to continue their education in graduate/professional school in: biological and/or biomedical sciences, medicine, dentistry, veterinary medicine, physician assistant, pathologists' assistant, forensic sciences, microbiological sciences, molecular biology, biotechnology, toxicology, neurobiology, plus many other areas.

Students who excel in this program (>3.0 GPA overall and in science/math) may be eligible to participate in a research project with a faculty member or an internship in an area company sometime during their junior or senior year. This depends upon the availability of mentors and internships at the particular time. Upper-level BMS students in good academic standing (>3.0 GPA overall and in science/math) may also be permitted to take two to three graduate courses to fulfill undergraduate degree requirements. See policy here. (p. 136)

The technical standards for individuals working in the biomedical field may include the following abilities: to effectively communicate via oral and written expression; exhibit general fine motor skills and hand-eye coordination appropriate to performing delicate procedures; distinguish between subtle shades of color; read, comprehend and interpret scientific/medical information from professional sources. Reasonable accommodations will be considered on a case-by-case basis.

Students may choose to minor in *any* area of study, although BMS students often choose to pursue one (or more) of these particular minors:

- Microbiology and Immunology
- Chemistry
- Psychology

Students should work with their BMS major adviser and with their minor adviser to choose appropriate courses.

BS in Biomedical Sciences Curriculum

In addition to courses in science and mathematics, students are required to take a selection of University Curriculum (p. 51) courses (designated UC on the curriculum). The entire curriculum is designed to provide students with a strong program in basic and biomedical sciences, as well as a well-rounded educational experience through the University Curriculum. To remain in good academic standing within the program, the student must maintain a GPA of 2.5 overall, as well as in math and science.

Course	Title	Credits

¹ Minimum mathematics requirement: MA 140. For those interested in graduate or professional schools, MA 141 is recommended.

Students interested in graduate or professional school should investigate research and/or an independent study.

Science Electives

Take 15-18 credits from any BIO, BMS, HSC, CHE or PHY course at the 200 level or above. Three courses must be BMS.

Open Electives

Students may take 6 credits of 1-, 2-, 3-, or 4-credit courses. BMS majors may not take 100 level "science for non-science majors" classes as open electives.

Minors

Science and open electives may be taken to complete minors from a variety of disciplines such as microbiology/immunology, chemistry and

psychology. Students should discuss course selection for minors with their academic adviser.

Biomedical Sciences Electives

Student Learning Outcomes

Upon completion of the Bachelor of Science in Biomedical Sciences program, students will demonstrate the following competencies:

- Foundational Knowledge:** Demonstrate advanced knowledge of the major disciplines in the biomedical sciences (biology, chemistry, physics, physiology, microbiology, immunology, pathophysiology).
- Disease Mechanisms:** Identify factors that influence human health and disease.
- Translational Science:** Critically analyze how new research discoveries can be translated into effective patient treatments/interventions.
- Professional Skills:** Master the essential technical skills critical for success in a laboratory environment.
- Effective Scientist:** Engage in scientific research and effectively communicate the dissemination of results to various audiences.
- Responsible Citizen:** Evaluate the social and ethical impact of scientific discoveries on medical practice.

BMS Mission Statement

The mission of the Biomedical Sciences program is to provide students with a solid basic science foundation in preparation for studying the upper-level biomedical-related sciences. This is meant to provide maximum flexibility to students who are interested in pursuing one of the medical-related professions (e.g., physician, physician assistant, dentist, veterinarian, pharmacist, chiropractor, etc.), or graduate programs (MS/PhD) in the biomedical sciences (e.g., cancer biology, stem cell technology, cloning technology, molecular genetics, microbiology, immunology, etc.). Additionally, students who choose not to go on to graduate or professional school are able to apply for research and development positions in pharmaceutical and biotechnology companies.

BMS students have the opportunity to learn valuable skills that may be applicable in a variety of biomedical fields after graduation, including effective communication via oral and written expression; exhibition of general fine motor skills and hand-eye coordination appropriate to performing delicate procedures; reading comprehension, critical thinking, visual literacy, interpretation of scientific/medical information from professional sources, etc.

Admission into the Program

Admission into the Biomedical Sciences program is dependent on the applicant's potential to pursue a university program and on past academic performance. The high school student applying for admission into the Biomedical Sciences program should have a strong background in the biological sciences. To remain in good standing within the program, the student must maintain a GPA of 2.5 overall, as well as in math and science.

Transfer Students from within Quinnipiac University

Students currently attending Quinnipiac in another program may be accepted into the Biomedical Sciences program based upon a review of qualifications by the program director. Students may apply upon completion of at least one semester at Quinnipiac. Students transferring in as a junior (i.e., 57 credits or more) must have completed both

the general biology requirements, specifically, 8 credits of BIO 101 & BIO 102 *or* BIO 150 & BIO 151, and the general chemistry requirements, specifically, 8 credits of Quinnipiac's CHE 110 & CHE 111 prior to entry into the upper-class component of the program. Student must also meet the performance standards of the program (GPA of 2.5 overall, as well as in math and science).

Transfer Students from Other Colleges and Universities

Transfer students from other colleges and universities may be accepted into the Biomedical Sciences program. These students must meet the program's performance standards and course requirements. For all transfer students, a minimum GPA of 2.67 is required. Students transferring in as a junior (i.e., 57 credits or more) must have completed both the general biology requirements, specifically, the equivalent of 8 credits of Quinnipiac's BIO 101 & BIO 102 *or* BIO 150 & BIO 151, and the general chemistry requirements, specifically, the equivalent of 8 credits of Quinnipiac's CHE 110 & CHE 111 prior to entry into the upper-class component of the program. Transfer students wishing to enter this program will be given appropriate transfer credit for previous college work.

Pre-Medical Studies Program

Students majoring in Health Science Studies, Biology, Biomedical Sciences or the natural science track of Behavioral Neuroscience may fully participate in the pre-medical studies program. The curriculum in this degree program can fulfill the science prerequisites for most professional schools. Students should refer to Pre-Medical Studies (p. 47) for more information about the pre-medical studies program and contact the Health Professions Advisory Committee for further academic advising.

Seamless Transfer Agreement with Gateway Community College (GCC), Housatonic Community College (HCC) and Norwalk Community College (NCC)

Under this Transfer Agreement, GCC, HCC and NCC graduates will be guaranteed admission into a bachelor's degree program with third year (junior) status at Quinnipiac University on the condition that they:

- Graduate with an associate in arts, an associate in science in business, College of Technology engineering science, nursing or an allied health degree with a minimum cumulative GPA of 3.0 (this may be higher in specific programs).
- Satisfy all other Quinnipiac University transfer admission requirements and requirements for intended major.

Quinnipiac University agrees to accept the general education embedded in these associate degree programs in accordance with Quinnipiac preferred choices for general education as meeting all the requirements of its undergraduate general education except for the Integrative Capstone Experience and where courses are encumbered by the major (e.g., General Chemistry for the Disciplinary Inquiry Natural Science requirement for a Biochemistry major).

Suggested Transfer Curriculum for BS in Biomedical Sciences

A minimum of 60 credits is required for transfer into the BS in Biomedical Sciences program. Below is a sample plan of study for the first two years.

Course	Title	Credits
First Year		
Fall Semester		
English		3
General Biology with Lab		4
General Chemistry with Lab		4
Math - Pre-Calculus		3
Credits		14
Spring Semester		
English II		3
General Biology II with Lab		4
General Chemistry II with Lab		4
Math - Calculus		3
Elective		3
Credits		17
Second Year		
Fall Semester		
Anatomy & Physiology I with Lab		4
General Physics with Lab		4
Elective		3
Elective		3
Credits		14
Spring Semester		
Anatomy & Physiology II with Lab		4
General Physics II with Lab		4
Microbiology with Lab		4
Elective		3
Credits		15
Total Credits		60

Bachelor of Science in Health Science Studies

Program Contact: Jason Scozzafava (jason.scozzafava@qu.edu)
203-582-7663

The Health Science Studies bachelor's degree program is designed for students entering the School of Health Sciences who have interest in healthcare/health science related career paths. Upon admission, students choosing this option are assigned to academic advisers who will assist them in designing a customized program to meet their career goals. A strong emphasis on individualized academic advising is at the core of this program.

First-year students are automatically enrolled in a career exploration course to help them increase the breadth and depth of their professional interests. By their second year, students choose between the Clinical Preparation Track, Exercise & Wellness Track, Human Movement Track, Sports Medicine Track or the most flexible, Health & Science Track. This decision may change at anytime during their undergraduate program. A select number of students accepted into the Health Science Studies

major may be invited into the Physician Assistant (PA) Prep Track. The student-adviser relationship provides opportunity and support for each student, while pursuing *their goals* within the Quinnipiac University educational experience.

All students are strongly encouraged to declare a minor early in their undergraduate program to help broaden their foundational knowledge to help prepare them for their future careers or graduate programs. Qualified students have applied and attended graduate programs *such as* medical school, dental school, physician assistant, physical therapy, occupational therapy, nutrition, social work, speech language pathology, genetic counseling, medical laboratory sciences, pathology assistant or one of the many other healthcare related programs. Successful students have been accepted into combination programs such as the Dual-Degree BS/MBA (4+1) (p. 704) Health Care Management program, Accelerated Dual-Degree BS/JD (3+3) (p. 600) Pre-Law program, and Accelerated Dual-Degree BS/MSW (3+2) (p. 487) Master of Social Work program. Other options are to prepare for application to the Accelerated BSN program for Second Degree Students (p. 658) Nursing BS, or apply for a double major in health science studies along with psychology or sociology. The flexibility of the program allows students the option to graduate early by taking summer and/or J-term classes.

Students completing this bachelor's degree may also qualify for employment in the health science or healthcare related professions with or without direct patient interaction. Some examples would be as research assistant, biotechnology industry position, pharmaceutical/medical sales, community public health worker, environmental health advocate and more. We have also seen an increase in graduates of BS programs choosing to do a "gap" year and work entry-level jobs such as patient care associate, pharmacy technician and physical therapy assistant.

Mission Statement

The mission of the Health Science Studies bachelor's degree program is to facilitate and enrich students' development into knowledgeable, proficient and culturally competent interprofessional collaborators, who are leaders and lifelong learners, equally prepared for advanced healthcare education or direct entry into a health science career.

BS in Health Science Studies Curriculum

A total of 120 credits is required for completion of the BS in Health Science Studies. Below is a sample first year plan of study.

Course	Title	Credits
First Year		
Fall Semester		
HSC 221	Introduction to Health Care	2
BIO 101 & 101L	General Biology I and General Biology I Lab	4
Select one of the following: ¹		4
CHE 110 & 110L	General Chemistry I and General Chemistry I Lab	
CHE 101 & 101L	Fundamentals of General, Organic and Biological Chemistry I and Fundamentals of General, Organic and Biological Chemistry I Lab	
EN 101	Introduction to Academic Reading and Writing	3
FYS 101	First-Year Seminar	3
Credits		16

Spring Semester

HSC 202	Medical Terminology	2
BIO 102 & 102L	General Biology II and General Biology Lab II	4
Select one of the following: ¹		4
CHE 111 & 111L	General Chemistry II and General Chemistry II Lab	
CHE 102 & 102L	Fundamentals of General, Organic and Biological Chemistry II and Fundamentals of General, Organic and Biological Chemistry II Lab	
EN 102	Academic Writing and Research	3
UC Elective		3
Credits		16
Total Credits		32

¹ Chemistry courses and additional math courses depend on intended professional goal or career plan and math placement score.

Subsequent Course and GPA Requirements

Following the first year of study, Health Science Studies students meet with their academic advisers and develop a customized plan of study that incorporates their academic and career goals. During the first two years of study, students select a specific track. To remain in good standing within the program, students must maintain a minimum overall science GPA of 2.25 and earn 120 credits for degree completion. Course selections must fulfill the following:

Code	Title	Credits
	University Curriculum Requirements	46
	Foundational Science Core (additional biology, chemistry & physics)	13
	Health Science Track Specific Courses	19
	Science Electives (e.g., health science studies, biology, biomedical sciences)	12
	Open Electives	30
Total Credits		120

HSC offers the following tracks:

- Clinical Preparation Track (p. 480)
- Exercise and Wellness Track (p. 481)
- Health and Science Track
- Human Movement Track
- Sports Medicine Track
- Physician Assistant (PA) Preparation Track (Invitation Only)

Student Learning Outcomes

Upon completion of the Health Science Studies program, students will demonstrate the following competencies:

- Scientific Knowledge:** Demonstrate proficiency in understanding and explaining fundamental scientific principles in the disciplines of biology, chemistry and physics.

- Interprofessional Skills:** Effectively communicate information across the medical professions using advanced medical vocabulary.
- Teamwork:** Apply an advanced understanding of the interprofessional nature of healthcare.
- Health Systems:** Develop an advanced knowledge of the U.S. healthcare system and effectively describe challenges/issues that affect it.
- Evidence Informed Practice:** Critically evaluate biomedical information and sources to confirm validity and reliability.
- Responsible Citizen:** Evaluate the social, moral and ethical implications of scientific discoveries on medical practice.

Admission Requirements

Admission into the Health Science Studies program is dependent on the applicant's potential to pursue a university program and on past academic performance. The high school student applying for admission into the Health Science Studies program should have a strong background in the biological sciences. To remain in good standing within the program, the student must maintain a science GPA of 2.25. First-year biology (8 credits) must be successfully completed, at the latest, by the end of a student's sophomore year.

Transfer Students from within Quinnipiac University

Students currently attending Quinnipiac in another program may be accepted into the Health Science Studies program based upon a review of qualification by the program director. Students, with a science GPA of 2.25 minimum, may apply upon completion of at least one semester at Quinnipiac. Students transferring in as a junior (i.e., 57 credits or more) must have completed the general biology requirements, specifically, the equivalent of 8 credits of Quinnipiac's BIO 101 & BIO 102, or BIO 150 & BIO 151 or BIO 211 & BIO 212, prior to entry into the upper-class component of the program.

Transfer Students from Other Colleges and Universities

Transfer students from other colleges and universities may be accepted into the Health Science Studies program. These students must meet the program's performance standards and course requirements. For all transfer students, a minimum GPA of 2.67 is required. These students must have earned at least 8 credits of biology if entering their junior or senior year (i.e., having earned 57 credits or more), and performance standards of the program (science GPA minimum 2.25).

HSC 202. Medical Terminology. 2 Credits.

This course is a study of the principles of word analysis, word construction and word meanings as applied to medical and surgical terms. It includes a review of anatomy to indicate the relevancy of the terms being studied. The course is designed for first-year and sophomore health science students.

Offered: Every year, All

HSC 205. Age-Related Community Engagement Youth (HSC 505). 1 Credit.

This one-credit course utilizes experiential learning through the implementation of a service program in collaboration with a local community partner. During this course, students will have the opportunity to learn about and be a contributor to community engagement projects. This course will promote the development of critical thinking and assessment skills through observation, research, design, and implementation of a program that addresses future program sustainability for youth.

Offered: Every year, All

HSC 206. Community Engagement Legacy Service Learning Seminar: International (HSC 506). 1 Credit.

This one-credit course utilizes experiential learning through the implementation of a service program in collaboration with a local community partner. During this course, students will have the opportunity to learn about and be a contributor to community engagement projects. This course will promote the development of critical thinking and assessment skills through observation, research, design, and implementation of a program that addresses future program sustainability for older adults.

Offered: Every year, All

HSC 207. Interprofessional Community-Based Service Learning Seminar: Special Populations (HSC 507). 1-2 Credits.

This course involves active learning implementing a program with a local community partner working with at-risk population. Students are required to participate in 10-15 hours of community engagement. They observe and apply the concepts of interprofessional health care in a community-based setting. Faculty with expertise in the analysis of community-based practice lead discussions and community engagement related to population health in the local community. This course may be taken more than once. Offerings include MTW section during Thanksgiving week.

Offered: Every year, All

HSC 210. Introduction to Evidence-Based Health Care. 3 Credits.

Evidence-based practice in health care is the integration of the best available research with clinical expertise in the context of patient characteristics, culture and preferences. This is an introductory course outlining the processes associated with collecting and utilizing evidence to make clinical decisions.

Prerequisites: Course is designed for students in Online BS/HSC Completion Program. Take MA 275 or MA 206.

Offered: Every year, Fall and Spring

HSC 214. Care and Prevention of Athletic Injuries. 3 Credits.

This course is designed to provide an overview of the athletic training profession with an emphasis on the basic fundamentals utilized by the athletic trainer in prevention, recognition, care, treatment and rehabilitation of athletic injuries. Students may not also receive credit for AT 214.

Prerequisites: Take BIO 102, BIO 102L; or BIO 151, BIO 151L.

Offered: Every year, Fall and Summer

HSC 214L. CPR, AED and First Aid. 1 Credit.

Students learn principles of first aid and complete health provider certification in cardiopulmonary resuscitation and automated external defibrillator. (2 lab hrs.)

Prerequisites: Take BIO 102, BIO 102L.

Offered: Every year, Fall and Spring

HSC 215. Complementary and Alternative Medicine - a Health Science Perspective. 3 Credits.

This course is beneficial for any student who is planning on working in health care. It explores the history of Complementary and Alternative Medicine (CAM), which the National Institutes of Health Center reports is currently being used by 40 percent of Americans. This course familiarizes the student with the more common forms of CAM and the rising trend of integrative medicine departments in hospitals in the U.S. Comparisons are made between conventional medicine and CAM.

Prerequisites: Designed for students in Online BS/HSC Completion Program. Take Eight credits of biology such as BIO 101/L, BIO 102/L, BIO 150, BIO 151, BIO 211/L or BIO 212/L.

Offered: Every year, Spring

HSC 220. Health Care Essentials: Structure, Policy and Professionalism. 3 Credits.

This course provides pre-health care professional students with an overview of the structure, systems and policies of health care delivery in the United States and includes discussions of the underlying values and political influences on quality, access and finance. Considerations are made to other nation's health care systems and how these systems address societal need. The goal of this course is to increase students' knowledge and abilities to analyze and address health care issues from the perspective of all stakeholders.

Prerequisites: Take BMS 117 or BIO 102, BIO 102L or BIO 151 or BMS 162.

Offered: Every year, Fall and Spring

HSC 221. Introduction to Health Care. 2 Credits.

Designed for health science studies majors only in their first or second year of study, this course broadens the student's understanding of the many careers in health science. It introduces key concepts necessary to work in various health care professions, develops valuable skills to improve their employability and lays a foundation for further advanced studies in the major. For HSC first-year and sophomore students only.

Offered: Every year, Fall and Spring

HSC 225. Writing in the Health Professions. 3 Credits.

This course reviews effective writing strategies that are employed in various types of published health care-related articles and media. Emphasis is placed on the students' written communication skills such as editing and clarifying of messages, and checking of accuracy of research sources. Students improve their proficiency in written communication to patients and to colleagues.

Prerequisites: Take BIO 101 BIO 101L; or BIO 150; or BIO 211 BIO 211L; and EN 101 EN 102; or EN 103H.

Offered: As needed

HSC 230. Counseling and Teaching for Health Care Professionals. 3 Credits.

This course provides a theoretical framework in counseling, education and overall communication for health professionals, including motivational interviewing. Students describe the importance of counseling and teaching for the health professional. The educational component includes teaching and communicating at the individual level and developing skills necessary for individual and group education and counseling.

Prerequisites: Take BIO 102, BIO 102L; or BIO 150.

Offered: Every year, Fall and Spring

- HSC 240. Foundations of Pharmacy. 2 Credits.**
This hybrid course, beneficial for students interested in the health care professions, reviews the top 200 drugs, pharmacy math, pharmacy law, and hospital and retail pharmacy settings. Material required for the national PTCB exam (Pharmacy Technician Certification Board) is reviewed. Passing that exam confers the title of CPhT (Certified Pharmacy Technician), which enables students the opportunity to enter the pharmacy field if they choose to pursue that path.
Prerequisites: Take BIO 101, BIO 101L or BIO 150; Take MA 107, MA 140, MA 141 or MA 275.
Offered: Every year, Fall and Spring
- HSC 250. Communication Disorders. 3 Credits.**
This course provides information regarding a variety of communication and swallowing disorders. Information regarding potential causes of disorders as well as intervention methods is presented. The various health care professions that work together on cases of speech, language, hearing and swallowing disorders are discussed.
Prerequisites: Take BIO 102, BIO 102L or BIO 151.
Offered: Every year, Fall and Spring
- HSC 261. Scientific Study of Mummies. 3 Credits.**
This distance learning course explores the field of mummy science, placing the study of mummies within a cultural and global context. Students discover what can be learned, how it can be learned and how data should be used to create new knowledge regarding mummified human remains. Course content challenges students to apply experimental design to mummy science questions. Students create hypotheses, design experiments, analyze collected data and determine the significance of the findings. The significance of mummy studies to current populations also is discussed.
Offered: Every year, Summer Online
- HSC 262. Nutrition in Health and Illness. 3 Credits.**
This elective course focuses on the fundamentals of human nutrition in relation to disease prevention and treatment. This course applies practical nutrition concepts as vital tools for members of a health care team to achieve optimum patient care. Emphasis is placed on the science of nutrition, nutrition throughout the life cycle and clinical nutrition.
Prerequisites: Take BIO 102, BIO 102L or BIO 151.
Offered: Every year, All
- HSC 270. Pillars of Public Health: Saving the World on a Population Level. 3 Credits.**
This course defines the concept of public health, with a focus on introducing what public health is, its foundations and a brief discussion of the historical context. Course content includes basic material related to all six public health foundational areas: Biostatistics, Epidemiology, Environmental Health, Sociomedical Science, Health Policy and Management, and Population and Family Health, along with select specialized topics and current events.
Prerequisites: Course is designed for Online BS/HSC Completion Program Students. Take BIO 102, BIO 102L or BIO 151.
Offered: Every year, Spring
- HSC 300. Special Topics in Health Science. 2 Credits.**
This Special Topics course covers emerging issues or specialized content in the area of health science or health care. Students examine multiple perspectives of the current or emerging topic through readings, discussions and projects. The course guides student discovery on how the issue has evolved, and examines current advancements, problems and breakthroughs.
Prerequisites: Take BIO 102, BIO 102L or BIO 151; and HSC 202.
Offered: As needed
- HSC 301. Health Care Challenges and Team-Based Solutions. 1 Credit.**
This interactive seminar focuses on common challenges in health care and how those challenges may be more effectively met utilizing a team approach to health care. The common health challenges are different each week, exploring the challenges that students may experience in their own personal, family or college life. The central outcomes of this course are to: 1) Recognize how a health care team can work together; 2) Develop strategies to react responsibly and ethically to health care issues (social intelligence); 3) Develop ideas for community action as a citizen, and 4) Identify the influence of all aspects of diversity on health care delivery.
Prerequisites: Take BIO 102, BIO 102L or BIO 151.
Offered: Every year, Fall and Spring
- HSC 305. Emotional/Social Intelligence for the Health Sciences. 2 Credits.**
This course provides the student with an appreciation and understanding of the role of emotional/social intelligence in everyday living and especially in the health sciences. Topics include how emotional intelligence differs from IQ, anatomy of emotions and the mind-body connection, education for and development of emotional literacy, assessing one's own social intelligence level, applying social intelligence skills to one's personal and professional lives. Personal assessments, small group experiential activities, case studies, journaling and project development are the essential methodology for this course. Prerequisite may be waived with permission of instructor.
Prerequisites: Take BIO 102 or BIO 151.
Offered: Every year, Fall and Spring
- HSC 315. Bioethical Issues in the 21st Century. 3 Credits.**
Students gain a solid understanding of bioethical principles and examine ethical dilemmas in medicine and the moral arguments that accompany them. Controversial bioethics issues such as assisted-suicide, stem-cell research, medical marijuana, organ donation and designer babies are explored through research, contemporary media and the students' own moral compasses. They study the role of public policy on bioethics and investigate cases that shaped the way modern medicine is practiced today. The course stimulates discussion leading to final group debate projects.
Prerequisites: Take EN 102 or EN 103H and BIO 102 or BIO 151.
Offered: Every year, All
- HSC 317. Nutrition Across the Life Cycle. 3 Credits.**
The class explores the nutritional needs of humans prior to and beyond adulthood to look at other portions of the life cycle. Beginning with women's nutritional needs for conception and throughout pregnancy and lactation, the class progresses to discuss the nutritional needs of infants, adolescents and older adults over age 65. Each cycle is discussed with an understanding of the physiological changes and the implications for nutritional factors.
Prerequisites: Take HSC 262.
Offered: Every year, Fall
- HSC 318. Community Nutrition. 3 Credits.**
This course provides an introduction to the development of community nutrition programs including planning, needs assessment, implementation and evaluation. Students learn to describe nutrition programs and policies for varying population groups, including cultural, economic and social health practices. The implication of public policy legislation on food and nutrition services is introduced.
Prerequisites: Take HSC 262.
Offered: Every year, Spring

HSC 320. The Environment and Human Health. 3 Credits.

This course examines the connection between our environment and human health and disease. Topics include an overview of toxicology, carcinogenesis, risk assessments, precautionary principle and bioaccumulation. Environmental connections to infectious diseases, emerging viruses, food production practices, loss of biodiversity, and endocrine disruptors also are discussed along with bioethical concerns of these topics. The course touches on health policies and regulations addressing environmental health issues. Students apply critical thinking skills to current environmental situations affecting our health as well as exploring the role individuals and professional health organizations have in accountability.

Prerequisites: Course is designed for Online BS/HSC Completion Program students. Take BIO 101 BIO 150 or BIO 211.

Offered: Every year, Spring

HSC 322. Health Care Law (LE 322). 3 Credits.

This course provides an overview of the legal issues faced by health care providers and patients. Students explore various topics arising from the organization and financing of health care, provider liability, bioethics and public health. The course focuses on the way in which law impacts the delivery of health care in the United States.

Prerequisites: Take LE 101, HSC 220.

Offered: Every other year, Spring

HSC 324. Gut Microbes and Human Health. 3 Credits.

Maintaining a balance of healthy microbes can be the difference between health and disease. Our microbiome changes with the method of delivery (vaginal or C-section) as you entered this world, with what we eat, our lifestyles, stress and aging. Obesity, cardiovascular disease, cancer, autism and many other illnesses are now correlated with our gut bacteria. Explore this invisible world and learn about our health and microbes.

Prerequisites: Course is designed for Online BS/HSC Completion Program students. Take BIO 102 BIO 151 or BIO 212.

Offered: Every year, Spring

HSC 326. Therapeutic Exercise. 3 Credits.

This course provides a systemic approach to therapeutic exercise program development. Students review exercise techniques, indications, contraindications, progression as related to injury, prevention, reconditioning, and return to work/participation guidelines. The course provides the student with a strong foundation in physical rehabilitative medicine and examines various goals concerning the return to functional activity.

Prerequisites: Take BIO 211, BIO 211L.

Offered: Every year, All

HSC 330. Leadership: Creating Adaptive Cultures. 3 Credits.

In this course, students explore leadership theory and practice. This is a problem-based learning course that requires students to develop new insights around leadership and leading from the literature and from each other. Students spend the first week defining the term, and the subsequent weeks applying and refining their ideas through case-method vignettes and biographies. The culminating project of the course is to create a simple leadership development workshop, one that might be used by health care professionals.

Offered: Every year, Fall

HSC 334. Clinical Skills Patient Communication. 1 Credit.

This 1-credit course is dedicated to teaching fundamental clinical skills for patient interviewing. Students learn how to foster patient relationships and gather information during a medical interview using verbal and nonverbal communication skills in a professional and respectful manner. This course is designed for junior or senior students with a premedical designation and prehealth students majoring in health science studies or biomedical sciences.

Prerequisites: Take BIO 102, BIO 102L or BIO 151, BIO 151L.

Offered: Every year, Fall and Spring

HSC 350. Language Development. 3 Credits.

This course explores all areas of typical language development from birth through adulthood. Students examine literacy development and how it is impacted by language development. Students learn how to obtain and analyze language samples.

Prerequisites: Take BIO 211, BIO 211L.

Offered: Every year, Fall and Spring

HSC 351. Pharmacological Interventions for Common Medical Conditions. 3 Credits.

This course enables the student to recognize, evaluate and differentiate common systemic diseases, understand appropriate pharmacological interventions, understand the principles of pharmacology and common issues that arise when specific pharmacological agents are employed. Students may not receive credit for AT 351 also.

Prerequisites: Take BIO 212, BIO 212L.

Offered: Every year, Fall and Spring

HSC 375. Immunology. 3 Credits.

This immunology course examines topics related to the immune system, particularly the human immune system. The immune system is designed to differentiate self and non-self in order to prevent infection, disease and/or death. Students examine and discuss the current understanding of the immune response and discover why we are not sick all the time and how the body's immune system remembers "enemies" that it has seen in the past. This course covers the innate immune system, plus the two arms of the adaptive immune system—humoral immunity and cellular immunity. Immunodeficiencies, immunopathologies and immunotherapies also are discussed. Students may receive credit for BMS 375 or HSC 375, but not both.

Prerequisites: Take BIO 102. BIO 102L or BIO 151.

Offered: Every year, Spring and Summer Online

HSC 378. Vaccines and Vaccine-Preventable Diseases. 3 Credits.

This immunology course involves the investigation of vaccines and vaccine-preventable diseases (VPDs). The purpose of the course is to examine and discuss the current understanding of vaccinations and how they work, as well as the historical and current implication of VPDs. Student gain knowledge about VPDs, the childhood vaccination schedule, why they are still necessary and, most importantly, how to explain why they are safe, and to be able to debunk the current myths and misconceptions regarding vaccines. Students may only take one of the following for credit: BMS 378 or HSC 378.

Prerequisites: Take BIO 102 or BIO 151.

Offered: Every year, Summer Online

- HSC 380. International Health Care - Field Research.** **3 Credits.**
 This course provides health science students with an overview of the health care structure, systems and delivery in another country. Field research is conducted during a semester break trip, during which time students interact with the local community members and health professionals. Prior to the trip, students research the factors that influence the quality, access and finance of health care. Common health issues and their social determinants are explored as they relate to the subpopulation of interest. The goal of this course is to increase students' knowledge and abilities to analyze and address health care issues specific to a population while in the field.
Prerequisites: Take BIO 101, BIO 102 or BIO 150, BIO 151 and MA 275 or MA 206.
Offered: Every year, Fall and Spring
- HSC 388. EMT I Training.** **2 Credits.**
 This course includes both lecture and clinical experience, and provides students with an opportunity to develop the knowledge and skills required for Emergency Medical Technician National Certification. Successful completion of HSC 388-389 (two-semester sequence) and fulfillment of the state-mandated hours of instruction are required to be eligible for certification. This course must be taken in conjunction with HSC 388L.
Prerequisites: Take BIO 102, BIO 102L or BIO 151.
Corequisites: Take HSC 388L.
Offered: Every year, Fall
- HSC 388L. EMT I Training Lab.** **1 Credit.**
 This is the laboratory component of HSC 388. It includes learning the techniques necessary to develop the knowledge and skills required for Emergency Medical Technician National Certification. This course must be taken in conjunction with HSC 388.
Prerequisites: Take BIO 102, BIO 102L or BIO 151.
Corequisites: Take HSC 388.
Offered: Every year, Fall
- HSC 389. EMT Training II.** **2 Credits.**
 This course includes both lecture and clinical experience, and provides students with an opportunity to develop the knowledge and skills required for Emergency Medical Technician National Certification. Successful completion of the HSC 388-389 (two-semester sequence) and fulfillment of the state-mandated hours of instruction are required to be eligible for certification. This course must be taken in conjunction with HSC 389L.
Prerequisites: Take HSC 388, HSC 388L.
Corequisites: Take HSC 389L.
Offered: Every year, Spring
- HSC 389L. EMT Training II Lab.** **1 Credit.**
 This is the laboratory component of HSC 389. It includes learning the techniques necessary to develop the knowledge and skills required for Emergency Medical Technician National Certification. This course must be taken in conjunction with HSC 389.
Prerequisites: Take HSC 388, HSC 388L.
Corequisites: Take HSC 389.
Offered: Every year, Spring
- HSC 397. Pre-Health Professions Clinical Affiliation.** **3 Credits.**
 This course provides an opportunity to observe a health professional in a student's field of interest for a minimum of 36 hours. Students observe social, ethical and medical issues in a clinical setting. Professional dress is required, and some sites may require a background check. Students are responsible to arrange their site and are provided with guidance and contacts to do so. For HSC or BMS majors only, Junior or Senior Status, with minimum 2.5 GPA
Prerequisites: Take BIO 102, BIO 102L or BIO 151.
Offered: Every year, Fall and Spring
- HSC 398. Health Professions Career Practicum.** **1-3 Credits.**
 This course is designed to provide an introduction to a health sciences career through supervised fieldwork. Course involves supervised work (paid or unpaid) in an employment setting and career development research and reflection. A one, two or three-credit pass/fail course. A maximum of 6 credits can be obtained through pass/fail courses (FLW and workshop courses including HSC 398).
Prerequisites: Take BIO 102 or BIO 151.
Offered: Every year, Summer
- HSC 399. Health & Science Studies Independent Study.** **1-6 Credits.**
- HSC 401. Introduction to Medical Problem-Solving.** **3 Credits.**
 This course offers pre-medical and pre-physician assistant students the tools necessary for developing a systematic approach to a patient and his or her medical condition. Students learn to access and evaluate the medical literature for identification of the signs and symptoms of disease presentation, the components of a history and physical, and the understanding of a differential diagnosis. In addition, students are taught the basis for developing a patient treatment plan. Students may not receive credit for both PY 401 and HSC 401.
Prerequisites: Take BIO 212. Shadowing in a health care setting is highly recommended prior to taking this course.
Offered: Every year, Fall and Spring
- HSC 460. Advanced Nutrition (AT 460).** **3 Credits.**
 This advanced-level food and nutrition course examines the composition and physiological role of nutrients and their relationships to health and the body. Macronutrient metabolism as well as a detailed examination of the role of vitamin and mineral metabolism are explored. Current nutrition issues of supplement use, weight management, sports nutrition, nutritional ecology and the application of nutrition directly to food and its preparation also are addressed.
Prerequisites: Take AT 330 or HSC 262.
Offered: Every year, Spring
- HSC 498. Independent Study in Health Sciences.** **1-4 Credits.**
 This course consists of health sciences content not offered by another QU catalog course. It must involve contact hours and scholarly activities equivalent to any regularly offered course. This course often includes a review of the scientific literature in the field of the research project and creating a "product," such as a term essay, a series of short papers, laboratory or project reports, a portfolio or presentation at a scientific meeting. Students cannot register online; registration is via a paper form only. BMS students may take up to 8 credits of BMS 482, BMS 483, BMS 498, BMS 499, HSC 498, HSC 499.
Offered: As needed
- HSC 505. Interprofessional Community-Based Service Learning Seminar: Age-Related (HSC 205).** **1 Credit.**
 This course provides an opportunity to engage in active learning, implementing a program with a local community partner working with children/youth, adults or older adults. Students are required to participate in 10-15 hours of community engagement to observe and apply the concepts of interprofessional health care in a community-based setting. Community experience is supervised by faculty with expertise in analysis of community-based practice. Classroom/community engagement schedules will be determined. Course may be taken more than once.
Offered: Every year, All

HSC 506. Interprofessional Community-Based Service Learning Seminar: International (HSC 206). 1 Credit.

Students observe and apply various health/wellness concepts in an international community-based setting. Students are required to spend a minimum of 15 hours at an international site to engage in active learning by implementing a program with an international community partner. Course is taught by faculty with expertise in the analysis of community-based practice. Classroom/community engagement schedules will be determined. This course may be taken more than once. Application process for international experiences required.

Offered: Every year, All

HSC 507. Interprofessional Community-Based Service Learning Seminar: Special Populations (HSC 207). 1-2 Credits.

This course involves active learning implementing a program with a local community partner working with at-risk population. Students are required to participate in 10-15 hours of community engagement to observe and apply the concepts of interprofessional health care in a community-based setting. Faculty with expertise in the analysis of community-based practice lead discussions and community engagement related to population health in the local community. This course may be taken more than once. Offerings include MTW section during Thanksgiving week.

Offered: Every year, All

Pre-Medical Studies Program

Students majoring in Health Science Studies, Biology, Biomedical Sciences or the natural science track of Behavioral Neuroscience may fully participate in the pre-medical studies program. The curriculum in this degree program can fulfill the science prerequisites for most professional schools. Students should refer to Pre-Medical Studies (p. 47) for more information about the pre-medical studies program and contact the Health Professions Advisory Committee for further academic advising.

Seamless Transfer Agreement with Gateway Community College (GCC), Housatonic Community College (HCC) and Norwalk Community College (NCC)

Under this Transfer Agreement, GCC, HCC and NCC graduates will be guaranteed admission into a bachelor's degree program with third year (junior) status at Quinnipiac University on the condition that they:

- Graduate with an associate in arts, an associate in science in business, College of Technology engineering science, nursing or an allied health degree with a minimum cumulative GPA of 3.0 (this may be higher in specific programs).
- Satisfy all other Quinnipiac University transfer admission requirements and requirements for intended major.

Quinnipiac University agrees to accept the general education embedded in these associate degree programs in accordance with Quinnipiac preferred choices for general education as meeting all the requirements of its undergraduate general education except for the Integrative Capstone Experience and where courses are encumbered by the major (e.g., General Chemistry for the Disciplinary Inquiry Natural Science requirement for a Biochemistry major).

Suggested Transfer Curriculum for BS in Health Science Studies

A minimum of 60 credits is required for transfer into the BS in Health Science Studies program. Below is a sample plan of study for the first two years.

Course	Title	Credits
First Year		
Fall Semester		
English		3
General Biology with Lab		4
General Chemistry with Lab		4
Introduction to Health Care		2
Math - Statistics		3
Credits		16
Spring Semester		
English II		3
General Biology II with Lab		4
General Chemistry II with Lab		4
Medical Terminology		2
Elective		3
Credits		16
Second Year		
Fall Semester		
Anatomy & Physiology I with Lab		4
General Physics with Lab		4
Elective		3
Elective		3
Credits		14
Spring Semester		
Anatomy & Physiology II with Lab		4
Elective		3
Elective		3
Elective		3
Elective		2
Credits		15
Total Credits		61

Clinical Preparation Track

This track provides students with a solid foundation in patient communication and evidence-based medicine. This foundation helps to prepare students for graduate education in a variety of medical fields, such as (but not limited to) MD, DO, Dentistry, Pharmacy, Podiatry, Optometry, Audiology, Speech Language Pathology, Genetic Counselor, Anesthesiologists' Assistant, Pathologists' Assistant or Physician Assistant, and Accelerated Nursing programs. Students in the Clinical Preparation Track are required to take the following courses:

Code	Title	Credits
Core Requirements (8 credits)		
HSC 202	Medical Terminology	2
HSC 220	Health Care Essentials: Structure, Policy and Professionalism	3
HSC 221	Introduction to Health Care	2

HSC 334	Clinical Skills Patient Communication	1
Choose one of the following courses (3 credits):		3
HSC 380	International Health Care - Field Research	
HSC 388 & 388L	EMT I Training and EMT I Training Lab	
HSC 397	Pre-Health Professions Clinical Affiliation	
Choose 8 credits from the following courses:		8
HSC 205	Age-Related Community Engagement Youth (HSC 505)	
HSC 206	Community Engagement Legacy Service Learning Seminar: International (HSC 506)	
HSC 207	Interprofessional Community-Based Service Learning Seminar: Special Populations (HSC 507)	
HSC 210	Introduction to Evidence-Based Health Care	
HSC 230	Counseling and Teaching for Health Care Professionals	
HSC 301	Health Care Challenges and Team-Based Solutions	
HSC 305	Emotional/Social Intelligence for the Health Sciences	
HSC 315	Bioethical Issues in the 21st Century	
HSC 380	International Health Care - Field Research	
HSC 388 & 388L	EMT I Training and EMT I Training Lab	
HSC 389 & 389L	EMT Training II and EMT Training II Lab	
HSC 397	Pre-Health Professions Clinical Affiliation	
HSC 401	Introduction to Medical Problem-Solving	

Take 12 credits of science electives 12

Take 30 credits of open electives 30

Exercise & Wellness Track

This track provides students with a foundation in exercise prescription and nutrition. This foundation helps prepare students for graduate studies in areas such as Physical Therapy, Occupational Therapy, Exercise Physiologists, and Nutrition/Dietitian. Students interested in a more in-depth exploration of nutrition may consider earning a minor in nutrition (p. 496). Students in the Exercise & Wellness Track are required to take the following courses:

Code	Title	Credits
Core Requirements (13 credits)		
HSC 202	Medical Terminology	2
HSC 220	Health Care Essentials: Structure, Policy and Professionalism	3
HSC 221	Introduction to Health Care	2
HSC 262	Nutrition in Health and Illness	3

HSC 326	Therapeutic Exercise	3
---------	----------------------	---

Choose two of the following courses: 6

AT 330	Nutrition for Sport and Fitness	
AT 440	Biomechanics	
BMS 300 & 300L	The Physiology of Human Performance I and The Physiology of Human Performance I Lab	
BMS 301 & 301L	Physiology of Human Performance II and Physiology of Human Performance II Lab	
HSC 214	Care and Prevention of Athletic Injuries	
HSC 230	Counseling and Teaching for Health Care Professionals	
HSC 460	Advanced Nutrition (AT 460)	

Take 12 credits of science electives 12

Take 30 credits of open electives 30

Health & Science Track

The most flexible curriculum to prepare for careers or graduate studies in one of the many other fields a student may go in with this degree, such as Health Care Management, Health Science Research, or to tailor one of the above tracks to best meet their academic needs. Students in the Health & Science Track are required to take the following courses:

Code	Title	Credits
Core Requirements		
HSC 202	Medical Terminology	2
HSC 220	Health Care Essentials: Structure, Policy and Professionalism	3
HSC 221	Introduction to Health Care	2
Take 6 credits of health science studies electives		6
Take 18 credits of science electives		18
Take 30 credits of open electives		30

Human Movement Track

The Human Movement Track provides the foundation and application of knowledge related to human movement. The curricular model focuses on developing the early thought processes and disciplinary content for many fields in the health profession related to movement. Through the scientific understanding of human anatomy, kinesiology and biomechanics, students advance towards exploring methods of maintaining healthy movement, preventing disability and initiating an assessment of movement. The culmination of the track involves the application of human movement in clinical practice, through research in motion analysis, or in the community through the promotion of healthy living. Career paths include continuing on in fields or graduate studies related to athletic training, physical therapy, physician assistant orthopedics or biomechanics.

Code	Title	Credits
Program Required Courses		
HSC 202	Medical Terminology	2
HSC 220	Health Care Essentials: Structure, Policy and Professionalism	3

HSC 221	Introduction to Health Care	2
Track Required Courses		
AT 115	Introduction to Kinesiology	3
AT 440	Biomechanics	3
AT: Movement Assessment		3
BMS 301	Physiology of Human Performance II (No Lab)	3
HSC 210	Introduction to Evidence-Based Health Care	3
Take 12 credits of science electives		12
Take 27 credits of open electives		27

Sports Medicine Track

The Sports Medicine Track is grounded in science, targeted toward students interested in healthcare professions, especially those students who have an interest in working either in athletic settings or with a physically active population. The curricular model focuses on developing the early thought processes and disciplinary content for many fields in the health professions related to sports medicine and working with an active and/or athletic population (traditional sports, tactical athletes, performing artists, etc.). Career paths include continuing on in fields or graduate studies related to athletic training, physical therapy, physician associate, orthopedics, orthotics paramedics, strength and conditioning, or exercise.

Code	Title	Credits
Program Required Courses		
HSC 202	Medical Terminology	2
HSC 220	Health Care Essentials: Structure, Policy and Professionalism	3
HSC 221	Introduction to Health Care	2
Track Required Courses		
AT 115	Introduction to Kinesiology	3
AT 216	Emergency Management of Athletic Trauma	2
AT 481	Strength Training and Conditioning for the Athletic Trainer	2
BMS 301	Physiology of Human Performance II (No Lab)	3
HSC 210	Introduction to Evidence-Based Health Care	3
Take 12 credits of science electives		12
Take 28 credits of open electives		28

Physician Assistant (PA) Preparation Track (Invitation Only)

A limited number of Health Science Studies students also may be invited into the Physician Assistant (PA) Prep Track. This track is a means for well-qualified students to advance their interests in the PA profession but did not get accepted into the Entry-Level Master's in Physician Assistant (ELMPA) program. During the junior year, depending upon the number of seats available in the ELMPA cohort, approximately 3-5 students will be selected to transition into the ELMPA program. To be considered for transfer into ELMPA, students in the PA Prep concentration must meet established qualifications. The remaining PA Prep students not admitted into the ELMPA program will continue to follow a curriculum that mirrors

that of the ELMPA program. As a result, the PA Prep students will have a robust CASPA (Central Application Service for Physician Assistants) application making them a competitive applicant for other PA programs. Students interested in the PA profession who are not invited into the PA Prep Track may take similar courses via the Clinical Preparation Track. Students invited to the PA Prep Track will be required to take the following courses:

Code	Title	Credits
Core Requirements (19 credits)		
PY 104	Physician Assistant Seminar I - Orientation to the Profession	1
PY 204	Physician Assistant Seminar II - The Interdisciplinary Team	1
HSC 202	Medical Terminology	2
HSC 220	Health Care Essentials: Structure, Policy and Professionalism	3
HSC 388 & 388L	EMT I Training and EMT I Training Lab	3
HSC 389 & 389L	EMT Training II and EMT Training II Lab	3
HSC 397	Pre-Health Professions Clinical Affiliation	3
HSC 401	Introduction to Medical Problem-Solving	3
Take 12 credits of science electives		12
Take 30 credits of open electives		30

Double-Degree BS in Industrial Engineering and BS in Health Science Studies

Program Contacts: Jason Scozzafava (jason.scozzafava@qu.edu) 203-582-7663 and Emre Tokgoz (emre.tokgoz@quinnipiac.edu) 203-582-7909

Industrial engineering is a diverse discipline that includes healthcare as one of the major focus areas of interest. Health Sciences and Industrial Engineering as a double major enables students to learn concepts and gain experience in both science and engineering of health systems. The graduates of the double major are not only expected to grow in knowledge in health systems but also to become strong members of the health system societies. They would be able to apply their health systems engineering knowledge along with the health science knowledge for a better working health system.

Industrial engineers are employed throughout various industries, including manufacturing, healthcare and service, to determine the most effective and efficient ways to utilize resources. Industrial engineers are concerned with increasing productivity through the effective management of people, processes and technology. Through exposure to the University Curriculum, foundational coursework in science, mathematics, major field courses and extracurricular activities, students graduating with a BS in Industrial Engineering achieve intellectual proficiencies in critical thinking and reasoning, scientific literacy, quantitative reasoning, information fluency and creative thinking and visual literacy.

Double-Degree BS in Industrial Engineering and Health Science Studies Curriculum

A total of 142 credits is required for completion of the double-degree.

Course	Title	Credits
First Year		
Fall Semester		
BIO 101 & 101L	General Biology I and General Biology I Lab	4
EN 101	Introduction to Academic Reading and Writing	3

Credits **16**

Total Credits **142**

¹ Chemistry courses and additional math courses depend on intended professional goal or career plan and math placement score.

Student Learning Outcomes: Health Science Studies

Upon completion of the Health Science Studies program, students will demonstrate the following competencies:

- Scientific Knowledge:** Demonstrate proficiency in understanding and explaining fundamental scientific principles in the disciplines of biology, chemistry and physics.
- Interprofessional Skills:** Effectively communicate information across the medical professions using advanced medical vocabulary.

- c. **Teamwork:** Apply an advanced understanding of the interprofessional nature of healthcare.
- d. **Health Systems:** Develop an advanced knowledge of the U.S. healthcare system and effectively describe challenges/issues that affect it.
- e. **Evidence Informed Practice:** Critically evaluate biomedical information and sources to confirm validity and reliability.
- f. **Responsible Citizen:** Evaluate the social, moral and ethical implications of scientific discoveries on medical practice.

Student Learning Outcomes Industrial Engineering

Attainment of the following outcomes prepares graduates to enter the professional practice of engineering:

- a. Ability to **identify, formulate and solve** complex engineering problems by applying principles of engineering, science and mathematics.
- b. Ability to **apply engineering design** to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors.
- c. Ability to **communicate effectively** with a range of audiences.
- d. Ability to **recognize ethical and professional responsibilities** in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts.
- e. Ability to **function effectively** on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives.
- f. Ability to **develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment** to draw conclusions.
- g. Ability to **acquire and apply new knowledge** as needed, using appropriate learning strategies.

Admission Requirements

Admission into the Double-Degree BS in Industrial Engineering and BS in Health Science Studies program is dependent on the applicant's potential to pursue a university program and on past academic performance. The high school student applying for admission into program should have a strong background in mathematics and the biological sciences. To remain in good standing within the program, the student must maintain a science GPA of 2.25. First-year biology (8 credits) must be successfully completed, at the latest, by the end of a student's sophomore year.

Transfer Students from within Quinnipiac University

Students currently attending Quinnipiac in another program may be accepted into the program based upon a review of qualification by the program director. Students, with a science GPA of 2.25 minimum, may apply upon completion of at least one semester at Quinnipiac. Students transferring in as a junior (i.e., 57 credits or more) must have completed the general biology requirements, specifically, the equivalent of 8 credits of Quinnipiac's BIO 101 & BIO 102, or BIO 150 & BIO 151 or BIO 211 & BIO 212, prior to entry into the upper-class component of the program.

Transfer Students from Other Colleges and Universities

Transfer students from other colleges and universities may be accepted into the program. These students must meet the program's performance standards and course requirements. For all transfer students, a minimum GPA of 2.67 is required. These students must have earned at least 8 credits of biology if entering their junior or senior year (i.e., having earned 57 credits or more), and performance standards of the program (science GPA minimum 2.25).

Bachelor of Science in Medical Microbiology and Immunology

Program Contact: Thomas Martin (Thomas.Martin@qu.edu)
203-582-3368

Rapid and expanding advances in the field of medical microbiology and immunology have created a need for employees with expertise in a variety of areas. Our graduates are prepared for exciting careers in the expanding medical, clinical, pharmaceutical, biotechnological, molecular and health industries. This program also prepares the student for advanced study in specialized graduate science, health and medical programs.

The program offers students a range of classroom, laboratory and independent research experiences. All courses consist of lecture and hands-on laboratories where students perform the most current research techniques. In addition to courses in the sciences, the University Curriculum (p. 51) course offerings prepare students with a broad-based conceptual understanding of science and its role in society.

Included in this program is a two-semester required undergraduate seminar/research experience performed with faculty in research laboratories. This experience allows the student to develop the expertise and experience to be successful in beginning a career or in graduate study. All of our students give formal presentations of their independent research projects. Many have presented the results of research experiences at professional scientific meetings.

Successful third- and fourth-year students may be able to obtain internships or part-time work experiences during the school year and/or summer in government labs and major pharmaceutical or biotechnology companies located in the region. To remain in good standing within the program, the student must maintain a math and science GPA of 2.25.

BS in Medical Microbiology and Immunology Curriculum

Course	Title	Credits

BIO 211 & 211L	Human Anatomy and Physiology I and Human Anatomy and Physiology Lab I	4
BIO 212 & 212L	Human Anatomy and Physiology II and Human Anatomy and Physiology II Lab	4
BIO 282 & 282L	Genetics and Genetics Lab	4
BIO 317 & 317L	Developmental Biology and Developmental Biology Lab	4
BMS 332	Histology and Lab	4

Additional electives may be selected with the approval of the department chair.

Student Learning Outcomes

Upon completion of the medical microbiology and immunology program, students will demonstrate the following competencies:

- Core Disciplines:** Demonstrate advanced knowledge of the foundational principles in the disciplines of biology, chemistry and physics.
- Advanced Knowledge:** Demonstrate advanced knowledge of the fundamental concepts of microbiology and immunology.
- Organisms and Host:** Understand the symbiotic relationships that can exist between microorganisms and humans (mutualistic, commensal and pathogenic).
- Professional Skills:** Master the essential technical and analytical skills of the microbiologist/immunologist.
- Effective Scientist:** Engage in scientific research and effectively communicate the dissemination of results to various audiences.
- Responsible Citizen:** Evaluate the social and ethical impact of scientific discoveries on medical practice.

Mission Statement

The mission of the Medical Microbiology and Immunology degree program is to provide students with a solid basic science foundation in preparation for studying the upper-level sciences related to immunology and microbiology. This is meant to provide many opportunities to students who are interested in pursuing graduate programs (MS/PhD) in the micro-biological sciences (e.g., bacteriology, virology, public health, etc.), as well as sciences related to immunology (e.g., vaccines, epidemiology, cancer biology, etc.).

Additionally, students may pursue one of the medical-related professions (e.g., physician, physician assistant, dentist, veterinarian, pharmacist, chiropractor, etc.). Students who choose not to go on to graduate or professional school are able to apply for research and development positions in pharmaceutical and biotechnology companies.

Students learn about molecular biology with hands-on student-directed laboratory projects where thinking, planning and problem-solving skills are developed. Independent research projects under the guidance of faculty allow development of these skills with “real-world” experiences.

Student skills are evaluated continuously with written and oral presentations, encouraging the refinement of communication skills

critical to a successful career. Products of student research activity are presented in seminars and at regional or national scientific meetings.

Admission

Admission into the Medical Microbiology and Immunology program is dependent on the applicant’s potential to pursue a university program and on past academic performance. The high school student applying for admission into the Medical Microbiology and Immunology program should have a strong background in the biological sciences. To remain in good standing within the program, the student must maintain a math and science GPA of 2.25.

Transfer Students from within Quinnipiac University

Students currently attending Quinnipiac University in another program may be accepted into the Medical Microbiology and Immunology program based upon a review of qualification by the program director. Students may apply upon completion of at least one semester at Quinnipiac University. Students transferring in as a junior (i.e., 57 credits or more) must have completed both the general biology requirements, specifically, 8 credits of BIO 101 & BIO 102 *or* BIO 150 & BIO 151, and the general chemistry requirements, specifically, 8 credits of Quinnipiac’s CHE 110 & CHE 111 prior to entry into the upper-class component of the program. Student also must meet the performance standards of the program (minimum math and science GPA of 2.25).

Transfer Students from Other Colleges and Universities

Transfer students from other colleges and universities may be accepted into the Medical Microbiology and Immunology program. These students must meet the program’s performance standards and course requirements. For all transfer students, a minimum GPA of 2.67 is required. Students transferring in as a junior (i.e., 57 credits or more) must have completed both the general biology requirements, specifically, the equivalent of 8 credits of Quinnipiac’s BIO 101 & BIO 102 *or* BIO 150 & BIO 151 and the general chemistry requirements specifically, the equivalent of 8 credits of Quinnipiac’s CHE 110 & CHE 111 prior to entry into the upper-class component of the program. Transfer students wishing to enter this program will be given appropriate transfer credit for previous college work.

Pre-Medical Studies Program

Students majoring in Health Science Studies, Biology, Biomedical Sciences or the natural science track of Behavioral Neuroscience may fully participate in the pre-medical studies program. The curriculum in this degree program can fulfill the science prerequisites for most professional schools. Students should refer to Pre-Medical Studies (p. 47) for more information about the pre-medical studies program and contact the Health Professions Advisory Committee for further academic advising.

Seamless Transfer Agreement with Gateway Community College (GCC), Housatonic Community College (HCC) and Norwalk Community College (NCC)

Under this Transfer Agreement, GCC, HCC and NCC graduates will be guaranteed admission into a bachelor's degree program with third year (junior) status at Quinnipiac University on the condition that they:

- Graduate with an associate in arts, an associate in science in business, College of Technology engineering science, nursing or an allied health degree with a minimum cumulative GPA of 3.0 (this may be higher in specific programs).
- Satisfy all other Quinnipiac University transfer admission requirements and requirements for intended major.

Quinnipiac University agrees to accept the general education embedded in these associate degree programs in accordance with Quinnipiac preferred choices for general education as meeting all the requirements of its undergraduate general education except for the Integrative Capstone Experience and where courses are encumbered by the major (e.g., General Chemistry for the Disciplinary Inquiry Natural Science requirement for a Biochemistry major).

Suggested Transfer Curriculum for BS in Medical Microbiology and Immunology

A minimum of 60 credits is required for transfer into the BS in Medical Microbiology and Immunology program. Below is a sample plan of study for the first two years.

Course	Title	Credits
First Year		
Fall Semester		
English		3
General Biology with Lab		4
General Chemistry with Lab		4
Math - Precalculus		3
Credits		14
Spring Semester		
English II		3

Accelerated Dual-Degree BS in Health Science Studies/Master of Social Work (3+2)

Program Contact: Jason Scozzafava
(jason.scozzafava@qu.edu) 203-582-7663 Stephanie Jacobson
(stephanie.jacobson@qu.edu) 203-582-8907

The Accelerated Dual-Degree BS in Health Science Studies to Master of Social Work (3+2) program is designed for students entering the School of Health Sciences who have an interest in healthcare and want to pursue a career in the field of social work and mental health. Upon admission, students choosing this 3+2 program are assigned to academic advisers who design a customized program to meet the career goals of students.

First-year students are automatically enrolled in a career exploration course to help them increase the breadth and depth of their professional interests. A strong emphasis on individualized academic advising is at the core of this program. The student-adviser relationship provides opportunity and support for each student while pursuing *their goals* within the Quinnipiac University educational experience.

The Quinnipiac University MSW program prepares social workers for specialized practice in health and mental health. The curriculum emphasizes interprofessional education to familiarize students with a team-based health and mental health care approach. The MSW program equips students to provide clients with clinical social work skills, including counseling, crisis intervention and trauma-informed treatments, as well as access to social welfare and community resources. Students are prepared for social work licensure as part of the MSW coursework. Graduates of this MSW program meet eligibility requirements for both the LMSW and the LCSW.

Social work is the major provider of mental health care and one of the fastest-growing occupations in the United States. Graduates of this MSW program enter a broad range of high-demand fields. Hospitals, rehabilitation facilities, mental health clinics, schools, health departments, social welfare, criminal justice, and community organizations rely on social workers to provide health and mental health care to a wide variety of clients. These include treating persons with trauma, such as veterans with PTSD; people with chronic illnesses; and many others. Social workers are also a crucial link between patients/clients and other healthcare professionals, ensuring that people receive critical health and mental health care.

Through this Accelerated Dual-Degree BS/MSW (3+2) program, students complete both their bachelor's degree and their Master of Social Work (p. 810) in just 5 years.

Accelerated Dual-Degree BS/MSW Program of Study Undergraduate BS in Health Science Studies Curriculum

A total of 120 credits is required for completion of the BS in Health Science Studies.

Course	Title	Credits
First Year		
Fall Semester		
HSC 221	Introduction to Health Care	2
BIO 101 & 101L	General Biology I and General Biology I Lab	4
Select one of the following: ¹		4
CHE 110 & 110L	General Chemistry I and General Chemistry I Lab	
CHE 101 & 101L	Fundamentals of General, Organic and Biological Chemistry I and Fundamentals of General, Organic and Biological Chemistry I Lab	
EN 101	Introduction to Academic Reading and Writing	3
FYS 101	First-Year Seminar	3
Credits		16
Spring Semester		
HSC 202	Medical Terminology	2
BIO 102 & 102L	General Biology II and General Biology Lab II	4
Select one of the following: ¹		4
CHE 111 & 111L	General Chemistry II and General Chemistry II Lab	
CHE 102 & 102L	Fundamentals of General, Organic and Biological Chemistry II and Fundamentals of General, Organic and Biological Chemistry II Lab	
EN 102	Academic Writing and Research	3
UC Elective		3
Credits		16
Total Credits		32

¹ Chemistry courses and additional math courses depend on intended professional goal or career plan and math placement score.

Subsequent Course and GPA Requirements

Health Science Studies students must maintain a minimum overall science GPA of 2.25. Students meet with their academic advisers to develop a customized plan of study that incorporates their academic and career goals. To remain in good standing in the 3+2 program, students must maintain an overall GPA of 3.0, complete 20 credits in liberal arts, and earn 120 credits for degree completion in the third year. It is essential that students work closely with their academic adviser to carefully plan their course of study.

Students in this program take 9 credits of graduate coursework in their third year. These 9 MSW credits are used to fulfill both undergraduate and graduate requirements. Students must achieve a grade of B or higher in the graduate social work courses. Students earn the Master's Degree in Social Work upon satisfactory completion of all MSW graduate curriculum requirements.

Course selections must fulfill the following:

Code	Title	Credits
Curriculum Requirements		
University Curriculum Requirements		46

Admission Requirements

The requirements for admission into the undergraduate Health Science Studies programs are the same as those for admission to Quinnipiac University. The Accelerated Dual-Degree BS/MSW (3+2) is primarily a direct admit program for first-year students.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Dual-Degree BS in Biomedical Sciences/MHS Pathologists' Assistant (4+2)

Program Contact: Thomas Martin
(Thomas.Martin@qu.edu) 203-582-3368

This unique dual-degree program prepares students for the study of pathology and laboratory medicine with direct exposure to the clinical elements, providing an easy transition to graduate-level study. The BS in Biomedical Sciences grounds students in such subjects as biology, chemistry and microbiology, with a focus on human health and disease and the development of lab skills and research acumen. This positions students for direct entry into our highly competitive, NAACLS-accredited Pathologists' Assistant program, one of only 13 of its kind in the U.S. and Canada.

The graduate PA program blends the classroom and laboratory dynamic for a collaborative and hands-on learning experience. Students will learn to examine, process and prepare tissue specimens for a variety of clinical tests and procedures, such as light microscopy, biomedical imaging and tumor triage. The 12-month rotation places students in both community and university hospitals, where they will apply their skills in settings for both surgical and autopsy pathology. Graduates will be positioned for a range of high-demand careers in hospitals, clinical laboratories, research and medical teaching facilities.

Students begin taking PA courses as early as junior year, not only cutting down time for degree completion and easing the graduate-level course load, but saving costs on graduate education as well. Additionally, as a 4+2 undergraduate, students will still have opportunities to participate in faculty-mentored research, either during the semester as part of an independent study, or over the summer as part of the Quinnipiac Interdisciplinary Program for Research and Scholarship (QUIP-RS).

¹ Graduate course that also counts for a undergraduate science elective.

² Graduate course that fulfills the undergraduate Pathophysiology (BMS 318) requirement.

Mission Statement

The mission of Quinnipiac University's Dual-Degree BS in Biomedical Sciences/MHS Pathologists' Assistant (4+2) program (with concentrations in Medical Sciences or Microbiology) is to provide students with a strong foundation in biology, chemistry, microbiology and biomedical sciences. The curriculum will allow students to easily and effectively transition into the graduate Pathologists' Assistant program. The graduate curriculum, leading to a Master of Health Science, will train candidates to be pathologists' assistants. Upon successful completion of their training, graduates are employed by pathologists in hospital

laboratories, private laboratories and medical research centers. Currently, there is a nationwide demand for pathologists' assistants.

Admission to the Program

Candidates applying for admission into the Dual-Degree BS in Biomedical Sciences/MHS in Pathologists' Assistant from high school are required to have no less than three years of high school college preparatory mathematics (four years are preferred), one year of biology and one year of chemistry. Students are also encouraged to take advanced Biology electives. In addition, the scores of the Scholastic Assessment Test or the College Entrance Examination board of the American College Testing program are important considerations.

- Minimum high school GPA of 3.2
- Minimum SAT scores of 1200

Progression into the Graduate Program

In order to successfully progress into the Pathologists' Assistant program, students must meet the following criteria:

- Complete all requirements to fulfill a BS in Biomedical Sciences within four years
- Maintain an overall GPA of 3.2
- Maintain an overall Math and Science GPA of 3.2

Pre-Medical Studies Program

Students majoring in Health Science Studies, Biology, Biomedical Sciences or the natural science track of Behavioral Neuroscience may fully participate in the pre-medical studies program. The curriculum in this degree program can fulfill the science prerequisites for most professional schools. Students should refer to Pre-Medical Studies (p. 47) for more information about the pre-medical studies program and contact the Health Professions Advisory Committee for further academic advising.

Dual-Degree BS/MHS in Biomedical Sciences (4+1)

Program Contact: Thomas Martin (Thomas.Martin@qu.edu)
203-582-3368

The Department of Biomedical Sciences offers a five-year program leading to a Dual-Degree BS in Biomedical Sciences/MHS in Biomedical Sciences (4+1) with concentrations in Medical Sciences or Microbiology. The curriculum for this dual-degree program provides a solid foundation in the basic and biomedical sciences, which allows students to pursue many different avenues of opportunity depending upon their goals and interests. Students completing this graduate program may qualify for employment in the pharmaceutical and biotechnology industries; the medical diagnostics industry; university-based biomedical research; and city, state and federal health/research laboratories. Additionally, a student with this degree may wish to continue his/her education in graduate/professional school in: biomedical sciences, medicine, dentistry, veterinary medicine, physician assistant, pathologists' assistant, cardiovascular perfusion, microbiology and immunology, molecular biology, biotechnology, neurobiology, pharmacology, toxicology, cancer biology, plus many other areas.

To remain in good standing within the program, students must maintain a GPA of 3.0 overall, as well as in math and science for the remainder of

their undergraduate careers. Students also must maintain an overall GPA of 3.0 for the graduate portion and successfully pass the comprehensive examination in their final semester of their graduate year.

¹ Minimum mathematics requirement: MA 140. For those interested in graduate or professional schools, MA 141 is recommended.

² The comprehensive exam must be completed by April 15 of the fifth year.

Comprehensive Examination

The comprehensive examination in biomedical sciences (2 credits) is a requirement for the non-thesis option in the Biomedical Sciences program. The purpose of the exam is two-fold. First, the student must demonstrate broad and specific knowledge expected of someone holding a master's degree. Second, the student must be able to integrate

knowledge obtained from individual courses into unified concepts which link the student's own specialization to other fields of study. The student is given two opportunities to demonstrate competency. A written essay exam is administered by a designated faculty member. Students should schedule an appointment with the program director before registering for the comprehensive exam.

PA 535	Disease Mechanisms	4

Mission Statement

The mission of Quinnipiac University's Dual-Degree BS/MHS in Biomedical Sciences (4+1) program (with concentrations in Medical Sciences or Microbiology) is to provide students with the cutting-edge skills they need to manage the more complex operations carried out today in hospitals and research facilities, as well as allowing students to develop their critical thinking skills and knowledge of the biomedical sciences, sought after by PhD programs and medical schools. The program provides the student with a comprehensive knowledge to meet the education and technical needs of the biomedical profession in pharmaceutical, biotechnology, diagnostics and medical research. Students are guided in the principles and methods of scientific research, and they gain knowledge of the latest advances in biomedical, biotechnological and laboratory sciences—all directly applicable to real-world work environments.

Student Learning Outcomes

Upon completion of the Dual-Degree BS/MHS in Biomedical Sciences (4+1) program, students will demonstrate the following competencies:

- Foundational Knowledge:** Demonstrate advanced knowledge of the major disciplines in the Biomedical Sciences (Biology, Chemistry, Physics, Physiology, Microbiology, Immunology, Pathophysiology).
- Disease Mechanisms:** Identify factors that influence human health and disease.
- Translational Science:** Critically analyze how new research discoveries can be translated into effective patient treatments/interventions.
- Professional Skills:** Master the essential technical skills critical for success in a laboratory environment.
- Effective Scientist:** Engage in scientific research and effectively communicate the dissemination of results to various audiences.

- f. **Responsible Citizen:** Evaluate the social and ethical impact of scientific discoveries on medical practice.

Admission to the Program

Students interested in applying to the Dual-Degree BS/MHS in Biomedical Sciences (4+1) with concentrations in Medical Sciences or Microbiology must meet with the program contact during the spring semester of their junior year. Following the meeting, the student may apply for admission into the program. Admission into the program is dependent on the applicant's potential to pursue a university program and on past academic performance. At the time of application submission, students must have a GPA of 3.0 overall, as well as in math and science. To remain in good standing within the program and be eligible to enter the graduate curriculum, the student must maintain a GPA of 3.0 overall, as well as in math and science for the remainder of their undergraduate careers.

Students in the Health Science Studies program or other science programs such as (Behavioral Neuroscience, Biology or Chemistry) who successfully complete (BIO 212/BIO 212L, CHE 211/CHE 211L, PHY 111/PHY 111L & BMS 370/BMS 370L) also may be eligible for admittance into the graduate portion of the program and should contact the program director.

Pre-Medical Studies Program

Students majoring in Health Science Studies, Biology, Biomedical Sciences or the natural science track of Behavioral Neuroscience may fully participate in the pre-medical studies program. The curriculum in this degree program can fulfill the science prerequisites for most professional schools. Students should refer to Pre-Medical Studies (p. 47) for more information about the pre-medical studies program and contact the Health Professions Advisory Committee for further academic advising.

Independent Study Opportunities

Students in Biomedical Science programs may take independent study courses in biomedical science, microbiology and/or health sciences. Students who excel in the BMS program (>3.0 GPA overall and in science/math) may be eligible to work on a research project, enabling them to collaborate with faculty in research laboratories. The independent study courses BMS 498 and BMS 499 are for topics in biomedical sciences, BMS 482 and BMS 483, are for microbiology topics and HSC 498 for topics in health sciences. A maximum of 8 independent study credits may count toward the science, health science or open electives in the biomedical sciences, microbiology and immunology, or health science studies curriculum.

By definition, an independent study includes course content not offered by another QU Catalog course. However, it must involve contact hours and scholarly activities equivalent to any regularly offered course. These courses can include performing a research project, review of the scientific literature in the field of the research project and creation of a "product," such as a term essay, a series of short papers, laboratory or project reports, a portfolio, or presentation at a scientific meeting. Students register for these courses by first finding a mentor and then submitting the paper registration form (available on the second floor of Echlin).

For more information about the undergraduate biomedical sciences program, please contact the chair of the Department of Biomedical Sciences: Thomas Martin (Thomas.Martin@qu.edu) 203-582-3368.

Code	Title	Credits
BMS 482	Independent Study in Microbiology	1-4
BMS 483	Independent Study in Microbiology	1-4
BMS 498	Independent Study in Biomedical Sciences I	1-4
BMS 499	Independent Study in Biomedical Sciences II	1-4
HSC 498	Independent Study in Health Sciences	1-4

Minor in Biomedical Sciences

Program Contact: Thomas Martin (Thomas.Martin@qu.edu)
203-582-3368

The Department of Biomedical Sciences offers a minor in Biomedical Sciences, which provides students with a fundamental knowledge of the theories, principles and advances in these basic sciences. Completing this area of concentration may help students qualify for employment in the pharmaceutical and biotechnology industries; the medical diagnostics industry; university-based biomedical research; and city, state and federal health/research laboratories or to continue their education in graduate/professional school. This concentration helps students develop critical thinking skills and understand and utilize modern research laboratory technologies.

Biomedical Sciences Minor Curriculum

The BMS minor consists of a minimum of 18 credits, all with a grade of C or better. At least two courses must be lab-based. No more than two classes may be transferred in from other institutions. The same course cannot count toward both a minor in Microbiology and Immunology and a minor in Biomedical Sciences.

Graduate courses may count for the BMS minor with permission from the department chair.

Code	Title	Credits

BMS 498	Independent Study in Biomedical Sciences I	1-4
BMS 499	Independent Study in Biomedical Sciences II	1-4

¹ Take BMS 378 or BMS 525, not both.

² Take BMS 470 or BMS 570, not both.

Minor in Microbiology and Immunology

Program Contact: Thomas Martin (Thomas.Martin@qu.edu)
203-582-3368

The Department of Biomedical Sciences offers a minor in microbiology and immunology, which provides students with a fundamental knowledge of the theories, principles and research techniques in this exciting and rapidly evolving field. The program is committed to helping students develop the ability to ask significant scientific questions and then utilize

critical thinking skills and modern research laboratory technology to solve these problems successfully.

Microbiology and Immunology Minor Curriculum

The Microbiology and Immunology Minor consists of a minimum of 19 credits, all with a grade of C or better. Students are required to complete BMS 370 General Microbiology and one of the following immunology-based courses listed below. They also are required to take an additional 11-12 credits of elective courses. Students may only receive credit for BMS 375 or BMS 522. Students may only receive credit for BMS 378 or BMS 525 or HSC 378.

Code	Title	Credits
Microbiology Requirement		
BMS 370 & 370L	General Microbiology and General Microbiology Lab	4
Immunology Requirement (take one of the following):		3-4
BMS 375 & 375L	Immunology and Immunology Lab	
BMS 378	Vaccines and Vaccine-Preventable Diseases	
BMS 522 & 522L	Immunology and Immunology Lab	
HSC 375	Immunology	
HSC 378	Vaccines and Vaccine-Preventable Diseases	
Electives (select at least three of the following):		11-12
BIO 328 & 328L	Human Clinical Parasitology and Human Clinical Parasitology Lab	
BIO 346 & 346L	Cell Physiology and Cell Physiology Lab	
BIO 471 & 471L	Molecular Genetics and Molecular Genetics Lab	
BMS 319	Public Health: Epidemiology of Infectious Diseases	
BMS 372 & 372L	Pathogenic Microbiology and Pathogenic Microbiology Lab	
BMS 373 & 373L	Mycology and Mycology Lab	
BMS 375 & 375L	Immunology and Immunology Lab	
BMS 378	Vaccines and Vaccine-Preventable Diseases	
BMS 470 & 470L	Virology and Virology Lab	
BMS 472	Biotechnology (Laboratory Component)	
BMS 473	Infections of Leisure	
BMS 474	Power of Plagues	
BMS 475	Special Topics in Microbiology	
BMS 481	Research Techniques in Biomedical Sciences	
BMS 482	Independent Study in Microbiology	

BMS 483	Independent Study in Microbiology	
HSC 375	Immunology	
HSC 378	Vaccines and Vaccine-Preventable Diseases	
Graduate courses for the Microbiology and Immunology Minor (permission required):		
BMS 522 & 522L	Immunology and Immunology Lab	4
BMS 525	Vaccines and Vaccine Preventable Diseases	3
BMS 526	Epidemiology	3
BMS 528	Advanced Clinical Parasitology	4
BMS 569	Antimicrobial Therapy	3
BMS 570	Virology (cannot be combined with BMS 470)	4
BMS 573	Mycology	3
BMS 572	Pathogenic Microbiology	4
BMS 575	Food Microbiology	4
BMS 584	Emerging and Re-emerging Infectious Diseases	3
BMS 585	Outbreak Control	3
BMS 595	Transplantation Immunology	3

Minor in Nutrition

Program Contact: Dana White (dana.white@qu.edu) 203-582-6440

Nutrition is a fundamental pillar of health, wellness and health care. Dietitians and nutritionists are experts in the use of food and nutrition to promote health and manage disease. The Commission on Dietetic Registration is raising the minimum required education for prospective registered dietitians from a bachelor's degree to a graduate degree. Students typically need a six-course undergraduate sequence along with a strong chemistry background to be qualified candidates into the graduate-level programs.

The content includes general nutrition (HSC 262, HSC 460), lifespan nutrition (HSC 317) and community nutrition (HSC 318). Areas of additional cognate can include obesity (BMS 221), nutrition for athletic performance (AT 330), health care counseling (HSC 230) and biochemistry (BMS 304 or CHE 315).

Upon completion of the minor, students will have completed many of the prerequisite courses for entrance into graduate programs in dietetics. Nutrition is also a popular addition to many graduate school preparatory programs in healthcare (Medicine, Nursing, Public Health).

Outcomes

- Students will describe and apply the role of nutrients in human health.
- Students can assess dietary needs for both healthy and special needs populations.
- Students will apply nutritional principles in the evaluation of information and policies concerning food and dietary practices.
- Students will critique and effectively communicate evidence-based nutrition information.

Nutrition Minor Curriculum

The nutrition minor consists of a minimum of 18 credits, all with a grade of "C" or better. No more than two classes may be transferred in from other institutions.

Graduate courses may count for the minor with permission from the department chair.

Code	Title	Credits
Courses		
AT 330	Nutrition for Sport and Fitness	3
AT 460	Advanced Nutrition (HSC 460)	3
BMS 221	Physiology and Effects of Obesity in Society	3
BMS 304	Biological Chemistry ¹ or CHE 315 Biochemistry I	3
HSC 230	Counseling and Teaching for Health Care Professionals	3
HSC 262	Nutrition in Health and Illness	3
HSC 317	Nutrition Across the Life Cycle	3
HSC 318	Community Nutrition	3

¹ Take BMS 304 or CHE 315, not both.

Online Health Science Studies—BS Completion Track

Program Contact: Jason Scozzafava (jason.scozzafava@qu.edu) 203-582-7663

This program is designed for nontraditional, adult professionals who are looking to change careers and/or increase their opportunities in the growing health care industry, as well as for recent associate degree graduates who wish to continue their studies. Completion of this program is possible entirely online, part time, through a curriculum that builds on the individual's prior educational preparation. Course content emphasizes knowledge and skills that are essential to success in today's health care system while also allowing students a chance to explore the specific areas that interest them most. Students are guided and supported by an academic adviser, who works closely to structure the program to meet each student's unique career goals. Graduates will be well-equipped to pursue roles across a variety of fields.

For more information visit the Quinnipiac website (<https://online.quinnipiac.edu/online-programs/online-undergraduate-programs/bs-in-health-science-studies/>).

PO 302	The Global Civic Dilemma
Total Credits	120

¹ Course offered only during the summer semester. These courses are required, unless similar courses are transferred from another institution.

Courses and curriculum requirements are subject to change.

Student Learning Outcomes

Upon completion of the Health Science Studies online BS completion program, students will demonstrate the following competencies:

- Scientific Knowledge:** Demonstrate proficiency in core scientific principles in the disciplines of biology, chemistry and physics.
- Interprofessional Communication:** Effectively and professionally share information across the medical professions via written and oral communication.
- Health Systems:** Develop an advanced knowledge of the US Healthcare system and effectively describe challenges/issues that affect it.
- Evidence Informed Practice:** Critically evaluate biomedical information and sources to confirm validity and reliability.
- Responsible Citizen:** Weigh the historical, social, moral and ethical implications of scientific practices and discoveries on medical care.

Admission

Admission requirements include 45 transferable credits from a regionally accredited college or university with a grade point average of at least 2.5, transcripts from all post-secondary institutions attended, and a resume or curriculum vitae. Prerequisites for the program include 8 credits of Human Biology or Anatomy & Physiology. Students requesting transfer of college-equivalent learning (i.e., hospital-based programs and/or professional certifications), should request information from the program director.

Application procedures are managed through Quinnipiac University Online (<https://quonline.quinnipiac.edu/online-programs/online-undergraduate-programs/bs-in-health-science-studies/>).

Progression

To progress and remain in good standing, students must maintain a science GPA of 2.25 minimum. Students progress at a pace that they determine, working with their adviser to decide on the number of courses taken each semester, fall, spring and summer semesters. Most students take two, 7-week courses each semester, but schedules are flexible.

Advanced Placement Credits

Students request a transcript evaluation. A minimum of 45 credits is required (University Residency requirement) to be completed at the university to earn the bachelor's degree in science.

Advanced Core Credits

The advanced core courses developed by faculty in the College of Arts and Sciences, with the learning needs of health science adult students in mind, will enable part-time students to earn 20 credits from the University Curriculum.

The advanced core reflects the aims and goals of the traditional University Curriculum and the Essential Learning Outcomes while acknowledging the prior general education work completed at the associate's degree level. The advanced core, consisting of five 4-credit courses, are completed in seven-week blocks online and are designed to move students through in cohorts. Students can complete up to 8 credits during the fall and spring semesters and up to 7 credits in the summer. Students may start the program in the fall or spring.

Department of Diagnostic Imaging

The Department of Diagnostic Imaging at Quinnipiac University provides a quality and comprehensive education, through didactic, laboratory and clinical experiences, that prepares students for careers in diagnostic imaging and introduces them to the subspecialty areas.

We offer two bachelor of science degrees:

- BS in Diagnostic Medical Sonography, which prepares students for careers as ultrasound technologists
- BS in Radiologic Sciences, which prepares students for careers as radiologic technologists

Students who complete the BS program in Radiologic Sciences have the option to apply for advanced studies here at Quinnipiac University. Advanced study options within the Diagnostic Imaging Department include:

- MHS Advanced Medical Imaging and Leadership program (p. 790) - one-year program
- MHS Radiologist Assistant program (p. 824) - two-year program
- Bachelor of Science in Diagnostic Medical Sonography (p. 502)
- Bachelor of Science in Radiologic Sciences (p. 507)
- Master of Health Science – Advanced Medical Imaging and Leadership (p. 790)
- Master of Health Science – Radiologist Assistant (p. 824)

Accelerated Dual-Degree BS/MHS in Advanced Medical Imaging and Leadership (3+1)

Program Contact: Paula DeMaio (paula.demaio@quinnipiac.edu) 203-582-7973 or Bernadette Mele (bernadette.mele@quinnipiac.edu) 203-582-3815

The Accelerated Dual-Degree program consists of two distinct degrees: the Bachelor of Science in Radiologic Sciences and the Master of Health Science in Advanced Medical Imaging and Leadership.

The Bachelor of Science in Radiologic Sciences is a three-year accelerated degree. The mission of the Radiologic Sciences program at Quinnipiac University is to develop students' technical and interpersonal communication skills through a logical, organized and rigorous sequence of didactic, laboratory and clinical experiences. The program offers multiple clinical assignments to provide maximum exposure to diversified radiographic procedures and imaging protocols. In addition, the program prepares graduates competent in the art and science of radiography.

Graduates of the program will meet the needs of the community as efficient and highly qualified professionals. The program prepares students, upon successful completion of all didactic and clinical work, to move on to advanced study in the Advanced Medical Imaging and Leadership program.

The Advanced Medical Imaging and Leadership program is an interprofessional program. The integrated curriculum features core business discipline courses, guided health management courses, and advanced imaging modalities in three distinct pathways: magnetic resonance imaging (MRI), computed tomography (CT), and women's imaging (WI). Graduates of the MHS-AMIL program will be prepared to

become advanced imaging professionals possessing the foundational education necessary for future entry-level leadership and managerial roles within their respective radiology healthcare organizations.

Accelerated Dual-Degree BS/MHS in Advanced Medical Imaging and Leadership Curriculum

The designated Advanced Medical Imaging (3+1) course curriculum is subject to modification as deemed necessary to maintain a high-quality educational experience. The Academic Standing and Progression Committee recommendations regarding student progression, discipline or dismissal will be considered on a case-by-case basis.

¹ BIO 101–BIO 102 are required courses for the Radiologic Sciences program and may be used to meet the university core sciences requirement.

² Initial placement in the English and mathematics courses is determined by placement examination and an evaluation of high school units presented. The minimum mathematics requirement is MA 275 or its equivalent.

³ Associated lab is required for both Chemistry and Physics. CHE 110 or PHY 110 with lab are acceptable to fulfill the requirement. Students may take in the fall or spring of their first year.

⁴ If taking Chemistry or Physics in the spring, this UC elective should be taken in the fall semester.

Student Learning Outcomes

Upon completion of the Bachelor of Science in Radiologic Sciences component of the AMIL (3+1) program, students will demonstrate the following competencies:

Goal 1: Students will be clinically competent.

- Clinically Knowledgeable:** Apply skills and knowledge from foundational courses.
- Procedurally Knowledgeable:** Demonstrate growth in procedural knowledge from all RS coursework.

Goal 2: Students will demonstrate effective communication skills.

- Effective Communication:** Execute interpersonal communication with patients.
- Oral Proficiency:** Demonstrate their ability to present clear and creative ideas related to a case study.

Goal 3: Students will demonstrate critical thinking.

- Critical Decision Making:** Demonstrate their ability to perform non-routine and routine procedures.
- Image Analysis:** Evaluate images for quality and diagnostic value.

Goal 4: Students will grow and develop as highly qualified professionals.

- Professional Ethics:** Understand and apply ethical decision making.
- Professional Behaviors:** Conduct themselves professionally.
- Professional Research:** Create a culminating capstone project.

Goal 5: The program will continuously monitor and strive to sustain its effectiveness.

- Completion Rate:** Students who start the program will complete the program.
- Employer Satisfaction:** Employers will be satisfied with the education of the graduates of the program.
- Graduate Satisfaction:** Graduates will be satisfied with the education received from the program.
- Employment Rate:** Graduates of the program will become employed within six months of completion of the program.

Upon completion of the Advanced Medical Imaging and Leadership program, students will demonstrate the following competencies:

Goal 1: Students will be clinically competent.

- Clinically Knowledgeable:** Apply skills and knowledge from foundational courses.
- Procedurally Knowledgeable:** Demonstrate growth in procedural knowledge from all AMIL coursework.

Goal 2: The students will demonstrate effective communication skills.

- Effective Communication:** Execute interpersonal communication with patients.

- b. **Oral Proficiency:** Demonstrate their ability to present clear and creative ideas in a formal manner.

Goal 3: Students will demonstrate critical thinking.

- a. **Critical Decision Making:** Demonstrate their ability to navigate typical and atypical clinical scenarios while performing non-routine and routine procedures.
- b. **Image Analysis:** Evaluate images for quality and diagnostic value.

Goal 4: Students will grow and develop as professionals.

- a. **Professionalism:** Conduct themselves professionally and understand and apply ethical decision making.
- b. **Professional Research:** Create a culminating capstone project.

Student Learning Outcomes for both components of the AMIL (3+1) program are designed to mirror one another. The AMIL (3+1) program represents a natural progression from undergraduate to graduate studies. Students in the graduate component of the program will expand upon the outcomes achieved in the BSRS component and will continue growing as Registered Radiologic Technologists and healthcare workers.

Quinnipiac University's Accelerated Dual-Degree Radiologic Science and Advanced Medical Imaging and Leadership (3+1) program provides prospective students with the opportunity to obtain both bachelor's and master's degrees as well as certification in two radiographic modalities within a four-year time frame, a rarity among health science programs. Obtaining a master's degree in health science studies is a great benefit to students as the curriculum not only advances their knowledge within the radiologic field and specialty, but also delves into health policy, health administration, and prepares these students to take on leadership roles within healthcare departments.

Quinnipiac University's Accelerated Dual-Degree BS/MHS in Advanced Medical Imaging and Leadership (3+1) program supports the mission statements of both Quinnipiac University and the School of Health Sciences and their commitment to excellence in education. The mission of the program is to develop each student's technical, professional and interpersonal communication skills through a logical and organized sequence of didactic, laboratory and clinical experiences. The program offers multiple clinical assignments to provide maximum exposure to advanced imaging modalities and associated protocols. In addition, the program prepares skilled graduates competent in the art and science of radiography, fluoroscopy and interventional procedures. Graduates of the Advanced Medical Imaging and Leadership program meet the needs of the community for highly qualified professionals, and the program prepares students for career entry and advanced study.

The Accelerated Dual-Degree BS in Radiologic Sciences/MHS in Advanced Imaging and Leadership (3+1) program does not have a separate application process. Incoming first-year students admitted to the School of Health Sciences Radiologic Sciences BS who meet the dual-degree program criteria will be invited to enter the program. To be considered for this program, students must be ranked in the top 20 percent of their high school class, and must have a total SAT score (critical reading and math) of 1200 or higher, or an ACT composite score of 25 or higher.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first-quarter grades sent from their high school counselor as soon as they are available.

Additional Program Costs

As a clinical education program, the Radiologic Sciences major requires some expenses that go beyond standard university tuition and fees:

- a. **Clinical/Fieldwork Education Travel** (gas, parking, public transportation) – Students will have clinical rotation experiences that take them off campus. For these rotations, the student will typically be traveling two to three times per week. Clinic begins in the sophomore year and students are responsible for providing their own transportation. **Cost – variable.**
- b. **Immunizations** – Consistent with the School of Health Sciences policy, all students must have a full battery of immunizations and in some cases titer affirmation of immunity for common diseases including but not limited to: MMR, HepB, varicella, polio, TDAP, TB and influenza. These must be documented prior to the start of clinical experiences during the sophomore year and must be maintained through the undergraduate education. **Cost – variable (please check with your insurance carrier).**
- c. **Background Check** – All students must undergo an initial background check prior to the start of clinical/fieldwork experience.
- i. Initial background check cost is \$63 for all domestic addresses for the past 7 years or \$158 for students who have resided in New York state in the last 7 years due to NY state surcharge.
 - ii. Some students may be required to do an annual recheck one year after the initial background recheck. **Cost - \$32 per annual recheck.**
- d. **Drug Screening** – All students must undergo a drug screening prior to the start of the main component of the program in the sophomore year. **Cost – approximately \$42.25.**
- e. **Liability Insurance** – All students have liability insurance coverage through the university, free of charge, while performing required clinical activity. Students may choose to purchase additional coverage at their own expense.
- f. **EXXAT and APPROVE** – Students enrolled in professional programs must enroll in EXXAT and APPROVE.
- i. EXXAT is the clinical tracking and assessment program used by the School of Health Sciences. **Cost – one-time payment of \$150 per student for the current major (students are responsible for this cost).**
 - ii. APPROVE is the program within EXXAT that tracks all student health and safety records, provides documentation to prospective clinical sites and provides notification of impending expiration dates. **Cost – \$35 for first year; \$10 per year thereafter.**

Please note – All fees are subject to change.

Accreditation information for the BSRS component of the AMIL 3+1 program included below per the JRCERT accreditation guidelines.

The Radiologic Sciences program at Quinnipiac University is accredited by:

The Joint Review Committee on Education in Radiologic Technology
(jrcert.org (<http://www.jrcert.org>))
20 N. Wacker Drive, Suite 2850
Chicago, IL 60606-3182

Phone: 312-704-5300

The program received an eight-year accreditation (the maximum available) in spring 2020. The re-accreditation process will commence in 2027 with submission of the self-study report to the JRCERT.

Bachelor of Science in Diagnostic Medical Sonography

Program Contact: Marisa Hale
(Marisa.Hale@quinnipiac.edu) 203-582-8264

Diagnostic medical sonographers play a critical role in the health care team. The sonographer provides patient services using high-frequency sound waves that produce images of internal structures. Working under the supervision of a physician responsible for the use and interpretation of ultrasound procedures, the sonographer helps gather sonographic data to diagnose a variety of conditions and diseases, as well as monitor fetal development.

To prepare students for careers in sonography and certification examinations in the subspecialty areas, Quinnipiac offers a BS in Diagnostic Medical Sonography. The Diagnostic Medical Sonography program offers didactic, laboratory and clinical training in multiple subspecialties of sonography including abdominal and small parts, breast, vascular technology, OB/GYN and musculoskeletal imaging for the student who is motivated to become a multi-credentialed member of this profession.

The first two years of the bachelor's degree program consists of University Curriculum studies in addition to an introductory course into the field of diagnostic medical sonography. The professional component of the program begins in the third year of study. Each student spends two full years concentrating on didactic sonography classes, laboratory sessions on campus and clinical education at multiple clinical education centers. The curriculum is structured so students can apply the knowledge and skills developed in the classroom and laboratory to the care of patients in the clinical setting. Throughout the professional component of the program, didactic and clinical courses are taken simultaneously to provide the opportunity for immediate application and reinforcement.

Upon completion of their Bachelor of Science in Diagnostic Medical Sonography, students are eligible to apply for the American Registry of Diagnostic Medical Sonography certification. Graduates may take the Sonography Physics and Instrumentation examination in addition to the following ARDMS specialty examinations: abdomen and small parts, breast, vascular technology and obstetrics/gynecology.

Diagnostic Medical Sonography Curriculum

The curriculum for the professional courses in the program are subject to modification as deemed necessary to maintain a high-quality educational experience and keep current with best practices in the profession. The Academic Standing and Progression Committee recommendations regarding student progression, discipline or dismissal will be considered on a case-by-case basis.

Course	Title	Credits
First Year		
Fall Semester		
BIO 101 & 101L	General Biology I and General Biology I Lab ¹	4
EN 101	Introduction to Academic Reading and Writing ²	3
FYS 101	First-Year Seminar	3
MA 275	Biostatistics ²	3
DMS 100	Foundations of Diagnostic Imaging	1
Credits		14
Spring Semester		
BIO 102 & 102L	General Biology II and General Biology Lab II ¹	4
EN 102	Academic Writing and Research	3
PHY 101 & 101L	Elements of Physics and Elements of Physics Lab (UC Elective) ^{1,3}	4
UC Elective		3
Credits		14
Second Year		
Fall Semester		
BIO 211 & 211L	Human Anatomy and Physiology I and Human Anatomy and Physiology Lab I	4
UC Elective		3
UC Elective		3
UC Elective		3
UC Elective		3
Credits		16
Spring Semester		
BIO 212 & 212L	Human Anatomy and Physiology II and Human Anatomy and Physiology II Lab	4
DMS 101 & 101L	Introduction to Diagnostic Medical Sonography and Sonography Laboratory Practicum I (UC Elective)	4
UC Elective		3
UC Elective		3
Credits		14
Third Year		
Fall Semester		
DMS 200	Sonography Physics and Instrumentation I	3
DMS 210 & 210L	Abdominal and Small Parts Sonography and Abdominal and Small Parts Sonography Lab Practicum	4
DMS 250	Sonography Clinical Education I	3

DMS 297 & 297L	Methods of Patient Care and Methods of Patient Care Lab	3
UC Elective		3

Credits 16

Spring Semester

DMS 201	Sonography Physics and Instrumentation II	3
DMS 220 & 220L	Vascular Sonography and Vascular Sonography Lab Practicum	4
DMS 260	Sonography Clinical Education II	3
UC Elective		3

Credits 13

Summer Semester

DMS 270	Sonography Clinical Education III	5
---------	-----------------------------------	---

Credits 5

Fourth Year

Fall Semester

DMS 205	Human Anatomy Lab I	1
DMS 330 & 330L	OB/GYN Sonography and OB/GYN Sonography Lab Practicum	4
DMS 380	Sonography Clinical Education IV	3
DMS 414	Research Analysis and Critique (RS 414)	3
BMS 318	Pathophysiology	3

Credits 14

Spring Semester

DMS 206	Human Anatomy Lab II	1
DMS 340 & 340L	Breast Sonography and Breast Sonography Lab Practicum	4
DMS 350 & 350L	Musculoskeletal Sonography and MSK Sonography Lab Practicum	4
DMS 390	Sonography Clinical Education V	3
DMS 499	Capstone (RS 499)	3

Credits 15

Total Credits 121

¹ BIO 101 - BIO 102 and PHY 101 are required courses for the Diagnostic Medical Sonography program and may be used to meet the university core sciences requirement.

² Initial placement in the English and mathematics courses is determined by placement examination and an evaluation of high school units presented. The minimum mathematics requirement is MA 275 or its equivalent.

³ Associated lab is required for Physics. PHY 110 with lab is acceptable to fulfill the requirement. Students may take the lab in the fall or spring of their first year.

All diagnostic medical sonography course requirements must be completed in the appropriate semester as indicated above. All diagnostic medical sonography courses, beginning with DMS 101 and DMS 101L, are reserved for DMS majors only.

Student Learning Outcomes

Upon completion of the Diagnostic Medical Sonography program, students will demonstrate the following competencies:

Goal: The students will be clinically competent.

- a. **Clinically Knowledgeable:** Apply foundational skills and knowledge from didactic and laboratory courses to clinical practice.
- b. **Procedurally Knowledgeable:** Demonstrate procedural knowledge from all DMS coursework.

Goal: The students will demonstrate effective communication skills.

- a. **Effective Communication:** Execute effective communication with patients.
- b. **Oral Proficiency:** Demonstrate the ability to present clear and creative ideas related to a case study.

Goal: The students will demonstrate critical thinking.

- a. **Critical Decision Making:** Demonstrate the ability to obtain, review and integrate patient history, physical examination and sonographic findings to provide a physician with an oral or written interpretation of technical findings.
- b. **Image Analysis:** Evaluate images for quality and diagnostic value.

Goal: The students will grow as professionals.

- a. **Professional Ethics:** Understand and apply ethical decision making.
- b. **Professional Behaviors:** Conduct themselves professionally.
- c. **Professional Research:** Create a culminating capstone research project.

Mission Statement

The mission of the Diagnostic Medical Sonography program at Quinnipiac University is to provide a quality and comprehensive education, through didactic, laboratory and clinical experiences, that will prepare students to become multi-credentialed sonographers. The program offers multiple clinical assignments to provide maximum exposure to diversified sonographic procedures.

The program prepares students to be competent in the art and science of diagnostic medical sonography, both for career entry and advanced study. Graduates of the program are prepared to meet the needs of the community for highly qualified professionals.

Admission to the Program

Candidates applying for admission to the Diagnostic Medical Sonography program are required to have at least three years of high school college preparatory mathematics and one year of biology. One year of anatomy and physiology and one year of general physics is highly recommended. In addition, the scores of the SAT or the ACT are an important consideration. Related health care experience is highly desirable. Prospective candidates also must satisfy general Quinnipiac University Admission Requirements (p. 20).

Program Policies

In addition to the general policies of Quinnipiac University, such as due process and academic honesty, the following apply to students enrolled in the Diagnostic Medical Sonography program:

Progression in the Program

The Diagnostic Medical Sonography program has both GPA and final course grade requirements.

A cumulative university GPA of 2.85 and programmatic GPA of 3.0 must be maintained each semester. Final course grades of D or F in any DMS

course are unacceptable. Programmatic GPA calculation and final course grade requirements begin with DMS 100 and include all DMS coursework thereafter.

Any student who does not maintain GPA requirements or earns a grade of a D or F in any DMS course will be referred to the Diagnostic Imaging Department's Academic Progression and Retention Committee (APRC) for review. Students who fail to meet the minimum cumulative university GPA requirement of 2.85 and/or the minimum programmatic GPA requirement of 3.0 will be subject to sanctions up to and including program dismissal. Students who earn a final course grade of D or F for any DMS course will be subject to program dismissal.

Technical Standards

The Diagnostic Medical Sonography program is a rigorous and intense program that places specific requirements and demands on the students enrolled in the program. An objective of this program is to prepare graduates to enter a variety of employment settings and to render care to a wide spectrum of individuals. The technical standards set forth by the Diagnostic Medical Sonography program establish the essential qualities considered necessary for admitted students to this program to achieve the knowledge, skills and competencies of an entry-level sonographer.

All students admitted to the program must meet the established abilities and expectations. In the event a student is unable to fulfill these technical standards, with or without reasonable accommodation, the student will not be admitted or may be dismissed from the program.

Students are required to verify they understand and meet the technical standards or that they believe that, with certain reasonable accommodations, the technical standards can be met. Verification of understanding includes the student reading, signing and returning a copy of the Technical Standards Agreement to the program director. A listing of the technical standards and an agreement form is located in the Diagnostic Medical Sonography student handbook as well as on the program's web page (<https://www.qu.edu/schools/health-sciences/programs/bs-diagnostic-medical-sonography.html>).

Transportation

Multiple clinical education centers are used throughout the professional component of the program. Students are responsible for their own transportation to and from these sites.

Summer Study

All students are required to perform one clinical assignment during the summer semester, third year (DMS 270). This clinical practicum is performed during summer sessions I and II and may be performed only in a clinical education site currently affiliated with Quinnipiac's Diagnostic Medical Sonography program.

Transfer Students from within Quinnipiac

The admission of internal transfer students to the Diagnostic Medical Sonography major is on a space-available, competitive basis only and will be reviewed on a yearly basis every fall. These students must meet the course requirements, performance standards and technical standards of the program.

Internal transfers who wish to transfer to the Diagnostic Medical Sonography program must meet the following criteria:

- a. A programmatic GPA of 3.0, starting with RS 100/DMS 100
- b. A cumulative GPA of 2.85

- c. Successful completion of RS 100/DMS 100
- d. Successful completion of BIO 101 and BIO 101L
- e. Successful completion of MA 275

Internal transfer students will be selected competitively, based on the highest programmatic GPA, cumulative GPA and BIO grades respectively. Completion of the course RS 100/DMS 100, does not guarantee any internal transfer student a spot in the Diagnostic Medical Sonography program. All applicants must submit a change of major request form during the fall advisement period. Change of major forms will be held for approval by the Diagnostic Imaging department chair until the final grades are posted.

Transfer Students from Other Colleges and Universities

The admission of external transfer students to the Diagnostic Medical Sonography major is on a space-available, competitive basis only and will be reviewed on a yearly basis at the end of every fall semester. These students must meet the course requirements, performance standards and technical standards of the program. The program director will notify Admissions of available spots at the end of the fall semester after final grades have posted and internal transfers have been accepted. External transfer students will have the ability to take RS 100/DMS 100 online over the J-Term.

External transfers must meet the following criteria for acceptance into the major and progression into DMS 101/DMS 101L in the spring:

- a. A cumulative GPA of 2.85
- b. Successful completion of RS 100/DMS 100 by the end of J-term
- c. Successful completion of BIO 101 and BIO 101L

All diagnostic medical sonography courses must be taken and completed at Quinnipiac University. Diagnostic medical sonography courses from the student's previous institution will not be considered for replacement for any of the diagnostic medical sonography courses offered at Quinnipiac.

Additional Program Costs

As a clinical education program, the Diagnostic Medical Sonography major requires some expenses that go beyond standard university tuition and fees:

- a. **Clinical/Fieldwork Education Travel** (gas, parking, public transportation) – **Costs: variable**
- b. **Immunizations** – Consistent with the School of Health Sciences policy, all students must have a full battery of immunizations and in some cases titer affirmation of immunity for common diseases including but not limited to: MMR, HepB, varicella, polio, TDAP, TB and influenza. These must be documented prior to the start of clinical experiences during the sophomore year and must be maintained through the undergraduate education. **Costs: variable (please check with your insurance carrier)**
- c. **Background Check** – All students must undergo an initial background check prior to the start of any clinical/fieldwork experience.
 - i. Initial background check cost is \$63 for all domestic addresses for the past 7 years or \$158 for students who have resided in New York state in the last 7 years due to NY state surcharge.
 - ii. Some students may be required to do an annual recheck one year after the initial background recheck. **Cost: \$32 per annual recheck**

- d. **Drug Screening – Cost: \$42.25**
- e. **Liability Insurance** – All students have liability insurance coverage through the university, free of charge, while performing required clinical activity. Students may choose to purchase additional coverage at their own expense.
- f. **EXXAT and APPROVE** – FOR THOSE PROGRAMS USING EXXAT ONLY. Students enrolled in professional programs must enroll in EXXAT and APPROVE.
- i. EXXAT is the clinical tracking and assessment program used by the School of Health Sciences. **Cost: one-time payment of \$150 per student for the current major (students are responsible for this cost).**
 - ii. APPROVE is the program within EXXAT that tracks all student health and safety records, provides documentation to prospective clinical sites, and provides notification of impending expiration dates. **Cost: \$35 for first year, \$10 per year thereafter**
- g. **Certification examination costs:** Please visit the American Registry of Diagnostic Medical Sonography website (<https://www.ardms.org/>) for current cost of exams.

DMS 100. Foundations of Diagnostic Imaging. 1 Credit.

This course provides the student with a basic knowledge of the fundamentals of diagnostic imaging practice. Topics include defining diagnostic imaging as it relates to all imaging modalities, historical development of the profession, introduction to current and emerging practice arenas, and application of professional terminology. Students complete a self-study in medical terminology.

Offered: Every year, Fall

DMS 101. Introduction to Diagnostic Medical Sonography. 3 Credits.

This is an introductory course to the field of diagnostic medical sonography. This course is taken in conjunction with DMS 101L. Throughout the course, the career of sonography is defined. Students are introduced to terminology pertaining to ultrasound as well as the physics responsible for its production. Cross-sectional anatomy pertaining to the abdomen, thyroid gland, scrotum and prostate is presented. Normal sonographic anatomy of the abdomen and small parts also is presented.

Prerequisites: Take DMS 100.

Corequisites: Take DMS 101L.

Offered: Every year, Spring

DMS 101L. Sonography Laboratory Practicum I. 1 Credit.

This is an introductory lab course to the field of diagnostic medical sonography. This course is taken in conjunction with DMS 101. To produce high-quality diagnostic images, it is necessary for the students to have a thorough understanding of image orientation, acoustic properties, scanning techniques and image documentation. The students have the opportunity to utilize ultrasound equipment to learn to identify normal sonographic anatomy of the abdomen and small parts and begin to develop scanning techniques.

Prerequisites: Take DMS 100.

Corequisites: Take DMS 101.

Offered: Every year, Spring

DMS 200. Sonography Physics and Instrumentation I. 3 Credits.

This core course is designed to prepare the student toward eligibility for the Sonography Physics and Instrumentation portion of the American Registry of Diagnostic Medical Sonographers (ARDMS) registry exam. The course encompasses the theoretical concepts and practical applications related to ultrasound physics and instrumentation. Concepts include: sound, sound waves, pulse waves, intensities, interaction of sound and media, transducers, sound beams and display modes. These concepts are tied in with terms used in Introduction to Sonography course and how they apply to practical, daily scanning skills.

Prerequisites: Take DMS 101, DMS 101L, PHY 101, MA 275.

Offered: Every year, Fall

DMS 201. Sonography Physics and Instrumentation II. 3 Credits.

This core course is designed to prepare the student toward eligibility for the Sonography Physics and Instrumentation portion of the American Registry of Diagnostic Medical Sonographers (ARDMS) registry exam. The course encompasses the theoretical concepts and practical applications related to ultrasound physics and instrumentation. Concepts include: two dimensional imaging, real-time imaging, displays, harmonics, contrast agents, hemodynamics, Doppler, artifacts, quality assurance and bioeffects. These concepts are tied in with terms used in the Physics and Instrumentation I course and how they apply to practical, daily scanning skills.

Prerequisites: Take DMS 200.

Offered: Every year, Spring

DMS 205. Human Anatomy Lab I. 1 Credit.

This course presents in-depth consideration of human anatomy within systems located in the neck, abdomen and pelvis. Students discuss the structure and function of each anatomic component within each region. Conventional anatomic illustrations are correlated with their sonographic counterpart. The sonographic appearance of specific structures is correlated to images obtained using other advanced imaging modalities such as computed tomography and magnetic resonance imaging.

Prerequisites: Take BIO 212, BIO 212L.

Offered: Every year, Fall

DMS 206. Human Anatomy Lab II. 1 Credit.

This course presents in-depth consideration of human anatomy within systems located in the upper and lower extremity. For each region, students discuss the structure and function of each anatomic component. Conventional anatomic illustrations are correlated with their sonographic counterpart. The sonographic appearance of specific structures is correlated to images obtained using other advanced imaging modalities such as computed tomography and magnetic resonance imaging?

Prerequisites: Take DMS 205.

Offered: Every year, Spring

DMS 210. Abdominal and Small Parts Sonography. 3 Credits.

This course is designed to prepare the student toward eligibility for the abdomen (AB) portion of the ARDMS Registry. This course is taken in conjunction with DMS 210L. The course encompasses all aspects of abdominal and small parts scanning including: anatomy and vasculature, normal variants and congenital abnormalities, pathology, organ function and laboratory tests. The course continues to emphasize cumulative learning to include materials covered in prior ultrasound directed courses.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.

Corequisites: Take DMS 210L.

Offered: Every year, Fall

DMS 210L. Abdominal and Small Parts Sonography Lab Practicum.**1 Credit.**

This lab course is designed to prepare the student toward eligibility for the abdomen (AB) portion of the ARDMS Registry. This course is taken in conjunction with DMS 210. The course encompasses all aspects of abdominal and small parts scanning including: anatomy and vasculature, normal variants and congenital abnormalities, pathology, organ function and laboratory tests. The students utilize ultrasound equipment to learn to identify sonographic anatomy of the abdomen and small parts and develop scanning techniques. The students learn to review and critique sonographic images.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.**Corequisites:** Take DMS 210.**Offered:** Every year, Fall**DMS 220. Vascular Sonography.****3 Credits.**

This course is dedicated to the instruction of vascular sonography. It is designed to prepare students for the (VT) portion of the ARDMS registry exams. This course is taken in conjunction with DMS 220L. Anatomy pertaining to the vascular system is reviewed. Sonographic anatomy and pathologic conditions of the upper and lower extremity veins, the aorta, abdominal vasculature, the upper and lower extremity arteries, the carotid arteries and intracranial arteries are presented. Venous and arterial physiologic testing, interventional vascular procedures, surgery and other treatment options are introduced.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.**Corequisites:** Take DMS 220L.**Offered:** Every year, Spring**DMS 220L. Vascular Sonography Lab Practicum.****1 Credit.**

This lab course is dedicated to the instruction of vascular sonography. It is designed to prepare students for the (VT) portion of the ARDMS registry exams. This course is taken in conjunction with DMS 220. Sonographic anatomy and pathologic conditions of extremity veins, the aorta, abdominal vasculature, extremity arteries, the carotid arteries and intracranial arteries are presented. The students utilize ultrasound equipment to learn to identify sonographic anatomy of the vascular system and develop scanning techniques. The students learn to review and critique sonographic images.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.**Corequisites:** Take DMS 220.**Offered:** Every year, Spring**DMS 250. Sonography Clinical Education I.****3 Credits.**

This course is designed to develop the student's sonographic scanning skills and interpersonal communication skills through experiences in the clinical setting.

Prerequisites: Take DMS 101, BIO 102, MA 275.**Offered:** Every year, Fall**DMS 260. Sonography Clinical Education II.****3 Credits.**

This course, a continuation of DMS 250, is a clinical experience under the supervision of certified clinical instructors and clinical staff. Clinical competency and proficiency related to the performance of the sonographic procedures are developed and assessed.

Prerequisites: Take DMS 250.**Offered:** Every year, Spring**DMS 270. Sonography Clinical Education III.****5 Credits.**

This course, a continuation of DMS 260, is a clinical experience under the supervision of certified clinical instructors and clinical staff. Clinical competency and proficiency related to the performance of the sonographic procedures are developed and assessed.

Prerequisites: Take DMS 260.**Offered:** Every year, Summer**DMS 297. Methods of Patient Care.****2 Credits.**

This course focuses on a study of skills in providing humanistic care for the well, acute or chronically ill individual, including preparing patients for invasive as well as non-invasive imaging studies; basic clinical skills in infection control, including aseptic technique, venipuncture, vital signs and O2 administration; effective communication with emphasis on problem-solving skills. (2 lab hrs.)

Prerequisites: Take DMS 101, DMS 101L.**Corequisites:** Take DMS 297L.**Offered:** Every year, Spring**DMS 297L. Methods of Patient Care Lab.****1 Credit.**

This lab develops preclinical competency for the procedures described and demonstrated in DMS 297.

Prerequisites: Take DMS 101, DMS 101L.**Corequisites:** Take DMS 297.**Offered:** Every year, Spring**DMS 330. OB/GYN Sonography.****3 Credits.**

This course is designed to prepare the student toward eligibility for the OB/GYN ARDMS Registry exam. This course is taken in conjunction with DMS 330L. The course encompasses all aspects of gynecology, and obstetrical scanning including: anatomy and vasculature, normal variants and congenital anomalies, pathology, organ function and laboratory tests. The course continues to emphasize cumulative learning to include materials covered in prior ultrasound directed courses.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.**Corequisites:** Take DMS 330L.**Offered:** Every year, Fall**DMS 330L. OB/GYN Sonography Lab Practicum.****1 Credit.**

This lab course is designed to prepare the student toward eligibility for the OB/GYN ARDMS Registry. This course is taken in conjunction with DMS 330. The course encompasses all aspects of gynecology, and obstetrical scanning including: anatomy and vasculature, normal variants and congenital anomalies, pathology, organ function and laboratory tests. The students utilize ultrasound equipment to learn to identify sonographic anatomy of the female pelvis and develop scanning techniques. The students learn to review and critique sonographic images.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.**Corequisites:** Take DMS 330.**Offered:** Every year, Fall**DMS 340. Breast Sonography.****3 Credits.**

This course is dedicated to the instruction of the growing field of breast sonography. It is designed to prepare the student toward eligibility for the breast portion of the ARDMS Registry. This course is taken in conjunction with DMS 340L. To produce high-quality diagnostic images, it is necessary for students to have a thorough understanding of the anatomy and physiology of the breast as well as the normal and abnormal sonographic appearance of breast tissue.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.**Corequisites:** Take DMS 340L.**Offered:** Every year, Spring

DMS 340L. Breast Sonography Lab Practicum. 1 Credit.

This course is dedicated to the instruction of the growing field of breast sonography. This lab course, taken in conjunction with DMS 340, prepares the student toward eligibility for the breast portion of the ARDMS Registry. The students utilize ultrasound equipment to identify sonographic anatomy of the breast and develop scanning techniques. The students learn to review and compare sonographic and mammographic images.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.

Corequisites: Take DMS 340.

Offered: Every year, Spring

DMS 350. Musculoskeletal Sonography. 3 Credits.

This course, taken in conjunction with DMS 350L, is designed to prepare the student toward eligibility for the MSK ARDMS Registry. The course encompasses all aspects of MSK scanning including: anatomy and vasculature, normal variants, physiology, pathology, interventional procedures. The course continues to emphasize cumulative learning to include materials covered in prior ultrasound directed courses.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.

Corequisites: Take DMS 350L.

Offered: Every year, Spring

DMS 350L. MSK Sonography Lab Practicum. 1 Credit.

This lab course, taken in conjunction with DMS 350, is designed to prepare the student toward eligibility for the MSK ARDMS Registry. The course encompasses all aspects of MSK scanning including: anatomy and vasculature, normal variants, physiology, pathology and interventional procedures. The students utilize ultrasound equipment to identify MSK sonographic anatomy of the upper and lower extremities and develop scanning techniques. The students learn to review and critique sonographic images.

Prerequisites: Take DMS 101, DMS 101L, BIO 102.

Corequisites: Take DMS 350.

Offered: Every year, Spring

DMS 380. Sonography Clinical Education IV. 3 Credits.

This course, a continuation of DMS 270, is a clinical experience under the supervision of certified clinical instructors and clinical staff. Clinical competency and proficiency related to the performance of the sonographic procedures are developed and assessed.

Prerequisites: Take DMS 270.

Offered: Every year, Fall

DMS 390. Sonography Clinical Education V. 3 Credits.

This course, a continuation of DMS 380 is a clinical experience under the supervision of certified clinical instructors and clinical staff. Clinical competency and proficiency related to the performance of the sonographic procedures are developed and assessed.

Prerequisites: Take DMS 380.

Offered: Every year, Spring

DMS 414. Research Analysis and Critique (RS 414). 3 Credits.

This course explores the basic elements of health care research including different types of research models and research strategies. Students explore the difference between a variety of publication types, including editorial, case studies and peer-reviewed research articles. Students also learn techniques for database queries.

Prerequisites: Take DMS 101.

Offered: Every year, Fall

DMS 499. Capstone (RS 499). 3 Credits.

This capstone course is intended for radiologic sciences majors and diagnostic medical sonography majors in their final semester. Students are required to develop a research project as it relates to the field of diagnostic imaging. The project may relate to the student's chosen focus and must include either a formal thesis paper or poster presentation.

Prerequisites: Take DMS 414.

Offered: Every year, Spring

Bachelor of Science in Radiologic Sciences

Program Contact: Alicia Giaimo (Alicia.Giaimo@quinnipiac.edu)
203-582-3814

Radiographers are essential members of the healthcare team. Their knowledge of radiation protection, physics and biology, as well as technical procedures, allows them to deliver the safest and highest quality patient care through the use of multiple imaging modalities. In the evolving world of medicine, high technology imaging has become multifaceted, both in modalities and operationally.

To prepare students for careers in radiography, Quinnipiac University's Department of Diagnostic Imaging offers a BS in Radiologic Sciences. The program offers didactic, laboratory and clinical training in diverse aspects of radiography including patient care, radiation safety, image production and procedures for the student who is motivated to become a member of the imaging profession. Students complete the program in a three-year accelerated format.

The first year of the bachelor's degree program consists of University Curriculum studies. The component of the program accredited by the Joint Review Committee on Education in Radiologic Technology begins in the second year of study. During the second and third years, the students concentrate on didactic radiography classes and laboratory sessions on campus and clinical education at multiple clinical education centers. The curriculum is structured so students can apply the knowledge and skills developed in the classroom and laboratory to the care of patients in the clinical setting. Beginning in the spring semester of the sophomore year and continuing throughout the program, didactic and clinical courses are taken simultaneously to provide the opportunity for immediate application and reinforcement.

At the end of the third year, students are eligible for graduation with a bachelor's degree in Radiologic Sciences, and are board-eligible for the American Registry of Radiologic Technologists (ARRT) certification examination. Students would be eligible to apply for one of two advanced studies options here at Quinnipiac University. Options within the Diagnostic Imaging Department include the two-year MHS Radiologist Assistant (p. 824) program and the one-year MHS Advanced Medical Imaging and Leadership (p. 790) program.

BS in Radiologic Sciences Curriculum

The designated Radiologic Sciences course curriculum is subject to modification as deemed necessary to maintain a high-quality educational experience. The Academic Standing and Progression Committee recommendations regarding student progression, discipline or dismissal will be considered on a case-by-case basis.

Course	Title	Credits
First Year		
Fall Semester		
BIO 101 & 101L	General Biology I and General Biology I Lab ¹	4
EN 101	Introduction to Academic Reading and Writing ²	3
FYS 101	First-Year Seminar	3
MA 275	Biostatistics ²	3
CHE 101 or PHY 101	Fundamentals of General, Organic and Biological Chemistry I ³ or Elements of Physics	3
CHE 101L or PHY 101L	Fundamentals of General, Organic and Biological Chemistry I Lab or Elements of Physics Lab	1
RS 100	Fundamentals of Diagnostic Imaging	1
Credits		18
Spring Semester		
BIO 102 & 102L	General Biology II and General Biology Lab II ¹	4
UC Elective ⁴		3
EN 102	Academic Writing and Research ²	3
UC Elective		3
RS 101	Introduction to Diagnostic Imaging	3
Credits		16
Summer Semester		
Online or on campus:		
UC Elective		3
UC Elective		3
Credits		6
Second Year		
Fall Semester		
BIO 211 & 211L	Human Anatomy and Physiology I and Human Anatomy and Physiology Lab I	4
UC Elective		3
RS 241 & 241L	Radiographic Image Production and Evaluation and Radiographic Image Production and Evaluation Lab I	4
RS 212 & 212L	Radiographic Procedures I and Laboratory Practicum I	4
UC Elective		3
Credits		18
Spring Semester		
BIO 212 & 212L	Human Anatomy and Physiology II and Human Anatomy and Physiology II Lab	4
RS 222 & 222L	Radiographic Procedures II and Laboratory Practicum II	5
RS 242 & 242L	Radiographic Image Production and Evaluation II and Radiological Processing and Exposure Lab	4
RS 250	Radiologic Clinical Education I	2

RS 297 & 297L	Methods of Patient Care and Methods of Patient Care Lab	3
Credits		18
Summer Semester		
RS 253	Radiologic Clinical Education II	4
UC Elective		3
Credits		7
Third Year		
Fall Semester		
RS 201	Human Anatomy Imaging I	1
RS 260	Radiographic Physics and Instrumentation	3
RS 232 & 232L	Radiographic Procedures III and Laboratory Practicum III	5
RS 254	Radiologic Clinical Education IV	3

RS 202	Human Anatomy Imaging II	1
RS 215	Radiation Safety and Protection	3
RS 255	Radiologic Clinical Education	3
RS 290 & 290L	Advanced Radiographic Procedures IV and Laboratory Practicum	4
RS 499	Capstone (DMS 499)	3
UC Elective		3
Credits		17
Total Credits		120

¹ BIO 101–BIO 102 are required courses for the Radiologic Sciences program and may be used to meet the university core sciences requirement.

² Initial placement in the English and mathematics courses is determined by placement examination and an evaluation of high school units presented. The minimum mathematics requirement is MA 275 or its equivalent.

³ Associated lab is required for both Chemistry and Physics. CHE 110 or PHY 110 with lab are acceptable to fulfill the requirement. Students may take the lab in the fall or spring of their first year.

⁴ If taking Chemistry or Physics in the spring, this UC elective should be taken in the fall semester.

All radiologic sciences course requirements must be completed in the appropriate semester as indicated above.

Completion of the above curriculum will meet requirements for graduation.

Student Learning Outcomes

Upon completion of the BS in Radiologic Sciences program, students will demonstrate the following competencies:

Goal: The students will be clinically competent.

- a. **Clinically Knowledgeable:** Apply skills and knowledge from foundational courses.
- b. **Procedurally Knowledgeable:** Demonstrate growth in procedural knowledge from all Radiologic Sciences coursework.

Goal: The students will demonstrate effective communication skills.

- a. **Effective Communication:** Execute interpersonal communication with patients.
- b. **Oral Proficiency:** Demonstrate their ability to present clear and creative ideas related to a case study.

Goal: The students will demonstrate critical thinking.

- a. **Critical Decision-Making:** Demonstrate their ability to perform non-routine and routine procedures.
- b. **Image Analysis:** Evaluate images for quality and diagnostic value.

Goal: The students will grow and develop as highly qualified professionals.

- a. **Professional Ethics:** Understand and apply ethical decision-making.
- b. **Professional Behaviors:** Conduct themselves professionally.
- c. **Professional Research:** Create a culminating capstone project.

Goal: The program will continuously monitor and strive to sustain its effectiveness.

- a. **Completion Rate:** Students who start the program will complete the program.
- b. **Employer Satisfaction:** Employers will be satisfied with the education of the graduates of the program.
- c. **Graduate Satisfaction:** Graduates will be satisfied with the education received from the program.
- d. **Employment Rate:** Graduates of the program will become employed within six months of completion of the program.

Mission Statement

The Quinnipiac University Radiologic Sciences program supports the mission statements of both Quinnipiac University and the School of Health Sciences and their commitment to excellence in education. The mission of the Radiologic Sciences program at Quinnipiac University is to develop students' technical and interpersonal communication skills through a logical sequence of didactic, laboratory and clinical experiences. The program offers multiple clinical assignments to provide maximum exposure to diversified radiographic procedures and imaging protocols. In addition, the program prepares graduates to be competent in the art and science of radiography. Graduates of the Radiologic Sciences program will meet the needs of the community as competent and highly qualified professionals. The program will prepare students for career entry and the ability to pursue advanced study.

Candidates applying for admission to the Radiologic Sciences program are required to have at least three years of high school college preparatory mathematics and one year of biology. One year of anatomy and physiology and one year of general chemistry or physics is recommended. In addition, the scores of the SAT or the ACT are an important consideration. Related healthcare experience is highly desirable. Prospective candidates also must satisfy general Quinnipiac University Admission Requirements (p. 20).

Policies

In addition to the general policies of Quinnipiac University, such as due process and academic honesty, the following apply to students enrolled in the Radiologic Sciences program.

Progression in the Program

The Radiologic Sciences Program has both GPA and final course grade requirements.

A cumulative GPA of 2.5 and a programmatic GPA of 3.0 must be maintained each semester. Final course grades of D or F in an RS course are unacceptable. Programmatic GPA calculation and final course grade requirements begin with RS 100 and include all RS coursework thereafter.

Any student who does not maintain GPA requirements or earns a grade of D or F in any RS course will be referred to the Diagnostic Imaging Department's Academic Progression and Retention Committee (APRC) for review. Students who fail to meet the minimum cumulative university GPA requirement of 2.5 and/or the minimum programmatic GPA requirement of 3.0 will be subject to sanctions up to and including program dismissal. Students who earn a final course grade of D or F for any RS course will be subject to program dismissal.

Transportation

Multiple clinical education centers are used throughout the professional component of the program. Students are responsible for their own transportation to and from these sites.

Summer Study

All students are required to perform one clinical assignment during the summer semester, second year (RS 253). This clinical practicum is performed during summer sessions I and II and may be performed only at a clinical affiliation currently approved by the Joint Review Committee on Education in Radiologic Technology (JRCERT) for the program.

Technical Standards

The Radiologic Sciences program is a rigorous program that places specific demands on its students. As stated in the mission of the program, graduates of the program will meet the needs of the community as efficient and highly qualified professionals.

The technical qualifications set forth by the American Registry of Radiologic Technologists combined with the program's views provides a guide to the essential qualities necessary to pursue a career in radiologic sciences as well as meet the expectations of the programs accrediting body (Joint Review Committee on Education of Radiologic Technologists: JRCERT).

Students in the program will be required to verify their understanding and compliance with the technical standards, or their belief that with reasonable accommodations these standards can be met, through reading, signing and returning the form to the program director.

Transfer Admissions

Internal and external transfer candidates are evaluated on a space-available, competitive basis.

Additional Program Costs

As a clinical education program, the Radiologic Sciences major requires some expenses that go beyond standard university tuition and fees:

- a. **Clinical/Fieldwork Education Travel** (gas, parking, public transportation) – Students will have clinical rotation experiences that take him/her off campus. For these rotations, the student will typically be traveling two to three times per week. Clinic begins in the sophomore year and students are responsible for providing their own transportation. **Cost – variable.**
- b. **Immunizations** – Consistent with the School of Health Sciences policy, all students must have a full battery of immunizations and in some cases titer affirmation of immunity for common diseases including but not limited to: MMR, HepB, varicella, polio, TDAP, TB and influenza. These must be documented prior to the start of clinical experiences during the sophomore year and must be maintained through the undergraduate education. **Cost – variable (please check with your insurance carrier).**
- c. **Background Check** – All students must undergo an initial background check prior to the start of clinical/fieldwork experience.
- Initial background check cost is \$63 for all domestic addresses for the past 7 years or \$158 for students who have resided in New York state in the last 7 years due to NY state surcharge.
 - Some clinical fieldwork sites may require an additional yearly background recheck. **Cost – \$32 per annual recheck.**
- d. **Drug Screening** – All students must undergo a drug screening prior to the start of the main component of the program in the sophomore year. **Cost – approximately \$42.25.**
- e. **Liability Insurance** – All students have liability insurance coverage through the university, free of charge, while performing required clinical activity. Students may choose to purchase additional coverage at their own expense.
- f. **EXXAT and APPROVE** – Students enrolled in professional programs must enroll in EXXAT and APPROVE.
- EXXAT is the clinical tracking and assessment program used by the School of Health Sciences. **Cost – one-time payment of \$150 per student for the current major (students are responsible for this cost).**
 - APPROVE is the program within EXXAT that tracks all student health and safety records, provides documentation to prospective clinical sites, and provides notification of impending expiration dates. **Cost – \$35 for first year; \$10 per year thereafter.**

Please note – All fees are subject to change.

The Radiologic Sciences program at Quinnipiac University is accredited by:

The Joint Review Committee on Education in Radiologic Technology (jrcert.org (<http://www.jrcert.org>))
20 N. Wacker Drive, Suite 2850
Chicago, IL 60606-3182

Phone: 312-704-5300

The program received an eight-year accreditation (the maximum available) in Spring 2020. The re-accreditation process will commence in 2027 with submission of the self-study report to the JRCERT.

RS 100. Fundamentals of Diagnostic Imaging. 1 Credit.

This course provides the student with a basic knowledge of the fundamentals of diagnostic imaging practice. Topics include defining diagnostic imaging as it relates to all imaging modalities, historical development of the profession, introduction to current and emerging practice arenas, and application of professional terminology. Students complete a self-study in medical terminology.

Offered: Every year, Fall

RS 101. Introduction to Diagnostic Imaging. 3 Credits.

Designed to provide an orientation to radiologic sciences, this course includes history, ethics and basic principles of radiation protections, medial and medicolegal terminology, as well as preclinical observation.

Prerequisites: Take RS 100.

Offered: Every year, Spring

RS 201. Human Anatomy Imaging I. 1 Credit.

This course presents in-depth consideration of human anatomy within systems located in the chest, abdomen and upper extremity of the body. Students discuss the structure and function of each anatomic component within each region. Conventional anatomic illustrations are correlated with their radiographic counterpart. The radiographic appearance of specific structures as demonstrated on conventional radiographic images is correlated to images obtained using other advanced imaging modalities such as computed tomography, magnetic resonance and sonography.

Prerequisites: Take BIO 212, BIO 212L, RS 222.

Corequisites: Take RS 232.

Offered: Every year, Fall

RS 202. Human Anatomy Imaging II. 1 Credit.

This course presents in-depth consideration of human anatomy within systems located in the head, neck, pelvis and lower extremity. For each region, students discuss the structure and function of each anatomic component. Conventional anatomic illustrations are correlated with their radiographic counterpart. The radiographic appearance of specific structures as demonstrated on conventional radiographic images is correlated to images obtained using other advanced imaging modalities such as computed tomography, magnetic resonance and sonography.

Prerequisites: Take RS 201.

Offered: Every year, Spring

RS 212. Radiographic Procedures I. 2 Credits.

This course introduces the student to the basic concepts, principles and applications of radiographic and radiologic procedures. Additional applications related to orthopaedic terminology, pathologies and procedures, trauma and patient-related modifications also are presented.

Prerequisites: Take RS 101, MA 275 and BIO 102.

Corequisites: Take RS 212L.

Offered: Every year, Fall

RS 212L. Laboratory Practicum I. 2 Credits.

This practicum develops preclinical competency in radiographic procedures studied in RS 212, as well as routine hospital procedures and radiographic tasks, basic radiographic analysis, patient management, communications and manipulation of imaging equipment.

Corequisites: Take RS 212.

Offered: Every year, Fall

RS 215. Radiation Safety and Protection. 3 Credits.

Students are introduced to the effects of ionizing radiation on biological systems at the molecular, cellular, organism, and community levels, with emphasis on medical implications and radiation protection.

Prerequisites: Take RS 260.

Offered: Every year, Spring

- RS 222. Radiographic Procedures II. 3 Credits.**
This course builds on the foundations developed in RS 212. This course provides continued integration and expansion on the concepts, principles and applications of radiographic and radiologic procedures.
Prerequisites: Take RS 212.
Corequisites: Take RS 222L.
Offered: Every year, Spring
- RS 222L. Laboratory Practicum II. 2 Credits.**
Designed to develop preclinical competency in radiographic procedures studied in RS 222, this practicum focuses on radiographic tasks, basic radiographic analysis, patient management, communications and manipulation of imaging equipment.
Prerequisites: Take RS 212.
Corequisites: Take RS 222.
Offered: Every year, Spring
- RS 232. Radiographic Procedures III. 3 Credits.**
This course provides continued integration and expansion on the concepts, principles and applications developed in RS 212 and RS 222.
Prerequisites: Take RS 222.
Corequisites: Take RS 232L.
Offered: Every year, Fall
- RS 232L. Laboratory Practicum III. 2 Credits.**
This practicum is designed to develop preclinical competency in routine hospital procedures and radiographic tasks, basic radiographic analysis, patient management, communications and manipulation of imaging equipment.
Prerequisites: Take RS 222.
Corequisites: Take RS 232.
Offered: Every year, Fall
- RS 241. Radiographic Image Production and Evaluation. 3 Credits.**
This course presents the basic principles, concepts and practical applications of radiographic image production and diagnostic quality. Topics include radiation production, description and proper selection of exposure factors, radiation protection, imaging media, imaging equipment and basic imaging formulas.
Prerequisites: Take RS 101, MA 275 and BIO 102.
Corequisites: Take RS 241L.
Offered: Every year, Fall
- RS 241L. Radiographic Image Production and Evaluation Lab I. 1 Credit.**
The laboratory, which accompanies RS 241, is designed to demonstrate and reinforce the concepts and principles presented in class. (2 lab hrs.)
Corequisites: Take RS 241.
Offered: Every year, Fall
- RS 242. Radiographic Image Production and Evaluation II. 3 Credits.**
This course expands on the foundations developed in RS 241. Integration and application of these foundations includes the development of exposure charts, methods of image processing, and the causation and identification of image artifacts. The course also incorporates quality control concepts and testing, and introduces basic terminology and principles of quality control and digital imaging systems.
Prerequisites: Take RS 241.
Corequisites: Take RS 242L.
Offered: Every year, Spring
- RS 242L. Radiological Processing and Exposure Lab. 1 Credit.**
This laboratory, which accompanies RS 242, is designed to demonstrate and reinforce the concepts and principles presented in class. (2 lab hrs.)
Corequisites: Take RS 242.
Offered: Every year, Spring
- RS 250. Radiologic Clinical Education I. 2 Credits.**
Students are provided with their initial clinical experience under the supervision of certified clinical instructors and clinical staff. Focus is on developing clinical competency and proficiency related to radiologic procedures and concepts taught in RS 212 and RS 241.
Prerequisites: Take RS 212, RS 241.
Corequisites: Take RS 222, RS 242.
Offered: Every year, Spring
- RS 253. Radiologic Clinical Education II. 4 Credits.**
This course, a continuation of RS 250, is a 12-week, 35 hour-per-week summer clinical experience under the supervision of certified clinical instructors and clinical staff. Clinical competency and proficiency related to the performance of radiographic procedures and concepts are continually developed and assessed.
Prerequisites: Take RS 250.
Offered: Every year, Summer
- RS 254. Radiologic Clinical Education IV. 3 Credits.**
This course, a continuation of RS 253, is a clinical experience under the supervision of certified clinical instructors and clinical staff. Clinical competency and proficiency related to the performance of radiographic procedures and concepts are continually developed and assessed.
Prerequisites: Take RS 253.
Corequisites: Take RS 232.
Offered: Every year, Fall
- RS 255. Radiologic Clinical Education. 3 Credits.**
This clinical experience is under the supervision of certified clinical instructors and clinical staff. Clinical competency and proficiency related to the performance of radiographic procedures and concepts are developed and assessed.
Prerequisites: Take RS 254.
Corequisites: Take RS 290.
Offered: Every year, Spring
- RS 260. Radiographic Physics and Instrumentation. 3 Credits.**
This course presents an analysis of the production of X-rays and the interaction of radiation with matter, units of radiation measurements and radiation protection.
Prerequisites: Take RS 242.
Offered: Every year, Fall
- RS 290. Advanced Radiographic Procedures IV. 3 Credits.**
This course provides continued integration and expansion on the concepts, principles and applications developed in RS 232. Students are introduced to the basic principles of CT, DEXA, MRI and mammography.
Prerequisites: Take RS 232.
Corequisites: Take RS 290L.
Offered: Every year, Spring
- RS 290L. Laboratory Practicum. 1 Credit.**
This practicum is designed to develop preclinical competency in routine hospital procedures and radiographic tasks, basic radiographic analysis, patient management, communications and manipulation of imaging equipment.
Prerequisites: Take RS 232.
Corequisites: Take RS 290.
Offered: Every year, Spring

RS 297. Methods of Patient Care. 2 Credits.

This course focuses on a study of skills in providing humanistic care for the well, acute or chronically ill individual, including preparing patients for invasive as well as non-invasive imaging studies; basic clinical skills in infection control, including aseptic technique, venipuncture, vital signs and O2 administration; effective communication with emphasis on problem-solving skills.

Prerequisites: Take RS 101.

Corequisites: Take RS 297L.

Offered: Every year, Spring

RS 297L. Methods of Patient Care Lab. 1 Credit.

This lab develops preclinical competency for the procedures described and demonstrated in RS 297. (2 lab hrs.)

Corequisites: Take RS 297.

Offered: Every year, Spring

RS 318. Pathology for Imaging Sciences. 3 Credits.

This course provides an introduction to the basic study of disease, including etiology, pathophysiology and current diagnostic procedures. Normal structure and function are reviewed prior to the discussion of each anatomic system.

Prerequisites: Take RS 222, BIO 212.

Offered: Every year, Fall

RS 336. Pharmacology for the Radiographer. 2 Credits.

The major classifications/categories, clinical applications and implications of pharmaceuticals used in diagnostic imaging and interventional procedures are presented.

Prerequisites: Take RS 297.

Offered: Every year, January Term

RS 414. Research: Analysis and Critique (DMS 414). 3 Credits.

This course explores the basic elements of health care research including different types of research models and research strategies. Students explore the differences between a variety of publication types, including editorials, case studies and peer-reviewed research articles. Students also learn techniques for database queries.

Prerequisites: Take RS 101.

Offered: Every year, Fall

RS 499. Capstone (DMS 499). 3 Credits.

This capstone course is intended for radiologic sciences majors and diagnostic medical sonography majors in their final semester. Students are required to develop a research project as it relates to the field of diagnostic imaging. The project may relate to the student's chosen focus and must include either a formal thesis paper or poster presentation.

Prerequisites: Take RS 414.

Offered: Every year, Spring

Department of Occupational Therapy

Occupational therapy is a client-centered health profession concerned with promoting health and well-being and enabling participation in everyday life activities. Occupational therapists work with individuals, groups, communities and populations to enhance their capacity and ability to engage in the occupations they want to, need to or are expected to do. Occupational therapists also may work collaboratively with clients to modify tasks, activities and/or environments to better support their engagement and participation [adapted from World Federation of Occupational Therapists, 2012].

Mission & Vision

The mission of the Department of Occupational Therapy at Quinnipiac University is to provide **high-quality education** to develop occupational therapy practitioner-scholars at both entry and advanced practice levels, who possess broad-based knowledge, and can **influence meaningful change** in the health and functioning of individuals, populations and communities.

We strive to be recognized for:

- Our **programs** that are models for innovative occupational therapy practice;
- Our **faculty** who are role models in practice, service leadership, teaching and clinical scholarship; and
- Our **graduates** who are forward thinkers, ethical, compassionate and competent occupational therapists.

We do so by striving for excellence in educating students to meet and exceed our program learning outcomes.

Program Philosophy

The Department of Occupational Therapy views the Entry-Level Masters Educational program through a developmental-humanistic lens. This approach acknowledges that each student has unique experiences and possesses varying abilities, which are brought to the university environment and further developed through liberal and disciplinary inquiry as well as co-curricular, community-based/experiential learning and professional experiences. The department conceptualizes "**development**" not merely as a sequential ontological event but rather as complex, iterative, heterarchical and hierarchical processes that are situated in various contexts.

The Entry-Level Doctoral Educational program is based on a transformational-humanistic perspective. This approach acknowledges that each student has a pre-existing occupational identity and possesses varying abilities and experiences, which are brought to the university environment. "Students are viewed as occupational beings who are in dynamic transaction with the learning context and the teaching-learning process" (AOTA Philosophy of Occupational Therapy Education, 2018). The transformational philosophy of education assumes that students can be transformed through the questioning, analysis and re-examination of worldviews, perceptions and prior belief systems utilizing a humanistic and critical approach to solving problems (Mezirow, 1997). Students' skills and cognitive processes are enhanced and transformed through community-based involvement, experiential learning, professional interactions and opportunities for creative flow experiences.

Through mentorship and curricular experiences, faculty members apply a transformational-humanistic approach to support doctoral students in their personal and professional growth towards becoming entry-level occupational therapists and leaders. Students are also taught the value and potential of every human being (including themselves) in their capacity to self-determine and need to participate in desired occupations for health, wellness and inclusion as social beings. Creative, high impact-transformation is the basis of curriculum content while developmental transformation is reflected in how the courses are arranged in overlapping phases or tiers using a modified version of Fink's Taxonomy of Significant Learning.

- Dual-Degree BS in Health Science Studies/Master of Occupational Therapy (BS/MOT) (Direct Entry) (p. 529)
- Dual-Degree BS in Health Science Studies/Doctor of Occupational Therapy (BS/OTD) (Direct Entry) (p. 537)
- Post-Baccalaureate Doctor of Occupational Therapy (OTD) (p. 545)
- Online Post-Professional Occupational Therapy Doctorate (OTD) (p. 553)

Occupational Therapy (OT)

OT 101. Foundations of Occupational Therapy. 2 Credits.

This course provides students with the foundations of occupational therapy practice including its philosophical and historical origins, as well as its core beliefs and principles. The course also presents the various occupational therapy practice settings—both traditional and emerging—and highlights how the foundations of OT practice are threaded across settings.

Offered: Every year, Fall and Spring

OT 201. Occupation, Health, Participation. 2 Credits.

This course introduces the concept of occupation as central to the practice of occupational therapy. Emphasis is on the relationship between occupation and health. Using methods of inquiry, students gain a deeper understanding of occupational performance and its determinants from a person-centered to a population- and institution-centered perspective. Theoretical models focused on occupations are explored and applied to assessing and enhancing occupational performance.

Offered: Every year, Fall

OT 214. Professionalism in Occupational Therapy Practice. 2 Credits.

This course serves as a bridge from students' general education to the professional phase of the OT curriculum. Students explore features of contemporary occupational therapy practice, such as client-centeredness and evidence-based practice, as foundations to professionalism. Students integrate Quinnipiac essential learning proficiencies into the context of occupational therapy practice. Finally, the course helps students to internalize the values of professionalism as keys to being an effective change agent.

Offered: Every year, Spring

OT 250. Occupational Therapy Framework and Activity Analysis. 3 Credits.

This course provides a comprehensive overview of the domain and processes of occupational therapy. Emphasis is on the following processes: occupational profile and analysis of occupational performance; activity analysis; intervention planning; collaboration between practitioner and client; and collaboration within an interprofessional team. Students learn terminology associated with the occupational therapy domain and process and apply that knowledge to case analysis, self-analysis, video analysis and standardized patients/clients.

Offered: Every year, Spring and Summer

OT 314. Therapeutic Relationships and Use of Self. 2 Credits.

This course builds upon students' understanding of intentional relationships, therapeutic use of self, and the OT process to develop leadership skills in the context of a therapeutic encounter. Concurrently, this course provides students with the foundation for the application of the group process as a means of intervention. The course involves didactic lectures and practical training on professional leadership skills for both dyadic as well as group relationships.

Offered: Every year, Spring

OT 322. Functional Anatomy and Kinesiology I. 3 Credits.

This course is a comprehensive, two-part series designed to provide students with foundational expertise in human biomechanics. Students examine the musculoskeletal system in conjunction with principles of kinetics and kinematics as the basis of practice in physical rehabilitation. The course includes a corequisite laboratory to develop competency in basic biomechanical safety and assessment (goniometry and manual muscle testing). The series culminates by merging all aspects of human movement as the basis for engaging in everyday occupational activities.

Prerequisites: Take BIO 211, BIO 212, PHY 101.

Offered: Every year, Fall

OT 322L. Functional Anatomy and Kinesiology Lab I. 1 Credit.

This lab, which accompanies OT 322, provides the opportunity to learn in the Human Anatomy Lab, Clinical Skills Lab, Rehabilitation Science Lab and the Model Apartment as students develop proficiency with basic biomechanical safety and assessment (goniometry and manual muscle testing). This variety of laboratory settings serves to enhance content delivered in the classroom; students are guided to first visualize human anatomy via donor dissection and then apply that learning in the simulated clinical settings. Students are alternately scheduled among spaces weekly and in accordance with progression of region in the human body. (2 lab hrs.)

Prerequisites: Take BIO 211, BIO 212, PHY 101.

Offered: Every year, Fall

OT 323. Functional Anatomy and Kinesiology II. 3 Credits.

This course is part two of a comprehensive series designed to provide students with foundational expertise in human biomechanics. Students continue their examination of the musculoskeletal system in conjunction with principles of kinetics and kinematics as the basis of practice in physical rehabilitation. The series culminates by merging all aspects of human movement as the basis for engaging in everyday occupational activities.

Prerequisites: Take OT 322.

Offered: Every year, Spring

OT 323L. Functional Anatomy and Kinesiology Lab II. 1 Credit.

This lab, which accompanies OT 323, provides an opportunity to learn in the Human Anatomy Lab, Clinical Skills Lab, Rehabilitation Science Lab and the Model Apartment as students develop proficiency with basic biomechanical safety and assessment (goniometry and manual muscle testing). This variety of laboratory settings enhances content delivered in the classroom. Students are guided to first visualize human anatomy via donor dissection and then apply that learning in the simulated clinical settings. Students are alternately scheduled among spaces weekly and in accordance with progression of region in the human body. (2 lab hrs.)

Prerequisites: Take OT 322L.

Offered: Every year, Spring

OT 325. Principles of Human Development and Occupation. 3 Credits.

This course explores normal development and its impact on age appropriate occupations. The age span is from conception through early adulthood. The course provides a foundation for evaluation and intervention in human occupation.

Offered: Every year, Fall and Spring

OT 326. Principles of Human Development/Older Adults. 3 Credits.

This course builds on the developmental concepts from OT 325 to explore normal development and its impact on age appropriate occupations. The age span is from early to late adulthood. The course provides a foundation for evaluation and intervention in human occupation as well as a foundation in performance patterns, skills and context.

Offered: Every year, Fall and Spring

OT 333. Functional Neuroscience I.**3 Credits.**

This course provides a comprehensive study of neuroanatomy including the structures, functions and physiology of neural systems that are key to normal human health and function. The course provides a strong foundation for future study on neural substrates of health conditions and occupational performance. The course also introduces basic screening procedures to identify neurobehavioral dysfunctions.

Offered: Every year, Fall**OT 333L. Functional Neuroscience I Lab.****1 Credit.**

This course supplements OT 333 Functional Neuroscience I lecture and provides a comprehensive study of neuroanatomy including the structures, functions and physiology of neural systems that are key to normal human health and function. The course also introduces basic screening procedures to identify neurobehavioral dysfunctions.

Offered: Every year, Fall**OT 334. Functional Neuroscience II.****2 Credits.**

This course builds on functional neuroanatomy as it examines the interrelationships of neuroanatomical structures, subsystems and neurophysiologic processes involved in human behaviors, which are the foundation for occupational performance. Specifically, students learn the neural substrates and mechanisms of motor behaviors, sensory-perception, language, attention, memory and learning. The course continues to introduce basic screening procedures to identify neurobehavioral dysfunctions.

Offered: Every year, Spring**OT 350. Theoretical Models and Service Learning.****2 Credits.**

This course highlights occupational therapy models and theory development as the foundation for occupational participation and the promotion of health and well-being among clients and populations. Students directly participate in a community-based service-learning context to enhance experiential learning and the application of theoretical concepts to practice.

Offered: Every year, Fall**OT 356F. Documenting OT Practice Fieldwork.****1 Credit.**

This course provides structured fieldwork observation in pediatric and adult settings and allows the student to observe and explore the documentation process utilized in occupational therapy. Students also have the opportunity to read documentation, compare documentation to observations, and record data and anecdotal information, utilized within the various models such as school systems, home care, and rehabilitation facilities. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum. Students have the opportunity to reflect on this experience within the lecture course.

Offered: Every year, Spring**OT 362. Documenting Occupational Therapy Practice.****1 Credit.**

This course provides an introduction to the philosophy, concepts and clinical reasoning that supports the documentation of occupational therapy practice. The course integrates ethical, legal and pragmatic considerations of documentation throughout the occupational therapy process in major practice settings. There is a simultaneous Level I Fieldwork/Seminar course that introduces students to requisite psychomotor and cognitive skills in documentation including reviewing client records, developing subjective and objective impressions from observations, and recording of data and anecdotal information.

Offered: Every year, Spring**OT 411. Mental Health and Psychosocial Occupational Therapy****I.****3 Credits.**

This course provides a comprehensive overview of OT's role for children and youth with mental health and psychosocial needs. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Psychological and OT theories guide the student's learning of the OT process within community-based and institutional settings across the continuum of service delivery. The inclusion of documentation, therapeutic use of self and evidence-based practice are emphasized.

Offered: Every year, Fall**OT 411L. Mental Health and Psychosocial Occupational Therapy I Lab.****1 Credit.**

This lab course complements OT 411 Mental Health and Psychosocial Occupational Therapy for Children and Youth. Students are provided with the opportunity to practice the application of evaluation and intervention process for various mental health conditions across the continuum of service delivery settings. Group theory and group interventions are highlighted. Related skills such as documentation, therapeutic use of self and therapeutic relationships are emphasized throughout this course.

Offered: Every year, Fall**OT 412. Mental Health and Psychosocial Occupational Therapy****II.****3 Credits.**

This integrative course provides a comprehensive overview of OT's role for adults with mental health and psychosocial needs. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Psychological and OT theories as well as group theory and group interventions are highlighted. Related skills such as documentation, therapeutic use of self and evidence-based practice are emphasized. A culminating group protocol demonstrates the student's clinical reasoning, application of theory and integration of best practice.

Offered: Every year, Spring**OT 412L. Mental Health and Psychosocial Occupational Therapy Lab II.****1 Credit.**

This lab course complements OT 412 Mental Health and Psychosocial Occupational Therapy for Adults and Older Adults. Students are given the opportunity to practice evidence based interventions for various mental health conditions across the continuum of practice settings. Group theory and group interventions are highlighted. Related skills such as documentation, therapeutic use of self and therapeutic relationships are emphasized throughout this course.

Offered: Every year, Spring**OT 431. Barriers to Health, Occupation and Participation in Children and Youth Populations.****4 Credits.**

This course provides a comprehensive study of pediatric health conditions as they alter body structures and functions and impact activity and participation. Environmental factors and related facilitators and barriers to occupational performance are incorporated. This course also provides a clinical/professional reasoning model for structured case review and clinical decision-making and problem-solving.

Offered: Every year, Fall and Spring

OT 432. Barriers to Health, Occupation and Participation in Adults/Older Adults. 4 Credits.

This course provides a comprehensive study of various conditions that impact health and occupational performance among adults and older adult populations. Emphasis is given to understanding common diagnoses encountered by occupational therapists. This course also provides a clinical/professional reasoning model for structured case review with clinical decision-making and problem-solving.

Offered: Every year, Fall and Spring

OT 451. Occupational Therapy Process in Children and Youth. 6 Credits.

This course provides a comprehensive overview of the evaluation and intervention planning processes used in OT for children and youth. It covers specific procedures and tools for assessment, and strategies for intervention, which consider a variety of cultural and environmental factors. The emphasis is placed on theoretical underpinnings; the family and structural systems where children live, learn and play; clinical/professional reasoning; and documentation of the OT process in a variety of pediatric practice contexts.

Offered: Every year, Fall and Spring

OT 451F. Occupational Therapy Process in Children and Youth Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the children and youth population. The experience allows the student to explore the evaluation and treatment process and the application of frame of reference utilized in occupational therapy models of practice. Students have the opportunity to reflect on this experience within the lecture course.

Offered: Every year, Fall and Spring

OT 451L. Occupational Therapy Process in Children and Youth Lab. 1 Credit.

This course accompanies OT 451 and OT 451F. It provides a comprehensive overview of the evaluation process and intervention planning utilized in pediatric occupational therapy. This includes specific assessment tools and intervention strategies, which consider a variety of cultural and environmental factors.

Offered: Every year, Fall and Spring

OT 452. Occupational Therapy Process in Adults and Older Adults. 6 Credits.

This course provides a comprehensive overview of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. While opportunities are provided to learn specific assessment tools and intervention techniques, emphasis is placed on the professional and clinical reasoning process and reflected on proper documentation of the processes. Application of theory, frames of reference, evidence and appreciation for diversity and systems are highlighted.

Offered: Every year, Fall and Spring

OT 452F. Occupational Therapy Process in Adult and Older Adult Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the adult and older adult population. The experience allows the student to explore the evaluation and treatment process and the application of frame of reference utilized in occupational therapy models of practice. Students have the opportunity to reflect on this experience within the lecture course.

Offered: Every year, Fall and Spring

OT 452L. Occupational Therapy Process in Adults and Older Adults Lab. 1 Credit.

This course complements OT 452 and OT 452F and provides an opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. The safe, efficient and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Fall and Spring

OT 499. Independent Study. 1-6 Credits.

Offered: As needed

OT 501F. Immersive Fieldwork Experience in Psychosocial and Mental Health Practice (Fieldwork IIa). 3 Credits.

This six- to seven-week fieldwork experience provides students with in-depth opportunities to integrate theory, research and best practice in psychosocial and/or mental health settings. The experience promotes clinical reasoning, reflective practice and professionalism while enhancing one's therapeutic use of self. Practice settings may include traditional mental health agencies, community-based programs and nontraditional sites that promote psychological and social factors for occupational engagement and well-being.

Offered: Every year, Summer

OT 501S. Fieldwork Seminar. 1 Credit.

This course runs concurrently with the mental health/psychosocial summer experience and is delivered in an online format. It is designed to enhance professional and clinical reasoning while promoting the integration of theory to practice. Students are encouraged to critique the system of care as it relates to best practice for an identified population.

Offered: Every year, Summer

OT 502. Pharmacology in Occupational Therapy Practice. 2 Credits.

This course addresses the pharmacokinetics, side effects and drug interactions of medications prescribed to clients who are commonly referred for occupational therapy services. The course emphasizes the role of the occupational therapist in medication management as a health maintenance activity and in monitoring the impact of drug therapy on the therapeutic process and occupational performance of clients.

Offered: Every year, Summer

OT 511. Administration and Management in Occupational Therapy. 4 Credits.

This class introduces students to the daily management functions of an occupational therapy department including planning, organizing, directing, controlling, and supervision of occupational therapy assistants and other department personnel. The course integrates students' knowledge of interventions with information related to the delivery of occupational therapy services. Topics include managed care, quality assurance, leadership, regulatory agencies, models of practice, ethics, and consultation. Students gain hands-on experience with budgeting, marketing, program evaluation, and ethical problem-solving in administration.

Offered: Every year, Fall

OT 522L. Biomechanical Interventions in Occupational Therapy. 2 Credits.

This lab provides students with "hands-on" learning experience and clinical reasoning in the safe and effective application of biomechanically-oriented interventions including physical agents and modalities, orthotic fitting and fabrication, and therapeutic exercise. Students also are introduced to prosthetics and the role of occupational therapy during pre-prosthetic and prosthetic training. Students apply clinical reasoning to identify the most appropriate biomechanical interventions based on the client's evaluation and socio-cultural factors to facilitate occupational performance. Prerequisite: Matriculation as an MOT student.

Offered: Every year, Fall

OT 531. Sensory Processing and Integration. 3 Credits.

This course provides an in-depth analysis of sensory processing and integration with a focus on clinical reasoning to understand and appreciate the impact of these processes on individuals, populations and community environments. Opportunities are provided to learn specific intervention strategies for individuals, as well a systems approach emphasizing the importance of educating the team of people who support these individuals in varying contexts, to facilitate functional participation and engagement in purposeful and productive activities. Prerequisite: Matriculation as an MOT student.

Offered: Every year, Fall and Spring

OT 531F. Sensory Processing and Integration Fieldwork. 1 Credit.

This course provides structured fieldwork experience to observe and analyze sensory processing the pediatric population. The experience emphasize exposure to the clinical application of the Ayres' sensory integration principles learned in the OT curriculum with fieldwork coordinators with advanced training. Students have the opportunity to reflect on this experience within the lecture course.

Offered: Every year, Fall and Spring

OT 531L. Sensory Processing and Integration Lab. 1 Credit.

This course provides practical experientials designed to assimilate sensory processing and integration concepts. Evaluation, direct intervention and collaboration strategies in traditional environments are emphasized. Additionally, application of sensory integrative concepts into currently relevant community-based contexts and systems are explored to facilitate functional participation and engagement in purposeful, context-specific activities. Prerequisite: Matriculation as an MOT student.

Offered: Every year, Fall and Spring

OT 532. Neurorehabilitation in Occupational Therapy. 3 Credits.

This course provides a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation. This course integrates the use of various theoretical models/frames of reference, current evidence and clinical/professional reasoning pertinent to the OT process in neurorehabilitation practice. Key concepts in interprofessional practice and health literacy are incorporated. Prerequisite: Matriculation as an MOT student.

Offered: Every year, Fall and Spring

OT 532F. Neurorehabilitation in Occupational Therapy Practice Fieldwork. 1 Credit.

This course provides a structured fieldwork experience to observe, participate in, and document the OT process with adult neurological populations in neurorehabilitation settings. Emphasis is on applying evidence and theory into practice and the development of professional identity and may observe inter- and intra-professional collaboration and patient/client education. Students have the opportunity to reflect on this experience within the lecture course.

Offered: Every year, Fall and Spring

OT 532L. Neurorehabilitation in Occupational Therapy Lab. 1 Credit.

This course complements OT 532 Neurorehabilitation in OT Practice in providing a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation. Students have the opportunity to apply methods and techniques according to various theoretical models/frames of reference and current evidence-based interventions. Prerequisite: Matriculation as an MOT student.

Offered: Every year, Fall and Spring

OT 540. Special Topics in Occupational Therapy. 1.5-3 Credits.

This course provides an opportunity for students to delve deeper into the specialized knowledge of the profession with evidence-based, occupation-centered practice as its core subject. Students further explore the specialized roles of the occupational therapist beyond that of a direct provider of skilled services, such as organizational/community leader, educator, case manager, entrepreneur and consultant at the systems level. In addition, students learn various modes of care delivery and systems of care including but not limited to tele-health, community building/development and train-the-trainer; they also evaluate the outcomes of such modes.

Offered: Every year, Spring

OT 541. Assistive Technology in Occupational Therapy. 2 Credits.

This course provides students with exposure to advanced intervention techniques related to assistive technology in occupational therapy. The course focuses on application of assistive technology across the lifespan, and thus emphasizes use of both interventions in a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning process used to select and evaluate interventions in rehabilitation, home, leisure and community technology-related practice areas. Prerequisite: Matriculation as an MOT student.

Offered: Every year, Fall

OT 541L. Assistive Technology in Occupational Therapy Lab. 1 Credit.

This lab course provides students with hands-on experience in advanced intervention techniques related to assistive technology in occupational therapy. The course focuses on application of assistive technology across the lifespan, and thus emphasizes use of both interventions in a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning process used to select and evaluate interventions in rehabilitation, home, work, leisure and community technology-related practice areas. Prerequisite: Matriculation as an MOT student.

Offered: Every year, Fall

OT 542. Work and Ergonomics. 3 Credits.

This course focuses on the occupation of work applied across the lifespan and to various practice contexts and worker challenges. The course addresses topics related to the occupation of work, including employment acquisition, job performance, volunteerism, and retirement. Work tasks and work demands are analyzed relative to physical, cognitive, social, organizational, and environmental factors that impact job performance. Modifications that optimize worker functioning are examined as prevention and as rehabilitation. Prerequisite: Matriculation as an MOT student

Offered: Every year, Spring

- OT 550. OT Research Methods. 4 Credits.**
This course addresses the importance of research in the practice of occupational therapy. The course examines the research approaches and methods in occupational therapy practice. Students participate in designing and implementing entry-level research studies as well as analyzing and interpreting the professional literature. Students begin work on their spring capstone project.
Offered: Every year, Fall
- OT 556. Professional Development. 3 Credits.**
This distance learning course focuses on the current issues related to the roles of the student transitioning to professional. The course emphasizes linking theory to practice, self-analysis and reflection upon academic experience, and relating those to different facets of clinical and professional reasoning as a funding mechanism in practice. Continued professional growth through the development of understanding of personal and professional responsibilities as a practicing therapist and a commitment to lifelong learning and professional advocacy also are addressed. Grant writing is included.
Offered: Every year, Spring
- OT 565. Integrative Case Studies. 2 Credits.**
This course explores individual, group and population case studies of clients in occupational therapy. Students analyze each case using clinical reasoning, qualitative research strategies, frames of reference and best practices to develop integrative evaluation and intervention skills.
Offered: Every year, Spring
- OT 570. Capstone Graduate Projects. 3 Credits.**
This capstone course is a culminating experience in the occupational therapy curriculum, which integrates all course-based material and fieldwork experiences with practical application. Students participate in designing and executing a research or creative project that is relevant to current and emerging practice areas in occupational therapy. Students gain experience in project management, critical analysis and professional presentations.
Offered: Every year, Spring
- OT 580. Fieldwork Level IIa. 6 Credits.**
This 12-week supervised experience provides the student with the opportunity to apply theory, evidence, and professional reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of settings. Students have the opportunity to engage in in-depth reflections regarding professionalism and professional identity through concurrent online seminars. Students are expected to abide by program policies outlined in the OT Fieldwork Handbook.
Offered: Every year, Summer
- OT 581. Fieldwork Level IIb. 6 Credits.**
This 12-week supervised experience provides the student with the opportunity to apply theory, evidence, and professional reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of settings. Students have the opportunity to engage in in-depth reflections regarding professionalism and professional identity through concurrent online seminars. Students are expected to abide by program policies outlined in the OT Fieldwork Handbook.
Offered: Every year, Fall
- OT 599. OT Independent Study. 1-3 Credits.**
Offered: As needed
- OT 615. Critical Writing I. 3 Credits.**
This course is the first in a sequence of courses focusing on scholarly reading and writing. Students investigate a specific area of interest, describe best practices as supported by evidence and theory and learn how to conduct a peer review of writing.
Offered: Every year, Spring Online
- OT 616. Self-Directed Study in Clinical Practice. 3 Credits.**
This self-directed course focuses on each individual student's goals and objectives within an area of specialty practice. Students create a proposal and learning contract with objectives, methods and timelines to meet individualized learning goals toward certifications or in-depth learning of a particular topic. The purpose of this course is to work toward individualized professional development goals.
Offered: Every year, Spring Online
- OT 620. Foundations in Teaching and Learning I. 3 Credits.**
This course is the first in a series of courses focusing on advanced topics in teaching and learning. Students explore various theoretical frameworks regarding learning and the relationship between learning theory and occupational therapy. Students work to develop the ability to incorporate learning theory into their educational practice.
Offered: Every year, Spring Online
- OT 621. Creating Effective Learning Environments and Experiences. 3 Credits.**
This course is the second course in the series of courses focusing on advanced topics in teaching and learning. Building upon theoretical foundations explored in OT 620 Foundations in Teaching and Learning I, students explore various educational models and tools to enhance teaching and utilize design steps to develop professional, educational presentations.
Prerequisites: Take OT 620.
Offered: Every year, Summer Online
- OT 625. Special Topics in School-Based Practice I. 3 Credits.**
This course is the first in a series of courses focusing on advanced topics in school-based practice. Students critique existing scholarship and professional documents regarding best practices in school-based practice, and identify and critique existing interventions utilized in school-based practice and their efficacy. Topics covered include legislations, assessment, intervention and whole school programming.
Offered: Every year, Spring Online
- OT 626. Special Topics in School-Based Practice II. 3 Credits.**
This course is the second in a series of courses focusing on advanced topics in school-based practice. Students build upon work completed as part of OT 625 Special Topics in School-Based Practice I to develop a model of practice/intervention addressing "best practice" for practitioners working in school-based practice.
Prerequisites: Take OT 625.
Offered: Every year, Summer Online
- OT 630. CAGS Hand Therapy I. 3 Credits.**
This course is the first in a series of courses focusing on advanced topics in hand therapy. Students critique existing scholarship and professional documents regarding best practice in hand therapy practice, and identify and critique existing assessments and interventions utilized in hand therapy practice.
Offered: Every year, Spring Online

OT 631. CAGS Hand Therapy II.**3 Credits.**

This course is the second in a series of hand therapy courses. Building on the first course, students continue to explore best practices and evidence and have the opportunity to synthesize their knowledge through a critique of clinical protocols and practice guidelines. The course culminates with a plan of action to further advance one's professional development.

Offered: Every year, Summer Online**OT 635. Scholarly Use of Evidence in Writing.****3 Credits.**

This course is the second in a sequence of courses focusing on scholarly reading and writing. Emphasis on determining proper use of evidence occurs throughout the course. Synthesis of scholarly evidence and literature culminates in the creation of a manuscript for submission to a professional trade magazine or journal.

Prerequisites: Take OT 615.**Offered:** Every year, Summer Online**OT 640. Directed Study in Evidence-Based Practice.****3 Credits.**

Students learn the steps of the evidence-based practice continuum. Each student follows the steps using actual practice case studies from his/her individual practice sites and presents the responses to each step in the process to discover evidence to guide the practice case questions. Peer interaction and feedback is critical to the realistic development of evidence to guide practice decisions. A major assignment is to have each student participate in the writing of a systematic review or an evidence-based practice brief for the profession. Students complete a needs assessment of a particular site or practice area as well.

Prerequisites: Take OT 654.**Offered:** Every year, Spring**OT 650. Application of Theory and Exploration of Occupation.****3 Credits.**

This course explores occupation—the central construct of the profession, and occupational science as a disciplinary knowledge base of the profession. Students examine a variety of theories relevant to occupational therapy and analyze their practice using critical theory.

Offered: Every year, Spring**OT 651. Systems.****3 Credits.**

Knowledge of health care delivery in the U.S. is fundamental to providing occupational therapy services. A key element to providing relevant health care services is an understanding of the broader systems that influence and drive delivery models. This course addresses the general systems model as applied to the delivery of health care services. System components are addressed including the resources, the internal processes, external influences, measurable outcomes and stakeholders in service delivery systems. The course examines the range of service delivery models in OT including the traditional medical model, school-based, community, educational, home health, hospice and telehealth, among others. The course prepares students to analyze the key components of delivery system and determine how OT services are optimized in specific models.

Offered: Every year, Fall**OT 652. Doctoral Seminar.****1 Credit.**

Students develop learning strategies for doctoral work and explore contemporary leadership theory and create a professional development plan for doctoral work with goals and objectives related to becoming an agent of change.

Offered: Every year, Fall**OT 653. Policy/Ethics.****2 Credits.**

The future leaders of the profession need an understanding of the political and legal policies impacting occupational therapy, as well as the ethics involved in decision making. Students explore the role of the occupational therapist in advocacy as well as the concepts of social justice. The impact of these policies and decisions are reviewed in relationship to all settings and the occupational as well as psychosocial well-being of the individual client and populations of clients.

Offered: Every year, Fall**OT 654. Critical Inquiry of Scholarship.****3 Credits.**

This course is the first of a series of courses focusing on scholarship in the profession. Emphasis is placed on understanding qualitative and quantitative research methods and building a solid foundation needed to carry out a scholarly project. This course covers the scholarship process, with a focus on developing a question for scholarly exploration, ways of answering questions and approaches to analyzing results.

Offered: Every year, Fall**OT 655. Professional Seminar.****3 Credits.**

This course integrates prior learning into the discussion of how to become an "agent of change" within systems. Topics include advocacy, leadership and leadership theories, group dynamics and change management. Student integrate this knowledge through the development of a program proposal and evaluation.

Offered: Every year, Summer**OT 656. Critical Inquiry of Scholarship II.****4 Credits.**

This course is the second of a series of courses focusing on scholarship in the profession. Emphasis is placed on developing a proposal for a scholarly project. Drawing on the content of OT 654 students develop the background to the project and problem statement, questions guiding the project informed by theory, and write a design a scholarly proposal in regards to ethical policies and procedures necessary to conduct research.

Prerequisites: Take OT 640, OT 654.**Offered:** Every year, Summer**OT 660. Seminar: Innovations and Emerging Issues in Children and Youth.****3 Credits.**

The OT seminars OT 660 and OT 662 present core content that is the same for both courses during weeks one and two. The focus of the core weeks is on environmental scanning for evidence of change and locating evidence in the literature for that change. Weeks four through seven focus on the individual theme as selected by each student.

Offered: Every year, Fall**OT 662. Seminar: Innovations and Emerging Issues in the Adult Health Care Continuum.****3 Credits.**

The OT seminars OT 660 and OT 662 present core content that is the same for both courses during weeks one and two. The focus of the core weeks is on environmental scanning for evidence of change and locating evidence in the literature for that change. Weeks four through seven focus on the individual theme as selected by each student.

OT 663. Seminar: Innovations and Emerging Issues.**3 Credits.**

This course will initially focus on environmental scanning for evidence of change and locating evidence in the literature for that change within a student-identified area of interest. Then, weeks four through seven focus on the individual theme as selected by each student.

Offered: Every year, Spring

- OT 670. Leadership in Program Development/Business. 3 Credits.**
Students analyze leadership styles as they relate to supervision in both public and private sectors. The course includes a review of skills required to be an entrepreneur, own a practice and navigate the policies required of a business.
Offered: Every year, Spring
- OT 671. Leadership in Higher Education. 3 Credits.**
Students analyze trends in higher education and health care. Building on these trends students create one course including a full syllabus, learning objectives, learning outcomes and assessment. This course provides a foundation for teaching in the future, either full or part time.
- OT 680. Capstone I. 2 Credits.**
This capstone course is a culminating experience in the occupational therapy curriculum, which integrates all core material. Students design and execute a scholarly or creative project that is relevant to current and emerging practice areas in occupational therapy. Students gain experience in project management, critical analysis and professional presentations.
Offered: Every year, Fall
- OT 681. Capstone II. 2 Credits.**
This capstone course is a culminating experience in the occupational therapy curriculum, which integrates all core material. Students design and execute a scholarly or creative project that is relevant to current and emerging practice areas in occupational therapy. Students gain experience in project management, critical analysis and professional presentations.
Offered: Every year, Spring
- OT 699. OT Independent Study. 1-6 Credits.**
Offered: As needed
- OT 700. Philosophy and Science of Occupational Therapy. 3 Credits.**
This course presents the philosophical, historical and scientific foundations of the occupational therapy profession and their relevance to contemporary practice. From a philosophical perspective, the course unpacks the epistemology (knowledge), ontology (reality/view) and axiology (actions/methods) of the profession. The evolution of practice throughout history and current and emerging trends in practice is analyzed with respect to meeting societal needs.
Offered: Every year, Summer
- OT 701. Occupational Therapy Theory. 3 Credits.**
This course explores how occupations influence health and well-being from a historical, developmental, and evidence-based perspective. Current and emerging occupation-based models are analyzed and applied as theoretical foundations in the promotion of health, prevention of disease, and management of occupational disruptions across the life span. Complementary healthcare models and current global social political issues are highlighted.
Offered: Every year, Fall
- OT 702L. OT Service Learning. 1 Credit.**
This course applies the concepts of observation and therapeutic use of self to a community setting where the students observe and conduct and applied activity analysis of the clients/community and/or the population in order to design service projects that meet the occupational needs of those being served in the setting. Application of context variable analysis and service provision in a meaningful occupation provides a natural experience of learning about human occupations.
Offered: Every year, Fall
- OT 703. OT Practice Framework and Professional Reasoning. 3 Credits.**
This course explores the vocabulary of the profession, The Occupational Therapy Practice Framework, and links the terminology to knowledge and skills in the identification and analysis of occupation in context, personal factors and occupational performance and the application of clinical reasoning to the occupational therapy process.
Offered: Every year, Fall
- OT 705. Research Methods and Evidence-Based Practice. 3 Credits.**
This course addresses research fundamentals in the practice of occupational therapy. The course examines research epistemology, methods, research designs, and data analysis in occupational therapy research. Levels of evidence are addressed and applied to decisions in occupational therapy interventions. Students gain experience developing research procedures, critically analyzing data, and identifying ethical issues involved in developing a research study.
Offered: Every year, Fall
- OT 710. Clinical Anatomy in OT Practice. 4 Credits.**
This course provides a comprehensive study of the musculoskeletal system with emphasis on clinical correlation to occupational therapy practice and the biomechanical basis of occupational performance. The course has a corresponding dissection and palpation lab.
Offered: Every year, Summer
- OT 710L. Clinical Anatomy in OT Practice Lab. 1 Credit.**
This laboratory course involves dissection, visual examination, and surface palpation as part of a comprehensive study of the human anatomy. Emphasis is in the thorough examination of the musculoskeletal system and select components of the nervous system relative to the anatomical and biomechanical bases of occupational performance.
Offered: Every year, Summer
- OT 711. Applied Kinesiology. 2 Credits.**
This course integrates information from Human Anatomy with principles of biomechanics and their application to occupational therapy practice. Emphasis is on the biomechanical analysis of human occupations and performance. Key concepts in clinical kinesiology are presented as essential elements to the OT process.
Offered: Every year, Fall
- OT 711L. Applied Kinesiology Lab. 1 Credit.**
This laboratory course provides a comprehensive review of fundamentals of musculoskeletal assessment relevant to occupational therapy practice. This course applies and integrates the concepts learned in the lecture course, OT 521.
Offered: Every year, Fall
- OT 712. Neuroanatomy in OT Practice. 3 Credits.**
This course provides a comprehensive study of neuroanatomy including the structures, functions and physiology of neural systems and examines the interrelationships of neuroanatomical structures, subsystems and neurophysiologic processes involved in human behaviors, which are the foundation for occupational performance. The course also introduces basic neurobehaviors and dysfunctions.
Offered: Every year, Summer
- OT 713. Applied Neuroscience. 2 Credits.**
This course builds on neuroanatomy as it examines the interrelationships of neuroanatomical structures, subsystems and neurophysiologic processes involved in human behaviors, which are the foundation for occupational performance. Specifically, students learn the neural substrates and mechanisms of motor behaviors, sensory-perception, emotions, language, attention, memory and learning.
Offered: Every year, Fall

OT 713L. Applied Neuroscience Lab.**1 Credit.**

This course builds on functional neuroanatomy and is an adjunct to Applied Neuroscience as it examines the interrelationships of neuroanatomical structures, subsystems and neurophysiologic processes involved in human behaviors, which are the foundation for occupational performance and applies screening procedures. Specifically, students learn the neural substrates and mechanisms of motor behaviors, sensory-perception, emotions, language, attention, memory and learning. The course also introduces basic screening procedures to identify neurobehavioral dysfunctions.

Offered: Every year, Fall**OT 720. Occupational Therapy Mental Health and Psychosocial Practice I.****3 Credits.**

This course highlights OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Emphasis is on the distinct nature of occupation in promoting mental health, preventing disease, and managing life disruptions. Scientific evidence and theories guide the student's learning of the OT process across the continuum of service delivery.

Offered: Every year, Spring**OT 720L. Occupational Therapy Mental Health and Psychosocial Practice I Lab.****1 Credit.**

This course builds on concepts from OT 720 highlighting OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Students practice assessments and evidence-based intervention modalities for various mental health conditions across the lifespan. Application of theoretical models and frames of reference are highlighted. Additionally, students enhance observation skills needed for documentation and practice verbal interventions related to therapeutic modes.

Offered: Every year, Spring**OT 721. OT Mental Health and Psychosocial Practice II.****3 Credits.**

This course highlights OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. OT, psychosocial, & group theories, as well as, group interventions are highlighted. Related skills such as documentation, therapeutic use of self and evidence-based practice are emphasized.

Offered: Every year, Fall**OT 721F. OT Mental Health and Psychosocial Practice II****Fieldwork.****1 Credit.**

This course provides structured fieldwork observation in various settings working with the mental health and psychosocial populations across the lifespan. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students have the opportunity to observe and report on the variety of assessment and intervention tools utilized across a continuum of service delivery. Students develop an appreciation for the frames of reference used in the models of practice, as a guide to the evaluation and intervention process.

Offered: Every year, Fall**OT 721L. OT Mental Health and Psychosocial Practice II Lab Lab.****1 Credit.**

This lab builds upon concepts from OT 512 highlighting OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Group theory and evidence-based group interventions are practiced to promote leadership skills and therapeutic use of self. A culminating group protocol assignment integrates theory, practice, and research.

Offered: Every year, Fall**OT 722. Occupational Therapy for Children and Youth I.****6 Credits.**

This course provides a comprehensive overview evaluation and interventions used by occupational therapy practitioners for children and youth. Traditional theoretical models/frames of reference and current evidence is utilized as a basis for the clinical/professional reasoning process applicable to the OT process for children and youth so that facilitators and barriers to occupational performance can be identified. Documentation related to contextual philosophies, procedures and regulations dictating pediatric practice is highlighted throughout the course.

Offered: Every year, Spring and Summer**OT 722F. Occupational Therapy for Children and Youth I****Fieldwork.****1 Credit.**

This course provides structured fieldwork observation in various settings working with the children/youth population. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students also have the opportunity to observe and report on the variety of assessment and intervention tools utilized within the models of health care for the children and youth population.

Offered: Every year, Spring and Summer**OT 722L. Occupational Therapy for Children and Youth I Lab.****1 Credit.**

This lab course complements the OT 531 and OT 531F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for children and youth. The safe, efficient, and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring and Summer**OT 723. Occupational Therapy for Children and Youth II.****6 Credits.**

This course focuses on specialized interventions for individuals and populations with sensory integrative and processing difficulties and brain-based behavioral challenges. It integrates the use of the SI frame of reference with previously learned theoretical models and apply best available evidence and clinical/professional reasoning to various systems (e.g., state/federal regulations for early intervention and school-based practice, insurance funding, and community-based health and wellness initiatives). Documentation within these various systems are illustrated, discussed and produced.

Offered: Every year, Fall and Spring**OT 723F. OT for Children and Youth II Fieldwork.****1 Credit.**

This course provides structured fieldwork observation in sensory integration settings and allows the student to observe and explore the intervention process utilized in these frames of reference. Students have the opportunity to see, observe and report on the variety of intervention strategies utilized within the various models such as health care, education, community and social systems. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the sensory integration intervention process.

Offered: Every year, Fall and Spring

- OT 723L. OT for Children and Youth II Lab. 1 Credit.**
This lab integrates the advanced intervention techniques/specialized interventions used by occupational therapy practitioners for individuals and populations with sensory integrative and processing difficulties, developmental disabilities and brain-based behavioral challenges. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.
Offered: Every year, Fall and Spring
- OT 724. Occupational Therapy for Adults and Older Adults I. 6 Credits.**
This course provides a comprehensive overview of assessments and interventions used by occupational therapy practitioners in general medicine/surgery, neurology and orthopedics. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process. Documentation is highlighted throughout the course including for traditional systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.
Offered: Every year, Spring and Summer
- OT 724F. Occupational Therapy for Adults and Older Adults I Fieldwork. 1 Credit.**
This course provides structured fieldwork observation in various settings working with the adult population. It allows the student to observe and explore the evaluation and treatment process utilized in occupational therapy with adults and older adults. Students develop an appreciation for the frame of reference used in the models of practice as a guide to evaluation and treatment.
Offered: Every year, Spring and Summer
- OT 724L. Occupational Therapy for Adults and Older Adults I Lab. 1 Credit.**
This lab course complements the OT 532 and OT 532F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. The safe, efficient and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.
Offered: Every year, Spring and Summer
- OT 725. OT for Adults and Older Adults II. 6 Credits.**
This course provides a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation, oncology and geriatrics/gerontology. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process in neurorehabilitation practice. Documentation is highlighted throughout the course for traditional and emerging systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.
Offered: Every year, Fall and Spring
- OT 725F. OT for Adults and Older Adults II Fieldwork. 1 Credit.**
This course provides structured fieldwork observation in neurorehabilitative settings and allows the student to observe and explore the intervention process utilized in these frames of reference. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the neurorehabilitation intervention process.
Offered: Every year, Fall and Spring
- OT 725L. OT for Adults and Older Adults II Lab. 1 Credit.**
This lab integrates the advanced intervention techniques discussed and described in the lecture portion of this class. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.
Offered: Every year, Fall and Spring
- OT 726. Technology in OT Practice. 2 Credits.**
This course provides students with opportunities to demonstrate knowledge and apply practice in the use of technology that includes assistive virtual and telehealth technology. The course focuses on application of technology across the lifespan, emphasizing a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning processes in the utilization of technologies in education, home, work, leisure and community practice domains.
Offered: Every year, Summer
- OT 726L. Technology in OT Practice Lab. 1 Credit.**
This lab provides students with opportunities to practice the design and fabrication and use of technology in practice that includes assistive technology; virtual environments in practice and telehealth technology. This lab must be completed concurrently with OTD 641 the lecture component of Technology in OT Practice.
Offered: Every year, Summer
- OT 727. Work and Ergonomics. 3 Credits.**
This course focuses on the occupation of work applied across the lifespan and to various practice contexts and worker challenges. The course addresses topics related to the occupation of work, including employment acquisition, job performance, volunteerism, and retirement. Work tasks and work demands are analyzed relative to physical, cognitive, social, organizational, and environmental factors that impact job performance. Modifications that optimize worker functioning are examined as prevention and as rehabilitation.
Offered: Every year, Spring
- OT 728L. Biomechanical Intervention Lab. 2 Credits.**
Students experience hands on learning in biomechanical principles such as splinting, physical agent modalities, and therapeutic exercise programs. Specifically, students evaluate and fabricate splints for specific diagnoses and discuss the role of splinting as part of an overall intervention plan. Students are introduced to various prosthetic devices and the role of occupational therapy during pre-prosthetic and prosthetic training. Students demonstrate the ability to use and apply various physical agent modalities to intervention planning assignments
Offered: Every year, Spring
- OT 730. Administration and Management of Systems. 3 Credits.**
This class introduces students to the systems involved in delivering occupational therapy services in health care, educational and community-based environments. Students examine components of service delivery including external influences, internal processes, communication, reimbursement and measurable outcomes to understand how occupational therapy services are optimized. The course addresses core management functions including planning, organizing, directing and controlling. Students gain hands-on experience with strategic planning, budgeting, marketing, program evaluation and conflict management.
Offered: Every year, Spring

- OT 731. Leadership and Change. 2 Credits.**
This course addresses the means to become an "agent of change" within the occupational therapy environment using leadership approaches. Leadership theories are addressed and applied to supervision, advocacy, and mentoring. Students self-reflect on leadership and communication styles and strategies to promote effective supervision for groups both internal and external to occupational therapy.
Offered: Every year, Summer
- OT 751. Capstone Seminar I - Exploration. 2 Credits.**
This course is the first of a series of capstone seminars designed to assist the students in understanding the elements and process of developing a culminating signature project in the OTD program. Students explore personal interests, opportunities and the social context around topic areas. They develop skills of conducting an environmental scan and needs assessment relative to their project interests. Students identify program evaluation methods and ultimately present a capstone proposal as an initial plan for their capstone project.
Offered: Every year, Fall
- OT 752. Knowledge Translation and Synthesis. 3 Credits.**
This course focuses on the assessment, review and utilization of research to inform policy and improve practice. Students actively engage in multiple components of the knowledge translation process including defining the problem, searching for and critically appraising the evidence. Students work in small groups to apply this information to the development of a clinical practice guideline. Competencies acquired in this course are integral to the Capstone process.
Offered: Every year, Spring
- OT 753. Capstone Seminar II - Planning. 2 Credits.**
This course is the second of a series of Capstone seminars leading to the Doctoral Capstone Experience and Project. This course is specifically designed to assist the students in finalizing their Doctoral Capstone Project (DCP) proposal based on a needs assessment. Students are expected to complete a comprehensive literature review that serves as justification for the DCP.
Offered: Every year, Summer
- OT 754. Capstone Seminar III - Preparation. 2 Credits.**
This course is the third of a series of capstone seminars designed to assist the students in planning their Doctoral Experiential Component. Under faculty mentorship, students design a 14-week experience and project plan that outlines goals and objectives, as well as formal evaluation mechanism. Students write the methods section of the formal capstone project paper.
Offered: Every year, Spring
- OT 760. Special Topics Or Independent Study. 3 Credits.**
Students delve deeper into the specialized knowledge of the profession with evidence-based, occupation-centered practice as its core subject. Exploration of specialized roles beyond that of a direct provider of skilled services, such as educator, case manager and consultant at the systems level. Students also learn various modes of care delivery and systems of care and evaluate the outcomes of such modes.
Offered: Every year, Spring
- OT 762. Health Policy, Law, and Advocacy. 2 Credits.**
This course prepares students as future leaders of the profession who need an understanding of the political and legal policies impacting occupational therapy, as well as the ethics involved in decision making. The role of the occupational therapist in advocacy as well as the concepts of social justice is explored as well.
Offered: Every year, Spring
- OT 764. Business Leadership and Entrepreneurship in OT. 3 Credits.**
This course provides an overview of business development and entrepreneurship for occupational therapy practitioners within today's health care environment, including public initiatives for health and wellness and prevention for society. Leadership concepts are threaded in the context of a business enterprise.
Offered: Every year, Spring
- OT 766. Methods of Teaching and Learning in OT. 3 Credits.**
This course introduces students to the principles of the teaching-learning process in order to meet the needs of clients, family, significant others, communities, colleagues, other health providers and the public. Concepts discussed include health literacy, assessment of learning outcomes, factors which may influence the teaching-learning process, instructional methods and best practices in clinical and academic teaching.
Offered: Every year, Spring
- OT 780. Fieldwork Level IIA. 6 Credits.**
This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the first of two required level II experiences.
Offered: Every year, Summer
- OT 781. Fieldwork Level IIB. 6 Credits.**
This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the second of two required level II experiences and is different in setting/population from OTD 580.
Offered: Every year, Fall
- OT 782. Professional Development. 2 Credits.**
This course focuses on the current issues related to transitioning from student to professional roles and responsibilities. Topics include updates in the OT profession with a focus on official documents; emerging roles of OT in practice; credentialing, licensure and continuing competence/professional development. Contemporary issues of practice such as access to services, advocacy and inter-/intra-professional collaboration are explored.
Offered: Every year, Spring
- OT 790. Doctoral Project Seminar. 2 Credits.**
This seminar course is designed to facilitate the completion of the student's Doctoral Capstone Project and promote an in-depth reflection on the program learning outcomes. The seminar runs concurrently with the Doctoral Capstone Experience where specific competencies representing in-depth knowledge of practice are synthesized. The final outcome of the seminar is a scholarly manuscript and public dissemination of the Doctoral Capstone Project.
Offered: Every year, Summer

OT 791. Doctoral Experience. 2-4 Credits.

The Occupational Therapy Doctoral Experience is a culminating experience in the OT curriculum to develop occupational therapists with skills beyond a generalist level. The experience provides the student with an in-depth learning opportunity in one or more (but not limited to) of the following areas of practice: education, clinical practice skills, advocacy and professional identity, theory development, research, administration, leadership and program and policy development. The experiential component requires a total of 560-640 hours.

Offered: Every year, Summer

OT 799. Independent Study in OT. 1-6 Credits.

Offered: As needed

Occupational Therapy Masters (OTM)

OTM 501. OT Theory. 3 Credits.

This course explores how occupations influence health and well-being from a historical, developmental, and evidence-based perspective. Current and emerging occupation-based models are analyzed and applied as theoretical foundations in the promotion of health, prevention of disease, and management of occupational disruptions across the life span. Complementary healthcare models and current global social political issues are highlighted.

Offered: Every year, Fall

OTM 502L. OT Service Learning. 1 Credit.

This course applies the concepts of observation and therapeutic use of self to a community setting where the students will observe and conduct an applied activity analysis of the clients/community and/or the population in order to design service projects that meet the occupational needs of those being served in the setting. Application of context variable analysis and service provision in a meaningful occupation will provide a natural experience of learning about human occupations.

Offered: Every year, Fall

OTM 503. OT Practice Framework and Professional Reasoning. 2 Credits.

This course explores the vocabulary of the profession, The Occupational Therapy Practice Framework, and links the terminology to knowledge and skills in the identification and analysis of occupation in context, personal factors and occupational performance and the application of clinical reasoning to the occupational therapy process.

Offered: Every year, Fall

OTM 505. Research Methods and Evidence-Based Practice. 3 Credits.

This course addresses research fundamentals in the practice of occupational therapy. The course examines research epistemology, methods, research designs, and data analysis in occupational therapy research. Levels of evidence are addressed and applied to decisions in occupational therapy interventions. Students gain experience developing research procedures, critically analyzing data, and identifying ethical issues involved in developing a research study.

Offered: Every year, Fall

OTM 520. OT Mental Health & Psychosocial Practice. 3 Credits.

This course provides a comprehensive overview of OT's role for children and youth with mental health and psychosocial needs. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Psychological and OT theories guide the student's learning of the OT process within community-based and institutional settings across the continuum of service delivery. The inclusion of documentation, therapeutic use of self and evidence-based practice are emphasized

Offered: Every year, Spring

OTM 520L. OT Mental Health and Psychosocial Practice Lab. 1 Credit.

This course builds upon concepts from OTM 520 highlighting OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups, and organizations. Students will practice assessments and evidence-based intervention modalities for various mental health conditions across the life span. Application of theoretical models and frames of reference will be highlighted. Additionally, students will enhance observation skills needed for documentation and practice verbal interventions related to therapeutic modes.

Offered: Every year, Spring

OTM 521. OT in Mental Health & Psychosocial Practice II. 3 Credits.

This course highlights OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. OT, psychosocial, & group theories, as well as, group interventions are highlighted. Related skills such as documentation, therapeutic use of self and evidence-based practice are emphasized.

Offered: Every year, Fall

OTM 521F. OT in Mental Health & Psychosocial Practice II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the mental health and psychosocial populations across the lifespan; it will allow the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students will also have the opportunity to observe and report on the variety of assessment and intervention tools utilized across a continuum of service delivery. Students will develop an appreciation for the frames of reference used in the models of practice, as a guide to the evaluation and intervention process.

Offered: Every year, Fall

OTM 521L. OT in Mental Health & Psychosocial Practice II Lab. 1 Credit.

This lab builds upon concepts from OT 521 highlighting OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Group theory and evidence-based group interventions are practiced to promote the therapeutic use of self. A culminating group protocol assignment integrates theory, practice, and research.

Offered: Every year, Fall

OTM 522. OT For Children and Youth I. 6 Credits.

This course provides a comprehensive overview of pediatric health conditions as they alter function and participation, environmental factors as they relate to barriers for occupational performance, and evaluation and interventions used by occupational therapy practitioners for children and youth. Traditional theoretical models/frames of reference and current evidence will be utilized as a basis for the clinical/professional reasoning process applicable to the OT process for children and youth so that facilitators and barriers to occupational performance can be identified. Documentation related to contextual philosophies, procedures, and regulations dictating pediatric practice will be highlighted throughout the course.

Offered: Every year, Spring

OTM 522F. OT For Children & Youth I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the children/youth population; it will allow the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students will also have the opportunity to observe and report on the variety of assessment and intervention tools utilized within the models of healthcare for the children and youth population.

Offered: Every year, Spring

OTM 522L. OT For Children & Youth I Lab. 1 Credit.

This lab course complements the OTM 522 and OTM 522F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for children and youth. The safe, efficient, and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring

OTM 523. OT for Children & Youth II. 6 Credits.

This course provides an in-depth analysis of sensory processing and integration with a focus on clinical reasoning to understand and appreciate the impact of these processes on individuals, populations and community environments. Opportunities are provided to learn specific intervention strategies for individuals, as well a systems approach emphasizing the importance of educating the team of people who support these individuals in varying contexts, to facilitate functional participation and engagement in purposeful and productive activities. Documentation within these various systems will be illustrated, discussed, and produced.

Offered: Every year, Fall

OTM 523F. OT for Children & Youth II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in sensory integration settings and allows the student to observe and explore the intervention process utilized in these frames of reference. Students will also have the opportunity to see, observe and report on the variety of intervention strategies utilized within the various models such as healthcare, education, community and social systems. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the sensory integration intervention process.

Offered: Every year, Fall

OTM 523L. OT for Children & Youth II Lab. 1 Credit.

This lab integrates the advanced intervention techniques / specialized interventions used by occupational therapy practitioners for individuals and populations with sensory integrative and processing difficulties, developmental disabilities, and brain-based behavioral challenges. Opportunities will be provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.

Offered: Every year, Fall

OTM 524. OT for Adults/Olders Adults I. 6 Credits.

This course provides a comprehensive overview of various conditions that impact health and occupational performance among adults and older adult populations, with emphasis given to understanding common diagnoses encountered and assessments and interventions used by occupational therapy practitioners in general medicine/surgery, neurology, and orthopedics. This course will integrate the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process. Documentation will be highlighted throughout the course including for traditional systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy will be incorporated.

Offered: Every year, Summer

OTM 524F. OT for Adults/Older Adults I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the adult population; it will allow the student to observe and explore the evaluation and treatment process utilized in occupational therapy with adults and older adults. Students will develop an appreciation for the frame of reference used in the models of practice as a guide to evaluation and treatment.

Offered: Every year, Summer

OTM 524L. OT for Adults/Older Adults I Lab. 1 Credit.

This lab course complements the OTM 524 and OTM 524F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. The safe, efficient and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Summer

OTM 525. OT for Adults/Older Adults II. 6 Credits.

This course provides a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation, oncology and geriatrics/gerontology. This course will integrate the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process in neurorehabilitation practice. Documentation will be highlighted throughout the course for traditional and emerging systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy will be incorporated.

Offered: Every year, Spring

OTM 525F. OT for Adults/Older Adults II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in neuro-rehabilitative settings and allows the student to observe and explore the intervention process utilized in these frames of reference. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the neurorehabilitation intervention process.

Offered: Every year, Spring

OTM 525L. OT for Adults/Older Adults II Lab. 1 Credit.

This lab integrates the advanced intervention techniques discussed and described in the lecture portion of this class. Opportunities will be provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.

Offered: Every year, Spring

OTM 526. Technology in OT Practice. 2 Credits.

This course provides students with exposure to advanced intervention techniques related to assistive technology in occupational therapy. The course focuses on application of assistive technology across the lifespan, and thus emphasizes use of both interventions in a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning process used to select and evaluate interventions in education, home, work, leisure and community practice domains.

Offered: Every year, Summer

- OTM 527. Work & Ergonomics. 3 Credits.**
This course focuses on the occupation of work applied across the lifespan and to various practice contexts and worker challenges. The course addresses topics related to the occupation of work, including employment acquisition, job performance, volunteerism, and retirement. Work tasks and work demands are analyzed relative to physical, cognitive, social, organizational, and environmental factors that impact job performance. Modifications that optimize worker functioning are examined as prevention and as rehabilitation.
Offered: Every year, Spring
- OTM 528L. Biomechanical Interventions Lab. 1 Credit.**
Students experience hands on learning in safe and effective application of biomechanically-oriented interventions and principles for splinting, physical agent modalities, and therapeutic exercise programs. Specifically, students evaluate and fabricate splints for specific diagnoses and discuss the role of splinting as part of an overall intervention plan. Students are introduced to various prosthetic devices and the role of occupational therapy during pre-prosthetic and prosthetic training. Students demonstrate the ability to use and apply various physical agent modalities to intervention planning assignments.
Offered: Every year, Summer
- OTM 530. Administration and Management of System. 3 Credits.**
This class introduces students to the daily management functions of an occupational therapy department including planning, organizing, directing, controlling, and supervision of occupational therapy assistants and other department personnel. The course integrates students' knowledge of interventions with information related to the delivery of occupational therapy services. Topics include managed care, quality assurance, leadership, regulatory agencies, models of practice, ethics, and consultation. Students gain hands-on experience with budgeting, marketing, program evaluation, and ethical problem-solving in administration.
Offered: Every year, Spring
- OTM 560. Special Topics in OT. 2 Credits.**
Students will delve deeper into the specialized knowledge of the profession with evidence-based, occupation-centered practice as its core subject. Exploration of specialized roles beyond that of a direct provider of skilled services, such as educator, case manager, and consultant at the systems level. Students will also learn various modes of care delivery and systems of care and evaluate the outcomes of such modes.
Offered: Every year, Spring
- OTM 562. Professional Development. 2 Credits.**
This course focuses on the current issues related to transitioning from student to professional roles and responsibilities. The course emphasizes linking theory to practice, self-analysis and reflection upon academic experience, and relating those to different facets of clinical and professional reasoning in practice. Topics include updates in the OT profession with a focus on official documents; emerging roles of OT in practice; credentialing, licensure, and continuing competence/professional development. Contemporary issues of practice such as access to services, advocacy, and inter-/intra-professional collaboration will be explored.
Offered: Every year, Spring
- OTM 570. Scholarly Project I. 1 Credit.**
This course is the first of a series of capstone seminars designed to assist the students in understanding the elements and process of participating in the research process. Under faculty mentorship, students are expected to complete a comprehensive literature review related to their topic of study.
Offered: Every year, Summer
- OTM 571. Scholarly Project II. 1 Credit.**
Under faculty mentorship, students in small groups participate in the design and implementation of entry-level research studies by analyzing and interpreting the professional literature, and beginning to work on their spring capstone project.
Prerequisites: TAKE OTM 570
Offered: Every year, Fall
- OTM 572. Scholarly Project III. 1 Credit.**
This seminar course is designed to facilitate the completion of the students Capstone Project and promote an in-depth reflection on the program learning outcomes. Final outcome of the seminar is a scholarly manuscript and public dissemination of the results of the completed project.
Prerequisites: TAKE OTM 570 OTM 571
Offered: Every year, Spring
- OTM 580. Fieldwork Level IIA. 6 Credits.**
This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the first of two required level II experiences.
Offered: Every year, Summer
- OTM 581. Fieldwork Level IIB. 6 Credits.**
This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the second of two required level II experiences and is different in setting/population from OTM 580.
Prerequisites: TAKE OTM 580
Offered: Every year, Fall

Occupational Therapy Doctoral (OTD)

- OTD 500. Philosophy and Science of Occupational Therapy. 2 Credits.**
This course presents the philosophical, historical, and scientific foundations of the occupational therapy profession and their relevance to contemporary practice. From a philosophical perspective, the course unpacks the epistemology (knowledge), ontology (reality/view) and axiology (actions/methods) of the profession. The evolution of practice throughout history and current and emerging trends in practice is analyzed with respect to meeting societal needs.
Offered: Every year, Summer
- OTD 501. Occupational Therapy Theory. 3 Credits.**
This course explores how occupations influence health and well-being from a historical, developmental, and evidence-based perspective. Current and emerging occupation-based models are analyzed and applied as theoretical foundations in the promotion of health, prevention of disease, and management of occupational disruptions across the life span. Complementary healthcare models and current global social political issues are highlighted.
Offered: Every year, Fall

OTD 502L. OT Service Learning.**1 Credit.**

This course applies the concepts of observation and therapeutic use of self to a community setting where the students observe and conduct and applied activity analysis of the clients/community and/or the population in order to design service projects that meet the occupational needs of those being served in the setting. Application of context variable analysis and service provision in a meaningful occupation provides a natural experience of learning about human occupations.

Offered: Every year, Fall**OTD 503. OT Practice Framework & Professional Reasoning.****2 Credits.**

This course explores the profession's domain and scope through the Occupational Therapy Practice Framework and links the terminology to the analysis of occupation and occupational performance in context, as well as the various forms of professional reasoning used in the occupational therapy process.

Offered: Every year, Fall**OTD 505. Development of Human Occupations Seminar.****2 Credits.**

This course explores typical human development and more specifically, occupational development from conception through early (emerging) adulthood. In this course, traditional theories of development are explored along with more contemporary and occupation-focused theories. Each of these sets of theories will contribute to an understanding of how biologic capacity, environmental, and cultural factors influence occupational development.

Offered: Every year, Summer**OTD 510. Clinical Anatomy in Occupational Therapy.****3 Credits.**

This course provides a comprehensive study of the musculoskeletal system and the peripheral nervous system with emphasis on their correlation to health conditions and occupational dysfunctions as well as the biomechanical basis of occupational performance. This course has a corresponding dissection and palpation lab.

Offered: Every year, Summer**OTD 510L. Clinical Anatomy in OT Practice Lab.****1 Credit.**

This laboratory course involves dissection, visual examination, and surface palpation as part of a comprehensive study of the human anatomy. Emphasis is in the thorough examination of the musculoskeletal system and select components of the nervous system relative to the anatomical and biomechanical bases of occupational performance.

Offered: Every year, Summer**OTD 511. Applied Kinesiology.****2 Credits.**

This course integrates information from Human Anatomy with principles of biomechanics and their application to occupational therapy practice. Emphasis is on the biomechanical analysis of human occupations and performance. Key concepts in clinical kinesiology are presented as essential elements to the OT process.

Offered: Every year, Fall**OTD 511L. Applied Kinesiology Lab.****1 Credit.**

This laboratory course provides a comprehensive review of fundamentals of musculoskeletal assessment relevant to occupational therapy practice. This course applies and integrates the concepts learned in the lecture course, OT 521.

Offered: Every year, Fall**OTD 512. Applied Neuroscience in OT Practice.****4 Credits.**

This course provides a comprehensive study of neuroanatomy including the structures, functions, and interrelationships of neural subsystems that are key to occupational performance. Students apply their understanding of these neural substrates including motor behaviors, sensory-perception, emotional processing, cognition, and learning, to the analysis of human occupations and dysfunctions in occupational performance.

Prerequisites: Take OTD 510**Offered:** Every year, Fall**OTD 512L. Applied Neuroscience in OT Practice Lab.****1 Credit.**

This course provides a comprehensive study of neuroanatomy including the structures, functions, and interrelationships of neural subsystems that are key to occupational performance. Students apply their understanding of these neural substrates including motor behaviors, sensory-perception, emotional processing, cognition, and learning, to the analysis of human occupations and dysfunctions in occupational performance.

Prerequisites: Take OTD 510L**Offered:** Every year, Fall**OTD 515. Research Methods and Evidence-Based Practice.****3 Credits.**

This course addresses research fundamentals in the practice of occupational therapy. The course examines research epistemology, methods, research designs, and data analysis in occupational therapy research. Levels of evidence are addressed and applied to decisions in occupational therapy interventions. Students gain experience developing research procedures, critically analyzing data, and identifying ethical issues involved in developing a research study.

Offered: Every year, Fall**OTD 520. Occupational Therapy Mental Health and Psychosocial Practice I.****3 Credits.**

This course highlights OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Emphasis is on the distinct nature of occupation in promoting mental health, preventing disease, and managing life disruptions. Scientific evidence and theories guide the student's learning of the OT process across the continuum of service delivery.

Offered: Every year, Spring**OTD 520L. Occupational Therapy Mental Health and Psychosocial Practice I Lab.****1 Credit.**

This course builds on concepts from OT 720 highlighting OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Students practice assessments and evidence-based intervention modalities for various mental health conditions across the lifespan. Application of theoretical models and frames of reference are highlighted. Additionally, students enhance observation skills needed for documentation and practice verbal interventions related to therapeutic modes.

Offered: Every year, Spring**OTD 521. OT Mental Health and Psychosocial Practice II.****3 Credits.**

This course highlights OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. OT, psychosocial, & group theories, as well as, group interventions are highlighted. Related skills such as documentation, therapeutic use of self and evidence-based practice are emphasized.

Offered: Every year, Fall

OTD 521F. OT Mental Health and Psychosocial Practice II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the mental health and psychosocial populations across the lifespan. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students have the opportunity to observe and report on the variety of assessment and intervention tools utilized across a continuum of service delivery. Students develop an appreciation for the frames of reference used in the models of practice, as a guide to the evaluation and intervention process.
Offered: Every year, Fall

OTD 521L. OT Mental Health and Psychosocial Practice II Lab. 1 Credit.

This lab builds upon concepts from OT 512 highlighting OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Group theory and evidence-based group interventions are practiced to promote leadership skills and therapeutic use of self. A culminating group protocol assignment integrates theory, practice, and research.
Offered: Every year, Fall

OTD 522. Occupational Therapy for Children and Youth I. 6 Credits.

This course provides a comprehensive overview evaluation and interventions used by occupational therapy practitioners for children and youth. Traditional theoretical models/frames of reference and current evidence is utilized as a basis for the clinical/professional reasoning process applicable to the OT process for children and youth so that facilitators and barriers to occupational performance can be identified. Documentation related to contextual philosophies, procedures and regulations dictating pediatric practice is highlighted throughout the course.

Offered: Every year, Spring and Summer

OTD 522F. Occupational Therapy for Children and Youth I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the children/youth population. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students also have the opportunity to observe and report on the variety of assessment and intervention tools utilized within the models of health care for the children and youth population.
Offered: Every year, Spring and Summer

OTD 522L. Occupational Therapy for Children and Youth I Lab. 1 Credit.

This lab course complements the OT 531 and OT 531F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for children and youth. The safe, efficient, and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.
Offered: Every year, Spring and Summer

OTD 523. Occupational Therapy for Children and Youth II. 6 Credits.

This course focuses on specialized interventions for individuals and populations with sensory integrative and processing difficulties and brain-based behavioral challenges. It integrates the use of the SI frame of reference with previously learned theoretical models and apply best available evidence and clinical/professional reasoning to various systems (e.g., state/federal regulations for early intervention and school-based practice, insurance funding, and community-based health and wellness initiatives). Documentation within these various systems are illustrated, discussed and produced.

Offered: Every year, Fall and Spring

OTD 523F. OT for Children and Youth II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in sensory integration settings and allows the student to observe and explore the intervention process utilized in these frames of reference. Students have the opportunity to see, observe and report on the variety of intervention strategies utilized within the various models such as health care, education, community and social systems. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the sensory integration intervention process.
Offered: Every year, Fall and Spring

OTD 523L. OT for Children and Youth II Lab. 1 Credit.

This lab integrates the advanced intervention techniques/specialized interventions used by occupational therapy practitioners for individuals and populations with sensory integrative and processing difficulties, developmental disabilities and brain-based behavioral challenges. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.

Offered: Every year, Fall and Spring

OTD 524. Occupational Therapy for Adults and Older Adults I. 6 Credits.

This course provides a comprehensive overview of assessments and interventions used by occupational therapy practitioners in general medicine/surgery, neurology and orthopedics. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process. Documentation is highlighted throughout the course including for traditional systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.

Offered: Every year, Spring and Summer

OTD 524F. Occupational Therapy for Adults and Older Adults I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the adult population. It allows the student to observe and explore the evaluation and treatment process utilized in occupational therapy with adults and older adults. Students develop an appreciation for the frame of reference used in the models of practice as a guide to evaluation and treatment.

Offered: Every year, Spring and Summer

OTD 524L. Occupational Therapy for Adults and Older Adults I Lab. 1 Credit.

This lab course complements the OT 532 and OT 532F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. The safe, efficient and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring and Summer

OTD 525. OT for Adults and Older Adults II. 6 Credits.

This course provides a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation, oncology and geriatrics/gerontology. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process in neurorehabilitation practice. Documentation is highlighted throughout the course for traditional and emerging systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.

Offered: Every year, Fall and Spring

OTD 525F. OT for Adults and Older Adults II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in neurorehabilitative settings and allows the student to observe and explore the intervention process utilized in these frames of reference. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the neurorehabilitation intervention process.

Offered: Every year, Fall and Spring

OTD 525L. OT for Adults and Older Adults II Lab. 1 Credit.

This lab integrates the advanced intervention techniques discussed and described in the lecture portion of this class. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.

Offered: Every year, Fall and Spring

OTD 526. Technology in OT Practice. 2 Credits.

This course provides students with opportunities to demonstrate knowledge and apply practice in the use of technology that includes assistive virtual and telehealth technology. The course focuses on application of technology across the lifespan, emphasizing a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning processes in the utilization of technologies in education, home, work, leisure and community practice domains.

Offered: Every year, Summer

OTD 526L. Technology in OT Practice Lab. 1 Credit.

This lab provides students with opportunities to practice the design and fabrication and use of technology in practice that includes assistive technology; virtual environments in practice and telehealth technology. This lab must be completed concurrently with OTD 641 the lecture component of Technology in OT Practice.

Offered: Every year, Summer

OTD 527. Work and Ergonomics. 3 Credits.

This course focuses on the occupation of work applied across the lifespan and to various practice contexts and worker challenges. The course addresses topics related to the occupation of work, including employment acquisition, job performance, volunteerism, and retirement. Work tasks and work demands are analyzed relative to physical, cognitive, social, organizational, and environmental factors that impact job performance. Modifications that optimize worker functioning are examined as prevention and as rehabilitation.

Offered: Every year, Spring

OTD 528L. Biomechanical Interventions Lab. 1 Credit.

This course provides hands on learning in the therapeutic application of orthotics, physical agents and modalities, and exercise programs. Students will develop the skills to evaluate and develop an intervention plan for specific conditions. Students also learn the role of occupational therapy during pre-prosthetic and prosthetic training.

Offered: Every year, Summer

OTD 530. Administration and Management of Systems. 3 Credits.

This class introduces students to the systems involved in delivering occupational therapy services in health care, educational and community-based environments. Students examine components of service delivery including external influences, internal processes, communication, reimbursement and measurable outcomes to understand how occupational therapy services are optimized. The course addresses core management functions including planning, organizing, directing and controlling. Students gain hands-on experience with strategic planning, budgeting, marketing, program evaluation and conflict management.

Offered: Every year, Spring

OTD 531. Leadership and Change. 2 Credits.

This course addresses the means to become an "agent of change" within the occupational therapy environment using leadership approaches. Leadership theories are addressed and applied to supervision, advocacy, and mentoring. Students self-reflect on leadership and communication styles and strategies to promote effective supervision for groups both internal and external to occupational therapy.

Offered: Every year, Summer

OTD 580. Fieldwork Level IIA. 6 Credits.

This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the first of two required level II experiences.

Offered: Every year, Summer

OTD 581. Fieldwork Level IIB. 6 Credits.

This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the second of two required level II experiences and is different in setting/population from OTD 580.

Offered: Every year, Fall

OTD 582. Professional Development. 2 Credits.

This course focuses on the current issues related to transitioning from student to professional roles and responsibilities. Topics include updates in the OT profession with a focus on official documents; emerging roles of OT in practice; credentialing, licensure and continuing competence/professional development. Contemporary issues of practice such as access to services, advocacy and inter-/intra-professional collaboration are explored.

Offered: Every year, Spring

OTD 751. Capstone Seminar I - Exploration. 2 Credits.

This course is the first of a series of capstone seminars designed to assist the students in understanding the elements and process of developing a culminating signature project in the OTD program. Students explore personal interests, opportunities and the social context around topic areas. They develop skills of conducting an environmental scan and needs assessment relative to their project interests. Students identify program evaluation methods and ultimately present a capstone proposal as an initial plan for their capstone project.

Offered: Every year, Fall

OTD 752. Knowledge Translation and Synthesis. 3 Credits.

This course focuses on the assessment, review and utilization of research to inform policy and improve practice. Students actively engage in multiple components of the knowledge translation process including defining the problem, searching for and critically appraising the evidence. Students work in small groups to apply this information to the development of a clinical practice guideline. Competencies acquired in this course are integral to the Capstone process.

Offered: Every year, Spring

OTD 753. Capstone Seminar II - Planning. 2 Credits.

This course is the second of a series of Capstone seminars leading to the Doctoral Capstone Experience and Project. This course is specifically designed to assist the students in finalizing their Doctoral Capstone Project (DCP) proposal based on a needs assessment. Students are expected to complete a comprehensive literature review that serves as justification for the DCP.

Offered: Every year, Summer

OTD 754. Capstone Seminar III - Preparation. 2 Credits.

This course is the third of a series of capstone seminars designed to assist the students in planning their Doctoral Experiential Component. Under faculty mentorship, students design a 14-week experience and project plan that outlines goals and objectives, as well as formal evaluation mechanism. Students write the methods section of the formal capstone project paper.

Offered: Every year, Spring

OTD 760. Principles of Teaching/Learning. 2 Credits.

This course introduces students to the principles of the teaching-learning process to meet the needs of clients, communities, other health providers, and the public. Concepts discussed include health literacy, assessment of learning outcomes, factors which may influence the teaching-learning process, instructional methods, and best practices in clinical and academic teaching.

Offered: Every year, Spring

OTD 762. Health Policy, Law & Advocacy. 2 Credits.

This course prepares students as future leaders of the profession who need an understanding of the political and legal policies impacting occupational therapy, as well as the ethics involved in decision making. The role of the occupational therapist in advocacy and concepts of social justice are explored.

Offered: Every year, Spring

OTD 764. Business Leadership and Entrepreneurship. 2 Credits.

This course provides an overview of business development and entrepreneurship for occupational therapy practitioners within today's health care environment, including public initiatives for health and wellness and prevention for society. Leadership concepts are threaded in the context of a business enterprise.

Offered: Every year, Spring

OTD 790. Doctoral Project Seminar. 1 Credit.

This seminar course is designed to facilitate the completion of the student's Doctoral Capstone Project and promote an in-depth reflection on the program learning outcomes. The seminar runs concurrently with the Doctoral Capstone Experience where specific competencies representing in-depth knowledge of practice are synthesized. The final outcome of the seminar is a scholarly manuscript and public dissemination of the Doctoral Capstone Project.

Offered: Every year, Summer

OTD 791. Doctoral Experience. 2-4 Credits.

The Occupational Therapy Doctoral Experience is a culminating experience in the OT curriculum to develop occupational therapists with skills beyond a generalist level. The experience provides the student with an in-depth learning opportunity in one or more (but not limited to) of the following areas of practice: education, clinical practice skills, advocacy and professional identity, theory development, research, administration, leadership and program and policy development. The experiential component requires a total of 560-640 hours.

Offered: Every year, Summer

Dual-Degree BS in Health Science Studies/Master of Occupational Therapy

Program Contact: Courtney Richards (Courtney.Richards@qu.edu)
203-582-8418

Our five-and-a-half-year, entry-level, Dual-Degree Bachelor of Science/Master of Occupational Therapy program prepares students with a breadth and depth of knowledge and skills to practice autonomously or collaboratively at entry-level, within various healthcare, educational and social systems. Our curriculum consists of three overlapping tiers: University Curriculum, professional component, and fieldwork. Upon successful completion of the fourth year, the BS in Health Science Studies is awarded.

- Tier 1: University Curriculum.** During the first two years, students take most of their University Curriculum (UC) courses. Concurrently, students take prerequisite science courses for the OT program (PHY 101 + PHY 101L, BIO 211 + BIO 211L, BIO 212 + BIO 212L, and MA 275) as well as OT foundational courses (OT 101, OT 201 and OT 214). Prior to entry in the junior year, students must satisfy the following requirements: acquire a grade of B- or better in 100- and 200-level OT courses; satisfactorily complete a minimum of 40 credits of the University Curriculum; achieve a cumulative grade point average (GPA) of 3.0 or better; and achieve a science prerequisite GPA of 2.75 or better. It is highly recommended that students take all **prerequisite** science courses at Quinnipiac University. If a student is granted permission to take a science course at another four-year institution, the science grade will be factored into the required science GPA of 2.75. Failure to meet the cumulative GPA of 3.0 with Quinnipiac University courses only or the science prerequisite GPA of 2.75 by the start of the junior year will result in dismissal from the program.
- Tier 2: Professional Component.** The professional component of the program consists of all occupational therapy courses from the junior, senior and graduate years. Upon entry into the professional component, students must maintain a GPA of 3.0 each semester in the occupational therapy courses. To progress through the program, students must meet the minimum GPA of 3.0 and must earn a grade of C+ or above in all didactic courses and B+ or above in all fieldwork level I courses.
- Tier 3: Fieldwork Component.** All fieldwork level II experiences (OTM 580 and OTM 581) must be completed with a "P" (pass) to graduate.

Fieldwork Requirements

Students are responsible for transportation to all fieldwork experiences. All students are required to maintain a viable health insurance,

malpractice insurance, CPR certification and current immunization record according to their fieldwork placements. A fieldwork site may have additional requirements as part of its affiliation agreement such as background checks and site-specific mandatory in-services. Failure to comply with fieldwork requirements may negatively impact a student's ability to participate in fieldwork. The department also requires current membership with the American Occupational Therapy Association.

Accreditation

The Quinnipiac Dual-Degree BS/MOT program is accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA). The ACOTE address is:

c/o Accreditation Department
 American Occupational Therapy Association
 6116 Executive Boulevard, Suite 200
 North Bethesda, MD 20852-4929
 Phone: 301-652-6611 (ext. 2914)
 Fax: 301-652-1417
 Email: accred@aota.org
 Website: acoteonline.org (<https://acoteonline.org/>) c/o Accreditation Department

Program Sponsorship

Quinnipiac University assumes primary responsibility for appointment of faculty, admission of students, and curriculum planning for the Dual-Degree BS/MOT program. This responsibility includes the delivery of course content, satisfactory completion of the educational program, and granting of the degree. The university also is responsible for the coordination of classroom teaching and supervised fieldwork practice and for providing assurance that the practice activities assigned to students in a fieldwork setting are appropriate to the program.

Quinnipiac University complies with the administrative requirements for maintaining accreditation of the Dual-Degree BS/MOT program.

Dual-Degree BS/MOT Curriculum

The curriculum for the professional courses in the program are reviewed regularly and are subject to modification in both content and credit as deemed necessary to maintain a high-quality educational experience and keep current with best practices in the profession.

Progression, Retention and Graduation Requirements

All policies and procedures regarding progression, retention and graduation are found in the OT Student Manual. These policies and procedures are routinely reviewed with the students at the beginning of each semester and/or during advising.

University Curriculum and OT Prerequisite Phase

Prior to entry in the junior year, students must satisfy the following requirements:

- Complete a minimum of 40 credits of the University Curriculum, all OT prerequisites and all OT foundational courses with a minimum cumulative grade point average of 3.0;
- All foundational OT courses must be at a grade of B- or better; and

- Achieve a minimum science GPA of 2.75. Courses that are considered in the science GPA are BIO 101 +BIO 101L, BIO 102 + BIO 102L and all the OT prerequisites.

Professional Component and Fieldwork Phases

To progress through the program, students must meet the minimum semester GPA of 3.0 and must earn a grade of C+ or above in all didactic courses and B+ or above in all fieldwork level I courses. In addition, all students must acquire a “Pass” in their fieldwork level II. Failing to meet the aforementioned requirements will result in a referral to the Occupational Therapy Academic Progression and Retention Committee (APRC). The outcome of such referral may be: program probation with course remediation; a program probation with a course repeat (and a repayment); or a program dismissal.

All courses must be taken sequentially as indicated in the program of study. Students may request in writing to the department chairperson, any deviations from the course sequence, waivers from occupational therapy courses, and/or transfer credits from other occupational therapy programs. All requests must be approved by the Occupational Therapy APRC and the department chairperson.

Successful completion of all didactic and fieldwork requirements is necessary for graduation with the degree of Master of Occupational Therapy.

Student Learning Outcomes

Upon completion of the **baccalaureate phase** of the Dual-Degree Bachelor of Science/Master of Occupational Therapy (BS/MOT) program, students will demonstrate the following competencies:

- Synthesis of Occupation:** Articulate in-depth knowledge of occupation with health and participation to guide the practice of occupational therapy.
- Professional Identity and Role Competence:** Demonstrate professionalism and competent role performance.
- Advocacy:** Advocate for the distinct value of occupational therapy for individuals, groups and populations.
- Professional Reasoning:** Apply occupation and client-centered principles and professional reasoning as part of the occupational therapy process to produce positive outcomes with individuals, communities and populations within systems.
- Evidence-Based Practice and Knowledge Translation:** Evaluate, synthesize, translate and contribute evidence to inform practice and support the delivery of OT services.
- Occupational Therapy Roles in Systems and Practice Contexts:** Demonstrate knowledge of systems and occupational therapy roles in order to work collaboratively in intra/interprofessional teams within traditional and role emerging settings.

Mission Statement

The Department of Occupational Therapy aims to provide high-quality education to develop occupational therapy practitioner-scholars, who possess broad-based knowledge and can influence meaningful change in the health and functioning of individuals, populations and communities.

Philosophy

The OT Department views the entry-level educational experience with a developmental-humanistic lens. This approach acknowledges that each

student has unique experiences and possesses varying abilities, which are brought to the university environment and further developed through liberal and disciplinary inquiry as well as, co-curricular, community-based/ experiential learning and professional experiences.

The department conceptualizes “**development**” not merely as a sequential ontological event but rather as a complex iterative, heterarchical and hierarchical sets of processes that are situated in various contexts. This developmental curriculum concept is reflected below using Fink’s Taxonomy of Significant Learning:

- **Foundational Knowledge (and Caring and Learning to Learn)** – refers to understanding, remembering information and ideas; developing interests and professional values; and developing the skills to learn or self-direct one’s learning
- **Application and Integration (and Learning About Oneself/Others)** – refers to development of practical, creative and critical thinking skills by connecting ideas/concepts, events and realms of life; as well as developing a depth of awareness of oneself and of others
- **Application and Synthesis** – refers to continued refinement of practical, creative and critical thinking skills through understanding of systems and embracing one’s agency

Through advising, mentorship and curricular experiences, the faculty applies a **humanistic approach** to support students in their personal and professional growth toward becoming an entry-level occupational therapist. Students are also taught the value and potential of every human being and their capacity to self-determine.

Admission to the Program

The high school student applying for admission to the Occupational Therapy program should present four years of mathematics and four years of science. The general Quinnipiac University requirements for admissions must be met. All students applying for admission are strongly encouraged to have 10–20 hours of observation in occupational therapy. The department is prepared to provide reasonable accommodations for students who have special needs or challenges.

Transfer Students

The Occupational Therapy department has procedures in place for transfer admission into the Dual-Degree Bachelor of Science/Master of Occupational Therapy program. Acceptance as a transfer into the BS/MOT program is on a *space-available basis only*. When the number of qualified applicants exceeds the number of available slots, prospective students will be evaluated and ranked. *A student with a prior history of dismissal from any of the programs within the Occupational Therapy department is ineligible for transfer admission.* Additional information is available upon request from Program Director Courtney Richards at courtney.richards@quinnipiac.edu; 203-582-8418 or Professor Deanna Proulx-Sepelak at deanna.proulx-sepelak@quinnipiac.edu (Deanna.Proulx-Sepelak@quinnipiac.edu); 203-582-8675.

Additional Program Costs

As a clinical education program, the BS/MOT dual degree major requires some expenses that go beyond standard university tuition and fees:

- Clinical/Fieldwork Education Travel** – Students are responsible for all expenses (gas, parking, maintenance) related to transportation to get to a fieldwork site. This includes private transportation, public transportation, and air travel as necessary. **Cost: variable**

- b. **Immunizations** – Consistent with the School of Health Sciences policy, all students must have a full battery of immunizations and in some cases titer affirmation of immunity for common diseases including but not limited to: MMR, HepB, varicella, polio, TDAP, TB and influenza. These must be documented prior to the start of clinical experiences during the sophomore year and must be maintained through the undergraduate education. **Cost: variable (please check with your insurance carrier)**
- c. **Background Check** – All students must undergo an initial background check prior to the start of any clinical/fieldwork experience. Students in the BS/MOT program are required to have a background check prior to the start of the clinical portion of the curriculum in Junior year and again before beginning Level II fieldwork.
- Initial background check cost is **\$63** for all domestic addresses for the past 7 years or **\$158** for students who have resided in **New York state** in the last 7 years due to NY state surcharge.
 - Some clinical fieldwork sites may require an additional yearly background recheck. **Cost: \$32 per annual recheck**
- d. **Drug Screening** – Drug screenings may be required and are dependent upon individual fieldwork site requirements. **Cost: \$42.25**
- e. **Liability Insurance** – All students have liability insurance coverage through the university, free of charge, while performing required clinical activity. Students may choose to purchase additional coverage at their own expense.
- f. **EXXAT and APPROVE** – FOR THOSE PROGRAMS USING EXXAT ONLY. Students enrolled in professional programs must enroll in EXXAT and APPROVE.
- EXXAT is the clinical tracking and assessment program used by the School of Health Sciences. **Cost: one-time payment of \$150 per student for the BS/MOT major (students are responsible for this cost).**
 - APPROVE is the program within EXXAT that tracks all student health and safety records, provides documentation to prospective clinical sites, and provides notification of impending expiration dates. **Cost: \$35 for first year, \$10 per year thereafter**
- g. **Professional Association Membership** – All occupational therapy students are required to purchase a student membership from the American Occupational Therapy Association (AOTA). The cost of the student membership is **\$75 per year**. Students have full access to all of the resources as part of this membership including journal articles, videos, and other class and professional learning materials needed for program completion.
- h. **Certification Examination Costs** – All occupational therapy students upon successful completion of the academic and fieldwork requirements of the BS/MOT program must take a certification examination in order to practice as a registered occupational therapist. This is given by the National Board of Certification of Occupational Therapy (NBCOT) and **costs \$555.00 (2021 cost)** to take the examination.

The Quinnipiac Dual-Degree BS/MOT program is accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA). The ACOTE address is:

c/o Accreditation Department
 American Occupational Therapy Association
 6116 Executive Boulevard, Suite 200
 North Bethesda, MD 20852-4929
 Phone: 301-652-6611 (ext. 2914)
 Fax: 301-652-1417

Email: accred@aota.org

Website: [acoteonline.org \(https://acoteonline.org/\)](https://acoteonline.org/)

Accreditation

The combined Bachelor of Science/Master of Occupational Therapy program at Quinnipiac University is an entry-level master's degree program accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA), located at 4720 Montgomery Lane, Suite 200, Bethesda, MD 20814-3449. ACOTE's telephone number c/o AOTA is 301-652-AOTA, and its web address is [acoteonline.org \(http://www.acoteonline.org\)](http://www.acoteonline.org). Graduates of the occupational therapy program are eligible to sit for the NBCOT (National Board for Certification in Occupational Therapy) exam. After successful completion of the exam, you will be an Occupational Therapist, Registered (OTR). All states and jurisdictions require graduation from an ACOTE-accredited occupational therapy program and passing the NBCOT exam as a requirement for state licensure.

State-by-State Occupational Therapy Licensure

All 50 states and the jurisdictions of Washington, D.C.; Guam; and Puerto Rico have licensure laws for occupational therapists. The American Occupational Therapy Association (AOTA) website provides links to state regulations regarding qualifications and licensure, continuing competency requirements, regulations, supervision and telehealth.

NBCOT offers an interactive US map with links to each state's OT State Regulatory Board Contact List and AOTA links to each state's licensure requirements.

AOTA's Student Guide to Registration and Licensure (<https://www.aota.org/publications/student-articles/career-advice/virtual-tour/>) offers a self-directed "tour" for graduates seeking information on the NBCOT exam and obtaining state licensure.

Quinnipiac University complies with the administrative requirements for maintaining accreditation of the Dual-Degree BS/MOT program.

Occupational Therapy (OT)

OT 101. Foundations of Occupational Therapy. 2 Credits.

This course provides students with the foundations of occupational therapy practice including its philosophical and historical origins, as well as its core beliefs and principles. The course also presents the various occupational therapy practice settings—both traditional and emerging—and highlights how the foundations of OT practice are threaded across settings.

Offered: Every year, Fall and Spring

OT 201. Occupation, Health, Participation. 2 Credits.

This course introduces the concept of occupation as central to the practice of occupational therapy. Emphasis is on the relationship between occupation and health. Using methods of inquiry, students gain a deeper understanding of occupational performance and its determinants from a person-centered to a population- and institution-centered perspective. Theoretical models focused on occupations are explored and applied to assessing and enhancing occupational performance.

Offered: Every year, Fall

OT 214. Professionalism in Occupational Therapy Practice. 2 Credits.

This course serves as a bridge from students' general education to the professional phase of the OT curriculum. Students explore features of contemporary occupational therapy practice, such as client-centeredness and evidence-based practice, as foundations to professionalism. Students integrate Quinnipiac essential learning proficiencies into the context of occupational therapy practice. Finally, the course helps students to internalize the values of professionalism as keys to being an effective change agent.

Offered: Every year, Spring

OT 322. Functional Anatomy and Kinesiology I. 3 Credits.

This course is a comprehensive, two-part series designed to provide students with foundational expertise in human biomechanics. Students examine the musculoskeletal system in conjunction with principles of kinetics and kinematics as the basis of practice in physical rehabilitation. The course includes a corequisite laboratory to develop competency in basic biomechanical safety and assessment (goniometry and manual muscle testing). The series culminates by merging all aspects of human movement as the basis for engaging in everyday occupational activities.

Prerequisites: Take BIO 211, BIO 212, PHY 101.

Offered: Every year, Fall

OT 322L. Functional Anatomy and Kinesiology Lab I. 1 Credit.

This lab, which accompanies OT 322, provides the opportunity to learn in the Human Anatomy Lab, Clinical Skills Lab, Rehabilitation Science Lab and the Model Apartment as students develop proficiency with basic biomechanical safety and assessment (goniometry and manual muscle testing). This variety of laboratory settings serves to enhance content delivered in the classroom; students are guided to first visualize human anatomy via donor dissection and then apply that learning in the simulated clinical settings. Students are alternately scheduled among spaces weekly and in accordance with progression of region in the human body. (2 lab hrs.)

Prerequisites: Take BIO 211, BIO 212, PHY 101.

Offered: Every year, Fall

OT 323. Functional Anatomy and Kinesiology II. 3 Credits.

This course is part two of a comprehensive series designed to provide students with foundational expertise in human biomechanics. Students continue their examination of the musculoskeletal system in conjunction with principles of kinetics and kinematics as the basis of practice in physical rehabilitation. The series culminates by merging all aspects of human movement as the basis for engaging in everyday occupational activities.

Prerequisites: Take OT 322.

Offered: Every year, Spring

OT 323L. Functional Anatomy and Kinesiology Lab II. 1 Credit.

This lab, which accompanies OT 323, provides an opportunity to learn in the Human Anatomy Lab, Clinical Skills Lab, Rehabilitation Science Lab and the Model Apartment as students develop proficiency with basic biomechanical safety and assessment (goniometry and manual muscle testing). This variety of laboratory settings enhances content delivered in the classroom. Students are guided to first visualize human anatomy via donor dissection and then apply that learning in the simulated clinical settings. Students are alternately scheduled among spaces weekly and in accordance with progression of region in the human body. (2 lab hrs.)

Prerequisites: Take OT 322L.

Offered: Every year, Spring

OT 325. Principles of Human Development and Occupation. 3 Credits.

This course explores normal development and its impact on age appropriate occupations. The age span is from conception through early adulthood. The course provides a foundation for evaluation and intervention in human occupation.

Offered: Every year, Fall and Spring

OT 326. Principles of Human Development/Older Adults. 3 Credits.

This course builds on the developmental concepts from OT 325 to explore normal development and its impact on age appropriate occupations. The age span is from early to late adulthood. The course provides a foundation for evaluation and intervention in human occupation as well as a foundation in performance patterns, skills and context.

Offered: Every year, Fall and Spring

OT 333. Functional Neuroscience I. 3 Credits.

This course provides a comprehensive study of neuroanatomy including the structures, functions and physiology of neural systems that are key to normal human health and function. The course provides a strong foundation for future study on neural substrates of health conditions and occupational performance. The course also introduces basic screening procedures to identify neurobehavioral dysfunctions.

Offered: Every year, Fall

OT 333L. Functional Neuroscience I Lab. 1 Credit.

This course supplements OT 333 Functional Neuroscience I lecture and provides a comprehensive study of neuroanatomy including the structures, functions and physiology of neural systems that are key to normal human health and function. The course also introduces basic screening procedures to identify neurobehavioral dysfunctions.

Offered: Every year, Fall

OT 334. Functional Neuroscience II. 2 Credits.

This course builds on functional neuroanatomy as it examines the interrelationships of neuroanatomical structures, subsystems and neurophysiologic processes involved in human behaviors, which are the foundation for occupational performance. Specifically, students learn the neural substrates and mechanisms of motor behaviors, sensory-perception, language, attention, memory and learning. The course continues to introduce basic screening procedures to identify neurobehavioral dysfunctions.

Offered: Every year, Spring

Occupational Therapy (OTM)

OTM 501. OT Theory. 3 Credits.

This course explores how occupations influence health and well-being from a historical, developmental, and evidence-based perspective. Current and emerging occupation-based models are analyzed and applied as theoretical foundations in the promotion of health, prevention of disease, and management of occupational disruptions across the life span. Complementary healthcare models and current global social political issues are highlighted.

Offered: Every year, Fall

OTM 502L. OT Service Learning. 1 Credit.

This course applies the concepts of observation and therapeutic use of self to a community setting where the students will observe and conduct an applied activity analysis of the clients/community and/or the population in order to design service projects that meet the occupational needs of those being served in the setting. Application of context variable analysis and service provision in a meaningful occupation will provide a natural experience of learning about human occupations.

Offered: Every year, Fall

OTM 503. OT Practice Framework and Professional Reasoning. 2 Credits.

This course explores the vocabulary of the profession, The Occupational Therapy Practice Framework, and links the terminology to knowledge and skills in the identification and analysis of occupation in context, personal factors and occupational performance and the application of clinical reasoning to the occupational therapy process.

Offered: Every year, Fall

OTM 505. Research Methods and Evidence-Based Practice. 3 Credits.

This course addresses research fundamentals in the practice of occupational therapy. The course examines research epistemology, methods, research designs, and data analysis in occupational therapy research. Levels of evidence are addressed and applied to decisions in occupational therapy interventions. Students gain experience developing research procedures, critically analyzing data, and identifying ethical issues involved in developing a research study.

Offered: Every year, Fall

OTM 520. OT Mental Health & Psychosocial Practice. 3 Credits.

This course provides a comprehensive overview of OT's role for children and youth with mental health and psychosocial needs. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Psychological and OT theories guide the student's learning of the OT process within community-based and institutional settings across the continuum of service delivery. The inclusion of documentation, therapeutic use of self and evidence-based practice are emphasized

Offered: Every year, Spring

OTM 520L. OT Mental Health and Psychosocial Practice Lab. 1 Credit.

This course builds upon concepts from OTM 520 highlighting OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups, and organizations. Students will practice assessments and evidence-based intervention modalities for various mental health conditions across the life span. Application of theoretical models and frames of reference will be highlighted. Additionally, students will enhance observation skills needed for documentation and practice verbal interventions related to therapeutic modes.

Offered: Every year, Spring

OTM 521. OT in Mental Health & Psychosocial Practice II. 3 Credits.

This course highlights OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. OT, psychosocial, & group theories, as well as, group interventions are highlighted. Related skills such as documentation, therapeutic use of self and evidence-based practice are emphasized.

Offered: Every year, Fall

OTM 521F. OT in Mental Health & Psychosocial Practice II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the mental health and psychosocial populations across the lifespan; it will allow the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students will also have the opportunity to observe and report on the variety of assessment and intervention tools utilized across a continuum of service delivery. Students will develop an appreciation for the frames of reference used in the models of practice, as a guide to the evaluation and intervention process.

Offered: Every year, Fall

OTM 521L. OT in Mental Health & Psychosocial Practice II Lab. 1 Credit.

This lab builds upon concepts from OT 521 highlighting OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Group theory and evidence-based group interventions are practiced to promote the therapeutic use of self. A culminating group protocol assignment integrates theory, practice, and research.

Offered: Every year, Fall

OTM 522. OT For Children and Youth I. 6 Credits.

This course provides a comprehensive overview of pediatric health conditions as they alter function and participation, environmental factors as they relate to barriers for occupational performance, and evaluation and interventions used by occupational therapy practitioners for children and youth. Traditional theoretical models/frames of reference and current evidence will be utilized as a basis for the clinical/professional reasoning process applicable to the OT process for children and youth so that facilitators and barriers to occupational performance can be identified.

Documentation related to contextual philosophies, procedures, and regulations dictating pediatric practice will be highlighted throughout the course.

Offered: Every year, Spring

OTM 522F. OT For Children & Youth I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the children/youth population; it will allow the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students will also have the opportunity to observe and report on the variety of assessment and intervention tools utilized within the models of healthcare for the children and youth population.

Offered: Every year, Spring

OTM 522L. OT For Children & Youth I Lab. 1 Credit.

This lab course complements the OTM 522 and OTM 522F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for children and youth. The safe, efficient, and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring

OTM 523. OT for Children & Youth II. 6 Credits.

This course provides an in-depth analysis of sensory processing and integration with a focus on clinical reasoning to understand and appreciate the impact of these processes on individuals, populations and community environments. Opportunities are provided to learn specific intervention strategies for individuals, as well a systems approach emphasizing the importance of educating the team of people who support these individuals in varying contexts, to facilitate functional participation and engagement in purposeful and productive activities. Documentation within these various systems will be illustrated, discussed, and produced.

Offered: Every year, Fall

- OTM 523F. OT for Children & Youth II Fieldwork.** **1 Credit.**
This course provides structured fieldwork observation in sensory integration settings and allows the student to observe and explore the intervention process utilized in these frames of reference. Students will also have the opportunity to see, observe and report on the variety of intervention strategies utilized within the various models such as healthcare, education, community and social systems. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the sensory integration intervention process.
Offered: Every year, Fall
- OTM 523L. OT for Children & Youth II Lab.** **1 Credit.**
This lab integrates the advanced intervention techniques / specialized interventions used by occupational therapy practitioners for individuals and populations with sensory integrative and processing difficulties, developmental disabilities, and brain-based behavioral challenges. Opportunities will be provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.
Offered: Every year, Fall
- OTM 524. OT for Adults/Olders Adults I.** **6 Credits.**
This course provides a comprehensive overview of various conditions that impact health and occupational performance among adults and older adult populations, with emphasis given to understanding common diagnoses encountered and assessments and interventions used by occupational therapy practitioners in general medicine/surgery, neurology, and orthopedics. This course will integrate the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process. Documentation will be highlighted throughout the course including for traditional systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy will be incorporated.
Offered: Every year, Summer
- OTM 524F. OT for Adults/Older Adults I Fieldwork.** **1 Credit.**
This course provides structured fieldwork observation in various settings working with the adult population; it will allow the student to observe and explore the evaluation and treatment process utilized in occupational therapy with adults and older adults. Students will develop an appreciation for the frame of reference used in the models of practice as a guide to evaluation and treatment.
Offered: Every year, Summer
- OTM 524L. OT for Adults/Older Adults I Lab.** **1 Credit.**
This lab course complements the OTM 524 and OTM 524F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. The safe, efficient and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.
Offered: Every year, Summer
- OTM 525. OT for Adults/Older Adults II.** **6 Credits.**
This course provides a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation, oncology and geriatrics/gerontology. This course will integrate the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process in neurorehabilitation practice. Documentation will be highlighted throughout the course for traditional and emerging systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy will be incorporated.
Offered: Every year, Spring
- OTM 525F. OT for Adults/Older Adults II Fieldwork.** **1 Credit.**
This course provides structured fieldwork observation in neuro-rehabilitative settings and allows the student to observe and explore the intervention process utilized in these frames of reference. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the neurorehabilitation intervention process.
Offered: Every year, Spring
- OTM 525L. OT for Adults/Older Adults II Lab.** **1 Credit.**
This lab integrates the advanced intervention techniques discussed and described in the lecture portion of this class. Opportunities will be provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.
Offered: Every year, Spring
- OTM 526. Technology in OT Practice.** **2 Credits.**
This course provides students with exposure to advanced intervention techniques related to assistive technology in occupational therapy. The course focuses on application of assistive technology across the lifespan, and thus emphasizes use of both interventions in a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning process used to select and evaluate interventions in education, home, work, leisure and community practice domains.
Offered: Every year, Summer
- OTM 527. Work & Ergonomics.** **3 Credits.**
This course focuses on the occupation of work applied across the lifespan and to various practice contexts and worker challenges. The course addresses topics related to the occupation of work, including employment acquisition, job performance, volunteerism, and retirement. Work tasks and work demands are analyzed relative to physical, cognitive, social, organizational, and environmental factors that impact job performance. Modifications that optimize worker functioning are examined as prevention and as rehabilitation.
Offered: Every year, Spring
- OTM 528L. Biomechanical Interventions Lab.** **1 Credit.**
Students experience hands on learning in safe and effective application of biomechanically-oriented interventions and principles for splinting, physical agent modalities, and therapeutic exercise programs. Specifically, students evaluate and fabricate splints for specific diagnoses and discuss the role of splinting as part of an overall intervention plan. Students are introduced to various prosthetic devices and the role of occupational therapy during pre-prosthetic and prosthetic training. Students demonstrate the ability to use and apply various physical agent modalities to intervention planning assignments.
Offered: Every year, Summer
- OTM 530. Administration and Management of System.** **3 Credits.**
This class introduces students to the daily management functions of an occupational therapy department including planning, organizing, directing, controlling, and supervision of occupational therapy assistants and other department personnel. The course integrates students' knowledge of interventions with information related to the delivery of occupational therapy services. Topics include managed care, quality assurance, leadership, regulatory agencies, models of practice, ethics, and consultation. Students gain hands-on experience with budgeting, marketing, program evaluation, and ethical problem-solving in administration.
Offered: Every year, Spring

OTM 560. Special Topics in OT.**2 Credits.**

Students will delve deeper into the specialized knowledge of the profession with evidence-based, occupation-centered practice as its core subject. Exploration of specialized roles beyond that of a direct provider of skilled services, such as educator, case manager, and consultant at the systems level. Students will also learn various modes of care delivery and systems of care and evaluate the outcomes of such modes.

Offered: Every year, Spring**OTM 562. Professional Development.****2 Credits.**

This course focuses on the current issues related to transitioning from student to professional roles and responsibilities. The course emphasizes linking theory to practice, self-analysis and reflection upon academic experience, and relating those to different facets of clinical and professional reasoning in practice. Topics include updates in the OT profession with a focus on official documents; emerging roles of OT in practice; credentialing, licensure, and continuing competence/professional development. Contemporary issues of practice such as access to services, advocacy, and inter-/intra-professional collaboration will be explored.

Offered: Every year, Spring**OTM 570. Scholarly Project I.****1 Credit.**

This course is the first of a series of capstone seminars designed to assist the students in understanding the elements and process of participating in the research process. Under faculty mentorship, students are expected to complete a comprehensive literature review related to their topic of study.

Offered: Every year, Summer**OTM 571. Scholarly Project II.****1 Credit.**

Under faculty mentorship, students in small groups participate in the design and implementation of entry-level research studies by analyzing and interpreting the professional literature, and beginning to work on their spring capstone project.

Prerequisites: TAKE OTM 570**Offered:** Every year, Fall**OTM 572. Scholarly Project III.****1 Credit.**

This seminar course is designed to facilitate the completion of the students Capstone Project and promote an in-depth reflection on the program learning outcomes. Final outcome of the seminar is a scholarly manuscript and public dissemination of the results of the completed project.

Prerequisites: TAKE OTM 570 OTM 571**Offered:** Every year, Spring**OTM 580. Fieldwork Level IIA.****6 Credits.**

This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the first of two required level II experiences.

Offered: Every year, Summer**OTM 581. Fieldwork Level IIB.****6 Credits.**

This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the second of two required level II experiences and is different in setting/population from OTM 580.

Prerequisites: TAKE OTM 580**Offered:** Every year, Fall

Dual-Degree BS in Health Science Studies/Doctor of Occupational Therapy

Program Contact: Susan M. Higgins (Susan.Higgins@quinnipiac.edu)
203-582-7543

Overview

Our six-year, entry-level, Dual-Degree Bachelor of Science/Doctor of Occupational Therapy program prepares students with a breadth and depth of knowledge and skills in the profession to practice autonomously or collaboratively at entry level, within various healthcare, educational and social systems.

Our curriculum consists of four overlapping tiers: University Curriculum and Professional Foundations, Professional Practice Component, Fieldwork Component and Doctoral Capstone. Upon successful completion of the fourth year, the BS in Health Science Studies is awarded.

Tier 1: University Curriculum and Professional Foundations. During the first two years, students take most of their University Curriculum (UC) courses. Concurrently, students take:

- prerequisite science courses for the OT program (PHY 101+PHY 101L, BIO 211+BIO 211L, BIO 212+BIO 212L, and MA 275). A grade of C+ or better is required for each of the prerequisites.
- OT foundational courses (OT 101, OT 201, and OT 214). A grade of B- or better is required.

Before the junior year, students must satisfy the following requirements:

- Complete all OT foundation courses with a grade of B- or better
- Complete all prerequisites with a GPA of 3.0 or better
- Attain an overall GPA of 3.2 or better

When a student is granted transfer credits in their prerequisite courses at another four-year institution, the grade will be factored into the required science GPA of 3.0. The program does not accept AP credits toward their prerequisites. Failure to meet the cumulative GPA of 3.2 with Quinnipiac University courses only or the science prerequisite GPA of 3.0 by the start of the junior year will result in non-progression into the junior year OT curriculum.

During the junior year, students complete professional foundations in occupational therapy and the health sciences as follows:

- OT 300-level courses. A grade of C+ or better is required.
- Health Science Core and Electives (HSC 200- and 300-level). A grade of B- or better is required for each of the HSC courses.

To progress into the next Tier, students must achieve a semester GPA of 3.2. Failure to meet the GPA requirement may result in program dismissal.

Tier 2: Professional Practice Component. The professional component of the program consists of all occupational therapy courses at 500-level in the senior and the first graduate year. Students must earn a minimum grade of B- in all OT lecture courses and a B+ in all lab and experiential courses (fieldwork, service learning) with a semester GPA of 3.2.

Tier 3: Fieldwork Component and Entry-Level Practice. The goal of Level II Fieldwork is to prepare a student to become an entry-level practitioner. Students will complete one traditional and one non-traditional/role emerging fieldwork experience. All fieldwork Level II experiences must be completed with a "P" (pass) to advance to Tier 4.

Tier 4: Doctoral Capstone Component and In-Depth Knowledge. Students will complete didactic coursework at 700-level representing advance competencies in occupational therapy. Students must pass a competency exam and submit a portfolio documenting entry-level practice skills and the program learning outcomes prior to their Doctoral Capstone.

Fieldwork Expectations

Students are responsible for transportation to all fieldwork experiences. All students are required to maintain viable health insurance, malpractice insurance, CPR certification and current immunization record according to their fieldwork placement requirements. A fieldwork site may have additional requirements as part of its affiliation agreement such as background checks and site-specific mandatory in-services. Failure to comply with fieldwork requirements may negatively impact a student's ability to participate in fieldwork. The department also requires current membership in the American Occupational Therapy Association.

Capstone Expectations

All students are required to complete a capstone experience (OTD 791) and a capstone project (OTD 790) in the final semester. All fieldwork and didactic requirements must be satisfactorily fulfilled, and a student must pass a comprehensive competency exam prior to matriculating into OTD 790 and OTD 791.

- **OTD 791 CAPSTONE EXPERIENCE:** The capstone experience is a mentored process by an individual with demonstrated expertise in the student's area of interest. The capstone experience may occur in a traditional clinical site or non-traditional/non-clinical site that is appropriate for the implementation of the capstone project and the integration of learning. Students are responsible for transportation to all capstone experiences. All students are required to maintain viable health insurance, malpractice insurance, CPR certification and current immunization record according to their capstone placements. A capstone site may have additional requirements as part of its affiliation agreement or memorandum of understanding such as background checks and site-specific mandatory in-services. Failure to comply with capstone experiential requirements may negatively impact a student's ability to participate.
- **OTD 790 CAPSTONE PROJECT:** The doctoral capstone project is an opportunity for students to demonstrate in-depth knowledge in occupational therapy and the attainment of all program learning outcomes. The project concludes in the production of a scholarly manuscript and oral presentation to the occupational therapy practice community.

Dual-Degree BS/OTD Curriculum

The curriculum for the professional courses in the program is reviewed regularly and is subject to modification in both content and credit as deemed necessary to maintain a high-quality educational experience and keep current with best practices in the profession.

Course	Title	Credits
First Year		
Fall Semester		
BIO 101 & 101L	General Biology I and General Biology I Lab	4
EN 101	Introduction to Academic Reading and Writing	3
MA 275	Biostatistics	3
FYS 101	First-Year Seminar	3
OT 101	Foundations of Occupational Therapy	2
Credits		15
Spring Semester		
BIO 102 & 102L	General Biology II and General Biology Lab II	4
EN 102	Academic Writing and Research	3
PHY 101 & 101L	Elements of Physics and Elements of Physics Lab	4

¹ Doctoral Year 3 - Spring: OTD 754, OTD 762, OTD 764 are courses that will be offered in a 7-week format during Spring A.

² Doctoral Year 4 - Summer: OTD 790 and OTD 791 are experiential components that will begin in Spring B and will conclude in Summer I.

Student Learning Outcomes

Upon completion of the **baccalaureate phase** of the Dual-Degree Bachelor of Science/Doctor of Occupational Therapy (BS/OTD) program, students will demonstrate the following competencies:

- Occupation:** Articulate the unique nature and significance of human occupation to personal identity, health and participation.
- Professionalism and Leadership Development:** Demonstrate professionalism and attributes of leadership in the educational context.
- Inclusive Excellence and Diversity:** Recognize the significance of diversity and intersectionality of identities and opportunities for meaningful occupations among individuals, groups and populations.
- Professional Reasoning:** Identify the occupational therapy process and recognize professional reasoning in the delivery of the OT process.
- Evidence-Based Practice:** Identify and critique evidence that informs OT practice and service delivery.
- Roles and Systems:** Describe the role of OT in intra/interprofessional teams in the broad health, educational and social systems.

Upon completion of the graduate phase of the Doctor of Occupational Therapy program, students will demonstrate the following competencies:

- Synthesis of Occupation:** Synthesize and articulate in-depth knowledge of occupation with health and participation to guide the practice of occupational therapy.
- Professionalism and Leadership Development:** Demonstrate professionalism, competent role performance and leadership.
- Advocacy:** Advocate for the distinct value of occupational therapy for individuals, groups and populations.
- Professional Reasoning:** Apply occupation and client-centered principles and professional reasoning to produce positive outcomes with individuals, communities and populations within broader systems.
- Knowledge Translation and Evidence-Based Practice:** Evaluate, synthesize, translate and contribute to evidence that informs practice and supports OT service.
- Systems and Practice Contexts:** Demonstrate in-depth knowledge of systems and work collaboratively in and lead intra/interprofessional teams within traditional and non-traditional/role emerging settings.

Mission Statement

The mission of the OTD program is to provide high-quality education to develop occupational therapy practitioner-scholars who possess broad-based knowledge and skills to influence meaningful change in the health and functioning of individuals, populations and communities. The program aims to graduate entry-level occupational therapists who possess in-depth knowledge and skills in advocacy, occupational therapy process, systems, professional leadership, evidence-based practice and in the synthesis of occupation, health and participation.

Philosophy

The Department of Occupational Therapy views the Entry-Level Doctoral Educational program with an occupational and transformational-humanistic lens. This approach acknowledges that each student has a pre-existing occupational identity and possesses varying abilities and experiences, which are brought to the University environment. "Students are viewed as occupational beings who are in dynamic transaction with the learning context and the teaching-learning process" (AOTA Philosophy of Occupational Therapy Education, 2018). The transformational philosophy of education assumes that students can be shaped and transformed through the questioning, analysis and re-examination of worldviews, perceptions and prior belief systems utilizing a humanistic and critical approach to solving problems (Mezirow, 1997). Utilizing community-based, experiential learning; professional interactions; and opportunities for creative flow experiences, student's perceptions, skills and cognitive processes are enhanced and transformed.

Through mentorship and curricular experiences, faculty members apply a transformational humanistic approach to support doctoral students in their personal and professional growth towards becoming an entry-level occupational therapist and leader. Students are also taught the value and potential of every human being (including themselves) in their capacity for self-determination and need to participate in desired occupations for health, wellness and inclusion as social beings.

The department conceptualizes both development and transformation not merely as a sequential ontological event but rather as a complex iterative, heterarchical and hierarchical set of processes that are situated in various contexts. Creative, high impact-transformation is the basis of curriculum content while developmental transformation is

reflected in how the courses are arranged in overlapping phases or tiers using a modified version of Fink's Taxonomy of Significant Learning:

- Foundational Knowledge (Caring and Learning to Learn) – refers to understanding, remembering information and ideas; developing interests and professional values; and self-directing one's learning.
- Application and Integration (Learning About Oneself/Others) – refers to development of practical, creative and critical thinking skills by connecting ideas/concepts, events and realms of life, as well as in-depth exploration and integration of awareness of oneself and of others.
- Application and Synthesis – refers to continued refinement of practical, creative and critical thinking and reflection through the understanding of systems and embracing one's agency in decision-making on complex issues affecting individuals, communities and society.

Admission to the Program

The high school student applying for admission to the Occupational Therapy program should present four years of mathematics and four years of science. The general Quinnipiac University requirements for admissions must be met. All students applying for admission are strongly encouraged to have 10-20 hours of observation in occupational therapy. The department is prepared to provide reasonable accommodations for students who have special needs or challenges.

Transfer Students

The Occupational Therapy department has procedures in place for transfer admission into the Dual-Degree Bachelor of Science/Doctor of Occupational Therapy program. This includes a review of the student's academic aptitude and past experiences of service and scholarly engagement, and an interview. Details of the policies and procedures available upon request.

To be eligible, students must have:

- A minimum of 30 college credits earned
- A minimum overall GPA of 3.0
- Completed the following prerequisites with a minimum of C+ and an overall prerequisite GPA of 3.0: BIO 101+BIO 101L, BIO 102+BIO 102L, BIO 211+BIO 211L, BIO 212+BIO 212L, PHY 101+PHY 101L, MA 275
- A minimum of 30 hours of clinical observation or relevant service to groups, populations or organizations that may benefit from occupational therapy

Acceptance as a transfer into the BS/OTD program is on **space-available basis only**. When the number of qualified applicants exceeds the number of available slots, prospective students will be evaluated and ranked. **A student with a prior history of dismissal from any of the programs within the Occupational Therapy department is ineligible for transfer admission.**

Accreditation

The Entry-Level Doctor of Occupational Therapy (OTD) program at Quinnipiac University has been granted Candidacy Status by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA). The ACOTE address is:

c/o Accreditation Department
American Occupational Therapy Association

6116 Executive Boulevard, Suite 200
North Bethesda, MD 20852-4929
Phone: 301-652-6611 (ext. 2914)
Fax: 301-652-1417
Email: accred@aota.org
Website: [acoteonline.org \(https://acoteonline.org/\)](https://acoteonline.org/)

As a program with Candidacy Status, Quinnipiac University may admit students into the Entry-Level OTD according to the approved timeline and may proceed to the Preaccreditation Review step of the accreditation process. The program must have a preaccreditation review, complete an on-site evaluation and be granted Accreditation Status before its graduates will be eligible to sit for the national certification examination for the occupational therapist administered by the National Board for Certification in Occupational Therapy (NBCOT). After successful completion of this exam, the individual will be an Occupational Therapist, Registered (OTR). All states and jurisdictions require graduation from an ACOTE-accredited occupational therapy program and passing the NBCOT exam is a requirement for state licensure. Note that a felony conviction may affect a graduate's ability to sit for the NBCOT certification examination or attain state licensure.

The American Occupational Therapy Association (AOTA) website provides links to state regulations regarding qualifications and licensure, including continuing competency requirements, scope of practice by state and a list of the states that offer temporary licensure to graduates from ACOTE-accredited programs who have not yet passed the NBCOT exam.

Program Sponsorship

Quinnipiac University assumes primary responsibility for appointment of faculty, admission of students, and curriculum planning for the Entry-Level OTD program. This responsibility includes the delivery of course content, satisfactory completion of the educational program, and granting of the degree. The university also is responsible for the coordination of classroom teaching and supervised fieldwork practice and for providing assurance that the practice activities assigned to students in a fieldwork setting are appropriate to the program.

Quinnipiac University complies with the administrative requirements for maintaining accreditation of the Entry-Level OTD program.

Occupational Therapy Doctoral (OTD)

OTD 500. Philosophy and Science of Occupational Therapy. 2 Credits.

This course presents the philosophical, historical, and scientific foundations of the occupational therapy profession and their relevance to contemporary practice. From a philosophical perspective, the course unpacks the epistemology (knowledge), ontology (reality/view) and axiology (actions/methods) of the profession. The evolution of practice throughout history and current and emerging trends in practice is analyzed with respect to meeting societal needs.

Offered: Every year, Summer

OTD 501. Occupational Therapy Theory. 3 Credits.

This course explores how occupations influence health and well-being from a historical, developmental, and evidence-based perspective. Current and emerging occupation-based models are analyzed and applied as theoretical foundations in the promotion of health, prevention of disease, and management of occupational disruptions across the life span. Complementary healthcare models and current global social political issues are highlighted.

Offered: Every year, Fall

OTD 502L. OT Service Learning.**1 Credit.**

This course applies the concepts of observation and therapeutic use of self to a community setting where the students observe and conduct and applied activity analysis of the clients/community and/or the population in order to design service projects that meet the occupational needs of those being served in the setting. Application of context variable analysis and service provision in a meaningful occupation provides a natural experience of learning about human occupations.

Offered: Every year, Fall**OTD 503. OT Practice Framework & Professional Reasoning.****2 Credits.**

This course explores the profession's domain and scope through the Occupational Therapy Practice Framework and links the terminology to the analysis of occupation and occupational performance in context, as well as the various forms of professional reasoning used in the occupational therapy process.

Offered: Every year, Fall**OTD 505. Development of Human Occupations Seminar.****2 Credits.**

This course explores typical human development and more specifically, occupational development from conception through early (emerging) adulthood. In this course, traditional theories of development are explored along with more contemporary and occupation-focused theories. Each of these sets of theories will contribute to an understanding of how biologic capacity, environmental, and cultural factors influence occupational development.

Offered: Every year, Summer**OTD 510. Clinical Anatomy in Occupational Therapy.****3 Credits.**

This course provides a comprehensive study of the musculoskeletal system and the peripheral nervous system with emphasis on their correlation to health conditions and occupational dysfunctions as well as the biomechanical basis of occupational performance. This course has a corresponding dissection and palpation lab.

Offered: Every year, Summer**OTD 510L. Clinical Anatomy in OT Practice Lab.****1 Credit.**

This laboratory course involves dissection, visual examination, and surface palpation as part of a comprehensive study of the human anatomy. Emphasis is in the thorough examination of the musculoskeletal system and select components of the nervous system relative to the anatomical and biomechanical bases of occupational performance.

Offered: Every year, Summer**OTD 511. Applied Kinesiology.****2 Credits.**

This course integrates information from Human Anatomy with principles of biomechanics and their application to occupational therapy practice. Emphasis is on the biomechanical analysis of human occupations and performance. Key concepts in clinical kinesiology are presented as essential elements to the OT process.

Offered: Every year, Fall**OTD 511L. Applied Kinesiology Lab.****1 Credit.**

This laboratory course provides a comprehensive review of fundamentals of musculoskeletal assessment relevant to occupational therapy practice. This course applies and integrates the concepts learned in the lecture course, OT 521.

Offered: Every year, Fall**OTD 512. Applied Neuroscience in OT Practice.****4 Credits.**

This course provides a comprehensive study of neuroanatomy including the structures, functions, and interrelationships of neural subsystems that are key to occupational performance. Students apply their understanding of these neural substrates including motor behaviors, sensory-perception, emotional processing, cognition, and learning, to the analysis of human occupations and dysfunctions in occupational performance.

Prerequisites: Take OTD 510**Offered:** Every year, Fall**OTD 512L. Applied Neuroscience in OT Practice Lab.****1 Credit.**

This course provides a comprehensive study of neuroanatomy including the structures, functions, and interrelationships of neural subsystems that are key to occupational performance. Students apply their understanding of these neural substrates including motor behaviors, sensory-perception, emotional processing, cognition, and learning, to the analysis of human occupations and dysfunctions in occupational performance.

Prerequisites: Take OTD 510L**Offered:** Every year, Fall**OTD 515. Research Methods and Evidence-Based Practice.****3 Credits.**

This course addresses research fundamentals in the practice of occupational therapy. The course examines research epistemology, methods, research designs, and data analysis in occupational therapy research. Levels of evidence are addressed and applied to decisions in occupational therapy interventions. Students gain experience developing research procedures, critically analyzing data, and identifying ethical issues involved in developing a research study.

Offered: Every year, Fall**OTD 520. Occupational Therapy Mental Health and Psychosocial Practice I.****3 Credits.**

This course highlights OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Emphasis is on the distinct nature of occupation in promoting mental health, preventing disease, and managing life disruptions. Scientific evidence and theories guide the student's learning of the OT process across the continuum of service delivery.

Offered: Every year, Spring**OTD 520L. Occupational Therapy Mental Health and Psychosocial Practice I Lab.****1 Credit.**

This course builds on concepts from OT 720 highlighting OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Students practice assessments and evidence-based intervention modalities for various mental health conditions across the lifespan. Application of theoretical models and frames of reference are highlighted. Additionally, students enhance observation skills needed for documentation and practice verbal interventions related to therapeutic modes.

Offered: Every year, Spring**OTD 521. OT Mental Health and Psychosocial Practice II.****3 Credits.**

This course highlights OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. OT, psychosocial, & group theories, as well as, group interventions are highlighted. Related skills such as documentation, therapeutic use of self and evidence-based practice are emphasized.

Offered: Every year, Fall

OTD 521F. OT Mental Health and Psychosocial Practice II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the mental health and psychosocial populations across the lifespan. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students have the opportunity to observe and report on the variety of assessment and intervention tools utilized across a continuum of service delivery. Students develop an appreciation for the frames of reference used in the models of practice, as a guide to the evaluation and intervention process.
Offered: Every year, Fall

OTD 521L. OT Mental Health and Psychosocial Practice II Lab. 1 Credit.

This lab builds upon concepts from OT 512 highlighting OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Group theory and evidence-based group interventions are practiced to promote leadership skills and therapeutic use of self. A culminating group protocol assignment integrates theory, practice, and research.
Offered: Every year, Fall

OTD 522. Occupational Therapy for Children and Youth I. 6 Credits.

This course provides a comprehensive overview evaluation and interventions used by occupational therapy practitioners for children and youth. Traditional theoretical models/frames of reference and current evidence is utilized as a basis for the clinical/professional reasoning process applicable to the OT process for children and youth so that facilitators and barriers to occupational performance can be identified. Documentation related to contextual philosophies, procedures and regulations dictating pediatric practice is highlighted throughout the course.

Offered: Every year, Spring and Summer

OTD 522F. Occupational Therapy for Children and Youth I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the children/youth population. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students also have the opportunity to observe and report on the variety of assessment and intervention tools utilized within the models of health care for the children and youth population.

Offered: Every year, Spring and Summer

OTD 522L. Occupational Therapy for Children and Youth I Lab. 1 Credit.

This lab course complements the OT 531 and OT 531F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for children and youth. The safe, efficient, and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring and Summer

OTD 523. Occupational Therapy for Children and Youth II. 6 Credits.

This course focuses on specialized interventions for individuals and populations with sensory integrative and processing difficulties and brain-based behavioral challenges. It integrates the use of the SI frame of reference with previously learned theoretical models and apply best available evidence and clinical/professional reasoning to various systems (e.g., state/federal regulations for early intervention and school-based practice, insurance funding, and community-based health and wellness initiatives). Documentation within these various systems are illustrated, discussed and produced.

Offered: Every year, Fall and Spring

OTD 523F. OT for Children and Youth II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in sensory integration settings and allows the student to observe and explore the intervention process utilized in these frames of reference. Students have the opportunity to see, observe and report on the variety of intervention strategies utilized within the various models such as health care, education, community and social systems. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the sensory integration intervention process.

Offered: Every year, Fall and Spring

OTD 523L. OT for Children and Youth II Lab. 1 Credit.

This lab integrates the advanced intervention techniques/specialized interventions used by occupational therapy practitioners for individuals and populations with sensory integrative and processing difficulties, developmental disabilities and brain-based behavioral challenges. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.

Offered: Every year, Fall and Spring

OTD 524. Occupational Therapy for Adults and Older Adults I. 6 Credits.

This course provides a comprehensive overview of assessments and interventions used by occupational therapy practitioners in general medicine/surgery, neurology and orthopedics. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process. Documentation is highlighted throughout the course including for traditional systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.

Offered: Every year, Spring and Summer

OTD 524F. Occupational Therapy for Adults and Older Adults I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the adult population. It allows the student to observe and explore the evaluation and treatment process utilized in occupational therapy with adults and older adults. Students develop an appreciation for the frame of reference used in the models of practice as a guide to evaluation and treatment.

Offered: Every year, Spring and Summer

OTD 524L. Occupational Therapy for Adults and Older Adults I Lab. 1 Credit.

This lab course complements the OT 532 and OT 532F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. The safe, efficient and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring and Summer

OTD 525. OT for Adults and Older Adults II. 6 Credits.

This course provides a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation, oncology and geriatrics/gerontology. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process in neurorehabilitation practice. Documentation is highlighted throughout the course for traditional and emerging systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.

Offered: Every year, Fall and Spring

- OTD 525F. OT for Adults and Older Adults II Fieldwork. 1 Credit.**
This course provides structured fieldwork observation in neurorehabilitative settings and allows the student to observe and explore the intervention process utilized in these frames of reference. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the neurorehabilitation intervention process.
Offered: Every year, Fall and Spring
- OTD 525L. OT for Adults and Older Adults II Lab. 1 Credit.**
This lab integrates the advanced intervention techniques discussed and described in the lecture portion of this class. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.
Offered: Every year, Fall and Spring
- OTD 526. Technology in OT Practice. 2 Credits.**
This course provides students with opportunities to demonstrate knowledge and apply practice in the use of technology that includes assistive virtual and telehealth technology. The course focuses on application of technology across the lifespan, emphasizing a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning processes in the utilization of technologies in education, home, work, leisure and community practice domains.
Offered: Every year, Summer
- OTD 526L. Technology in OT Practice Lab. 1 Credit.**
This lab provides students with opportunities to practice the design and fabrication and use of technology in practice that includes assistive technology; virtual environments in practice and telehealth technology. This lab must be completed concurrently with OTD 641 the lecture component of Technology in OT Practice.
Offered: Every year, Summer
- OTD 527. Work and Ergonomics. 3 Credits.**
This course focuses on the occupation of work applied across the lifespan and to various practice contexts and worker challenges. The course addresses topics related to the occupation of work, including employment acquisition, job performance, volunteerism, and retirement. Work tasks and work demands are analyzed relative to physical, cognitive, social, organizational, and environmental factors that impact job performance. Modifications that optimize worker functioning are examined as prevention and as rehabilitation.
Offered: Every year, Spring
- OTD 528L. Biomechanical Interventions Lab. 1 Credit.**
This course provides hands on learning in the therapeutic application of orthotics, physical agents and modalities, and exercise programs. Students will develop the skills to evaluate and develop an intervention plan for specific conditions. Students also learn the role of occupational therapy during pre-prosthetic and prosthetic training.
Offered: Every year, Summer
- OTD 530. Administration and Management of Systems. 3 Credits.**
This class introduces students to the systems involved in delivering occupational therapy services in health care, educational and community-based environments. Students examine components of service delivery including external influences, internal processes, communication, reimbursement and measurable outcomes to understand how occupational therapy services are optimized. The course addresses core management functions including planning, organizing, directing and controlling. Students gain hands-on experience with strategic planning, budgeting, marketing, program evaluation and conflict management.
Offered: Every year, Spring
- OTD 531. Leadership and Change. 2 Credits.**
This course addresses the means to become an "agent of change" within the occupational therapy environment using leadership approaches. Leadership theories are addressed and applied to supervision, advocacy, and mentoring. Students self-reflect on leadership and communication styles and strategies to promote effective supervision for groups both internal and external to occupational therapy.
Offered: Every year, Summer
- OTD 580. Fieldwork Level IIA. 6 Credits.**
This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the first of two required level II experiences.
Offered: Every year, Summer
- OTD 581. Fieldwork Level IIB. 6 Credits.**
This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the second of two required level II experiences and is different in setting/population from OTD 580.
Offered: Every year, Fall
- OTD 582. Professional Development. 2 Credits.**
This course focuses on the current issues related to transitioning from student to professional roles and responsibilities. Topics include updates in the OT profession with a focus on official documents; emerging roles of OT in practice; credentialing, licensure and continuing competence/professional development. Contemporary issues of practice such as access to services, advocacy and inter-/intra-professional collaboration are explored.
Offered: Every year, Spring
- OTD 751. Capstone Seminar I - Exploration. 2 Credits.**
This course is the first of a series of capstone seminars designed to assist the students in understanding the elements and process of developing a culminating signature project in the OTD program. Students explore personal interests, opportunities and the social context around topic areas. They develop skills of conducting an environmental scan and needs assessment relative to their project interests. Students identify program evaluation methods and ultimately present a capstone proposal as an initial plan for their capstone project.
Offered: Every year, Fall

OTD 752. Knowledge Translation and Synthesis. 3 Credits.

This course focuses on the assessment, review and utilization of research to inform policy and improve practice. Students actively engage in multiple components of the knowledge translation process including defining the problem, searching for and critically appraising the evidence. Students work in small groups to apply this information to the development of a clinical practice guideline. Competencies acquired in this course are integral to the Capstone process.

Offered: Every year, Spring

OTD 753. Capstone Seminar II - Planning. 2 Credits.

This course is the second of a series of Capstone seminars leading to the Doctoral Capstone Experience and Project. This course is specifically designed to assist the students in finalizing their Doctoral Capstone Project (DCP) proposal based on a needs assessment. Students are expected to complete a comprehensive literature review that serves as justification for the DCP.

Offered: Every year, Summer

OTD 754. Capstone Seminar III - Preparation. 2 Credits.

This course is the third of a series of capstone seminars designed to assist the students in planning their Doctoral Experiential Component. Under faculty mentorship, students design a 14-week experience and project plan that outlines goals and objectives, as well as formal evaluation mechanism. Students write the methods section of the formal capstone project paper.

Offered: Every year, Spring

OTD 760. Principles of Teaching/Learning. 2 Credits.

This course introduces students to the principles of the teaching-learning process to meet the needs of clients, communities, other health providers, and the public. Concepts discussed include health literacy, assessment of learning outcomes, factors which may influence the teaching-learning process, instructional methods, and best practices in clinical and academic teaching.

Offered: Every year, Spring

OTD 762. Health Policy, Law & Advocacy. 2 Credits.

This course prepares students as future leaders of the profession who need an understanding of the political and legal policies impacting occupational therapy, as well as the ethics involved in decision making. The role of the occupational therapist in advocacy and concepts of social justice are explored.

Offered: Every year, Spring

OTD 764. Business Leadership and Entrepreneurship. 2 Credits.

This course provides an overview of business development and entrepreneurship for occupational therapy practitioners within today's health care environment, including public initiatives for health and wellness and prevention for society. Leadership concepts are threaded in the context of a business enterprise.

Offered: Every year, Spring

OTD 790. Doctoral Project Seminar. 1 Credit.

This seminar course is designed to facilitate the completion of the student's Doctoral Capstone Project and promote an in-depth reflection on the program learning outcomes. The seminar runs concurrently with the Doctoral Capstone Experience where specific competencies representing in-depth knowledge of practice are synthesized. The final outcome of the seminar is a scholarly manuscript and public dissemination of the Doctoral Capstone Project.

Offered: Every year, Summer

OTD 791. Doctoral Experience. 2-4 Credits.

The Occupational Therapy Doctoral Experience is a culminating experience in the OT curriculum to develop occupational therapists with skills beyond a generalist level. The experience provides the student with an in-depth learning opportunity in one or more (but not limited to) of the following areas of practice: education, clinical practice skills, advocacy and professional identity, theory development, research, administration, leadership and program and policy development. The experiential component requires a total of 560-640 hours.

Offered: Every year, Summer

Post-Baccalaureate Doctor of Occupational Therapy

Program Contact: Susan M. Higgins (Susan.Higgins@quinnipiac.edu)
203-582-7543

Our Post-Baccalaureate Doctor of Occupational Therapy (OTD) program prepares students with a breadth and depth of knowledge and skills to practice autonomously or collaboratively within various healthcare, educational and social systems. Our curriculum consists of three distinct elements:

- Academics: didactics integrated with laboratory and immersive clinical experiences
- Clinicals: two 12-week, full-time fieldwork experiences designed to prepare students for entry-level practice
- Capstone: doctoral capstone seminar series that culminates in a 14-week doctoral capstone experience and scholarly project that represents in-depth knowledge in occupational therapy

Throughout each phase of the program, each student is required to maintain a professional portfolio that coincides with the program's learning outcomes. This OTD program is a full-time, intensive program designed to be completed in three years (fall, spring, summer) of coursework for a total of 115 credits.

Post-Baccalaureate OTD Curriculum

The curriculum is reviewed regularly and subject to modification in both content and credit as deemed necessary to maintain a high-quality educational experience and to keep current with best practices in the profession.

Course	Title	Credits
First Year		
Summer Semester		
OTD 510	Clinical Anatomy in Occupational Therapy	3
OTD 500	Philosophy and Science of Occupational Therapy	2
OTD 510L	Clinical Anatomy in OT Practice Lab	1
OTD 505	Development of Human Occupations Seminar	2
Credits		8
Fall Semester		
OTD 501	Occupational Therapy Theory	3
OTD 502L	OT Service Learning	1
OTD 503	OT Practice Framework & Professional Reasoning	2
OTD 515	Research Methods and Evidence-Based Practice	3

OTD 511	Applied Kinesiology	2
OTD 511L	Applied Kinesiology Lab	1
OTD 512	Applied Neuroscience in OT Practice	4
OTD 512L	Applied Neuroscience in OT Practice Lab	1
Credits		17

Spring Semester

OTD 522	Occupational Therapy for Children and Youth I	6
OTD 522L	Occupational Therapy for Children and Youth I Lab	1
OTD 522F	Occupational Therapy for Children and Youth I Fieldwork	1
OTD 520	Occupational Therapy Mental Health and Psychosocial Practice I	3
OTD 520L	Occupational Therapy Mental Health and Psychosocial Practice I Lab	1
OTD 530	Administration and Management of Systems	3
Credits		15

Second Year**Summer Semester**

OTD 524	Occupational Therapy for Adults and Older Adults I	6
OTD 524L	Occupational Therapy for Adults and Older Adults I Lab	1
OTD 524F	Occupational Therapy for Adults and Older Adults I Fieldwork	1
OTD 528L	Biomechanical Interventions Lab	1
OTD 531	Leadership and Change	2
OTD 526	Technology in OT Practice	2
OTD 526L	Technology in OT Practice Lab	1
Credits		14

Fall Semester

OTD 523	Occupational Therapy for Children and Youth II	6
OTD 523F	OT for Children and Youth II Fieldwork	1
OTD 523L	OT for Children and Youth II Lab	1
OTD 521	OT Mental Health and Psychosocial Practice II	3
OTD 521F	OT Mental Health and Psychosocial Practice II Fieldwork	1
OTD 521L	OT Mental Health and Psychosocial Practice II Lab	1
OTD 751	Capstone Seminar I - Exploration	2
Credits		15

Spring Semester

OTD 525	OT for Adults and Older Adults II	6
OTD 525F	OT for Adults and Older Adults II Fieldwork	1
OTD 525L	OT for Adults and Older Adults II Lab	1
OTD 527	Work and Ergonomics	3
OTD 760	Principles of Teaching/Learning	2
OTD 752	Knowledge Translation and Synthesis	3
Credits		16

Third Year**Summer Semester**

OTD 580	Fieldwork Level IIA	6
---------	---------------------	---

OTD 753	Capstone Seminar II - Planning	2
Credits		8

Fall Semester

OTD 581	Fieldwork Level IIB	6
Credits		6

Spring Semester

OTD 582	Professional Development	2
OTD 754	Capstone Seminar III - Preparation	2
OTD 790	Doctoral Project Seminar	1
OTD 791	Doctoral Experience	2
OTD 762	Health Policy, Law & Advocacy	2
OTD 764	Business Leadership and Entrepreneurship	2
Credits		11

Fourth Year**Summer Semester**

OTD 790	Doctoral Project Seminar	1
OTD 791	Doctoral Experience	4
Credits		5

Total Credits	115
----------------------	------------

Fieldwork Expectations

All students are responsible for transportation to all fieldwork experiences. All students are required to maintain viable health insurance, malpractice insurance, CPR certification and current immunization record according to their fieldwork placement requirements. A fieldwork site may have additional requirements as part of its affiliation agreement such as background checks and site-specific mandatory in-services. Failure to comply with fieldwork requirements may negatively impact a student's ability to participate in fieldwork. The department also requires current membership in the American Occupational Therapy Association.

Capstone Expectations

All students are required to complete a capstone experience (OT 791) and a capstone project (OT 790) in the final semester. All fieldwork and didactic requirements must be satisfactorily fulfilled and a student must pass a comprehensive competency exam prior to matriculating into OT 790 and OT 791.

- **CAPSTONE EXPERIENCE:** The capstone experience is a mentored process by an individual with demonstrated expertise in the student's area of interest. The capstone experience may occur in a traditional clinical site or non-traditional/non-clinical site that is appropriate for the implementation of the capstone project and the integration of learning. Students are responsible for transportation to all capstone experiences. All students are required to maintain viable health insurance, malpractice insurance, CPR certification and current immunization record according to their capstone placements. A capstone site may have additional requirements as part of its affiliation agreement or memorandum of understanding such as background checks and site-specific mandatory in-services. Failure to comply with capstone experiential requirements may negatively impact a student's ability to participate.
- **CAPSTONE PROJECT:** The doctoral capstone project is an opportunity for students to demonstrate in-depth knowledge in occupational therapy and the attainment of all program learning outcomes. The project concludes in the production of a scholarly

manuscript and oral presentation to the occupational therapy practice community.

Progression, Retention and Graduation Requirements

All policies and procedures regarding progression, retention and graduation are found in the OTD Student Handbook. These policies and procedures are routinely reviewed with the students at the beginning of each semester and/or during advising.

Grade and Course Sequence Requirements

The program uses a tiered approach to curricular progression.

- During Tier 1 (summer and fall of the first year), students must meet a semester GPA of 3.0 and a C+ in all OT courses.
- During Tiers 2–4 (remainder of the program), students must meet a semester GPA of 3.2 and a B- in all lecture courses, and a B+ in laboratory courses and in Level I fieldwork.
- In addition, all students must acquire a “Pass” in their Level II fieldwork (Tier 3) and Doctoral Capstone Experience (Tier 4).

Failure to meet the aforementioned requirements will result in a referral to the Academic Progression and Retention Committee (APRC). The outcome of such referral may be: program probation with course remediation; a program probation with a course repeat (and repay); or a program dismissal.

All courses must be taken sequentially as indicated in the program of study. Students may request in writing to the department chairperson (or designee) any deviations from the course sequence, waivers from occupational therapy courses, and/or transfer credits from other occupational therapy programs. All requests must be approved by the APRC and the department chairperson.

Fieldwork Requirements

- a. Students must complete all the required didactic coursework and be in good academic standing prior to starting Level II fieldwork (OT 780 and OT 781).
- b. All Level II fieldwork experiences must be completed within 12 months following completion of the didactic portion of the program.

Capstone Requirements

- a. Students must complete all didactic coursework and Level II fieldwork, be in good academic standing and pass a comprehensive exam prior to starting the Doctoral Capstone Experience (OT 791) and Project (OT 790).
- b. The Doctoral Capstone Experience and Project must be completed within 12 months following the successful passing of the comprehensive exam.

Successful completion of all didactic, fieldwork and capstone requirements is necessary for graduation with the degree of Doctor of Occupational Therapy.

Student Learning Outcomes

Upon completion of the Doctor of Occupational Therapy program, students will demonstrate the following competencies:

- **Synthesis of Occupation:** Synthesize and articulate in-depth knowledge of occupation with health and participation to guide the practice of occupational therapy.
- **Professionalism and Leadership Development:** Demonstrate professionalism, competent role performance and leadership.
- **Advocacy:** Advocate for the distinct value of occupational therapy for individuals, groups and populations.
- **Professional Reasoning:** Apply occupation and client-centered principles and professional reasoning as part of the occupational therapy process to produce positive outcomes with individuals, communities and populations within broader systems.
- **Knowledge Translation and Evidence-Based Practice:** Evaluate, synthesize, translate and contribute evidence to inform practice and support the delivery of OT services.
- **Systems and Practice Contexts:** Demonstrate in-depth knowledge of systems and occupational therapy roles in order to work collaboratively in and lead intra/interprofessional teams within traditional and role emerging settings.

Program Mission

The mission of the OTD program is to provide high-quality education to develop occupational therapy practitioner-scholars who possess broad-based knowledge and skills to influence meaningful change in the health and functioning of individuals, populations and communities. The program aims to graduate entry-level occupational therapists who possess **in-depth knowledge and skills** in advocacy, occupational therapy process, systems, professional leadership, evidence-based practice and in the synthesis of occupation, health and participation.

Program Philosophy

The Department of Occupational Therapy views the Entry-Level Doctoral Educational program with an occupational and transformational-humanistic lens. This approach acknowledges that each student has a pre-existing occupational identity and possesses varying abilities and experiences, which are brought to the university environment. “Students are viewed as occupational beings who are in dynamic transaction with the learning context and the teaching-learning process” (AOTA Philosophy of Occupational Therapy Education, 2018). The transformational philosophy of education assumes that students can be shaped and transformed through the questioning, analysis and re-examination of worldviews, perceptions and prior belief systems utilizing a humanistic and critical approach to solving problems (Mezirow, 1997). Utilizing community-based, experiential learning; professional interactions; and opportunities for creative flow experiences, student’s perceptions, skills and cognitive processes are enhanced and transformed.

Through mentorship and curricular experiences, faculty apply a transformational humanistic approach to support doctoral students in their personal and professional growth toward becoming an entry-level occupational therapist and leader. Students are also taught the value and potential of every human being (including themselves) in their capacity for self-determination and need to participate in desired occupations for health, wellness and inclusion as social beings.

The department conceptualizes both development and transformation not merely as a sequential ontological event but rather as a complex

iterative, heterarchical and hierarchical set of processes that are situated in various contexts. Creative, high impact-transformation is the basis of curriculum content while developmental transformation is reflected in how the courses are arranged in overlapping phases or tiers using a modified version of Fink's Taxonomy of Significant Learning:

- Foundational Knowledge (Caring and Learning to Learn) – refers to understanding, remembering information and ideas; developing interests and professional values; and self-directing one's learning.
- Application and Integration (Learning About Oneself/Others) – refers to development of practical, creative and critical thinking skills by connecting ideas/concepts, events and realms of life, as well as in-depth exploration and integration of awareness of oneself and of others.
- Application and Synthesis – refers to continued refinement of practical, creative and critical thinking and reflection through the understanding of systems and embracing one's agency in decision-making on complex issues affecting individuals, communities and society.

Admission

Application Process

Students are admitted to the Post-Baccalaureate OTD program using a holistic review process. A holistic review takes into account multiple factors about the candidate's potential for meeting the expected outcomes of the E-OTD program, as well as their potential contribution to the educational experience of their fellow students.

There are two stages to the application process: a screening stage and an interview stage.

- a. The **screening stage** involves a review of the applicant's GPA, prerequisites and observation hours as listed below. After the screening stage, the most qualified applicants will be offered an interview.
- b. The **interview stage** involves an actual interview, as well as a review of the applicant's recommendation letters, personal essay and resume.

There are three potential outcomes of the application process: 1) acceptance; 2) conditional acceptance; or 3) denial of admission. An applicant may be denied admission at either stage of the process. **Note: A student with a prior history of dismissal from any of the programs within the QU Occupational Therapy department is ineligible for admission.**

Application Timeline

Students are admitted to the Post-Baccalaureate OTD program on a rolling basis. As the program begins in the Summer I session (mid-late May), applications are accepted until March 15 of the same year the applicant plans to matriculate. Interviews are required and offered to the most qualified candidates. Applicants are notified of their acceptance on or before April 1st.

Admission Requirements

- a. Bachelor's degree prior to matriculation into the program.
- b. A minimum GPA of 3.2 in all post-secondary coursework.
- c. A minimum prerequisite GPA of 3.0 with a grade of C+ or better in each prerequisite course.
- d. A minimum of 40 verifiable observation hours in the past 3 years. These hours may be completed in a combination of traditional/

clinical and non-traditional/non-clinical settings and patient/client populations.

- e. Three letters of recommendation, with at least one from an academic adviser or faculty member, and at least one from a supervisor in an employee or volunteer capacity.
- f. Supplemental personal statement that includes reasons for pursuing the Post-Baccalaureate OTD at Quinnipiac and examples of personal attributes as well as professional and academic experiences that demonstrate capacity for rigor of doctoral studies and future success as a well-rounded occupational therapist and leader.
- g. Resume or curriculum vitae.
- h. Applicant must have access to technology devices needed for online or hybrid courses that are interwoven throughout the curriculum. Courses labeled DE or HY indicate that they are delivered in part or whole as online. Student should be knowledgeable in utilizing technology software including Word, Excel, PowerPoint, video conferencing (Zoom, Microsoft Teams) and email communication. Information on recommended computing device and software may be accessed through information technology services at techhelp.quinnipiac.edu/ (<https://techhelp.quinnipiac.edu/>)
- i. Successful in-person interview with the OTD Admissions Committee.

Scores from the Graduate Record Examination (GRE) are not required. However, applicants may submit scores if they believe it can enhance the strength of their application.

OTD Prerequisites

The OTD prerequisite courses are as follows:

- a. Biological Sciences
 - i. Anatomy and Physiology I with Lab (4 credits)
 - ii. Anatomy and Physiology II with Lab (4 credits)
- b. Quantitative Literacy
 - i. General Physics (3-4 credits). A course in Calculus or Biomechanics may be used as a substitute.
 - ii. Biostatistics or Statistics for Social and Behavioral Sciences (3 credits)
- c. Social Sciences
 - i. Lifespan Development including Child Development and Adult Development (3-6 credits)
 - ii. Abnormal Psychology (3 credits)
 - iii. Sociology or Cultural Anthropology (3 credits)

In order to be credited, prerequisites must meet the following conditions:

- a. Prerequisites must be completed within 8 years of application from a regionally or nationally accredited institution of higher learning. For students whose credentials were received from a foreign institution, submit an academic equivalency evaluation from a credentialed agency ([naces.org](https://www.naces.org/) (<https://www.naces.org/>)).
- b. Each prerequisite course must be completed with a grade of C+ or better. Each prerequisite course may only be repeated once.
- c. For prerequisite courses with a separate lab course grade (e.g., Anatomy and Physiology), the lecture and lab components will be weighted and calculated based on credit hour, and recorded as a single course grade.
- d. At the time of application, up to two prerequisite courses (excluding labs) may be in progress or pending but must be completed by May before starting the OTD program. Qualified candidates whose

prerequisites are in progress or pending may be granted conditional acceptance until all prerequisites are satisfactorily met.

The following courses are not required but strongly recommended:

- Coursework on the disease process (e.g., Pathophysiology, Human Health and Disease, Biology of Aging, etc.)
- Coursework on health systems, health policy or leadership
- Coursework in Humanities such as philosophy, logic, ethics and courses on Western thought and ideas

Required Documents

- a. Application form completed through OTCAS
- b. Letter of intent
- c. Supplemental personal statement
- d. Official transcripts from all undergraduate, graduate and professional schools attended
- e. Three letters of recommendation
- f. Observation hours (40) that are verified in an official letter from the supervising occupational therapist with contact information

NOTE: Incomplete submissions will not be reviewed.

Additional Program Costs (all cost estimates are subject to change)

As a clinical education program, the Post-Baccalaureate Doctor of Occupational Therapy degree requires some expenses that go beyond university graduate tuition and fees:

- a. **Clinical/Fieldwork Education Travel** – Students are responsible for all expenses (gas, parking, maintenance) related to transportation to get to a fieldwork site. This includes private transportation, public transportation and air travel as necessary. **Cost: variable**
- b. **Immunizations** – Consistent with the School of Health Sciences policy, all students must have a full battery of immunizations and, in some cases, titer affirmation of immunity for common diseases including but not limited to: MMR, HepB, varicella, polio, TDAP, TB and influenza. These must be documented prior to the start of clinical experiences and must be maintained until graduation. **Cost: variable (please check with your insurance carrier)**
- c. **Background Check** – All students must undergo an initial background check prior to the start of any clinical/fieldwork experience. Students in the OTD program are required to have a background check prior to the start of program in the first summer and again before beginning Level II fieldwork.
 - i. Initial background check cost is **\$63** for all domestic addresses for the past 7 years or **\$158 for students who have resided in New York state** in the last 7 years due to NY state surcharge.
 - ii. Some clinical fieldwork sites may require an additional yearly background recheck. **Cost: \$32 per annual recheck**
- d. **Drug Screening** – Drug screenings may be required and are dependent upon individual fieldwork site requirements. **Cost: \$42.25**
- e. **Liability Insurance** – All students have liability insurance coverage through the university, free of charge, while performing required clinical activity. Students may choose to purchase additional coverage at their own expense.
- f. **EXXAT and APPROVE** – FOR THOSE PROGRAMS USING EXXAT ONLY. Students enrolled in professional programs must enroll in EXXAT and APPROVE.

- i. EXXAT is the clinical tracking and assessment program used by the School of Health Sciences. **A one-time payment of \$150 per student for the OTD program is required (students are responsible for this cost).**
 - ii. **APPROVE is the program within EXXAT that tracks all student health and safety records, provides documentation to prospective clinical sites and provides notification of impending expiration dates.** Cost: \$35 for first year, \$10 per year thereafter
- g. **Professional Association Membership** – All occupational therapy students in the OTD program are required to purchase a student membership from the American Occupational Therapy Association (AOTA). The cost of the student membership is **\$75 per year**. Students have full access to all of the resources as part of this membership including journal articles, videos, and other class and professional learning materials needed for program completion.
 - h. **Certification Examination Costs** – All occupational therapy students upon successful completion of the academic and fieldwork requirements of the OTD program must take a certification examination in order to practice as a registered occupational therapist. This is given by the National Board of Certification of Occupational Therapy (NBCOT) and **costs \$515 (2022 cost)** to take the examination.

Accreditation

The Doctor of Occupational Therapy (OTD) program at Quinnipiac University has applied for accreditation and has been granted Candidacy Status by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA), located at 6116 Executive Boulevard, Suite 200 North Bethesda, MD 20852-4929. ACOTE's contact information is as follows: phone: 301-652-6611 (ext. 2914); fax: 301-652-1417; email: accred@aota.org; website: acoteonline.org/

As a program with Candidacy Status, Quinnipiac University may admit students into the OTD according to the approved timeline and may proceed to the Preaccreditation Review step of the accreditation process. The program must have a preaccreditation review, complete an on-site evaluation and be granted Accreditation Status before its graduates will be eligible to sit for the national certification examination for the occupational therapist administered by the National Board for Certification in Occupational Therapy (NBCOT). After successful completion of this exam, the individual will be an Occupational Therapist, Registered (OTR). All states and jurisdictions require graduation from an ACOTE-accredited occupational therapy program and passing the NBCOT exam is a requirement for state licensure. Note that a felony conviction may affect a graduate's ability to sit for the NBCOT certification examination or attain state licensure.

The American Occupational Therapy Association (AOTA) website (<https://www.aota.org/>) provides links to state regulations regarding qualifications and licensure, including continuing competency requirements, scope of practice by state and a list of the states that offer#temporary licensure#to graduates from ACOTE-accredited programs who have not yet passed the NBCOT exam.

Program Sponsorship

Quinnipiac University assumes primary responsibility for appointment of faculty, admission of students, and curriculum planning for the OTD program. This responsibility includes the delivery of course content, satisfactory completion of the educational program and granting of

the degree. The university also is responsible for the coordination of classroom teaching and supervised fieldwork practice and for providing assurance that the practice activities assigned to students in a fieldwork setting are appropriate to the program.

Quinnipiac University complies with the administrative requirements for maintaining accreditation of the OTD program.

OTD 500. Philosophy and Science of Occupational Therapy. 2 Credits.

This course presents the philosophical, historical, and scientific foundations of the occupational therapy profession and their relevance to contemporary practice. From a philosophical perspective, the course unpacks the epistemology (knowledge), ontology (reality/view) and axiology (actions/methods) of the profession. The evolution of practice throughout history and current and emerging trends in practice is analyzed with respect to meeting societal needs.

Offered: Every year, Summer

OTD 501. Occupational Therapy Theory. 3 Credits.

This course explores how occupations influence health and well-being from a historical, developmental, and evidence-based perspective. Current and emerging occupation-based models are analyzed and applied as theoretical foundations in the promotion of health, prevention of disease, and management of occupational disruptions across the life span. Complementary healthcare models and current global social political issues are highlighted.

Offered: Every year, Fall

OTD 502L. OT Service Learning. 1 Credit.

This course applies the concepts of observation and therapeutic use of self to a community setting where the students observe and conduct and applied activity analysis of the clients/community and/or the population in order to design service projects that meet the occupational needs of those being served in the setting. Application of context variable analysis and service provision in a meaningful occupation provides a natural experience of learning about human occupations.

Offered: Every year, Fall

OTD 503. OT Practice Framework & Professional Reasoning. 2 Credits.

This course explores the profession's domain and scope through the Occupational Therapy Practice Framework and links the terminology to the analysis of occupation and occupational performance in context, as well as the various forms of professional reasoning used in the occupational therapy process.

Offered: Every year, Fall

OTD 505. Development of Human Occupations Seminar. 2 Credits.

This course explores typical human development and more specifically, occupational development from conception through early (emerging) adulthood. In this course, traditional theories of development are explored along with more contemporary and occupation-focused theories. Each of these sets of theories will contribute to an understanding of how biologic capacity, environmental, and cultural factors influence occupational development.

Offered: Every year, Summer

OTD 510. Clinical Anatomy in Occupational Therapy. 3 Credits.

This course provides a comprehensive study of the musculoskeletal system and the peripheral nervous system with emphasis on their correlation to health conditions and occupational dysfunctions as well as the biomechanical basis of occupational performance. This course has a corresponding dissection and palpation lab.

Offered: Every year, Summer

OTD 510L. Clinical Anatomy in OT Practice Lab. 1 Credit.

This laboratory course involves dissection, visual examination, and surface palpation as part of a comprehensive study of the human anatomy. Emphasis is in the thorough examination of the musculoskeletal system and select components of the nervous system relative to the anatomical and biomechanical bases of occupational performance.

Offered: Every year, Summer

OTD 511. Applied Kinesiology. 2 Credits.

This course integrates information from Human Anatomy with principles of biomechanics and their application to occupational therapy practice. Emphasis is on the biomechanical analysis of human occupations and performance. Key concepts in clinical kinesiology are presented as essential elements to the OT process.

Offered: Every year, Fall

OTD 511L. Applied Kinesiology Lab. 1 Credit.

This laboratory course provides a comprehensive review of fundamentals of musculoskeletal assessment relevant to occupational therapy practice. This course applies and integrates the concepts learned in the lecture course, OT 521.

Offered: Every year, Fall

OTD 512. Applied Neuroscience in OT Practice. 4 Credits.

This course provides a comprehensive study of neuroanatomy including the structures, functions, and interrelationships of neural subsystems that are key to occupational performance. Students apply their understanding of these neural substrates including motor behaviors, sensory-perception, emotional processing, cognition, and learning, to the analysis of human occupations and dysfunctions in occupational performance.

Prerequisites: Take OTD 510

Offered: Every year, Fall

OTD 512L. Applied Neuroscience in OT Practice Lab. 1 Credit.

This course provides a comprehensive study of neuroanatomy including the structures, functions, and interrelationships of neural subsystems that are key to occupational performance. Students apply their understanding of these neural substrates including motor behaviors, sensory-perception, emotional processing, cognition, and learning, to the analysis of human occupations and dysfunctions in occupational performance.

Prerequisites: Take OTD 510L

Offered: Every year, Fall

OTD 515. Research Methods and Evidence-Based Practice. 3 Credits.

This course addresses research fundamentals in the practice of occupational therapy. The course examines research epistemology, methods, research designs, and data analysis in occupational therapy research. Levels of evidence are addressed and applied to decisions in occupational therapy interventions. Students gain experience developing research procedures, critically analyzing data, and identifying ethical issues involved in developing a research study.

Offered: Every year, Fall

OTD 520. Occupational Therapy Mental Health and Psychosocial Practice I. 3 Credits.

This course highlights OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Emphasis is on the distinct nature of occupation in promoting mental health, preventing disease, and managing life disruptions. Scientific evidence and theories guide the student's learning of the OT process across the continuum of service delivery.

Offered: Every year, Spring

OTD 520L. Occupational Therapy Mental Health and Psychosocial Practice I Lab. 1 Credit.

This course builds on concepts from OT 720 highlighting OT's distinct value in addressing psychosocial and mental health needs among children and youth, groups and organizations. Students practice assessments and evidence-based intervention modalities for various mental health conditions across the lifespan. Application of theoretical models and frames of reference are highlighted. Additionally, students enhance observation skills needed for documentation and practice verbal interventions related to therapeutic modes.

Offered: Every year, Spring

OTD 521. OT Mental Health and Psychosocial Practice II. 3 Credits.

This course highlights OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. OT, psychosocial, & group theories, as well as, group interventions are highlighted. Related skills such as documentation, therapeutic use of self and evidence-based practice are emphasized.

Offered: Every year, Fall

OTD 521F. OT Mental Health and Psychosocial Practice II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the mental health and psychosocial populations across the lifespan. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students have the opportunity to observe and report on the variety of assessment and intervention tools utilized across a continuum of service delivery. Students develop an appreciation for the frames of reference used in the models of practice, as a guide to the evaluation and intervention process.

Offered: Every year, Fall

OTD 521L. OT Mental Health and Psychosocial Practice II Lab. 1 Credit.

This lab builds upon concepts from OT 512 highlighting OT's distinct value in addressing psychosocial and mental health needs among adult and older adult populations, groups, and organizations. Emphasis is on the role of occupation in promoting mental health, preventing disease and managing life disruptions. Group theory and evidence-based group interventions are practiced to promote leadership skills and therapeutic use of self. A culminating group protocol assignment integrates theory, practice, and research.

Offered: Every year, Fall

OTD 522. Occupational Therapy for Children and Youth I. 6 Credits.

This course provides a comprehensive overview evaluation and interventions used by occupational therapy practitioners for children and youth. Traditional theoretical models/frames of reference and current evidence is utilized as a basis for the clinical/professional reasoning process applicable to the OT process for children and youth so that facilitators and barriers to occupational performance can be identified. Documentation related to contextual philosophies, procedures and regulations dictating pediatric practice is highlighted throughout the course.

Offered: Every year, Spring and Summer

OTD 522F. Occupational Therapy for Children and Youth I Fieldwork. 1 Credit.

This course provides structured fieldwork observation in various settings working with the children/youth population. It allows the student to observe and explore the evaluation and intervention process utilized in occupational therapy. Students also have the opportunity to observe and report on the variety of assessment and intervention tools utilized within the models of health care for the children and youth population.

Offered: Every year, Spring and Summer

OTD 522L. Occupational Therapy for Children and Youth I Lab. 1 Credit.

This lab course complements the OT 531 and OT 531F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for children and youth. The safe, efficient, and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring and Summer

OTD 523. Occupational Therapy for Children and Youth II. 6 Credits.

This course focuses on specialized interventions for individuals and populations with sensory integrative and processing difficulties and brain-based behavioral challenges. It integrates the use of the SI frame of reference with previously learned theoretical models and apply best available evidence and clinical/professional reasoning to various systems (e.g., state/federal regulations for early intervention and school-based practice, insurance funding, and community-based health and wellness initiatives). Documentation within these various systems are illustrated, discussed and produced.

Offered: Every year, Fall and Spring

OTD 523F. OT for Children and Youth II Fieldwork. 1 Credit.

This course provides structured fieldwork observation in sensory integration settings and allows the student to observe and explore the intervention process utilized in these frames of reference. Students have the opportunity to see, observe and report on the variety of intervention strategies utilized within the various models such as health care, education, community and social systems. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the sensory integration intervention process.

Offered: Every year, Fall and Spring

OTD 523L. OT for Children and Youth II Lab. 1 Credit.

This lab integrates the advanced intervention techniques/specialized interventions used by occupational therapy practitioners for individuals and populations with sensory integrative and processing difficulties, developmental disabilities and brain-based behavioral challenges. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.

Offered: Every year, Fall and Spring

OTD 524. Occupational Therapy for Adults and Older Adults I. 6 Credits.

This course provides a comprehensive overview of assessments and interventions used by occupational therapy practitioners in general medicine/surgery, neurology and orthopedics. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process. Documentation is highlighted throughout the course including for traditional systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.

Offered: Every year, Spring and Summer

OTD 524F. Occupational Therapy for Adults and Older Adults I Fieldwork.**1 Credit.**

This course provides structured fieldwork observation in various settings working with the adult population. It allows the student to observe and explore the evaluation and treatment process utilized in occupational therapy with adults and older adults. Students develop an appreciation for the frame of reference used in the models of practice as a guide to evaluation and treatment.

Offered: Every year, Spring and Summer**OTD 524L. Occupational Therapy for Adults and Older Adults I Lab.****1 Credit.**

This lab course complements the OT 532 and OT 532F and provides opportunity for experiential learning of the evaluation process and intervention techniques used in occupational therapy for adults and older adults. The safe, efficient and culturally sensitive delivery of specific assessment and intervention techniques are highlighted.

Offered: Every year, Spring and Summer**OTD 525. OT for Adults and Older Adults II.****6 Credits.**

This course provides a comprehensive overview of specialized interventions used by occupational therapy practitioners in neurorehabilitation, oncology and geriatrics/gerontology. The course integrates the use of various theoretical models/frames of reference, current evidence, and clinical/professional reasoning pertinent to the OT process in neurorehabilitation practice. Documentation is highlighted throughout the course for traditional and emerging systems for individual and population-based approaches. Key concepts in interprofessional practice and health literacy are incorporated.

Offered: Every year, Fall and Spring**OTD 525F. OT for Adults and Older Adults II Fieldwork.****1 Credit.**

This course provides structured fieldwork observation in neurorehabilitative settings and allows the student to observe and explore the intervention process utilized in these frames of reference. The settings utilized are equipped to provide clinical application of principles learned in the OT curriculum and focus on the neurorehabilitation intervention process.

Offered: Every year, Fall and Spring**OTD 525L. OT for Adults and Older Adults II Lab.****1 Credit.**

This lab integrates the advanced intervention techniques discussed and described in the lecture portion of this class. Opportunities are provided to learn specific interventions required for a variety of occupational therapy practice contexts and with consideration of cultural and environmental factors.

Offered: Every year, Fall and Spring**OTD 526. Technology in OT Practice.****2 Credits.**

This course provides students with opportunities to demonstrate knowledge and apply practice in the use of technology that includes assistive virtual and telehealth technology. The course focuses on application of technology across the lifespan, emphasizing a variety of practice contexts and practice settings. Since technology options change rapidly, emphasis is on the clinical reasoning processes in the utilization of technologies in education, home, work, leisure and community practice domains.

Offered: Every year, Summer**OTD 526L. Technology in OT Practice Lab.****1 Credit.**

This lab provides students with opportunities to practice the design and fabrication and use of technology in practice that includes assistive technology; virtual environments in practice and telehealth technology. This lab must be completed concurrently with OTD 641 the lecture component of Technology in OT Practice.

Offered: Every year, Summer**OTD 527. Work and Ergonomics.****3 Credits.**

This course focuses on the occupation of work applied across the lifespan and to various practice contexts and worker challenges. The course addresses topics related to the occupation of work, including employment acquisition, job performance, volunteerism, and retirement. Work tasks and work demands are analyzed relative to physical, cognitive, social, organizational, and environmental factors that impact job performance. Modifications that optimize worker functioning are examined as prevention and as rehabilitation.

Offered: Every year, Spring**OTD 528L. Biomechanical Interventions Lab.****1 Credit.**

This course provides hands on learning in the therapeutic application of orthotics, physical agents and modalities, and exercise programs. Students will develop the skills to evaluate and develop an intervention plan for specific conditions. Students also learn the role of occupational therapy during pre-prosthetic and prosthetic training.

Offered: Every year, Summer**OTD 530. Administration and Management of Systems.****3 Credits.**

This class introduces students to the systems involved in delivering occupational therapy services in health care, educational and community-based environments. Students examine components of service delivery including external influences, internal processes, communication, reimbursement and measurable outcomes to understand how occupational therapy services are optimized. The course addresses core management functions including planning, organizing, directing and controlling. Students gain hands-on experience with strategic planning, budgeting, marketing, program evaluation and conflict management.

Offered: Every year, Spring**OTD 531. Leadership and Change.****2 Credits.**

This course addresses the means to become an "agent of change" within the occupational therapy environment using leadership approaches. Leadership theories are addressed and applied to supervision, advocacy, and mentoring. Students self-reflect on leadership and communication styles and strategies to promote effective supervision for groups both internal and external to occupational therapy.

Offered: Every year, Summer**OTD 580. Fieldwork Level IIA.****6 Credits.**

This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the first of two required level II experiences.

Offered: Every year, Summer

OTD 581. Fieldwork Level IIB.**6 Credits.**

This 12-week full-time supervised fieldwork experience provide the student with the opportunity to apply theory and clinical reasoning skills to the occupational therapy evaluation and intervention process for clients across the life span and in a variety of life environments. Students must abide by all fieldwork policies as listed in the Student Fieldwork Manual. This is the second of two required level II experiences and is different in setting/population from OTD 580.

Offered: Every year, Fall**OTD 582. Professional Development.****2 Credits.**

This course focuses on the current issues related to transitioning from student to professional roles and responsibilities. Topics include updates in the OT profession with a focus on official documents; emerging roles of OT in practice; credentialing, licensure and continuing competence/professional development. Contemporary issues of practice such as access to services, advocacy and inter-/intra-professional collaboration are explored.

Offered: Every year, Spring**OTD 751. Capstone Seminar I - Exploration.****2 Credits.**

This course is the first of a series of capstone seminars designed to assist the students in understanding the elements and process of developing a culminating signature project in the OTD program. Students explore personal interests, opportunities and the social context around topic areas. They develop skills of conducting an environmental scan and needs assessment relative to their project interests. Students identify program evaluation methods and ultimately present a capstone proposal as an initial plan for their capstone project.

Offered: Every year, Fall**OTD 752. Knowledge Translation and Synthesis.****3 Credits.**

This course focuses on the assessment, review and utilization of research to inform policy and improve practice. Students actively engage in multiple components of the knowledge translation process including defining the problem, searching for and critically appraising the evidence. Students work in small groups to apply this information to the development of a clinical practice guideline. Competencies acquired in this course are integral to the Capstone process.

Offered: Every year, Spring**OTD 753. Capstone Seminar II - Planning.****2 Credits.**

This course is the second of a series of Capstone seminars leading to the Doctoral Capstone Experience and Project. This course is specifically designed to assist the students in finalizing their Doctoral Capstone Project (DCP) proposal based on a needs assessment. Students are expected to complete a comprehensive literature review that serves as justification for the DCP.

Offered: Every year, Summer**OTD 754. Capstone Seminar III - Preparation.****2 Credits.**

This course is the third of a series of capstone seminars designed to assist the students in planning their Doctoral Experiential Component. Under faculty mentorship, students design a 14-week experience and project plan that outlines goals and objectives, as well as formal evaluation mechanism. Students write the methods section of the formal capstone project paper.

Offered: Every year, Spring**OTD 760. Principles of Teaching/Learning.****2 Credits.**

This course introduces students to the principles of the teaching-learning process to meet the needs of clients, communities, other health providers, and the public. Concepts discussed include health literacy, assessment of learning outcomes, factors which may influence the teaching-learning process, instructional methods, and best practices in clinical and academic teaching.

Offered: Every year, Spring**OTD 762. Health Policy, Law & Advocacy.****2 Credits.**

This course prepares students as future leaders of the profession who need an understanding of the political and legal policies impacting occupational therapy, as well as the ethics involved in decision making. The role of the occupational therapist in advocacy and concepts of social justice are explored.

Offered: Every year, Spring**OTD 764. Business Leadership and Entrepreneurship.****2 Credits.**

This course provides an overview of business development and entrepreneurship for occupational therapy practitioners within today's health care environment, including public initiatives for health and wellness and prevention for society. Leadership concepts are threaded in the context of a business enterprise.

Offered: Every year, Spring**OTD 790. Doctoral Project Seminar.****1 Credit.**

This seminar course is designed to facilitate the completion of the student's Doctoral Capstone Project and promote an in-depth reflection on the program learning outcomes. The seminar runs concurrently with the Doctoral Capstone Experience where specific competencies representing in-depth knowledge of practice are synthesized. The final outcome of the seminar is a scholarly manuscript and public dissemination of the Doctoral Capstone Project.

Offered: Every year, Summer**OTD 791. Doctoral Experience.****2-4 Credits.**

The Occupational Therapy Doctoral Experience is a culminating experience in the OT curriculum to develop occupational therapists with skills beyond a generalist level. The experience provides the student with an in-depth learning opportunity in one or more (but not limited to) of the following areas of practice: education, clinical practice skills, advocacy and professional identity, theory development, research, administration, leadership and program and policy development. The experiential component requires a total of 560-640 hours.

Offered: Every year, Summer

Online Post-Professional Occupational Therapy Doctorate (OTD)

Program Contact: B (Francine.Seruya@quinnipiac.edu)arbara Nadeau (barbara.nadeau@qu.edu) 203-582-8691

The Post-Professional Occupational Therapy Doctorate (OTD) is designed for practicing registered occupational therapists who want to merge their experience and practical skills with contemporary professional knowledge and scholarship.

The program enables registered occupational therapists to advance their skills to become future leaders and evidence-based scholars of the profession. The degree can be completed in five semesters online with minimal on-campus requirements and is tailored for the working professional.

Courses run in online modules of varying duration (i.e., 5-week, 7-week, 14-week). Students are required to attend a one-week, on-campus residency during the summer between the first and second year in the program as well as the Symposium Day at the end of the curriculum.

The online program offers an opportunity for practicing occupational therapists to continue their education without interrupting their careers. The pace of the program permits steady accumulation of skills that can be applied immediately to the workplace. Practitioners develop refined skills allowing increased specialization and direct practical application. This program is designed to further the American Occupational Therapy Association "Vision 2025" by creating practitioners who are equipped to lead the profession to meet society's occupational needs and to be "agents of change" within their communities and the occupational therapy profession.

The Occupational Therapy department offers multiple avenues for registered occupational therapists to advance their education.

Bridge from BSOT to OTD

This program recognizes the fact that a number of experienced practitioners previously entered the field of occupational therapy when the bachelor's degree was the accepted entry-level degree. As demands within healthcare have evolved, so did the educational requirements for students. This track is designed for individuals who currently have an entry-level BS in occupational therapy with initial National Certification Board for Occupational Therapy (NBCOT/AOTCB) certification to form a bridge from BS to an OTD.

Students in the Bridge from BSOT to OTD track will complete 12 credits of graduate coursework over the course of two semesters prior to beginning the doctoral phase of the program. Upon admission to the BSOT to OTD track, students will be assigned an adviser within the occupational therapy program who will work with students to determine an individualized plan of study. This program begins in the spring semester.

Occupational Therapy Doctorate

To be eligible to apply directly to the online post-professional Occupational Therapy Doctorate (OTD) program, students need to have completed either a bachelor's degree in occupational therapy with a separate master's degree or a master's degree in occupational therapy. The program provides students with an opportunity to integrate clinical experience with theoretical concepts within the clinical literature, incorporate advanced concepts of policy and advocacy into practice, and develop the capacity for clinical scholarship. Students can customize most assignments to their own area of interest so that they can immediately apply what they are learning into their practice environment.

On-Campus Residency Requirement

All students in the online post-professional OTD program are required to attend one summer course at Quinnipiac University for the duration of one week (OT 656). Students also are required to attend the Symposium Day at the completion of the second year to present their final project.

Interprofessional Program of Distinction

In addition to their degree, students in the post-professional OTD program will have an option to earn a Distinction in Interprofessional Healthcare Education. Visit the Interprofessional Healthcare (<https://www.qu.edu/academics/centers-and-institutes/center-for-interprofessional-healthcare-education/>) page on our website for more information.

Class Schedule

OTD classes begin in the fall. The program requires five semesters: two academic years and summer between.

Occupational Therapy Course of Study

Course	Title	Credits
First Year		
Fall Semester		
OT 651	Systems	3
OT 652	Doctoral Seminar	1
OT 654	Critical Inquiry of Scholarship	3
Credits		7
Spring Semester		
OT 640	Directed Study in Evidence-Based Practice	3
OT 650	Application of Theory and Exploration of Occupation	3
Credits		6
Summer Semester		
OT 655	Professional Seminar	3
OT 656	Critical Inquiry of Scholarship II ¹	4
Credits		7
Second Year		
Fall Semester		
OT 653	Policy/Ethics	2
OT 680	Capstone I	2
OT 671	Leadership in Higher Education	3
Credits		7
Spring Semester		
OT 681	Capstone II	2
OT 663	Seminar: Innovations and Emerging Issues	3
Credits		5
Total Credits		32

¹ A portion of this course is taken at Quinnipiac University to fulfill the residency requirement.

Graduation Requirements

Completion of all courses with a cumulative GPA of 3.0.

Student Learning Outcomes

Upon completion of the occupational therapy doctorate program, students will demonstrate the following competencies:

- Leadership:** Demonstrate in-depth knowledge of leadership skills.
- Advocacy:** Synthesize knowledge of healthcare policies and systems to be an advocate at an individual, group and population level.
- Evidence-Based Practice:** Critique clinical practice based on current theoretical concepts and evidence within the clinical literature.
- Research:** Contribute to occupational therapy clinical research and scholarship.

Program Mission

The mission of the Post-Professional Occupational Therapy Doctorate (OTD) program is to provide excellent online educational opportunities

that build upon the clinical experience of each student, to enable students to become an “agent of change” for their professional community and to foster lifelong learning and continued professional growth in the field of occupational therapy.

Program Philosophy

Because the OTD program philosophy is humanistic and developmental in nature, it is recognized that students enter the program with unique experiences and interests. The OTD program is designed to allow students to reflect upon their own experiences and incorporate their particular interests into their coursework. To support students in an individual manner, a faculty adviser is assigned to each student from the beginning of the program. This allows the adviser to guide the student throughout the entire OTD curriculum.

Admission Requirements

To qualify for admission to the Occupational Therapy Doctorate (OTD) program, a student must meet the following admission criteria:

- A bachelor's degree in occupational therapy with a GPA of 3.0 or higher. Students applying for direct entry into the OTD program must also have a related master's degree, OR an entry-level master's degree in occupational therapy with a GPA of 3.0 or higher.
- Official transcript(s), indicating the year of graduation from an Accreditation Council for Education of Occupational Therapy (ACOTE) or a World Federation of Occupational Therapy (WFOT) accredited entry-level professional program.
- Proof of initial certification by the National Board for Certification of Occupational Therapy (NBCOT) or American Occupational Therapy Certification Board (AOTCB) initial certification (prior to NBCOT). International applicants who do not have NBCOT certification must provide proof of qualification/licensure in their home country.
- Students for whom English is not their first language must take the iBT (internet version of the TOEFL, Test of English as a Foreign Language).
- Verification of current employment as an occupational therapist.
- Proof of active licensure to practice (if applicable in the state of current practice).
- Current membership to the American Occupational Therapy Association.

In addition, the student must submit the following documents, which will be used to evaluate the applicant's fit and potential for success in the OTD program:

- Two professional references, at least one of which must be from a supervisor or administrator.
- A personal essay that sets forth the applicant's professional goals and compatibility with the program's learning objectives. The essay must address focused questions that coincide with the program's mission. Question prompts may include:
 - Describe a professional issue in your practice area and identify how you might address or resolve this issue.
 - How would this program assist you in meeting this professional need?
 - Reflect upon and describe your professional goals and motivations.

Responses to EACH question should be at most 350 words.
Responses MUST include current references utilizing APA

formatting. The essay will be evaluated based on depth of content, as well as writing ability.

Finally, a telephone interview may be required in the admission process. Qualified applicants will be notified via email if they are selected for an interview.

Classes in the OTD program begin in August for the fall term. Classes for the BSOT to OTD bridge program begin in January. Candidates are advised to submit applications as early as possible.

Program Requirements

- Students in the OTD program are required to achieve a GPA of 3.0 upon the completion of their first 9 credits, and must maintain a cumulative GPA of 3.0 thereafter, as stated in the Graduate Student Handbook.
- A student must earn a grade of C+ or above in all coursework. Any student who receives a grade below a C+ in a course is required to repeat and repay for that course.

In the event that a student does not achieve a 3.0 upon completion of the first 9 credits, they will be referred to the Progression and Retention Committee and placed on academic probation. The student must achieve a 3.0 semester GPA thereafter to demonstrate progression.

In the event that the student does not meet the GPA requirement in any semester after the first 9 credits, they will be referred to the Progression and Retention Committee and placed on academic probation.

If the student does not achieve a 3.0 per semester subsequent to being placed on academic probation, they will be dismissed from the program. A student may appeal dismissal by writing a letter to the dean. Please refer to the Graduate Handbook for specific policies regarding the appeal process.

OT 640. Directed Study in Evidence-Based Practice. 3 Credits.

Students learn the steps of the evidence-based practice continuum. Each student follows the steps using actual practice case studies from his/her individual practice sites and presents the responses to each step in the process to discover evidence to guide the practice case questions. Peer interaction and feedback is critical to the realistic development of evidence to guide practice decisions. A major assignment is to have each student participate in the writing of a systematic review or an evidence-based practice brief for the profession. Students complete a needs assessment of a particular site or practice area as well.

Prerequisites: Take OT 654.

Offered: Every year, Spring

OT 650. Application of Theory and Exploration of Occupation. 3 Credits.

This course explores occupation—the central construct of the profession, and occupational science as a disciplinary knowledge base of the profession. Students examine a variety of theories relevant to occupational therapy and analyze their practice using critical theory.

Offered: Every year, Spring

OT 651. Systems. 3 Credits.

Knowledge of health care delivery in the U.S. is fundamental to providing occupational therapy services. A key element to providing relevant health care services is an understanding of the broader systems that influence and drive delivery models. This course addresses the general systems model as applied to the delivery of health care services. System components are addressed including the resources, the internal processes, external influences, measurable outcomes and stakeholders in service delivery systems. The course examines the range of service delivery models in OT including the traditional medical model, school-based, community, educational, home health, hospice and telehealth, among others. The course prepares students to analyze the key components of delivery system and determine how OT services are optimized in specific models.

Offered: Every year, Fall

OT 652. Doctoral Seminar. 1 Credit.

Students develop learning strategies for doctoral work and explore contemporary leadership theory and create a professional development plan for doctoral work with goals and objectives related to becoming an agent of change.

Offered: Every year, Fall

OT 653. Policy/Ethics. 2 Credits.

The future leaders of the profession need an understanding of the political and legal policies impacting occupational therapy, as well as the ethics involved in decision making. Students explore the role of the occupational therapist in advocacy as well as the concepts of social justice. The impact of these policies and decisions are reviewed in relationship to all settings and the occupational as well as psychosocial well-being of the individual client and populations of clients.

Offered: Every year, Fall

OT 654. Critical Inquiry of Scholarship. 3 Credits.

This course is the first of a series of courses focusing on scholarship in the profession. Emphasis is placed on understanding qualitative and quantitative research methods and building a solid foundation needed to carry out a scholarly project. This course covers the scholarship process, with a focus on developing a question for scholarly exploration, ways of answering questions and approaches to analyzing results.

Offered: Every year, Fall

OT 655. Professional Seminar. 3 Credits.

This course integrates prior learning into the discussion of how to become an "agent of change" within systems. Topics include advocacy, leadership and leadership theories, group dynamics and change management. Student integrate this knowledge through the development of a program proposal and evaluation.

Offered: Every year, Summer

OT 656. Critical Inquiry of Scholarship II. 4 Credits.

This course is the second of a series of courses focusing on scholarship in the profession. Emphasis is placed on developing a proposal for a scholarly project. Drawing on the content of OT 654 students develop the background to the project and problem statement, questions guiding the project informed by theory, and write a design a scholarly proposal in regards to ethical policies and procedures necessary to conduct research.

Prerequisites: Take OT 640, OT 654.

Offered: Every year, Summer

OT 671. Leadership in Higher Education. 3 Credits.

Students analyze trends in higher education and health care. Building on these trends students create one course including a full syllabus, learning objectives, learning outcomes and assessment. This course provides a foundation for teaching in the future, either full or part time.

OT 663. Seminar: Innovations and Emerging Issues. 3 Credits.

This course will initially focus on environmental scanning for evidence of change and locating evidence in the literature for that change within a student-identified area of interest. Then, weeks four through seven focus on the individual theme as selected by each student.

Offered: Every year, Spring

OT 680. Capstone I. 2 Credits.

This capstone course is a culminating experience in the occupational therapy curriculum, which integrates all core material. Students design and execute a scholarly or creative project that is relevant to current and emerging practice areas in occupational therapy. Students gain experience in project management, critical analysis and professional presentations.

Offered: Every year, Fall

OT 681. Capstone II. 2 Credits.

This capstone course is a culminating experience in the occupational therapy curriculum, which integrates all core material. Students design and execute a scholarly or creative project that is relevant to current and emerging practice areas in occupational therapy. Students gain experience in project management, critical analysis and professional presentations.

Offered: Every year, Spring

Department of Physical Therapy

The Department of Physical Therapy at Quinnipiac University is a member of the Early Assurance Consortium for physical therapy education.

Qualified students are admitted as first-year students into the Entry-Level Dual-Degree Bachelor of Science in Health Sciences Studies/Doctor of Physical Therapy (DPT) program.

The undergraduate curriculum, which can be completed in 3 or 4 years, is specifically designed to prepare students for the DPT program. Students study human movement and explore methods of maintaining healthy movement, preventing disability and assessment of movement. Students choose an area of concentration, either in Human Movement or Sports Medicine, to best prepare for graduate studies.

Upon successful completion of the Bachelor of Science in Health Science Studies and after meeting specific program requirements, students are guaranteed admission to the graduate DPT program. The Doctor of Physical Therapy program cultivates critical and reflective thinking, clinical decision-making and lifelong learning by utilizing an evidence-based learning model, authentic assessments and a variety of learning experiences that include interactive technology. This learning model features small lab sizes, hands-on activities, visits to area clinics and opportunities to engage in professional development forums and community interdisciplinary collaboration. The program provides both in-class and in-clinic opportunities for students to engage in the essential elements of patient/client management.

Doctor of Physical Therapy (DPT) Program Mission Statement

The Department of Physical Therapy at Quinnipiac University provides an innovative, student-oriented environment to prepare students who

can meet the evolving health needs of society. The program is dedicated to developing lifelong learners who will enhance the profession through a commitment to reflective practice, interprofessional collaboration, leadership and socially aware action. The educational experience embodies both the university and APTA's core values. Students provide patient-centered care using evidence-informed practice to optimize movement and positively transform society.

Undergraduate Direct-Entry

- Direct-Entry Bachelor of Science (BS) to Doctor of Physical Therapy (p. 557):
 - Dual-Degree BS in Health Science Studies/Doctor of Physical Therapy (3+3) (p. 559)
 - Dual-Degree BS in Health Science Studies/Doctor of Physical Therapy (4+3) (p. 560)

Graduate Program

- Doctor of Physical Therapy (graduate component)* (p. 799)

*The curriculum for the professional courses in the program are subject to modification as deemed necessary to maintain a high-quality educational experience and keep current with best practices in the profession.

Entry-Level Dual-Degree Bachelor of Science to Doctor of Physical Therapy

The Department of Physical Therapy at Quinnipiac University is a member of the Early Assurance Consortium for physical therapy education. Qualified students are admitted as first-year students into the Entry-Level Dual-Degree Bachelor of Science in Health Science Studies/Doctor of Physical Therapy (DPT) program.

The undergraduate curriculum, which can be completed in 3 or 4 years, is specifically designed to prepare students for the DPT program. Students study human movement and explore methods of maintaining healthy movement, preventing disability and assessment of movement. Students choose an area of concentration, either in Human Movement or Sports Medicine, to best prepare for graduate studies.

Human Movement Track: This track explores movement across the lifespan, from pediatrics to geriatrics, with the intent to provide a foundational understanding of normal human movement. The curricular model focuses on developing the early thought processes and disciplinary content for many fields in the health profession related to movement. Through the scientific understanding of human anatomy, kinesiology and biomechanics, students advance toward exploring methods of maintaining healthy movement, preventing disability and initiating assessment of movement. The culmination of the track involves application of human movement in clinical practice, through research in motion analysis, or in the community through promotion of healthy living.

Sports Medicine Track: This track explores movement from the perspective of athletic performance. The curricular model focuses on developing the early thought processes and disciplinary content for many fields in the health professions related to sports medicine and working with an active and/or athletic population (traditional sports, tactical athletes, performing artists, etc.).

Upon successful completion of the Bachelor of Science in Health Science Studies and after meeting specific program requirements, students are guaranteed admission to the graduate DPT program. At the beginning of the spring semester of the first undergraduate year, students are required to select and adhere to coursework in either the three- or four-year preprofessional track. If the three-year track is selected, students will not be allowed transfer into the four-year curriculum at a later date. The decision for a three-year versus four-year track is individual, yet multifactorial. Factors to be considered include, but are not limited to, the following: accumulation of college credits upon entering the university, involvement in athletics, financial aid, necessity of summer and/or J-term coursework and study abroad opportunities.

Student Learning Outcomes

Upon completion of the Health Science Studies program for physical therapy, students will demonstrate the following competencies:

Goal: Students will have a strong foundation in sciences to prepare them for the graduate Doctor of Physical Therapy program.

- Foundational Science Knowledge:** Demonstrate a knowledge of foundational sciences.
- Interprofessional Healthcare:** Identify the roles of various healthcare professionals.

Goal: Students will demonstrate diverse and innovative thinking.

- Creative Thinking:** Define and devise imaginative and original solutions to various challenges.
- Diversity:** Identify the role and impact diversity plays in health.

Admission to the Program

Statement on Nondiscrimination and Compliance: The Quinnipiac University Physical Therapy program supports equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of race, color, disability, religion, age, gender, sexual orientation, or ethnic or national origin.

Admissions: Candidates applying for admission to the Dual-Degree BS Health Science Studies/Doctor of Physical Therapy program from high school are required to have no less than three years of high school college preparatory mathematics (four years are preferred), one year of biology, one year of chemistry and one year of physics. In addition, the scores of the Scholastic Assessment Test or the College Entrance Examination board of the American College Testing program are important considerations. Related health care experience is highly desirable. Prospective candidates also must satisfy general Quinnipiac University admission requirements.

All applications must include two letters of reference, and a personal interview may be required with representatives of the admissions office to discuss program requirements and the applicant's professional interests and commitments. Applicants must have observation hours in at least two different clinical settings, preferably one in a rehabilitation facility and one in an acute care setting. A minimum of 10 hours in at least two settings (20 hours total) is required.

Applicants should forward to the Office of Admissions a signed note from the physical therapist at each setting verifying observation hours. Applications are accepted for admission to the fall semester only. All applications are processed and screened by the dean of admissions

for selection to the program. Reference letters, other correspondence and inquiries relating to an application should be directed to the dean of undergraduate admissions. Admission to Quinnipiac does not guarantee admission to the professional graduate DPT program in physical therapy, unless officially accepted into the program as a first-year student and pre-professional program requirements are met.

AP Credits and Course Substitutions

A student who scores a 4 on the AP exam for biology will take BIO 101-BIO 102 at Quinnipiac University and have alternative credits awarded.

A student who scores a 4 or 5 on the AP exam for calculus or has transfer credits may choose to be awarded credit for MA 141.

If AP credits are awarded and accepted for CHE 110-CHE 111, the student and adviser will discuss other sciences to be considered as replacements.

A student who receives a 4 or 5 on the AP exam for biostatistics or has transfer credits may choose to be awarded credit for MA 275.

No other AP credits will be accepted in the math and science categories; AP credits or transfer credits for other non-math and science core curriculum requirements will be accepted.

Preprofessional Bachelor's Degree Program Requirements

The Department of Physical Therapy Graduate Admissions Committee is responsible for evaluating and ensuring that all early-assurance candidates meet the requirements of the preprofessional component of the program.

To be eligible for the professional graduate DPT program, students must achieve a minimum overall GPA of 3.2 during the preprofessional component of the program. In addition, a 3.2 cumulative GPA in preprofessional program science and math coursework is required for admission to the professional graduate DPT component of the program. (D and F grades in the required preprofessional science and math courses are unacceptable.) Initial placement in the English and mathematics courses is determined by examination and an evaluation of high school units presented. The minimum mathematics requirement is MA 141. All students are required to complete a minor or concentration in a subject area of their choice. The following courses in the preprofessional component must be successfully completed with a C- or better and are calculated into the GPA for science and math coursework.

Preprofessional Undergraduate Courses Calculated into 3.2 Math/Science Requirement

Code	Title	Credits
BIO 211 & 211L	Human Anatomy and Physiology I and Human Anatomy and Physiology Lab I	4
BIO 212 & 212L	Human Anatomy and Physiology II and Human Anatomy and Physiology II Lab	4
BMS 200	Biomedical Basis and Experience of Human Aging	3

BMS 301	Physiology of Human Performance II	3
CHE 110 & 110L	General Chemistry I and General Chemistry I Lab	4
CHE 111 & 111L	General Chemistry II and General Chemistry II Lab	4
HSC 210	Introduction to Evidence-Based Health Care	3
MA 141	Calculus of a Single Variable	3
MA 275	Biostatistics	3
PHY 110 & 110L	General Physics I and General Physics I Lab	4
PHY 111 & 111L	General Physics II and General Physics II Lab	4
AT 115	Introduction to Kinesiology	3
AT 250	Introduction to Evaluation and Treatment of Musculoskeletal Injuries	3
AT 440	Biomechanics	3
Total Credits		48

Professional DPT Program Requirements

Please see the DPT Requirements (p. 801) tab for criteria and requirements necessary for continuation in the graduate program.

Undergraduate Direct-Entry

- Entry-Level Dual-Degree BS in Health Science Studies/Doctor of Physical Therapy (3+3) (p. 559)
- Entry-Level Dual-Degree BS in Health Science Studies/Doctor of Physical Therapy (4+3) (p. 560)

Dual-Degree BS in Health Science Studies/Doctor of Physical Therapy (3+3)

Program Contact: Michelle Broggi (michelle.broggi@qu.edu) 203-582-8057 or Ken Kosior (ken.kosior@qu.edu) 203-582-3931

This program is for direct entry only. Students accepted into the HSS-DPT program as first-year students may complete the Bachelor of Science in Health Science Studies in three years. All students must complete 120 university credits to include the required University Curriculum (UC) courses, DPT required courses, and required courses in either the Human Movement or Sports Medicine track. Students must achieve a 3.2 cumulative GPA and a 3.2 average for 48 credits of selected math and science courses for admission to the graduate Doctor of Physical Therapy (DPT) program. In this fast-paced curriculum, students are expected to enroll in course work during summer terms (two courses per summer) and a J-term (one course in one J-term). Online courses are available for summer and J-term coursework.

The Department of Physical Therapy Graduate Admissions Committee is responsible for evaluating and ensuring that all early-assurance candidates meet the requirements of the preprofessional component of the program.

Curriculum for Dual-Degree BS in Health Science Studies/DPT (3+3) for Direct Entry

The BS in Health Science Studies requires the completion of 120 credits.

Course	Title	Credits
First Year		
Fall Semester		
BIO 101 & 101L	General Biology I and General Biology I Lab	4

¹ Sports Medicine Track includes two additional required emergency management electives.

The sequencing of coursework for the preprofessional track has some flexibility; however, some course sequences must be maintained. All requirements in the curriculum must be completed prior to entry into the graduate DPT program.

For information about the graduate portion of the program, please see Post-Bachelor's Doctor of Physical Therapy (p. 799).

Mission Statement

The mission of the Health Science Studies bachelor's degree program is to facilitate and enrich students' development into knowledgeable, proficient and culturally competent interprofessional collaborators, who are leaders and lifelong learners, equally prepared for advanced healthcare education or direct entry into a health science career.

Dual-Degree BS in Health Science Studies/Doctor of Physical Therapy (4+3)

Program Contact: Michelle Broggi (michelle.broggi@qu.edu) 203-582-8057 or Ken Kosior (ken.kosior@qu.edu) 203-582-3931

This program is for direct entry only. Students accepted into the HSS-DPT program as first-year students may complete the Bachelor of Science in Health Science Studies in four years. All students must complete 120 university credits to include the required University Curriculum (UC) courses, DPT required courses, and required courses in either the Human Movement or Sports Medicine tracks. Students must achieve a 3.2 cumulative GPA and a 3.2 average for 48 credits of selected math and science courses for admission to the graduate Doctor of Physical Therapy (DPT) program.

The Department of Physical Therapy Graduate Admissions Committee is responsible for evaluating and ensuring that all early-assurance candidates meet the requirements of the preprofessional component of the program.

Curriculum for Dual-Degree BS in Health Science Studies/DPT (4+3)

Mission Statement

The mission of the Health Science Studies bachelor's degree program is to facilitate and enrich students' development into knowledgeable, proficient and culturally competent interprofessional collaborators, who are leaders and lifelong learners, equally prepared for advanced healthcare education or direct entry into a health science career.

Department of Physician Assistant Studies

The physician assistant profession has grown to meet the healthcare needs of our communities and nation. The Department of Physician Assistant Studies at Quinnipiac University educates qualified individuals to be highly skilled licensed healthcare providers who practice team-based medicine in collaboration with physicians. The department offers a dual-degree program, which consists of an undergraduate pre-PA program known as the Entry-Level Master's Physician Assistant (ELMPA) program and the accredited graduate Master of Health Science (MHS) Physician Assistant program.

The ELMPA program provides students who are serious about entering the physician assistant profession with a well-rounded education and a strong focus in biological and health science studies. This very structured and organized undergraduate program not only prepares students for the rigors of the professional component of the program, but also introduces students to the role and responsibilities of physician assistants as well as the six competencies for the physician assistant profession. Upon successful completion of all of the requirements of the ELMPA program, students receive a Bachelor of Science in Health Science Studies and directly matriculate into reserved seats in the MHS program.

The graduate MHS Physician Assistant program is a 27-month intensive educational experience that prepares students with the core competencies to be a caring, compassionate, competent and highly skilled healthcare provider. The program consists of a total of 15 months didactic and 12 months clinical education. Students are required to meet core professional competencies, standards of professionalism and mission-driven program requirements prior to graduation from the program. Each graduate cohort is composed of students entering from the ELMPA program as well as external candidates who apply for admission through the Central Application Service for Physician Assistants (CASPA).

Undergraduate Program

- Entry-Level Master's Physician Assistant (p. 565)

Graduate Program

- Master of Health Science (p. 820)

Physician Assistant (PY)

PY 104. Physician Assistant Seminar I - Orientation to the Profession. **1 Credit.**

This course is for ELMPA majors only. Students gain a basic knowledge of the fundamentals of the physician assistant profession and are introduced to the competencies of the PA profession. PA education, role expectations and practice settings are examined. In addition, historical information on the profession is presented. Students must have active AAPA student membership.

Offered: Every year, Spring

PY 204. Physician Assistant Seminar II - The Interdisciplinary Team. **1 Credit.**

In this seminar course, students explore the roles of those professionals who are part of the health care team and learn how team practice affects patient care. Experts from a variety of health care fields explore the relationship of the practicing PA in each professional domain.

Prerequisites: Take PY 104, PY 397.

Offered: Every year, Spring

PY 388. Clinical Training I. **3 Credits.**

This course is for ELMPA majors only. It includes classroom and clinical experiences and provides students with an opportunity to develop the knowledge and skills required for Emergency Medical Technician National Certification. Emphasis is placed on patient assessment, clinical signs and symptoms, pathophysiology and the practical skills necessary to manage the pre-hospital care of patients. Clinical rotations with an ambulance service are required. At the discretion of the course instructor, students may be required to meet for additional practical sessions outside of class time. Successful completion of the PY 388-389 sequence and fulfillment of state-mandated hours of instruction are required to be eligible for certification.

Prerequisites: Take PY 104.

Offered: Every year, Fall

PY 388L. Clinical Training I Lab. **0 Credits.**

Lab to accompany PY 388. (3 lab hrs.)

Offered: Every year, Fall

PY 389. Clinical Training II. **3 Credits.**

This course is a continuation of PY 388 and is for ELMPA majors only.

Prerequisites: Take PY 388.

Offered: Every year, Spring

PY 389L. Clinical Training II Lab. **0 Credits.**

Lab to accompany PY 389. (3 lab hrs.)

Offered: Every year, Spring

PY 397. Pre-Health Professions Clinical Affiliation. **3 Credits.**

The pre-clinical experience pairs an undergraduate student who displays maturity, dedication and sensitivity with a physician assistant for a 12-week period. The affiliation is designed to provide the student with the opportunity to observe PA practice and the competencies of the PA profession in a clinical setting. Students may register for the course according to the following criteria: permission of faculty; completion of a minimum of three semesters at Quinnipiac; satisfactory GPA; compliance with pre-clinical health and uniform requirements.

Prerequisites: Take PY 104.

Offered: Every year, Spring

PY 401. Introduction to Clinical Problem Solving. **3 Credits.**

This course offers the pre-physician assistant student the tools necessary for developing a systematic approach to the patient and his or her medical condition. Students learn to access and evaluate the medical literature for identification of the signs and symptoms of disease presentation, the components of a history and physical, and the understanding of a differential diagnosis. In addition, students are taught the basis for developing a patient assessment plan. Students may not receive credit for both PY 401 and HSC 401.

Prerequisites: Take PY 104, PY 397.

Offered: Every year, Fall

PY 501. Human Physiology. **4 Credits.**

This course takes a system approach to the physiologic and biochemical functions of the human body, including relevant anatomical correlations. Laboratory sessions emphasize clinical application to systemic function.

Offered: Every year, Summer

- PY 501L. Physiology Lab.** **0 Credits.**
Lab to accompany PY 501. (3 lab hrs.)
Offered: Every year, Summer
- PY 503. Principles of Interviewing.** **3 Credits.**
This course explores the various methods of approaching and interviewing patients focusing on the establishment of a relationship, effects of cultural backgrounds, gender and age on giving and receiving of information in order to obtain an accurate medical history.
Offered: Every year, Summer
- PY 504. History, Roles and Responsibilities of the PA.** **1 Credit.**
This course explores through lecture and discussion the factors affecting the development of the profession and role socialization with emphasis on standards of quality assurance, credentialing of continued competence, policies and regulations governing clinical responsibilities and dynamics of membership on a health care team.
Offered: Every year, Spring
- PY 505. Clinical Pharmacology I.** **2 Credits.**
This distance education course covers the classification, mechanism of action, toxicity and clinical use of therapeutics agents. Side effects, indications, dose response and management of therapeutics are emphasized.
Offered: Every year, Fall
- PY 506. Principles of Internal Medicine.** **6 Credits.**
This course takes an organ system approach to disease emphasizing the pathogenesis, clinical presentation, differential diagnosis, diagnostic and therapeutic approach to disease processes. Laboratory sessions focus on clinical problem solving through the use of real cases.
Corequisites: Take PY 520L.
Offered: Every year, Fall
- PY 506L. Clinical Correlation Lab.** **0 Credits.**
Lab to accompany PY 506. (1 lab hr.)
Offered: Every year, Fall
- PY 507. Principles of Electrocardiography.** **1 Credit.**
This course offers a directed approach to understanding the principles of electrocardiography and its applications to clinical practice. Throughout this course, general principles of the etiologies of abnormal EKG patterns, the differential diagnosis and clinical management are discussed to correlate the EKG with clinical situations.
Offered: Every year, Summer
- PY 507L. EKG Lab.** **0 Credits.**
Lab to accompany PY 507. (1 lab hr.)
Offered: Every year, Summer
- PY 508. Diagnostic Methods I.** **2 Credits.**
Clinical laboratory medicine is examined with emphasis on indications for tests, normal values, interpretation of results and correlation with clinical conditions. Laboratory sessions provide students with practical experience performing basic laboratory tests.
Offered: Every year, Summer
- PY 508L. Diagnostic Methods Lab.** **0 Credits.**
Lab to accompany PY 508. (2 lab hrs.)
Offered: Every year, Summer
- PY 509. Principles of Obstetrics and Gynecology.** **3 Credits.**
Anatomy and physiology of the human reproductive system are examined, including the changes in pregnancy, prenatal care, medical and surgical complications of pregnancy, pre- and postpartum care. Common gynecologic conditions, methods and effectiveness of contraception, cancer detection methods and the diagnosis and treatment of sexually transmitted infections in the female are explored.
Offered: Every year, Spring
- PY 510. Principles of Pediatrics.** **3 Credits.**
This course examines the physical and psychological fundamentals of normal growth and development. Focus is on the major pediatric illnesses and conditions, their signs, symptoms and treatment. Immunization schedules, the various medications used in the pediatric population, their doses and indication are examined; the management of pediatric emergencies such as acute cardiac and respiratory arrest, anaphylaxis, seizures and trauma also are explored.
Offered: Every year, Spring
- PY 511. Principles of Surgery and Emergency Medicine.** **4 Credits.**
The fundamentals of surgical disease are explored with discussions on the etiology, pathophysiology, clinical manifestations and appropriate management of major and minor surgical conditions and care of the acutely injured and critically ill patient. Topics are discussed with emphasis on clinical presentation and pre- and post-operative management. The course introduces the principles of life support technique and the initial management of acute medical and traumatic conditions. Laboratory sessions are used to familiarize the student with aseptic technique and basic surgical procedures such as airway control, various catheter placements, surgical bleeding control and wound management.
Offered: Every year, Spring
- PY 511L. Clinical Skill Lab.** **0 Credits.**
Lab to accompany PY 511. (2 lab hrs.)
Offered: Every year, Spring
- PY 512. Psychosocial Issues in Health Care.** **2 Credits.**
This course explores how cultural belief systems and values in a multicultural society relate to the provision of appropriate health care/ counseling. Students become familiarized with the biological and psychological attributes contributing to sexual expression as well as societal values that shape perception and expression. Factors associated with communicating with and caring for individuals from different cultures, opposite genders or differing sexual preference are explored. Lab sessions help students gain experience and develop confidence in approaching patients through preclinical clerkships. Students improve their clinical skills in the areas of eliciting a history, performing a physical exam, presenting an oral report and medical documentation via the patient chart note.
Offered: Every year, Spring
- PY 512L. Psychosocial Issues Lab.** **0 Credits.**
Lab to accompany PY 512. (2 lab hrs.)
Offered: Every year, Spring

- PY 513. Behavioral Medicine.** **3 Credits.**
 This one-semester course gives students an overview of some of the most important areas in behavioral psychiatry. The course includes an overview of basic psychiatric concepts and focuses on assessing patients who manifest psychological symptoms. Topics include diagnosis and treatment of anxiety disorders, mood disorders, common child and adolescent disorders, somatoform and factitious disorders, psychotic disorders, sleep disorders, adjustment and personality disorders, drug and alcohol abuse, and addresses forensic issues in behavioral health.
Offered: Every year, Spring
- PY 514. Diagnostic Methods II.** **1 Credit.**
 This course covers the basic principles of radiologic and imaging techniques, indication for various tests and recognition of abnormal findings.
Offered: Every year, Fall
- PY 515. Clinical Pathology.** **3 Credits.**
 Basic human pathology is examined from a systemic and cellular level, pathogenesis and various disease states. Topics include histology, inflammation and repair, endocrine, cardiovascular, pulmonary, musculoskeletal, GI and GU pathology.
Offered: Every year, Summer
- PY 516. Clinical Pharmacology II.** **2 Credits.**
 This continuation of Clinical Pharmacology I emphasizes commonly prescribed therapeutic agents.
Offered: Every year, Spring
- PY 518. Physical Diagnosis.** **3 Credits.**
 This lecture course presents the techniques for performing a complete and competent physical examination with an understanding of the pathophysiology presented by the patient. Along with the comprehensive complete physical examination, students learn the problem-oriented physical examination as well as special examination tools and techniques. Synthesis of historical and physical presentations for an accurate evaluation of the patient are emphasized.
Prerequisites: Take PY 503.
Corequisites: Take PY 518L.
Offered: Every year, Fall
- PY 518L. Physical Diagnosis Lab.** **1 Credit.**
 This laboratory/pre-clinical clerkship course presents and explores the techniques for performing a complete and competent physical examination and organizing and reporting the findings in both written and oral format. The pre-clinical clerkships allow the student to gain experience and develop confidence in approaching patients prior to entering the clinical year. Instructional techniques include small group discussion, practical experience with other students and patients, and the observation and critique of physical examination, write-ups and oral presentations.
Prerequisites: Take PY 503.
Corequisites: Take PY 518.
Offered: Every year, Fall
- PY 519. Human Anatomy.** **3 Credits.**
 This lecture experience is meant to provide an environment for learning gross morphology of the human body including structural relationships, anatomical variations and clinical application. Approach to the material is both regional and systemic. Content includes the basic concepts of embryology, the comparison of normal and abnormal structural relationships and demonstration of how these things relate to health and disease. To meet the instructional goals and objectives, students attend lectures and review online reusable learning modules while making connections to concepts encountered in PY 519L.
Offered: Every year, Summer
- PY 519L. Human Anatomy Lab.** **1 Credit.**
 This lab experience is meant to provide an environment for learning gross morphology of the human body including structural relationships, anatomical variations and clinical application. Approach to the material is both regional and systemic. To meet the instructional goals and objectives, students complete full cadaveric dissections and a self-study osteology review.
Corequisites: Take PY 519.
Offered: Every year, Summer
- PY 520L. Clinical Decision Making.** **1 Credit.**
 The purpose of this course is to reinforce materials taught in Principles of Internal Medicine and to provide clinical correlations by working through a case scenario, in either a simulation or seminar setting. Students develop critical thinking skills by working through a history, physical exam, laboratory tests and diagnostic studies, and developing a differential diagnosis for each case, which leads to a diagnosis so that the student can formulate a treatment plan.
Prerequisites: Take PY 501, PY 519, PY 519L.
Corequisites: Take PY 506.
Offered: Every year, Fall
- PY 526. Principles of Epidemiology.** **3 Credits.**
 This graduate-level course in epidemiology directs itself toward application of epidemiological principles. The course involves analysis of prospective and retrospective studies, cross-sectional studies and experimental epidemiology. Both communicable and chronic disease case studies are used, as well as case studies of occupationally induced diseases.
Offered: Every year, Summer
- PY 536. Biostatistics.** **3 Credits.**
 This course covers the application of statistical techniques to the biological and health sciences. Emphasis is on mathematical models, collection and reduction of data, probabilistic models estimation and hypothesis testing, regression and correlation, experimental designs and non-parametric methods.
Offered: Every year, Summer

- PY 548. Ethics in Health Care Delivery I. 2 Credits.**
This course provides an overview of the discipline of Medical Ethics presenting the study and application of relevant principles, insights and understandings of modern medical practice. The course includes a study of ethical theories, which lay the foundation for subsequent investigation into specific ethical problems found in medical science and technology. A framework of ethical decision making is introduced and practiced using realistic medical cases. The purpose of the course is to provide a framework that enables the student to reason clearly and effectively about the ethics involved in medical science and technology. This course better prepares students to identify ethical issues they may encounter during the clinical year and provides a method for ethical decision making when faced with these issues. The course assumes no prior knowledge of philosophical ethics or medical science.
Offered: Every year, Summer
- PY 572. Medical Microbiology and Infectious Diseases. 3 Credits.**
This detailed study of microorganisms and the diseases they cause in man includes consideration of infectious disease microorganisms including their biochemical, serological and virulence characteristics, and clinical manifestations. An organ system approach is used to examine the fundamentals of pathogenicity, host response, epidemiological aspects of infectious disease, as well as clinical manifestations, diagnosis and treatment of infections.
Offered: Every year, Fall
- PY 608. Graduate Seminar. 3 Credits.**
This seminar prepares students for the specific requirements of entering professional practice. Faculty active in the profession cover such issues as malpractice coverage, licensure regulation, risk management and legal issues, and aspects of the financing of health care. Lab sessions are designed as small group seminars. Through guided discussion in these small seminar settings, students explore the current literature and thinking on the competencies for the physician assistant profession.
Offered: Every year, Summer
- PY 608L. Graduate Seminar Lab. 0 Credits.**
Lab to accompany PY 608. (1.5 lab hrs.)
Offered: Every year, Summer
- PY 611. Clinical Residency I. 3 Credits.**
Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.
Offered: Every year, Summer
- PY 612. Clinical Residency II. 3 Credits.**
Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.
Offered: Every year, Summer
- PY 613. Clinical Residency III. 3 Credits.**
Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.
Offered: Every year, Summer
- PY 614. Clinical Residency IV. 3 Credits.**
Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.
Offered: Every year, Fall
- PY 615. Clinical Residency V. 3 Credits.**
Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.
Offered: Every year, Fall
- PY 616. Clinical Residency VI. 3 Credits.**
Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.
Offered: Every year, Fall
- PY 617. Clinical Residency VII. 3 Credits.**
Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.
Offered: Every year, Spring

PY 618. Clinical Residency VIII.**3 Credits.**

Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.

Offered: Every year, Spring**PY 619. Clinical Residency IX.****3 Credits.**

Upon successful completion of the didactic phase, the PA student undertakes an intensive course of study requiring the application of skills and concepts acquired during the earlier course work. Each student rotates through seven six-week clinical disciplines and two four-week electives at varying sites throughout Connecticut, Massachusetts and Rhode Island. The core rotations are: family medicine/primary care, internal medicine, general surgery, emergency medicine, obstetrics/gynecology, pediatrics and psychiatry. Supplemental electives include a wide variety of medical, surgical and pediatric subspecialties.

Offered: Every year, Spring**PY 648. Ethics/Health Care Delivery II.****1 Credit.**

This 1-credit course occurs in the third summer after the student completes their clinical rotations. The course is a continuation of the PY 548 Ethics in Health Care I. The purpose of the course is to reinforce a framework of ethical decision-making which enables the student to reason clearly and effectively about the ethics involved in medical science and technology and reflect on ethical issues encountered during the clinical year. Student experiences encountered during their clinical year are used to exemplify the theoretical course material.

Offered: Every year, Summer**PY 650. Medical Writing Workshop/Journal Club.****1 Credit.**

The purpose of the medical writing course is to educate the PA student in the interpretation of medical literature and provide experiences in the various forms of medical writing and presentations. The course begins in summer semester of the second year with lectures, modules and on-campus activities, and then spans the clinical year using distance-education resources. Learning topics progress from a basic overview of writing mechanics and proper referencing to specific types of medical articles. Success in the medical writing course is determined by the quality of the researched written clinical papers and posters.

Offered: Every year, Summer**PY 676. Comprehensive Examination.****2 Credits.**

This comprehensive examination is a capstone of the physician assistant program. The purpose of the exam is twofold. First, to ascertain if the student has both the broad and specific knowledge expected of someone holding a master's degree. Second, to determine whether the student has been able to integrate knowledge obtained from individual courses into unified concepts that link the students' own specialization to other fields of study. The student is given an oral exam, a written examination and a clinical skills examination in the form of an Objective Score of Clinical Evaluation (OSCE).

Offered: Every year, Summer

Entry-Level Master's Physician Assistant

Program Contact: Laurie Seeger (p. 7) 203-582-3882

The Entry-Level Master's Physician Assistant (ELMPA) is a dual-degree program that offers the qualified pre-physician assistant students an opportunity to pursue a Bachelor of Health Science Studies and a Master of Health Science in the Physician Assistant program at Quinnipiac University. The program is divided into a four-year preprofessional component and a 27-month professional component. To progress to the professional phase, all ELMPA courses and program requirements must be completed within four years.

Student Learning Outcomes

Upon completion of the Entry-Level Master's Physician Assistant program, students will demonstrate the following competencies:

Goal: Students will have a strong foundation in sciences and the healthcare system preparing them for the rigors of the graduate PA program.

- Core Science Knowledge:** Demonstrate a knowledge of core sciences.
- Interprofessional Health Care:** Understand the roles and shared values of various healthcare professionals.

Goal: Students will become advocates of professional responsibility.

- Professionalism:** Demonstrate the attributes of a high-quality professional.
- Interpersonal and Communication Skills:** Possess the ability to safely and effectively communicate with various populations.
- Community Service:** Engage all students in active and ongoing community outreach.
- Leadership:** Support a culture of leadership in the university and the community.

Preprofessional Component

The mission of the Quinnipiac University Entry-Level Master's Physician Assistant (ELMPA) program is to begin the education and preparation of master's-level physician assistants who practice medicine with physicians and other members of the healthcare team. The program has been designed to benefit from faculty expertise in both the graduate and undergraduate divisions as well as practitioners from a variety of clinical settings and specialties. These collaborative strategies are intended to prepare graduates to enter the physician assistant profession and ultimately become outstanding healthcare providers.

Admission to the Program

Candidates applying for admission to the Dual-Degree BS in Health Science Studies/MHS Physician Assistant program must have: a minimum of three years of high school mathematics including geometry, algebra and precalculus; and four years of science—physics, anatomy and physiology, AP biology and advanced chemistry are some of the suggested courses. In addition, advanced electives in the biological sciences are recommended. Related healthcare experience and shadowing is highly desirable.

Prospective candidates must also satisfy the admission requirements of Quinnipiac. Transfer students are not admitted to the entry-level master's physician assistant program. Admission into the preprofessional component of the program does not guarantee admission into the professional component of the program, unless all requirements are met.

Technical Standards

All students entering the MHS Physician Assistant program at Quinnipiac University must be able to meet the established abilities and expectations of the graduate PA program technical standards, which can be found on the program's website (p. 822). Upon admission to the ELMPA program, students are required to review and verify that they understand the technical standards requirement. Prior to participation in the preclinical experiences, the student's primary care provider must verify, based on a complete history and physical examination, that the student meets the technical standards of the graduate PA program. In the event that a student is unable to fulfill these technical standards, the student may not be able to participate in preclinical affiliations and may not be able to progress to the graduate PA program.

Background Checks/Drug Screens

Students should be aware that certain preclinical sites may require a criminal background check and/or urine drug screen before a student is placed in the clinic or intern site. The university has procedures to assist students in obtaining these requirements. The cost of the background check and drug screen is the responsibility of each individual student. All students are required to have a new or updated background check upon progression to the MHS Physician Assistant program.

Undergraduate Program

- Dual-Degree BS in Health Science Studies/MHS Physician Assistant (p. 565)

Graduate Program

- MHS Physician Assistant (p. 820)

Dual-Degree BS in Health Science Studies/MHS Physician Assistant

Program Contact: Laurie Seeger
(laurie.seeger@quinnipiac.edu) 203-582-3882

This entry-level dual-degree Physician Assistant program leading to a Bachelor of Health Science Studies and Master of Health Science is divided into a 4-year preprofessional component and a 27-month professional component.

The preprofessional component provides students with a well-rounded education and a strong focus in biological and health science studies. This very structured and organized undergraduate program not only prepares students for the rigors of the professional component of the program, but also introduces students to the role and responsibilities of physician assistants as well as the six competencies for the physician assistant profession. The program addresses the need for medical experience by providing students with emergency medical technician (EMT) training (PY 388/PY 389) as well as extensive time shadowing practicing physician assistants (PY 397). EMT ride time and preclinical experiences take place at off-campus sites, and students are responsible for transportation to and from all off-campus sites beginning in the sophomore year. In addition, students must meet specific program health and immunization requirements for participation in the preclinical experiences. Program costs associated with the preclinical affiliations and EMT course, including uniform, parking, certification exam, health requirements documentation, background check and additional program fees are the responsibility of the student.

Entry-Level Master's Physician Assistant Curriculum

Course	Title	Credits
First Year		
Fall Semester		
BIO 101 & 101L	General Biology I and General Biology I Lab	4
EN 101	Introduction to Academic Reading and Writing	3
MA 141	Calculus of a Single Variable	3
CHE 110 & 110L	General Chemistry I and General Chemistry I Lab	4
FYS 101	First-Year Seminar	3
Credits		17
Spring Semester		
BIO 102 & 102L	General Biology II and General Biology Lab II	4
EN 102	Academic Writing and Research	3
UC Disciplinary Inquiry (Fine Arts, Humanities, Social Sciences)		3
CHE 111 & 111L	General Chemistry II and General Chemistry II Lab	4
PY 104	Physician Assistant Seminar I - Orientation to the Profession	1
Credits		15
Summer Semester		
Patient Contact Hours		
Credits		0
Second Year		
Fall Semester		
BIO 211 & 211L	Human Anatomy and Physiology I and Human Anatomy and Physiology Lab I	4
CHE 210 & 210L	Organic Chemistry I and Organic Chemistry I Lab	4
PHY 110 & 110L	General Physics I and General Physics I Lab	4
PY 388 & 388L	Clinical Training I and Clinical Training I Lab ¹	3
Credits		15
Spring Semester		
BIO 212 & 212L	Human Anatomy and Physiology II and Human Anatomy and Physiology II Lab	4
CHE 211 & 211L	Organic Chemistry II and Organic Chemistry II Lab	4
PY 397	Pre-Health Professions Clinical Affiliation	3
PY 389 & 389L	Clinical Training II and Clinical Training II Lab ¹	3
HSC 202	Medical Terminology	2
Credits		16
Summer Semester		
Patient Contact Hours		
Credits		0

Third Year**Fall Semester**

BMS 370 & 370L	General Microbiology and General Microbiology Lab	4
BIO/BMS Core science elective		3-4
UC Disciplinary Inquiry (Fine Arts, Humanities, Social Sciences)		3
UC Disciplinary Inquiry (Fine Arts, Humanities, Social Sciences)		3
Open Elective		3

Credits 16-17

Spring Semester

BMS 200	Biomedical Basis and Experience of Human Aging	3
BMS 304	Biological Chemistry	3
BIO/BMS Core science elective		3-4
BIO/BMS/HSC Science elective		3-4
UC Personal Inquiry 1 (Fine Arts, Humanities, Social Sciences)		3

Credits 15-17

Summer Semester

Patient Contact Hours		
-----------------------	--	--

Credits 0

Fourth Year**Fall Semester**

PY 401	Introduction to Clinical Problem Solving	3
BIO/BMS Core science elective		3-4
UC Personal Inquiry 1 (Fine Arts, Humanities, Social Sciences)		3
UC Personal Inquiry 2 (Fine Arts, Humanities, Social Sciences)		3
Open Elective		3

Credits 15-16

Spring Semester

PY 204	Physician Assistant Seminar II - The Interdisciplinary Team	1
BMS 332	Histology and Lab	4
BIO/BMS/HSC Science elective		3-4
UC Personal Inquiry 2 (Fine Arts, Humanities, Social Sciences)		3
SHS 420	Integrative Capstone	3

Credits 14-15

Total Credits 123-128

¹ If student has current EMT licensure on admission to the program, two additional science electives are taken instead of PY 388 and PY 389.

Total number of credits required for completion of the preprofessional component = 123

Students who have earned advanced placement credit or other college credit in an introductory-level science course are encouraged to still take BIO 101/BIO 102 and CHE 110/CHE 111 at Quinnipiac. Students opting out of those courses are required to take the equivalent number of hours at a higher level in the same area of course work. Students with AP credits in nonscience courses may elect to take only 14 credits in the fall semester of the first year.

Acceptable Core Science Electives

Code	Title	Credits
Select three of the following courses:		
BMS 310	Neuroanatomy	3
BMS 318	Pathophysiology	3
BMS 320	Pharmacology	3
BMS 325	Toxicology	3
BMS 330	Endocrinology	3
BMS 372 & 372L	Pathogenic Microbiology and Pathogenic Microbiology Lab	4
BMS 375 & 375L	Immunology and Immunology Lab	3-4
	or HSC 375 Immunology	
BIO 350	Cardiovascular Physiology	3

Additional Science Electives

Code	Title	Credits
Select two courses from core science electives OR from the following:		
BIO 282 & 282L	Genetics and Genetics Lab	4
	or BIO 471 Molecular Genetics	
BIO 298	Research Methods in Biology	3
	or BMS 278 Research and Technology	
BIO 317 & 317L	Developmental Biology and Developmental Biology Lab	4
BMS 318	Pathophysiology	3
BIO 328 & 328L	Human Clinical Parasitology and Human Clinical Parasitology Lab	4
BIO 329	Neurobiology	3
BIO 346 & 346L	Cell Physiology and Cell Physiology Lab	4
BIO 365	Cancer Biology	3
BIO 382 & 382L	Human Genetics and Human Genetics Lab	4
BMS 276	Drug Development	3
BMS 378	Vaccines and Vaccine-Preventable Diseases	3
BMS 470	Virology	4
BMS 473	Infections of Leisure	3
	or BMS 474 Power of Plagues	
BMS 475	Special Topics in Microbiology	4
BMS 482	Independent Study in Microbiology ¹	2-4
BMS 498	Independent Study in Biomedical Sciences I ¹	2-4
BMS 499	Independent Study in Biomedical Sciences II ¹	2-4
BMS 525	Vaccines and Vaccine Preventable Diseases ¹	3
BMS 556	Seminar in Health Care Disparities	1
BMS 595	Transplantation Immunology ¹	3
HSC 220	Health Care Essentials: Structure, Policy and Professionalism	3

HSC 225	Writing in the Health Professions	3
HSC 262	Nutrition in Health and Illness	3
HSC 270	Pillars of Public Health: Saving the World on a Population Level	3
HSC 315	Bioethical Issues in the 21st Century	3
HSC 322	Health Care Law (LE 322)	3
HSC 498	Independent Study in Health Sciences	1-4

¹ With permission. Students who complete an independent study course for 2 credits must also complete a 4-credit science elective course in order to have at least 6 credits of science electives.

Acceptable UC Social Sciences (Disciplinary Inquiry/Personal Inquiry 1)

Code	Title	Credits
PS 101	Introduction to Psychology	3
PS 210	Human Sexuality (WGS 210)	3
PS 232	The Concept of Personality and Its Development	3
PS 244	Psychology of Prejudice	3
PS 261	Social Psychology	3
PS 262	Psychology of Women and Gender (WGS 262)	3
PS 272	Abnormal Psychology	3
PS 284	LGBTQ Identities and Communities (SO/WGS 284)	3
SO 101	Introduction to Sociology	3
SO 280	Sociology of Health and Illness	3
SO 284	LGBTQ Identities and Communities (PS/WGS 284)	3

Acceptable UC Elective (Personal Inquiry 2)

Code	Title	Credits
BMS 200	Biomedical Basis and Experience of Human Aging	3

Program Requirements

Formal evaluation of the pre-physician assistant student by the Academic Progression and Retention Committee takes place at the end of the spring semester of the first year. To continue in the program, students must have a minimum cumulative GPA of 3.2 and a minimum cumulative science GPA of 3.2. Following the initial evaluation, students are evaluated after completion of each semester. Failure to maintain a minimum cumulative GPA of 3.2 and a minimum cumulative science GPA of 3.2 results in dismissal from the program. In addition, a minimum GPA (both cumulative and science) is required for participation in preclinical affiliations. All required courses must be completed with a course grade of C- or better.

By February 1 of the fourth year, students are required to have accumulated at least 1,000 hours of documented direct patient contact through paid and/or volunteer experiences (e.g., certified nurse's aide, medical assistant, phlebotomy technician, emergency room technician, EMT). While patient contact hours must be preapproved by program faculty, students are responsible for making their own arrangements to

obtain these direct patient contact hours. In addition, all students are required to obtain student membership in the American Academy of Physician Assistants (AAPA).

Requirements for Progression to the MHS Physician Assistant Program

For a student in the Entry-Level Master's Physician Assistant (ELMPA) program to progress to the MHS Physician Assistant program at Quinnipiac University, the student must successfully complete all requirements to obtain a BS degree in Health Science Studies, including all prerequisite courses for the PA program admission. Students progressing to the professional phase of the program may not have any course failures or grades of incomplete, and no outstanding academic integrity or professionalism issues at the time of progression. In addition, students must meet the established requirements for direct patient contact hours and EMT certification. Prior to beginning the Physician Assistant program, students meet with a faculty member from the Department of Physician Assistant Studies for a final academic review. The student must meet all academic, curricular, professional, health and immunization, background check and technical standards requirements of the PA program to matriculate into the program.

For information on the professional component of the Entry-Level Master's Physician Assistant program, please see the Graduate Studies section (p. 820).

PY 104. Physician Assistant Seminar I - Orientation to the Profession. 1 Credit.

This course is for ELMPA majors only. Students gain a basic knowledge of the fundamentals of the physician assistant profession and are introduced to the competencies of the PA profession. PA education, role expectations and practice settings are examined. In addition, historical information on the profession is presented. Students must have active AAPA student membership.

Offered: Every year, Spring

PY 204. Physician Assistant Seminar II - The Interdisciplinary Team. 1 Credit.

In this seminar course, students explore the roles of those professionals who are part of the health care team and learn how team practice affects patient care. Experts from a variety of health care fields explore the relationship of the practicing PA in each professional domain.

Prerequisites: Take PY 104, PY 397.

Offered: Every year, Spring

PY 388. Clinical Training I. 3 Credits.

This course is for ELMPA majors only. It includes classroom and clinical experiences and provides students with an opportunity to develop the knowledge and skills required for Emergency Medical Technician National Certification. Emphasis is placed on patient assessment, clinical signs and symptoms, pathophysiology and the practical skills necessary to manage the pre-hospital care of patients. Clinical rotations with an ambulance service are required. At the discretion of the course instructor, students may be required to meet for additional practical sessions outside of class time. Successful completion of the PY 388-389 sequence and fulfillment of state-mandated hours of instruction are required to be eligible for certification.

Prerequisites: Take PY 104.

Offered: Every year, Fall

PY 388L. Clinical Training I Lab. 0 Credits.

Lab to accompany PY 388. (3 lab hrs.)

Offered: Every year, Fall

PY 389. Clinical Training II. 3 Credits.

This course is a continuation of PY 388 and is for ELMPA majors only.

Prerequisites: Take PY 388.

Offered: Every year, Spring

PY 389L. Clinical Training II Lab. 0 Credits.

Lab to accompany PY 389. (3 lab hrs.)

Offered: Every year, Spring

PY 397. Pre-Health Professions Clinical Affiliation. 3 Credits.

The pre-clinical experience pairs an undergraduate student who displays maturity, dedication and sensitivity with a physician assistant for a 12-week period. The affiliation is designed to provide the student with the opportunity to observe PA practice and the competencies of the PA profession in a clinical setting. Students may register for the course according to the following criteria: permission of faculty; completion of a minimum of three semesters at Quinnipiac; satisfactory GPA; compliance with pre-clinical health and uniform requirements.

Prerequisites: Take PY 104.

Offered: Every year, Spring

PY 401. Introduction to Clinical Problem Solving. 3 Credits.

This course offers the pre-physician assistant student the tools necessary for developing a systematic approach to the patient and his or her medical condition. Students learn to access and evaluate the medical literature for identification of the signs and symptoms of disease presentation, the components of a history and physical, and the understanding of a differential diagnosis. In addition, students are taught the basis for developing a patient assessment plan. Students may not receive credit for both PY 401 and HSC 401.

Prerequisites: Take PY 104, PY 397.

Offered: Every year, Fall

Department of Rehabilitation, Health and Wellness

The Department of Rehabilitation, Health and Wellness is a vibrant six member group with expertise across multiple aspects of human health, fitness, injury prevention and rehabilitation; faculty are active in aspects of fitness, health care and education at the state, regional and national level. Faculty members collaborate with other health care educators across the School of Health Sciences, School of Medicine and School of Nursing to deliver an interprofessional educational experience.

The department is not currently accepting new students into its BS in Athletic Training nor into its Dual-Degree BS in Athletic Training/DPT (4+3) program. The Department offers classes to the broader campus community in areas of Fitness, Leisure and Wellness (FLW) and collaborates with the Department of Biomedical Sciences in offering the Minor in Nutrition.

- Bachelor of Science in Athletic Training (p. 569) not currently accepting new students
- Minor in Nutrition (p. 496)

Athletic training encompasses the prevention, examination, diagnosis, treatment and rehabilitation of emergent, acute or chronic injuries and medical conditions. Athletic training is recognized by the American Medical Association (AMA), Health Resources Services Administration (HRSA) and the Department of Health and Human Services (HHS) as an allied health care profession.

Athletic trainers (ATs) are highly qualified, multiskilled health care professionals who collaborate with physicians to provide preventive

services, emergency care, clinical diagnosis, therapeutic intervention and rehabilitation of injuries and medical conditions. Athletic trainers work under the direction of a physician as prescribed by state licensure statutes.

At Quinnipiac, the program in athletic training emphasizes practical clinical experience along with a strong foundation in anatomy and physiology, nutrition and fitness and conditioning, among other subjects. The program values personal responsibility and critical decision making in the development of high-quality, patient-centered care. Students work with student-athletes from Quinnipiac's Division I volleyball, soccer, field hockey, cross country, tennis, basketball and ice hockey teams as well as athletes in local high schools and community-based healthcare settings, all under the supervision of certified athletic trainers and other licensed healthcare providers.

Fitness, Leisure and Wellness

Program Contact: Debora H. Lavigne (debora.lavigne@qu.edu)
203-582-7943

Quinnipiac's School of Health Sciences offers courses that promote and encourage personal growth in the areas of fitness, leisure and wellness. In keeping with the school's mission, the courses are dedicated and focused on the development of the entire person with the goal of encouraging the essential habits of lifetime fitness, leisure and wellness. Classes take place on both the Mount Carmel and York Hill campuses, as well as at off-campus locations. See FLW course descriptions (<http://catalog.qu.edu/courses-undergraduate/flw/>) for a detailed list of offerings.

Bachelor of Science in Athletic Training

Program Contact: Stephen Straub (Stephen.Straub@quinnipiac.edu)
203-582-8443

The Bachelor of Science in Athletic Training program at Quinnipiac is a four-year undergraduate program preparing students to sit for the national certification exam (bocac.org (<http://www.bocac.org/>)), which permits the student to work as a Certified Athletic Trainer (nata.org (<http://www.nata.org/>)). This direct-entry program is accredited by the Commission on Accreditation of Athletic Training Education (caate.net (<https://caate.net>)) and offers a highly personalized learning environment featuring small classes and ready access to faculty, which reflects the university's commitment to excellence in teaching, as well as support for scholarship and professional development.

The Athletic Training faculty share a service orientation toward the students and their needs. The program also strives to prepare graduates who manifest critical and creative thinking, effective communication skills, informed value judgments, and who possess an educational foundation for continued growth and development in a changing world of diverse cultures and people.

BS in Athletic Training Curriculum Preprofessional Component

Examination and an evaluation of high school units presented determine initial placement in the English and mathematics courses. The minimum mathematics requirement is MA 275. Biology and athletic training courses must be completed in the appropriate semesters as indicated.

The following courses must be completed with a C- or better and a minimum GPA of 2.67.

Code	Title	Credits
Required Courses		
BIO 101 & 101L	General Biology I and General Biology I Lab	4
BIO 102 & 102L	General Biology II and General Biology Lab II	4
BIO 211 & 211L	Human Anatomy and Physiology I and Human Anatomy and Physiology Lab I	4
BIO 212 & 212L	Human Anatomy and Physiology II and Human Anatomy and Physiology II Lab	4
CHE 101 & 101L	Fundamentals of General, Organic and Biological Chemistry I and Fundamentals of General, Organic and Biological Chemistry I Lab ¹	4
CHE 102 & 102L	Fundamentals of General, Organic and Biological Chemistry II and Fundamentals of General, Organic and Biological Chemistry II Lab ¹	4
MA 275	Biostatistics	3
Total Credits		27

Where applicable, courses may be used to satisfy University Curriculum requirements. Progression to the professional component occurs in the fourth semester or second year, spring semester.

The following courses must be completed with a minimum of a B- at Quinnipiac and prior to entry into the professional component of the Athletic Training program. All AT courses must be taken at Quinnipiac.

Code	Title	Credits
AT 114	Introduction to Athletic Training/ Sports Medicine	2
AT 115	Introduction to Kinesiology	3
AT 116	Introduction to Fitness and Conditioning	2
AT 214	Care and Prevention of Athletic Injuries	3
AT 216 & 216L	Emergency Management of Athletic Trauma and Emergency Management of Athletic Trauma Lab	3
AT 250 & 250L	Introduction to Evaluation and Treatment of Musculoskeletal Injuries and Introduction to Evaluation and Treatment of Musculoskeletal Injuries	4
Total Credits		17

Professional Component

The Admissions, Progression and Retention Committee for the program in athletic training is responsible for evaluating and screening candidates

for the professional component of the program. Program requirements are established in conjunction with the guidelines established by the Commission on Accreditation of Athletic Training Education and are acceptable to the school and university administration. Clinical assignments (clinical practicum I–V) are divided between Quinnipiac and off-campus sites. Students are responsible for transportation to and from all off-campus sites and should plan to have a vehicle by the fourth semester. Most off-campus sites are within 15 miles from the main campus. Students involved in varsity athletics typically require additional semester(s) to complete the program.

The curriculum for the professional courses in the program is subject to modification as deemed necessary to maintain a high-quality educational experience and keep current with best practices in the profession.

Total Credits 127

¹ Students enrolled in the AT/DPT dual program or interested in certain graduate programs should substitute CHE 110–CHE 111 for CHE 101–CHE 102.

² These AT courses have a laboratory and/or clinical component.

**Students admitted to the AT/DPT dual major need to take PHY 110, PHY 111 and MA 141 (total credits 129). Additionally, students must achieve a 3.2 cumulative GPA and a 3.2 average for 46 credits of selected math and science courses at the completion of all credits for admission to the graduate DPT program.

A GPA of 3.0 must be maintained each semester during the professional component; C, D and F grades are unacceptable in the core courses during the professional component of the program.

The Athletic Training program is accredited by the Commission on Accreditation of Athletic Training Education (CAATE).

Student Learning Outcomes

Upon completion of the undergraduate degree program in athletic training, students will demonstrate the following competencies:

- Professional Competence:** Engage in quality patient interactions displaying entry-level professional attributes.
- Clinical Competence:** Provide quality patient care and clinical decision-making during all clinical experiences.
- Clinical Decision-Making:** Deliver high-quality patient care and make critical patient care decisions.
- High-Quality Patient Interaction:** Engage in interprofessional collaboration and patient care.
- Interprofessional Health Care:** Collaborate and communicate with professions across the health system.
- Evidence-Based Practice:** Partake in evidence-informed practice by engaging in the development and presentation of a PICO-based question.

Goal: Students will display personal responsibility.

- Personal Development:** Understand and engage as personally responsible professionals during clinical experiences.
- Adhere to Standards of Professional Practice:** Understand and engage within all legal and professional standards for healthcare providers.
- Professional Presentation:** Display personal responsibility, professionalism and subject area specialization to healthcare peers.

Goal: Students will demonstrate critical and creative thinking.

- Research Appraisal:** Effectively appraise and present current evidence for use in patient care decision-making.
- Education:** Engage in creative dissemination of professional attributes and/or health care promotion.
- Critical Thinking:** Demonstrate declarative and procedural knowledge of thinking.
- Rehabilitation Planning:** Create and implement patient care plans that exhibit both critical and creative development.

Goal: Students will demonstrate entry-level professional competence.

- a. **BOC Pass Rate:** Pass the national certification examination.
- b. **Senior Level Proficiency:** Display entry-level knowledge, skills and abilities within all domains of athletic training via individual assessments.

Departmental and Program Mission Statement

The mission of the Athletic Training Education Program is to provide a quality education program through which students obtain the knowledge and psychomotor skills necessary to practice as athletic trainers certified by the Board of Certification. Importance is placed upon the provision of opportunities within the curriculum for the development of skills encompassing the domains of athletic training. Strong emphasis is placed on the practical clinical experience coupled with specific professional coursework. Recognizing the importance of excellence in teaching and instruction, the faculty, in its commitment to the combination of diverse clinical and intellectual experiences, collaborates in educating students.

The Athletic Training Education Program offers a highly personalized learning environment featuring small classes and ready access to faculty. Reflecting the university's commitment to excellence in teaching, the Athletic Training and Sports Medicine faculty members share a service orientation toward the students and their needs. The program also strives to prepare graduates who manifest critical and creative thinking, effective communication skills, informed value judgments and who possess an educational foundation for continued growth and development in a changing world of diverse cultures and people.

Athletic Training Education Program Goals

The program will:

- a. Provide effective clinical placement sites supervised by willing and participatory preceptors.
- b. Demonstrate excellence in teaching.
- c. Provide professional mentorship to guide students through their undergraduate experience to their selected post-graduate placement.

Direct Entry

The School of Health Sciences is not currently accepting new students into the Bachelor of Science in Athletic Training.

Candidates applying for admission to the Athletic Training program from high school are recommended to have four years of math and science. Math must include Algebra I & II, Geometry through Pre-Calculus or Calculus. Biology and Chemistry are required and a relevant fourth year of science (i.e., Physics, Anatomy & Physiology, AP Biology, Advanced Chemistry, Bio II, Human Anatomy). Some observation hours are recommended, with a Certified Athletic Trainer. Prospective candidates also must satisfy general Quinnipiac University admission requirements.

All applications must include three letters of reference. A personal interview may be requested with representatives of the Admissions Office to discuss program requirements and the applicant's professional interests and commitments.

Applications are accepted for admission to the fall semester only.

Admission to Quinnipiac University does not guarantee admission to the Athletic Training program, unless officially accepted into the program. Students enrolled in the program (semesters 1–3) must achieve a B- or better in AT 114, AT 115, AT 116, AT 214, AT 216 and AT 250 and a minimum cumulative GPA of 2.67 upon completion of all program science and math requirements to qualify for advancement into the professional component of the program (D and F grades in the required science and math courses are unacceptable).

All AT courses must be taken and completed at Quinnipiac University. Professional component students (semesters 4–8) must earn at least a B- in all professional component courses and maintain a GPA of 3.0 each semester during the professional component. Students who fail to maintain these grade requirements are subject to dismissal from the program.

Students enrolled in the Athletic Training program, or other majors that provide prerequisite requirements for the graduate DPT program, may apply for entry into the three-year Doctor of Physical Therapy. Please see Entry-Level Dual-Degree Bachelor of Science to DPT (p. 557) for information on application for entry into the three-year Doctor of Physical Therapy graduate program.

Technical Standards for Admission

The Athletic Training program is a rigorous and intense program that places specific requirements and demands on the students enrolled in the program. An objective of this program is to prepare graduates to enter a variety of employment settings and to render care to a wide spectrum of individuals engaged in physical activity. The technical standards set forth by the Athletic Training program establish the essential qualities considered necessary for admitted students to this program to achieve the knowledge, skills and competencies of an entry-level athletic trainer, as well as meet the expectations of the program's accrediting agency: Commission on Accreditation of Athletic Training Education (CAATE).

All students admitted to the program must meet the established abilities and expectations. In the event a student is unable to fulfill these technical standards, with or without reasonable accommodation, the student will not be admitted or may be dismissed from the program.

Candidates for selection to the program are required to verify that they understand and meet the technical standards or that they believe that, with certain reasonable accommodations, the technical standards can be met. Verification of understanding includes the student reading, signing and returning a copy of the Technical Standards Agreement to the program director during the spring semester of the student's first year. Click the link for a listing of the technical standards and agreement form (<https://www.qu.edu/schools/health-sciences/programs/bachelors-degree/athletic-training/>) for the Athletic Training program. **It is recommended the student read and understand the agreement form prior to enrollment at the university. Please address any questions to the Office of Student Accessibility.**

Background Check and Immunizations

All students entering the Athletic Training program, and the healthcare professions in general, should be aware that most professional credentialing agencies require a background check prior to awarding professional credentials. Information regarding background checks for those seeking to become certified athletic trainers can be found at bocatc.org (<https://bocatc.org/state-regulation/state-regulation/>).

For Athletic Training, the affidavit portion of the certification exam application requires candidates to report any felony or misdemeanor conviction along with any judgments of negligence, malpractice or misconduct. During the application process for the national certifying examination, candidates must submit an explanation of the events that led to the conviction(s) and a copy of court document(s), including, but not limited to, an arrest report, sentence recommendation, compliance of all court requirements and proof of payment of all related fines.

Candidates may request a predetermination of eligibility at any time by submitting their documentation prior to their application. The Professional Practice and Discipline Committee reviews all convictions. Candidates are notified in writing of the committee's decision. Please review the Professional Practice and Disciplinary Guidelines and Procedures for details.

Students enrolled in the Quinnipiac University Athletic Training program will be required to complete criminal and sex offender background checks and submit required health and immunization records (including titer testing) prior to initiation of clinical rotations. The cost of the background checks and all immunization related costs are the responsibility of the individual student. A complete listing of the immunizations is available under "Additional Program Costs."

Additional Program Costs

As a clinical education program, the Athletic Training major requires some expenses that go beyond standard university tuition and fees:

- a. **Clinical Education Travel** (gas, parking, public transportation) – Students will have at least two clinical rotation experiences that take place off campus. For this rotation, the student typically travels 4 to 5 times per week for practice, games and treatments. While a car is not absolutely required, it increases the variety and flexibility of clinical experiences available to the student. These rotations start during the sophomore year. **Costs: variable.**
- b. **Immunizations** – Consistent with the School of Health Sciences policy, all students must have a full battery of immunizations and in some cases titer affirmation of immunity for common diseases including but not limited to: MMR, HepB, varicella, polio, TDAP, TB, influenza and COVID-19. These must be documented prior to the start of clinical experiences during the sophomore year and must be maintained through the undergraduate education. **Costs: variable (please check with your insurance carrier).**
- c. **Background Check** – All students must undergo a background check prior to the start of clinical observations in the sophomore year. **Cost:** Initial background check cost is \$63 for all domestic addresses for the past 7 years or \$158 for students who have resided in New York state in the last 7 years due to NY state surcharge.
- d. **Liability Insurance** – All students have liability insurance coverage through the university, free of charge, while performing required clinical activity. Students may choose to purchase additional coverage at their own expense.
- e. **Medical Record Tracking** – Consistent with School of Health Sciences policy, students must sign up for and maintain an online account to confirm all required medical records and certifications. This program tracks all student health and safety records, provides documentation to prospective clinical sites, and provides notification of impending expiration dates. **Cost: approximately \$35 per year.**
- f. **Professional Association Membership** – Students are strongly encouraged (but not required) to join the professional association (NATA). **Cost: approximately \$85 per year, depending on home state.**
- g. **BOC Certification Exam** – Professional certification is limited to those who pass the BOC certification examination (typically taken during the last semester of enrollment). **Cost: \$365 for NATA members; \$390 for non-NATA members.**
- h. **Appropriate Uniforms/Clothing** – Each clinical site determines appropriate dress for their location. The student is responsible for meeting the dress code. **Cost: estimated \$100 per year.**

Transfer Students from Other Colleges and Universities

Transfer students from other colleges and universities may be accepted into the Athletic Training program based on space availability. These students must meet the course requirements, performance standards (GPA of 2.67) and technical standards of the program. The students must complete the general science requirements, AT 114, AT 115, AT 116, AT 214, AT 216 and AT 250 prior to entry into the professional component of the program or the fourth semester of the course sequence. AT 114, AT 115, AT 116, AT 214, AT 216 and AT 250 must be taken at Quinnipiac.

Athletic Training courses from the student's previous institution will not be considered for replacement of BMS 300, BMS 301 or any of the athletic training courses offered at Quinnipiac.

Transfer Students from Within Quinnipiac

Students currently attending Quinnipiac in another program may be accepted into the Athletic Training program based on space availability and review of qualifications by the program director. Students may apply through the department upon completion of the general science requirements, AT 114, AT 115, AT 116, AT 214, AT 216 and AT 250 prior to entry into the professional component of the program or the fourth semester of the course sequence. These students must meet the course requirements, performance standards (GPA of 2.67) and technical standards (<https://www.qu.edu/schools/health-sciences/programs/bachelors-degree/athletic-training/>) of the program.

The Athletic Training education program at Quinnipiac University is accredited by:

The Commission on Accreditation Athletic of Training Education (CAATE.net (<http://caate.net/>))

2001 K Street NW, 3rd Floor North Washington, DC 20006

Phone: 512-733-9700 Toll-free: 844-GO-CAATE (844-462-2283)

The program received a 10-year accreditation (the maximum available) in 2019. The re-accreditation process will commence in June 2028 with the submission of a self-study report to CAATE.

Complete program outcomes can be found at our program link at CAATE_QU (<https://caate.net/program-info/214/>)

To become a Certified Athletic Trainer, a candidate must pass a national certification examination. The program has a three-year aggregate first-time pass rate of 95 percent. Here are our certification examination results by year:

Student BOC Pass Rate	2018-2019	2019-2020	2020-2021	3 Yr Aggregate
Number of students graduating from program	15	14	22	51
Number of graduating students who took examination	15	14	22	51
Number of students who passed exam on first attempt	13	14	21	48
Percentage who passed exam on first attempt	87	100	95	94
Number of students who passed exam regardless of # of attempts	14	14	21	49
Percentage who passed exam regardless of # of attempts	93	100	95	96

AT 114. Introduction to Athletic Training/Sports Medicine. 2 Credits.

This course is designed to familiarize the student with the role of an athletic trainer in sports and health care. AT major only or permission of instructor.

Corequisites: Take AT 114L.

Offered: Every year, Spring

AT 114L. Introduction to the Clinical Environment. 0 Credits.

Lab to accompany AT 114. This eight-week session is required for AT majors or those considering transferring into the major. AT major only or permission of instructor. (2 lab hrs.)

Corequisites: Take AT 114.

Offered: Every year, Spring

AT 115. Introduction to Kinesiology. 3 Credits.

This introductory course explores the way the musculoskeletal system produces movement patterns in humans. Musculoskeletal anatomy, joint arthrology, muscular mechanics and biomechanical principals are used to perform muscular analyses of both the upper and lower extremities and the trunk. AT major only or permission of instructor.

Prerequisites: Take BIO 101.

Offered: Every year, Spring

AT 116. Introduction to Fitness and Conditioning. 2 Credits.

This introductory lab and lecture course teaches the fundamentals of basic fitness and exercise. Students engage in fitness assessments and design of personal conditioning programs for healthy subjects. For AT major only or permission of instructor.

Offered: Every year, Spring

AT 201. Medical Aspects of Sports and Activity (SPS 201). 3 Credits.

This course is aimed at individuals who are interested in working in a sports-related field (e.g., coaches, journalists or managers). It provides an overview of a variety of sports medicine-related topics, including common sports injuries, an introduction to sports psychology and current events in the sports medicine. Students who take AT 201 cannot also receive credit for AT 214.

Prerequisites: Take one 4-credit lab science course.

Offered: Every year, Fall and Spring

AT 210. Introduction to Evidence-Based Practice. 2 Credits.

Evidence-based practice in health care is the integration of the best available research with clinical expertise in the context of patient characteristics, culture and preferences. This is an introductory course in the processes associated with collecting and utilizing evidence to make clinical decisions.

Prerequisites: Take MA 275.

Offered: Every year, Spring

AT 214. Care and Prevention of Athletic Injuries. 3 Credits.

This course is designed to provide an overview of the athletic training profession with an emphasis on the basic fundamentals utilized by the athletic trainer in prevention, recognition, care, treatment and rehabilitation of athletic injuries. AT major only or permission of instructor. Students who take AT 214 cannot also receive credit for AT 201 or HSC 214.

Prerequisites: Take BIO 102, BIO 102L, AT 114.

Offered: Every year, Fall

AT 214L. CPR, AED and First Aid. 1 Credit.

Students learn principles of first aid and complete health provider certification in cardiopulmonary resuscitation and automated external defibrillator. For PT majors only. (2 lab hrs.)

Offered: Every year, Fall and Spring

AT 215. Therapeutic Modalities. 3 Credits.

Therapeutic Modalities is an introductory course designed to provide students with knowledge of theory and operation of the most commonly used therapeutic devices.

Prerequisites: Take AT 214, AT 216.

Corequisites: Take AT 215L.

Offered: Every year, Spring

AT 215L. Therapeutic Modalities Lab. 1 Credit.

This lab includes the practical application of therapeutic modalities and must be taken in conjunction with AT 215. (2 lab hrs.)

Corequisites: Take AT 215.

Offered: Every year, Spring

AT 216. Emergency Management of Athletic Trauma. 2 Credits.

This laboratory and lecture course teaches the basic skills and decision-making processes necessary to manage emergency medical situations common to athletic activity. Students also perform general first aid. All students are required to pass Red Cross CPR/AED for the Professional Rescuer and Emergency Oxygen Administration (or equivalent).

Prerequisites: Take BIO 102, AT 115.

Corequisites: Take AT 216L.

Offered: Every year, Fall

AT 216L. Emergency Management of Athletic Trauma Lab. 1 Credit.

This lab includes the practical application of basic skills and decision-making processes necessary to manage emergency medical situations. Must be taken in conjunction with AT 216.

Corequisites: Take AT 216.

Offered: Every year, Fall

- AT 232. Leadership in Disruptive Times. 3 Credits.**
 Leadership is considered a "wicked problem" because it's impossible to fully frame, always evolving, and based in relationships. In this course, students investigate leadership from multiple perspectives and emerging theories, work to understand the complexity of the leadership environment, how diverse perspectives matter, and how these group/social/cultural differences often manifest on a level of different communities. This course is web-based but has a twice weekly residency requirement with the professor and the students' team.
Prerequisites: Take FYS 101 or FYS 150 and EN 102 or EN 103H.
Offered: Every year, Fall and Spring
- AT 250. Introduction to Evaluation and Treatment of Musculoskeletal Injuries. 3 Credits.**
 This lecture and laboratory course provides the student with a basic systematic approach to the process of physical evaluation and therapeutic exercise program development. It includes processes of history taking and physical exam techniques, indications and contraindications of therapeutic interventions, and treatment adjustments as related to patient injury, prevention, reconditioning and return-to-activity guidelines.
Prerequisites: Take AT 114, AT 115, AT 116.
Corequisites: Take AT 250L.
Offered: Every year, Fall
- AT 250L. Introduction to Evaluation and Treatment of Musculoskeletal Injuries. 1 Credit.**
 This lab includes the practical application of recognizing, evaluating and treating common musculoskeletal injuries. Must be taken in conjunction with AT 250.
Corequisites: Take AT 250.
Offered: Every year, Fall
- AT 251. Evaluation and Treatment of Lower Extremity Musculoskeletal Injuries. 3 Credits.**
 This lecture and laboratory course provides the student with a basic evaluation process and techniques involved in assessing musculoskeletal injuries of the lower extremity. The assessment information is then used to design and implement treatment and rehabilitative protocols. Emphasis is placed on integrating kinesiological principals with injury/illness recognition skills and rehabilitative concepts.
Prerequisites: Take AT 250.
Corequisites: Take AT 251L.
Offered: Every year, Spring
- AT 251L. Evaluation and Treatment of Lower Extremity Musculoskeletal Injuries Lab. 1 Credit.**
 This lab includes the practical application of recognizing, evaluating and treating common musculoskeletal injuries. Must be taken in conjunction with AT 251.
Corequisites: Take AT 251.
Offered: Every year, Spring
- AT 290. Clinical Practicum I, Risk Management and Injury Prevention. 2 Credits.**
 This practicum introduces students to the general policies and procedures of the Quinnipiac University athletic training room. Students are instructed in taping techniques, proper medical documentation skills, ambulatory aids, the preparticipation examination, and the Quinnipiac University Emergency Action Plan. Hands-on practical experience is emphasized in class sessions.
Prerequisites: Take AT 214, AT 216.
Corequisites: Take AT 290C.
Offered: Every year, Spring
- AT 290C. Clinical Practicum I. 1 Credit.**
 During the semester, students gain minimum 100 hours of supervised clinical experience. Students are required to complete specific NATA clinical competencies and proficiencies. (3 lab hrs.)
Prerequisites: Take AT 214, AT 216.
Corequisites: Take AT 290.
Offered: Every year, Spring
- AT 299. AT Independent Study. 1-6 Credits.**
- AT 330. Nutrition for Sport and Fitness. 3 Credits.**
 In this foundational course, students learn nutritional concepts related to wellness, injury prevention and maximizing human performance. Students also explore concepts surrounding eating disorders, nutrition for the injured athlete, and dietary supplements.
Prerequisites: Take AT 290 or HSC 262.
Offered: Every year, Spring
- AT 350. Evaluation and Treatment of Upper Extremity Musculoskeletal Injuries. 3 Credits.**
 Students learn the evaluation process and techniques involved in assessing musculoskeletal injuries of the upper extremity. The assessment information is then used to design and implement treatment and rehabilitative protocols. Emphasis is placed on integrating kinesiological principals with injury/illness recognition skills and rehabilitative concepts.
Corequisites: Take AT 350L.
Offered: Every year, Fall
- AT 350L. Evaluation and Treatment of Musculoskeletal Injuries Lab. 1 Credit.**
 This lab includes the practical application of musculoskeletal injury evaluation and rehabilitation. Must be taken in conjunction with AT 350.
Corequisites: Take AT 350.
Offered: Every year, Fall
- AT 351. General Medical Conditions and Treatment. 3 Credits.**
 This course enables the athletic training student to recognize, evaluate and differentiate common systemic diseases, understand appropriate pharmacological interventions, understand the principles of pharmacology and common issues that arise when specific pharmacological agents are employed. Students who take AT 351 may not also receive credit for HSC 351.
Prerequisites: Take AT 251, AT 216.
Corequisites: Take AT 351L.
Offered: Every year, Fall
- AT 351L. General Medical Conditions and Treatments Lab. 1 Credit.**
 This lab includes the practical application of recognizing, evaluating, differentiating and treating common medical conditions. Must be taken in conjunction with AT 351.
Corequisites: Take AT 351.
Offered: Every year, Fall

AT 352. Evaluation and Treatment of Spinal Injuries. 3 Credits.

Students learn the evaluation process and techniques involved in assessing common spinal pathologies in the orthopedic and sport setting. The assessment information is then used to design and implement treatment and rehabilitative protocols. Emphasis is on the evaluation process, critical thinking, choosing appropriate treatment techniques, as well as indications and contraindications of specific spinal disorders and exercise progression as related to spinal dysfunction/disorders. Manual therapy as a treatment technique and current trends for treating spinal disorders is also covered.

Prerequisites: Take AT 350, AT 351.

Corequisites: Take AT 352L.

Offered: Every year, Spring

AT 352L. Evaluation and Treatment of the Spinal Injuries Lab. 1 Credit.

This lab includes the practical application of the evaluation process of all musculoskeletal injuries with emphasis on the spine and demonstration of evidence based treatment techniques and must be taken in conjunction with AT 352.

Corequisites: Take AT 352.

Offered: Every year, Spring

AT 390. Clinical Practicum II, Athletic Protective Equipment. 2 Credits.

Students are introduced to proper fitting of athletic equipment, as well as sporting rules relevant to safety and the role of the medical professional.

The course includes instruction in fabricating and applying protective equipment, such as pads, splints and supports, and advanced taping and wrapping techniques used in athletic training; hands-on practical experience is emphasized in class sessions.

Prerequisites: Take AT 290.

Offered: Every year, Fall

AT 390C. Clinical Practicum II, Clinical. 1 Credit.

During the semester, students gain a minimum 200 hours of supervised clinical experience. Students are required to complete specific NATA clinical competencies and proficiencies. (3 lab hrs.)

Corequisites: Take AT 390.

Offered: Every year, Fall

AT 391C. Clinical Practicum III. 1 Credit.

During the semester, students gain a minimum of 200 hours of supervised clinical experience. Students are required to complete specific NATA clinical competencies and proficiencies. (3 lab hrs.)

Prerequisites: Take AT 350, AT 351, AT 390C.

Offered: Every year, Spring

AT 440. Biomechanics. 3 Credits.

This course focuses on the advanced study of human movement, concentrating on the principles of mechanics they relate to the human body. Areas of athletic injury, pathology, sport performance, occupational risks, injury prevention, and rehabilitation are addressed. Projects are designed not only to achieve scientific insights into biomechanical problems but also to train students in state-of-the-art interdisciplinary research procedures. Kinematic and kinetic analyses are conducted.

Prerequisites: Take BIO 211, BIO 212 or permission of instructor.

Offered: Every year, Fall and Spring

AT 450. Administration and Management in Athletic Training. 3 Credits.

Organizational and administrative procedures and considerations, as well as the legal aspects of athletic training and sports medicine are included in this course.

Prerequisites: Take AT 391C.

Offered: Every year, Fall

AT 460. Advanced Nutrition (HSC 460). 3 Credits.

This advanced-level food and nutrition course examines the composition and physiological role of nutrients and their relationships to health and the body. Macronutrient metabolism as well as a detailed examination of the role of vitamin and mineral metabolism are explored. Current nutrition issues of supplement use, weight management, sports nutrition, nutritional ecology and the application of nutrition directly to food and its preparation also are addressed. Students receive hands-on instruction in cooking throughout the semester.

Prerequisites: Take AT 330 or HSC 262.

Offered: Every year, Fall

AT 481. Strength Training and Conditioning for the Athletic Trainer. 2 Credits.

The purpose of the course is to expand the students' knowledge of rehabilitation beyond general concepts. Students learn theory pertaining to a variety of conditioning methods including: periodization, plyometrics and functional training. Lifting techniques and injury prevention related to conditioning are discussed and applied to both the individual athlete and team training concepts. The course is taught as a combination of classroom and laboratory experiences to ensure that students are capable of translating theory into practice.

Prerequisites: Take AT 352 or permission of instructor.

Offered: Every year, Spring

AT 482. Advanced Rehabilitation Options in Sports Medicine. 2 Credits.

This course examines in-depth rehabilitative techniques and advanced manual therapy skills for the sports medicine setting. Practical application of current concepts and research-driven rehabilitative protocols are emphasized. The course also addresses trends in sports medicine surgical procedures, research behind new rehabilitative techniques, and effective mechanisms for evaluating clinical relevance of new products.

Prerequisites: Take AT 352.

Offered: Every year, Fall

AT 490. AT Independent Study. 1-6 Credits.

Offered: As needed

AT 490C. Clinical Practicum IV. 1 Credit.

During the semester, students gain a minimum of 200 hours of clinical experience. Students are required to complete specific NATA clinical competencies and proficiencies. (3 lab hrs.)

Prerequisites: Take AT 351 AT 391C.

Offered: Every year, Fall

AT 491. Clinical Practicum V, Professional and Career Preparation. 2 Credits.

This course provides students with a means to integrate and augment all concepts, skills and knowledge covered in the athletic training curriculum. Much of the course is discussion based and requires the students to be fully participative.

Prerequisites: Take AT 490C.

Corequisites: Take AT 491C.

Offered: Every year, Spring

AT 491C. Clinical Practicum V, Clinical. 1 Credit.

During the semester, students gain a minimum of 200 hours of supervised clinical experience. Students are required to complete specific NATA clinical competencies and proficiencies. (3 lab hrs.)

Corequisites: Take AT 491.

Offered: Every year, Fall and Spring

Department of Social Work

Program Contact: Carol R. Awasu (carol.awasu@qu.edu) 203-582-6433

The Master of Social Work (MSW) program at Quinnipiac University prepares social workers for specialized practice in health and mental health through a curriculum that focuses on clinical and organizational practice, experiential learning, and interprofessional teamwork. Guided by respect for human dignity and a commitment to social justice, the MSW program uses a person-in-environment framework to ready students for professional practice in dynamic contexts.

The program prepares students for achievement and leadership in the field of social work. The curricular approach of the MSW program is unique in that it directly engages students in interprofessional education and the health care team approach.

Quinnipiac's MSW program embraces the university's commitment to the development of professional expertise through practice experience. The two field placements offer students the opportunity to practice skills learned in the classroom in real-world settings. A seminar that supports the student in integrating academic and fieldwork is held monthly. Upon completion of the MSW degree, the student will have at least 1,000 hours of professional preparation in the field.

Students entering Quinnipiac as undergraduates who are interested in the social work program also have the option of pursuing a dual-degree bachelor's-master's program. There are two options: the Accelerated Dual-Degree BS in Health Science Studies/Master of Social Work (3+2) (p. 487) or the Accelerated Dual-Degree Bachelor's/Master of Social Work (3+2) (p. 281) program. Graduate students in the MSW program also have the option of pursuing a dual-degree JD/MSW (p. 807).

Additional program costs:

As a clinical education program, the MSW program requires some expenses that go beyond standard university tuition and fees:

- a. **Clinical/Fieldwork Education Travel** (gas, parking, public transportation): You are responsible for the costs associated with travel to and from field internships. Costs – variable.
- b. **Background Check:** Quinnipiac University and its clinical affiliates require that all students undergo a criminal background check, through the university vendor, prior to beginning classes (University Criminal Background Check Policy (<https://catalog.qu.edu/university-policies/background-checks/>)). Please note that placement sites may require that students participate in the agency's background check, in addition to the one required by the university.
 - i. University background check cost – \$63 for all domestic addresses for the past 7 years or \$158 for students who have resided in New York state in the last 7 years due to NY state surcharge.
 - ii. Some students may be required to do an annual recheck one year after the initial background recheck. Cost – \$32 per annual recheck.
- c. **Drug Screening:** Some sites require physical and/or substance use drug screens as well as fingerprinting. MSW students are expected to comply with all agency requirements prior to beginning field internships.
- d. **Liability Insurance:** All students have liability insurance coverage through the university, free of charge, while performing required

clinical activity. Students may choose to purchase additional coverage at their own expense.

- e. **EXXAT and APPROVE:** Students enrolled in the MSW program must enroll in EXXAT and APPROVE.
 - i. EXXAT is the clinical tracking and assessment program used by the School of Health Sciences. Cost – one-time payment of \$150 per student enrolled in the MSW program (students are responsible for this cost).
 - ii. APPROVE is the program within EXXAT that tracks all student health and safety records, provides documentation to prospective clinical sites, and provides notification of impending expiration dates. Cost – \$35 for first year, \$10 per year after.

Mission Statement

The mission of the Quinnipiac University MSW program is to prepare social workers for specialized practice in health and mental health through a curriculum that focuses on clinical and organizational practice, experiential learning, and interprofessional teamwork. Guided by respect for human dignity and a commitment to social justice, the MSW program uses a person-in-environment framework to ready students for professional practice in dynamic contexts.

MSW Program Values

The MSW program's core values reflect the NASW Code of Ethics for Social Workers: service, social justice, the dignity and worth of the person, the importance of human relationships, integrity and competence.

MSW Program Goals:

The MSW program has the following five goals:

- a. Prepare students to be competent, ethical social workers in a variety of health and mental health settings.
- b. Prepare students to engage in anti-racist and anti-oppressive clinical and organizational social work practice.
- c. Prepare students to advocate for equity and social justice at all levels of social work practice.
- d. Prepare students to integrate social work perspectives within interprofessional collaborations and across systems.
- e. Promote lifelong learning and professional development for students, alumni and social work colleagues.

- Master of Social Work (p. 810)
- Advanced Standing MSW (p. 813)
- Dual-Degree JD/MSW (p. 807)
- Accelerated Dual-Degree BS in Health Science Studies/MSW (3+2) (p. 487)
- Accelerated Dual-Degree Bachelor's/MSW (3+2) (p. 281)

Social Work (SW)

SW 500. Generalist Field Education Practicum I.

3 Credits.

This is the first of two field placements. The generalist field placement is offered in the generalist year for 16 hours a week for a minimum of 400 hours. In addition to the hours required in the agency placement, there is a requirement to attend a Field Seminar on campus throughout the months of the placement.

Corequisites: Take SW 501.

Offered: Every year, Fall

SW 501. Social Work Practice I: Social Work Practice with Individuals and Families. 3 Credits.

This is the first semester of the generalist practice sequence. Social Work Practice I provides an introduction to social work practice. The courses present the knowledge and skills necessary for competent generalist social work practice with individuals and families. Skills taught in this course are interviewing, problem identification, problem exploration, formulating the presenting complaint, data gathering, differential assessment, planning, beginning intervention, termination, and evaluation.

Corequisites: Take SW 500. Take SW 511

Offered: Every year, Fall

SW 502. Generalist Field Education Practicum II. 3 Credits.

This is the second of two field placements. The generalist field placement is offered in the generalist year for 16 hours a week for a minimum of 400 hours. In addition to the hours required in the agency placement, there is a requirement to attend a Field Seminar on campus throughout the months of the placement.

Corequisites: Take SW 503.

Offered: Every year, Spring

SW 503. Social Work Practice II: Social Work Practice with Groups, Organizations and Communities. 3 Credits.

This is the second semester of the generalist practice sequence. Social Work Practice II provides an introduction to social work practice. The courses present the knowledge and skills necessary for competent social work practice with groups, organizations and communities. There is special attention given to vulnerable and disenfranchised populations.

Prerequisites: Take SW 501.

Corequisites: Take SW 502.

Offered: Every year, Spring

SW 504. Social Welfare and Social Policy. 3 Credits.

This course provides students with a foundation understanding and appraisal of social welfare policies and programs in the United States, and the historical and contemporary forces that have shaped their development. It covers the formation of the social work profession and its role in the creation and implementation of social policy and its tradition of advocacy, social action, and reform. Students take steps to engage in policy practice to advance social and economic justice.

Offered: Every year, Fall

SW 505. Social Work Research. 3 Credits.

The purpose of this course is to provide the generalist MSW student with a solid foundation in social work research, with an emphasis on evidence-based practice. As consumers and producers of research, social workers need to understand the core concepts of scientifically sound and rigorous research. Students become prepared to critically evaluate the research and learn to synthesize empirical research into a systematic review. The impact of bias in research is identified.

Offered: Every year, Fall

SW 507. Issues of Diversity and Oppression. 3 Credits.

This course examines the dynamics of racism and other forms of oppression in society and within us, and how those dynamics are intertwined with policy and practice. The course places oppression in the economic, political and social context of the U.S. Students analyze racism, sexism and ethnocentrism as they operate at the individual, community and institutional levels. The course aims to increase self-awareness and cultural humility for social work practice.

Offered: Every year, Spring

SW 508. Psychopathology. 3 Credits.

This course provides students with extensive knowledge of the major forms of emotional illness and their treatment. Students develop competence in diagnosis by mastering the currently accepted diagnostic code (DSM-V). They develop competence in treatment planning through awareness and understanding of the most modern and accepted treatments for each major category of mental illness.

Prerequisites: Take SW 500, SW 501.

Offered: Every year, Spring

SW 511. Human Behavior in the Social Environment I: Theories for Practice for Individuals and Families. 3 Credits.

Using a person-in-environment framework, this course provides an understanding of the relationship between the major theories of individual and family functioning among biological, social, psychological and spiritual dimensions as they affect and are affected by human behavior and family life. Students examine the role that culture and intersectionality play in human development, within the context of biological and social systems, psychodynamic, ecological, social constructionist, humanistic, cognitive and behavioral theories.

Offered: Every year, Fall

SW 512. Human Behavior in the Social Environment II: Theories for Groups, Organizations and Communities. 3 Credits.

Using an ecosystems framework, this course provides an understanding of the major theories that explain the structures, functions, and dynamics of groups, organizations and communities. Students master core ideas of theories that provide the conceptual base for engaging in interventions that occur in the macro social environment. The course focuses on utilizing theories that promote empowerment of key stakeholders within groups, organizations and communities and that address social and economic injustice.

Offered: Every year, Spring

SW 580. Clinical Assessment and Diagnosis. 3 Credits.

This course is designed to provide students with extensive knowledge of the major forms of emotional illness and their treatment. Students will develop competence in diagnosis by mastering the currently accepted diagnostic code (DSM-V). They will develop competence in treatment planning through awareness and understanding of the most modern and accepted treatments for each major category of mental illness. Strength-based approaches to mental health care is emphasized.

Prerequisites: Take SW 500 SW 501

Offered: As needed

SW 600. Specialized Practice Field Education Practicum in Health/Behavioral Health I. 4 Credits.

This specialized practice field placement is the first of two field placements and offers a social work experience focused on health/behavioral health in a variety of settings. Students complete 24 hours a week for a minimum of 600 hours. In addition to the hours required in the agency placement, there is a requirement to attend a monthly Field Seminar.

Prerequisites: All generalist curriculum courses.

Corequisites: Take SW 601.

Offered: Every year, Fall

SW 601. Social Work Practice III: Specialized Clinical Social Work Practice. 3 Credits.

This course focuses on clinical perspectives associated with social work in various fields of practice, particularly behavioral health consultation in the health care system. Skills to be acquired include how to make comprehensive psychosocial assessments and treatment plans for clients according to particular treatment perspectives. Multicultural applications for practice are incorporated. Attention is given to developing students' ability to apply ethical standards to clinical practice.

Prerequisites: All generalist curriculum courses.

Corequisites: Take SW 600.

Offered: Every year, Fall

SW 602. Specialized Practice Field Education Practicum in Health/Behavioral Health II. 4 Credits.

This specialized practice field placement is the second of two field placements and offers a social work experience focused on health/behavioral health in a variety of settings. Students complete 24 hours a week for a minimum of 600 hours. In addition to the hours required in the agency placement, there is a requirement to attend a monthly Field Seminar.

Prerequisites: All generalist curriculum courses.

Corequisites: Take SW 603.

Offered: Every year, Spring

SW 603. Social Work Practice IV: Specialized Organizational Social Work Practice. 3 Credits.

This course is designed to expand students' knowledge and understanding of human service organizations and to provide approaches for designing and managing programs. Students are exposed to various organizational and management theories and practices. In addition, emphasis is placed on organizational practice within the field of behavioral health in primary care settings.

Prerequisites: All generalist curriculum courses and SW 601.

Corequisites: Take SW 602.

Offered: Every year, Spring

SW 604. Evaluation Research Work Programs and Practice. 2 Credits.

This course focuses on the necessity of program evaluation for agency accountability and for improving services for clients. The course provides an overview of the methods of program evaluation and builds upon learned research knowledge for elaborating on the conceptual, methodological and administrative aspects of evaluation research. Students gain knowledge on how to utilize evaluation studies to inform their own practice at the micro and mezzo levels.

Prerequisites: All generalist curriculum courses.

Offered: Every year, Fall

SW 605. Integrative Seminar/Capstone Project. 2 Credits.

This course requires students to integrate core areas of generalist and specialized practice knowledge to a current issue relevant for social work practice. Students research human behavior theory, innovative evidence-based practice, policy and advocacy, as well as the latest data on health/behavioral health promotion to disseminate strategies for ameliorating the negative impact of a social problem on a specific marginalized population.

Prerequisites: All generalist curriculum courses.

Corequisites: Take SW 602, SW 603.

Offered: Every year, Spring

SW 611. Social Work in Health-Related Settings. 3 Credits.

This specialized practice MSW course focuses on the roles and functions of social workers serving clients in a rapidly changing health and behavioral health care industry. A strengths-based, family-centered and culturally sensitive approach to practice in a variety of health and behavioral health care settings is presented.

Prerequisites: All generalist curriculum courses.

Corequisites: Take SW 602.

Offered: Every other year, Spring

SW 612. Social Work Practice in Child Welfare and Behavioral Health Settings. 3 Credits.

This specialized practice social work course focuses on the characteristics, strengths and service needs of families and children in the child welfare, behavioral health and juvenile justice systems. It examines issues and builds practice skills related to those facing separation, reunification, effects of traumatic experiences, and mental health concerns.

Prerequisites: All generalist curriculum courses.

Offered: Every other year, Spring

SW 613. Social Work Practice in Schools. 3 Credits.

This specialized practice social work course presents knowledge and skills for engaging in social work practice from preschool through high school in educational settings across the continuum from direct practice, to school and district level programming and policy, to partnering with community stakeholders to advance programming and policy.

Prerequisites: All generalist curriculum courses.

Corequisites: Take SW 602, SW 603.

Offered: Every year, Spring

SW 614. Social Work Issues in Health and Illness. 3 Credits.

This course discusses the importance of cultural and socioeconomic factors in the creation of major health disparities in the United States. Physiological, psychological, social and environmental factors are considered in relationship to cultural and socioeconomic factors in explaining both etiology and consequences of disease. The framework is applied to common diseases in the life course.

Prerequisites: All generalist curriculum courses.

Offered: Every other year, Spring

SW 622. Multicultural Practice in Communities and Organizations. 3 Credits.

This specialized elective course provides students with an understanding of multicultural practice in organizational and community settings. Students examine concepts and techniques of multicultural practice; consider and evaluate relevant strategies and tactics that promote multiculturalism, including community capacity building, empowerment processes, intercultural communication, diversity training and cross-cultural supervision, and apply them to both community organizing and community-based agency practice settings.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Fall and Spring

SW 623. Child and Family Social Services Policy. 3 Credits.

This specialized practice MSW course provides a perspective on public and private sector social policies and service programs for children and families. The course includes topics related to policy objectives; history and values underpinning services; administration, economics, and funding of services; politics, interest group activities, and evaluation of policy and programs. The course builds on the evaluative concepts of social policy analysis included in the generalist policy course.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Fall and Spring

SW 624. Rape Crisis Victim Advocacy. 3 Credits.

This class prepares students to be certified to be rape crisis victim advocates and peer educators. The class is centered on the victim's perspective on sexual assault, sexual abuse, as well educating others about helping rape survivors. The course will cover basic information about sexual violence and rape myths, the protocol for reporting rape in different venues (e.g., on campus, police, hospital, rape crisis center), and methods for assisting survivors.

Offered: As needed

SW 630. Clinical Social Work with Military Service Members and Families. 3 Credits.

This specialized clinical elective provides conceptual theories of best practice approaches with, and research findings on working with service members and their families, with a primary focus on service members who have served in combat. Topics covered include strengths-based assessment and core evidence-based treatment interventions, and prevention strategies for working with service members and their families. The impact of working with traumatized individuals and families on social workers is reviewed with recommendations for self-care.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Spring and Summer

SW 633. Clinical Social Work Practice and Stress Management Techniques. 3 Credits.

The psychological, physiological and sociocultural aspects of stress are taught in this specialized clinical practice course. Stress management techniques are explored didactically and experientially. The purpose of this course is to teach students to understand the cognitive, affective and neurobiological impact of stress. Specific interventions to address traumatic stress also are discussed.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Fall

SW 634. Clinical Social Work with Substance Abuse and Addictive Behaviors Abuse and Addictive Behaviors. 3 Credits.

This course teaches the specialized practice social work student the theories and concepts of addiction. Students learn about the current research and approaches to counseling the chemically dependent client and/or family member, as well as the role of relevant systems, and how the addictive behavior affects these systems. The course emphasizes the application of social work values and ethics in the delivery of addiction services.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Fall

SW 635. Clinical Social Work Evidence-Based Treatment With Children and Adolescents. 3 Credits.

This specialized elective course provides students with a framework for understanding evidence-based mental health treatment with children and adolescents. Students become familiar with the most commonly used EBTs in the field and gain an understanding of the obstacles inherent in moving clinical practice from research to real-world settings. Models presented cover a range of diagnoses with an emphasis on children who have experienced emotional trauma. Individual, family and group treatment are addressed.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Fall

SW 636. Clinical Social Work in Relation To Death, Dying, Bereavement and Life-Threatening Illness. 3 Credits.

This specialized elective course provides a framework of knowledge, skills and values for culturally competent and responsive social work practice in helping clients who confront the issues of death and dying and life-threatening illnesses. A comparative, critically reflective approach to content is employed. Students explore experiences of clients dealing with these issues in relation to diversity of ethnicity or culture, age, gender, sexual orientation and social class.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Fall

SW 640. Clinical Social Work Practice with Adult Trauma. 3 Credits.

This specialized clinical elective focuses on the conceptual theories of trauma from cognitive/behavioral, psychodynamic and attachment theory perspectives. Emphasis is on the role of gender, race, ethnicity and culture in individuals' responses to trauma. Students apply diagnoses, assessment, psycho-education, stress management, affect regulation and emotional processing as core treatment components. The course includes application to selected groups, including adult survivors of complex PTSD such as sexual abuse, combat trauma and survivors of acute incident trauma.

Prerequisites: All generalist curriculum courses.

Offered: As needed, Spring

SW 698. Community-Based Service Learning Semina. 3 Credits.**SW 699. Special Topics in Social Work. 3 Credits.**

This course is offered to present a topic that is not part of the current course listings. It meets the curriculum standards of the MSW program for elective credit only.

Offered: As needed

SCHOOL OF LAW

The School of Law combines rigorous academics, personalized attention, and a practice-focused curriculum to enable every student to develop the core legal skills that are fundamental to a successful and rewarding legal career. The law school has several legal clinics and numerous externship opportunities through which students acquire client-based legal experience and do pro bono work in the community, supervised by practicing attorneys. Students can further refine their critical problem-solving skills in more than a dozen classroom-based simulation courses.

The School of Law offers full-time, part-time, and flex-time programs leading to the JD degree, as well as joint JD/MBA, JD/MSW, and JD/MELP (Master of Environmental Law and Policy) degrees. Students may also choose to concentrate in one or more of several subject matter areas: Civil Advocacy and Dispute Resolution, Criminal Law and Advocacy, Family Law, Health Law, Intellectual Property, International Law and Policy, Tax Law, Workplace Law, and Privacy, Cybersecurity, and Information Technology Law.

The student experience at the School of Law is enhanced through many other activities, including three student-edited scholarly journals – the Law Review, the Health Law Journal, and the Probate Law Journal; intramural and interschool competitions sponsored by the Moot Court Society, the Mock Trial Society, and the Society for Dispute Resolution; and a range of student organizations, including affinity bar organizations such as the Black Law Students Association, the Women’s Law Society, the Latin American Law Association, and Outlaws, our LGBTQA organization. The law school’s International Human Rights Law Society travels each year and a course in International Human Rights and Transitional Justice gives students the opportunity to make presentations at the annual Summit of Nobel Peace Laureates.

Quinnipiac’s Accelerated Dual-Degree Bachelor’s/JD (3+3) program offers qualified freshmen and sophomores the opportunity to complete both their BA or BS degree and the JD degree in six years instead of seven. Visit the Pre-Law (p. 46) section of this Catalog for program details.

Nondiscrimination

Quinnipiac University School of Law admits students of any race, color, religion, national origin, sex, gender (including identity and expression), sexual orientation, age or disability to all the rights, privileges, programs and activities generally accorded or made available to students at the school. It does not discriminate on the basis of race, color, religion, national origin, sex, gender (including identity and expression), sexual orientation, age or disability in administration of its educational policies, admission policies, scholarship and loan programs, and athletic and other school-administered programs. Quinnipiac University School of Law is committed to equal educational opportunity and full participation for persons with qualified disabilities. No qualified person will be excluded from participation in any university program or be subject to any form of discrimination.

Mission Statement

At Quinnipiac University School of Law, we seek to imbue our students with the knowledge, skills and attitudes necessary for competent and ethical service in the legal profession. Accordingly, we strive – through rigorous classroom instruction and practical training in lawyering skills – to educate attorneys who prepare carefully, think independently and creatively, reason critically, act with compassion and respect for others, and express themselves cogently, both orally and in writing. We also

strive to inspire our students to embrace the professional ethic of service and to appreciate the value of “practical wisdom.” To this end, we work with our students to help them develop sound judgment and personal approaches that will help them to succeed in a changing world and to serve effectively as advocates, problem-solvers and counselors. We also demonstrate our own commitment to professionalism and to the advancement of knowledge and justice, by engaging in scholarship that facilitates the understanding and just solution of complex problems and by providing service to governmental and public interest agencies and to the community at large. In addition, recognizing the important pedagogical benefits realized when an educational community is meaningfully diverse – and conscious of the role that law schools must play in helping diversify the legal profession – we strive to maintain meaningful diversity in our student body and in our faculty and staff.

Right to Modify

This Catalog is intended to serve as a convenient reference source for students. It is not guaranteed to be free from errors. Moreover, the programs, policies and courses described here are subject to continual review and reevaluation and may be changed at any time without prior notice. The School of Law reserves the right to modify the academic requirements, admission requirements and program of study; to change the arrangement and content of courses, the instructional material and the tuition and fees; to alter any regulation affecting students; to refuse readmission at any time; or to dismiss any student at any time, should it appear to be in the best interest of the school or student to do so. The School of Law also reserves the right to change the semester schedule and examination times and locations. Nothing in this Catalog should be regarded as setting terms of a contract between a student or prospective student and Quinnipiac University or its School of Law.

Admission to the Bar

Bar Examination

Some states require registration with their State Board of Law Examiners at the start of law studies for students who expect to take the bar examination upon graduation. Applicants are urged to consult the regulations of the Board of Law Examiners in the states where they expect to practice. The State of Connecticut does not require such registration. Students are also urged to check each state bar’s school credit and residency requirements, including possible limits on non-classroom credits, for bar certification in each state where they expect to take the bar examination. For students planning to sit for the New York Bar, we call attention to that state’s extensive experiential education requirement, which is more demanding than the requirement established by the ABA and Quinnipiac Law School. This New York requirement is set forth in Appendix A to this Catalog.

Character and Fitness for Admission to the Bar

It is extremely important for students to determine the applicable character, fitness, and other qualifications of the bar admission authorities in the state(s) in which he or she intends to practice. In particular, any student who has been subjected to disciplinary action by an educational institution, who has incurred a judgment of civil liability, or who has been charged with or convicted of a criminal offense is strongly encouraged to check with the bar admission authority in the jurisdiction(s) in which he or she intends to practice to determine the effect of such action on the person’s admissibility to the bar.

School of Law Academic Calendar

2022–23 Academic Calendar

Summer 2022

May 9	Monday	First day of classes
June 20	Monday	Juneteenth observed; no classes
June 24	Friday	Classes meet on a Monday schedule; last day of classes; last day to withdraw from courses.
June 28–30	Tues–Thurs	Examination period

Fall 2022

August 19–20	Fri–Sat	First-Year Orientation
August 22	Monday	1L classes begin
August 22	Monday	Business Literacy Bootcamp (for 2Ls)
August 24	Wednesday	Upper-level classes begin
August 30	Tuesday	Last day to add/drop classes
September 5	Monday	Labor Day—university holiday; no classes
October 5	Wednesday	Yom Kippur—university holiday; no classes
November 22	Tuesday	Classes meet on a Wednesday schedule
November 23–27	Wed–Sun	Thanksgiving Recess
December 2	Friday	Last day of 1L classes; last day for 1Ls to withdraw from courses
December 6	Tuesday	Last day of upper-level classes; last day for upper-level students to withdraw from courses

December 7	Wednesday	Class makeup day
December 8–20	Thursday–Tuesday	Examination period
December 21	Wednesday	Exam makeup day for weather-related postponements; last day for graduating students to complete coursework
December 22–January 8	Thursday–Sunday	Holiday Recess

Spring 2023

January 9	Monday	Upper-level classes begin
January 9–10	Mon–Tues	Gateway to Practice Program (for 1Ls)
January 11	Wednesday	1L classes begin
January 13	Friday	Last day to add/drop classes
January 16	Monday	Martin Luther King Jr. Day—university holiday; no classes
March 13–17	Mon–Fri	Spring Recess
April 7	Friday	Good Friday—no classes
April 15	Saturday	Transition to Practice for law students and recent graduates (optional)
April 25	Tuesday	Classes meet on a Friday schedule; last day of upper-level classes; last day for upper-level students to withdraw from courses
April 26	Wednesday	1L classes meet on a Monday schedule
April 27	Thursday	1L classes meet on a Tuesday schedule; last day of 1L classes; last day for 1Ls to withdraw from courses
April 28	Friday	Class makeup day
May 1–11	Mon–Thursday	Examination period - Last day for graduating students to complete coursework
May 12	Friday	School of Law Commencement 1:00 PM

* All references to "1Ls" and "2Ls" include both day and evening sections.

Summer 2023

May 15	Monday	First day of classes
May 29	Monday	Memorial Day—university holiday; no classes
June 19	Monday	Juneteenth observed; no classes
June 23	Friday	Classes meet on a Monday schedule
June 30	Friday	Last day of classes
July 5–7	Wednesday–Friday	Examination period

Juris Doctor

Full-Time JD Program

This program is designed for those students who are able to devote substantially all of their time to the study of law. Classes generally are taken during the day, but students may choose to enroll in evening elective courses during their second and third years, if space is available. The first year curriculum is entirely prescribed. The second year curriculum consists of core electives and general electives. Students must take at least four of the core electives as described below (see Academic Regulations (p. 617), section I.B. and I.C,

Requirements for Graduation). In addition, prior to graduation, a student must take the course in Lawyers' Professional Responsibility, satisfy the Professional Skills Requirement (for students matriculating before Fall 2016) or the Experiential Learning Requirement (for students matriculating Fall 2016 or later), and satisfy the Advanced Writing Requirement (p. 617).

Summer Session

One seven-week session is offered each summer. Summer courses are taught in the late afternoon or evening and are open to all students. Under some circumstances, a full-time or part-time student may accelerate graduation by attending summer sessions.

Bridge to Practice Program

The Bridge to Practice program at Quinnipiac Law is a three-part, three-year series of not-for-credit courses – two of them mandatory for full-time students – intended to contextualize the rest of the students' legal education, highlighting particularly the ways in which lawyers work with clients to clarify and achieve client goals. The goal is to help students begin the transition to law practice while in school.

1L Gateway to Practice

All full-time, first-year students are required to participate in this mandatory two-day workshop in law and lawyering, which is offered during the first two days of the second semester in January. For part-time students, the program is optional but recommended. Students are assigned to "law firms" as junior associates and work with practitioners who serve as partners, conducting a variety of tasks in simulated cases for mock clients. Over 60 lawyers from the state and the region volunteer to work with students.

The program is intended to provide several benefits:

- **Foundation:** First-year students learn the basics of law and legal analysis. This program shows students how lawyers use doctrine and basic legal skills in helping clients in the everyday practice of law.
- **Balance:** Students supplement their classroom experience with activities ordinarily not part of the first-year curriculum, including deriving facts from a client interview, brainstorming strategies with law firm colleagues, explaining options to clients and engaging clients in decision-making.
- **Context:** The program integrates transactional lawyering and litigation, and helps students to better understand the relationship between legal theory and practice.
- **Group work and collaboration:** Students work in teams to strategize and solve problems.
- **Immediate preparation:** The program helps students prepare for summer employment and gives them a start in developing networking skills.

2L Business Concepts Bootcamp

All full-time, second-year students are required to participate in a day-and-a-half program to kick off the fall semester in August. Part-time, second-year students are encouraged but not required to attend the program. They will be required to watch related video material and attend a Saturday Business Concepts Bootcamp in September.

The goal of the program is to expose students to basic financial and business concepts, many of which will arise in upper-level courses, both within the core curriculum and in other elective courses. The program

should be helpful not only to students who intend to practice business law, but also to those who will practice in a host of other specialties, such as litigation or family law. The program includes both panel presentations and interactive, hands-on workshops. Students select two practice area workshops in which a lawyer specializing in the field will discuss the types of clients served in the practice, the types of problems presented, and the skills and substantive legal expertise needed to work in the area. The practitioner leads the students in solving a typical client problem using the business and financial concepts the students learned in earlier sessions of the Bootcamp.

The program is intended to provide several benefits:

- Provide business context for doctrinal principles in upper-level courses.
- Address employers' concerns that the lack of business and financial literacy represents a major gap in new lawyers' knowledge.
- Demonstrate that an understanding of business concepts is critical in all areas of practice: private, government, public interest and nonprofit.
- Help students to better understand public policy debates.

Transition to Practice Workshop

The Transition to Practice workshop is an optional, one-day program offered on a Saturday in the spring semester to all students. While the 1L and 2L segments of the Bridge to Practice trilogy have focused on the business of clients as the context for lawyers' work, this workshop emphasizes the business aspects of the lawyer's own work. Although students have learned the law, they also need to understand the *business and organizational aspects of legal practice* to be ready for work. Legal employers of all types – private firms, in-house counsel, government and public interest – have to deal with the economics of serving clients. Panels of practitioners and recent graduates explain the business aspects of the practice of law whether in private practice, government or public interest. Topics include: the economics of practice, timekeeping, billing, marketing, project management, innovation and work-life balance. Students also choose workshops with practitioners related to the practice environment they hope to join upon graduation: small firm and solo, large firm and government/public interest.

¹ Full-time students **must** take 3 core electives in the second year. Core electives are:
 LAWS*114 - Administrative Law - 3 credits. Offered fall and spring
 LAWS*205 - Business Organizations - 4 credits. Offered spring only.
 LAWS*305 - Federal Income Tax - 4 credits. Offered fall only.
 LAWS*307 - Trusts & Estates - 3 credits. Offered fall and spring.
 LAWS*311 - Evidence - 3 credits. Offered fall only.
 LAWS*323 - Commercial Law - 4 credits. Offered spring only.
Students must take a total of four core electives. One of the four must be Federal Income Tax or Commercial Law.

² **Experiential Learning Requirement** (applicable to students matriculating Fall 2016 or later): Each student must also satisfactorily complete "one or more experiential course(s) totaling at least 6 credits," as provided by current ABA Standard 303(a)(3) and related provisions. Certain courses are always designated as "experiential courses" that will satisfy the requirement. They are: all law clinics except Advanced Clinic; all externships including Field Placement II; Introduction to Representing Clients; Negotiation; Trial Practice and Advanced Trial Practice. Other courses that may satisfy this requirement, depending on the design choices that the particular professor makes, include: Advanced Family Law II: Courtroom Advocacy, Advanced Juvenile Law: Delinquency Proceedings, Alternative Dispute Resolution, Bankruptcy Lab, Commercial Transactions Workshop, Estate Planning and Drafting, Financial Planning: Principles and Taxation, Judicial Clerkship Seminar, Land Use Practicum, Representation in Mediation, and Visual Persuasion in the Law. (This list is subject to revision; each semester the registrar will designate which courses taught the following semester will satisfy the requirement.) Any paper(s) written in connection with a course or courses used to satisfy the Experiential

Learning Requirement may be used to satisfy no more than three of the four papers required to satisfy the Advanced Writing Requirement.

I. Introduction

The School of Law has organized its institutional learning outcomes into two general categories: "first tier" learning outcomes and "second tier" learning outcomes.

- **First Tier Learning Outcomes** are outcomes that *all* students should achieve by graduation, regardless of the practice area(s) in which they expect to focus in post-law school employment.
- **Second Tier Learning Outcomes** are tailored to particular areas of the law in which students plan to focus in post-law school employment. For that reason, the law school does not expect that *all* students will achieve *all* of these second tier outcomes.

Students who have not yet settled upon a particular focus for post-law school employment should achieve *at least* the first tier learning outcomes, and they should also aspire to achieve those second tier learning outcomes that relate to their likely future practice focuses.

II. First Tier Learning Outcomes

Outcome 1: Graduates are expected to demonstrate competency in legal analysis and reasoning and legal problem solving.

Specific Criteria

Graduates are expected to demonstrate competency in the following:

- Reading cases, statutes and regulations effectively to glean rules and –if in play–the developmental history and policies underlying the rules.
- Recognizing issues and possible rules implicated in new and unfamiliar factual situations.
- Applying applicable rules effectively to understand potential arguments and counter-arguments in new and unfamiliar factual situations.
- Assessing what additional facts may need to be gathered for appropriate analysis of a legal issue.
- Assessing the relative strength of arguments and predicting likely outcomes effectively for legal issues.
- Analyzing applicable rules and facts to formulate and evaluate potential solutions to legal problems.

Outcome 2: Graduates are expected to demonstrate knowledge and understanding of legal theory, systems and doctrine, including core areas of substantive and procedural law and alternative methods for resolving disputes.

Specific Criteria

Graduates are expected to demonstrate knowledge and understanding of the following:

- The American federal and state legal systems, including their structures of rule-making and governance and their historical background.
- Core doctrine and theory in "foundation" areas, including those that will be tested on the bar examination.
- The range of dispute resolution processes and the ability to advise clients and others on choices of process/forum.

- d. Appellate review standards and practices.
- e. The impact of law and legal rules on society and its various sub-groups.

Outcome 3: Graduates are expected to demonstrate competency in oral and written communication in the legal context.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. Competency in cogently communicating analysis and advice orally in a range of settings and contexts.
- b. Competency in listening effectively to clients and others.
- c. Competency in cogently communicating analysis and advice in writing across a range of types of writings (e.g., memos, briefs and client letters).
- d. At least a basic understanding of principles of logic and rhetoric.
- e. At least novice-level understanding of and competency in a spectrum of advocacy skills.

Outcome 4: Graduates are expected to demonstrate competency in legal research and understanding of the factual research needed to solve legal problems.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. Competency in legal research, including effective use of technology for that research.
- b. Understanding of factual investigation, including an understanding of effective strategies and practices for gathering the facts needed to evaluate legal issues or problems.

Outcome 5: Graduates are expected to demonstrate knowledge and understanding of the attorney's professional and ethical responsibilities to clients and the legal system.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. Knowledge and understanding of the professional rules and the ability to recognize and resolve ethical dilemmas in a range of practice settings.
- b. Knowledge and understanding of the attorney's ethical obligation to represent clients diligently and competently.
- c. Knowledge and understanding of the attorney's ethical obligation to behave professionally and civilly.
- d. Knowledge and understanding of the attorney's ethical obligation to behave in accordance with the rules governing confidentiality and conflicts of interest.
- e. Knowledge and understanding of the attorney's ethical obligation to strive to promote justice (including access to justice) and fairness and to assist the profession in providing legal services to those who cannot afford to pay for them.

Outcome 6: Graduates are expected to demonstrate at least novice-level competency in other professional skills needed for competent, effective and ethical participation as a member of the legal profession.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. At least novice-level understanding of and competency in approaches for managing conflict for effective problem solving.
- b. At least novice-level competency in collaborative work approaches.
- c. At least novice-level understanding of and competency in effective approaches for client interviewing and counseling.
- d. At least novice-level understanding of and competency in effective negotiation practices.
- e. At least novice-level understanding of and competency in "learning how to learn" (techniques for finding guidance for unfamiliar tasks).
- f. Competency in interviewing for employment and planning for long-term career development.

III. Second Tier Learning Outcomes

(Approved December 5, 2018)

FOR ALL GRADUATES EARNING CIVIL ADVOCACY AND DISPUTE RESOLUTION CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term "understanding" to refer to knowledge and the term "competency" to refer to skills. We expect graduates to attain at least a "novice-level" understanding and competence. By "novice-level," we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/CADR Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict management.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.
- b. Competency in managing conflict for effective problem-solving.
- c. Competency in listening and in communication modes and skills in different settings.
- d. Competency in the ability to self-evaluate, by reflecting on and learning from past performances in order to improve effectiveness.
- e. Competency in giving and receiving feedback.

Second Tier/CADR Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of negotiation theory and terminology.
- b. Understanding of, and competency in, the use of both cooperative and competitive negotiation strategies.
- c. Understanding of the psychology of decision-making.
- d. Understanding of the ethical issues in negotiation.

- e. Competency in planning for and conducting effective negotiation, both with and without an ongoing relationship between the parties.
- f. Competency in conducting negotiation in presence of mediator, by interacting with the mediator effectively.

Second Tier/CADR Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, mediation.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of mediation theory and terminology, including the fundamental principles of mediation and the range of possible mediator approaches.
- b. Understanding of the Standards of Conduct for Mediators.
- c. Understanding of the current controversies and issues in the use of mediation as a dispute resolution process.
- d. Understanding of effectiveness as a consumer of mediation.
- e. Competency as an advocate in the mediation context.
- f. Competency in participating in a mediation in accordance with the fundamental principles of mediation, including the appropriate use of joint and caucus sessions, and the ability to encourage the creative generation of potential solutions.

Second Tier/CADR Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of the nature of arbitration.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the rules and regulation of arbitration.
- b. Understanding of the contractual issues and framework of arbitration.
- c. Understanding of the current controversies and issues in the use of arbitration as a dispute resolution process.
- d. Understanding of, and competence in, advocating for clients in arbitration.

Second Tier/CADR Learning Outcome 5: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, trial advocacy.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the litigation process, and the current issues and controversies in the use of trial as a dispute resolution process.
- b. Understanding of the elements of effective advocacy in litigation, including pretrial and trial phases.
- c. Understanding of, and competency in, the application of the rules of evidence, including presenting evidence through witness testimony, introduction of documentary evidence, and the making of and defending objections.
- d. Understanding of, and competency in, direct and cross examination techniques.
- e. Understanding of, and competency in, delivering persuasive argument, including opening and closing arguments.

FOR ALL GRADUATES EARNING CRIMINAL LAW AND ADVOCACY CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/CLA Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of criminal law and criminal procedure.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the substantive law of crimes including the construction of criminal statutes, elements of crimes, and defenses to crimes, as well as the concepts of causation, criminal responsibility and capacity, justification and excuse.
- b. Understanding of the investigative stage of the criminal justice process including the constitutional limitations on law enforcement—and the means of enforcing those limitations—with respect to arrest, stop and frisk, search and seizure, eavesdropping, wiretapping, identification procedures, and questioning of suspects.
- c. Understanding of the adjudicative stage of the criminal justice process including the initial appearance following arrest, the decision to prosecute, the preliminary hearing, bail, indictment, pleas and plea bargaining, the trial, double jeopardy, and the constitutional limitations on the adjudication of criminal matters.
- d. Understanding of the role and impact of the criminal justice system in the United States including current debates and controversies relating to criminal justice policies and practices.

Second Tier/CLA Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, pretrial, trial, and sentencing advocacy.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the pretrial, trial, and sentencing phases of criminal cases.
- b. Understanding of the elements of effective advocacy in criminal cases including the pretrial, trial, and sentencing phases.
- c. Understanding of, and competency in, the application of the rules of evidence, including presenting evidence through witness testimony, introduction of documentary evidence, and the making of and defending objections.
- d. Understanding of, and competency in, direct and cross examination techniques.
- e. Understanding of, and competency in, delivering persuasive argument, including opening and closing arguments.

- f. Understanding of, and competency in, developing and using mitigating evidence in sentencing advocacy.

Second Tier/CLA Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict and relationship management.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.
- b. Competency in managing conflict for effective problem-solving.
- c. Competency in listening and in communication modes and skills in different settings.
- d. Competency in the ability to self-evaluate, by reflecting on and learning from past performances in order to improve effectiveness.
- e. Competency in giving and receiving feedback.

Second Tier/CLA Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of negotiation theory and terminology.
- b. Understanding of the psychology of decision-making.
- c. Understanding of the ethical issues in negotiation and plea bargaining in criminal cases.
- d. Competency in planning for and conducting effective negotiations in criminal cases.

FOR ALL GRADUATES EARNING FAMILY LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/FAMILY Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of doctrine and related topics in family law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of topics in family law such as marriage, divorce, jurisdiction, spousal and child support, property division, and custody and parenting issues.
- b. Understanding of the emotional and psychological impact of divorce on family members.

- c. Understanding of child development principles and how parental separation and conflict affects child development.
- d. Understanding of the dynamics of domestic violence, including child abuse, and the array of criminal and civil responses to it.
- e. Understanding of the financial and property aspects of divorce, including the tax implications.

Second Tier/FAMILY Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, working with professionals from other disciplines and navigating the ethical aspects of the practice of family law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, working with mental health professionals, as treating professionals, consultants, witnesses, and expert witnesses.
- b. Understanding of, and competency in, working with financial professionals, such as divorce financial planners, business evaluators, and tax advisors.
- c. Understanding of, and competency in, the special ethical challenges of serving as an advocate and an advisor for clients in family law, particularly when there are children in the family.
- d. Understanding of, and competency in, providing for the physical and emotional safety in the lives of clients.
- e. Understanding of, and competency in, educating clients about the need for reducing conflict and enhancing the ability of parents to co-parent children.

Second Tier/FAMILY Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict management, managing relationships, and on-going self-improvement of dispute resolution skills.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in managing relationships with clients, other parties, and with counterparts.
- b. Understanding of, and competency in, interviewing and counseling family law clients.
- c. Competency in managing conflict for effective problem-solving.
- d. Competency in listening, and in using effective communication skills.
- e. Competency in the ability to self-evaluate, by reflecting on and learning from past performances in order to improve effectiveness.

Second Tier/FAMILY Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation and mediation in the family law context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of negotiation and mediation theory and terminology.
- b. Competency in planning for and conducting effective negotiation, especially cooperative strategies for clients with an ongoing relationship.
- c. Understanding of the ethical and negotiation principles in Collaborative Practice.

- d. Understanding of the psychology of decision-making.
- e. Understanding of the ethical issues in negotiation and mediation.
- f. Understanding of how to conduct negotiation in the presence of mediator, by preparing clients for mediation and interacting with the mediator effectively.

Second Tier/FAMILY Learning Outcome 5: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, trial advocacy in the family law context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the litigation process, and current issues and controversies in the use of trial as a dispute resolution process in family law.
- b. Understanding of the elements of effective advocacy in litigation, including pretrial and trial phases.
- c. Understanding of, and competency in, the application of the rules of evidence, including presenting evidence through witness testimony and expert witnesses, introduction of documentary evidence, and the making of and defending objections.
- d. Understanding of, and competency in, direct and cross examination techniques.
- e. Understanding of, and competency in, delivering persuasive argument, including opening and closing arguments.
- f. Understanding of, and competency in, working with child advocates in court.

FOR ALL GRADUATES EARNING HEALTH LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/HEALTH Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, business and financial activities and transactions relating to health care organizations.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in negotiating, drafting, and interpreting contracts related to commercial enterprises in the healthcare industry.
- b. Competency in reading and interpreting financial reports, profit and loss statements, and budget documents.
- c. Understanding of how insurance reimbursement policies affect the health care delivery system.
- d. Understanding of the federal and state tax implications associated with for-profit and not-for-profit corporations.

- e. Competency in demonstrating the necessary personal integrity, sound judgment, and commitment to accountability in negotiating health care-related transactions.

Second Tier/HEALTH Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level of understanding of, and competency in, health care regulation including federal, state, and local laws impacting the delivery of health care.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the major health law statutes including, but not limited to:
Medicare
Medicaid
Patient Protection and Affordable Care Act
Health Information and Technology for Economic and Clinical Health Act (HITECH)
Emergency Medical Treatment and Active Labor Act (EMTALA)
Health Insurance Portability and Accountability Act (HIPAA)
The Antitrust Statutes (Sherman Act, Clayton Act, Federal Trade Commission Act, Robinson Patman Act)
Fraud and Abuse Statute
Ethics in Patient Referrals Act (Stark Act)
- b. Understanding of the connection between the legislative process and regulatory agency rule-making.
- c. Competency in conducting research and drafting correspondence that interprets statutory and regulatory requirements related to a client’s particular circumstances.
- d. Understanding of federal and state regulations affecting labor relations, institutional and professional licensing, not-for-profit and for-profit organizations, and patients’ rights.

Second Tier/HEALTH Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level of understanding of the evolving nature of health care policy and competency in health law practices.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in analyzing the financial, antitrust and patient care-related issues associated with hospital acquisition of physicians’ practices.
- b. Understanding of the shift in the focus of patient care from inpatient-centric, sick care to outpatient, technology-centric, preventive well care.
- c. Understanding of the key policy questions relating to public health insurance.
- d. Understanding of the negative impact on patient care caused by lack of coordination within the United States health care system.
- e. Understanding of the statutory and historical basis for the peer review process for disciplining physicians.
- f. Understanding of the policy and political forces driving a shift away from a fee-for-service payment system to a value-based care payment system.

Second Tier/HEALTH Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level of understanding of, and

competency in examining, the connection between health, health care, health care inequities and social determinants of health.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in describing and analyzing the connection between the practice of medicine, the practice of health law, and the impact of law on medicine.
- b. Understanding of, and competency in, examining and discussing the question of whether or not there is a “right” to health care for both citizens and immigrants.
- c. Competency in analyzing and discussing the connection between the formation of the doctor-patient relationship and medical malpractice.
- d. Understanding of the tension between the ethical expectations and the legal obligations of physicians.
- e. Competency in analyzing the police powers of the states to restrict private autonomy in the name of public health promotion and protection.
- f. Understanding that shifting legislative priorities in response to political changes have resulted in creation of new health-related rights.

FOR ALL GRADUATES EARNING INTERNATIONAL LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/IL Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, using the foundational international law sources.

Specific Criteria

Concentration graduates are expected to demonstrate competency in the following:

- a. Competency in reading and understanding treaties, other dual nation and multilateral accords, international customs, generally recognized principles of international law, and international judicial decisions and juristic writings.
- b. Competency in recognizing issues and possible rules implicated in new and unfamiliar factual situations in the international context.
- c. Competency in applying applicable rules effectively to understand potential arguments and counter arguments in new and unfamiliar factual situations in the international context.
- d. Competency in analyzing applicable rules and facts to formulate and evaluate potential solutions to legal problems in the international context.

Second Tier/IL Learning Outcome 2: Concentration graduates are expected to demonstrate at least novice-level understating of, and

competency in, oral and written communication and advocacy in the international legal context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in cogently communicating analysis and advice orally in a range of settings in the international context.
- b. Competency in cogently communicating analysis and advice in written form in a range of settings in the international context.
- c. Competency in listening effectively to clients and others in the international context.
- d. Understanding of, and competency in, use of the principles of logic and rhetoric as they apply in the international context.
- e. Understanding of, and competency in, use of a spectrum of advocacy skills as they apply in the international context.

Second Tier/IL Learning Outcome 3: Concentration graduates are expected to demonstrate at least novice-level competency in legal research and understanding of the factual research needed to solve legal problems in the international context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in legal research, including effective use of technology for that research, in the international context.
- b. Understanding of, and competency in, factual investigation, including an understanding of effective strategies and practices for gathering the facts needed to evaluate legal issues or problems in the international context.

Second Tier/IL Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of the attorney’s professional and ethical responsibilities to clients and the legal system in the international context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the ethical implications of differing political systems.
- b. Understanding of the ethical implications of differing legal systems.
- c. Understanding of the ethical implications of differing levels of economic development.

FOR ALL GRADUATES EARNING INTELLECTUAL PROPERTY CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/IP Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, the substantive and procedural law of intellectual property, and legal analysis, reasoning and legal problem solving in the context of intellectual property.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the law of patents, trademarks, copyrights, and trade secrets.
- b. Competency in reading cases, statutes, and regulations effectively to glean rules, and understand the developmental history and policies underlying the rules in the context of IP matters.
- c. Competency in analyzing applicable rules and facts to formulate and evaluate potential solutions to clients' IP problems.
- d. Understanding of the structures of rule-making and governance and their historical background with respect to patents, trademarks, copyrights and trade secrets.

Second Tier/IP Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level competency in oral and written communication in the legal context as relates to intellectual property matters.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in listening effectively to clients and others in order to understand and address clients' IP matters.
- b. Understanding of, and competency in, a spectrum of oral and written advocacy skills on behalf of IP clients.
- c. Competency in listening and in oral and written communication modes.

Second Tier/IP Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, factual and legal research in intellectual property matters.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in IP legal research, including effective use of specialized resources for IP matters.
- b. Understanding of, and competency in, effective strategies and practices for gathering the facts needed to evaluate legal issues relating to IP matters.

Second Tier/IP Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict and relationship management and dispute resolution skills in the context of intellectual property matters.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.
- b. Competency in managing conflict for effective problem-solving.

- c. Competency in advising clients on choices of process/forum in the context of the specific IP problem.
- d. Understanding of, and competency in, the use of both cooperative and competitive negotiation strategies as a means to resolve IP disputes.

Second Tier/IP Learning Outcome 5: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, trial advocacy in the intellectual property context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, the litigation process in validity and enforcement proceedings in one or more of trademark, copyright, or patent matters.
- b. Understanding of the current issues and controversies in the use of trial as a dispute resolution process in the context of patent, trademark, and copyright validity and enforceability matters.

FOR ALL GRADUATES EARNING TAX CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term "understanding" to refer to knowledge and the term "competency" to refer to skills. We expect graduates to attain at least a "novice-level" understanding and competence. By "novice-level," we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/TAX Learning Outcome 1: Concentration graduates are expected to demonstrate at least novice-level understanding of, and competency in, reading and engaging with the sources of tax law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in reading and comprehending case law related to tax law.
- b. Competency in reading and comprehending the Internal Revenue Code and Regulations.
- c. Competency in reading and comprehending various other sources of tax law, such as Private Letter Rulings and other administrative pronouncements, legislative histories, tax treaties, and major secondary sources/compilations of tax law.
- d. Understanding of the relative importance, and legal weight of authority, of these various sources of tax law.
- e. Understanding of major administrative procedures related to the enactment and enforcement of tax law.

Second Tier/TAX Learning Outcome 2: Concentration graduates are expected to demonstrate at least novice-level understanding of, and competency in, applying tax law to specific problems faced by tax clients.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in identifying relevant facts presented by a client and identifying the tax principles implicated by those facts.
- b. Competency in determining which provisions of the Internal Revenue Code are relevant to a given factual situation.
- c. Competency in assessing the likely tax implications of actions of a client.
- d. Competency in communicating analysis and advice regarding tax matters, both orally and in writing.

Second Tier/TAX Learning Outcome 3: Concentration graduates are expected to demonstrate at least novice-level understanding of, and competency in, engaging in in-depth study of specific issues in tax law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of tax law, policy, and procedure.
- b. Competency in tax research.
- c. Competency in written analysis of issues in tax law.

FOR ALL GRADUATES EARNING WORKPLACE LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/WP Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of the legal theory, systems, and doctrine in the law involving the workplace.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the substantive law of public and private labor law in union and non-union-settings, employment law, employment discrimination, disability, worker compensation, and benefits.
- b. Understanding of administrative law and procedures, and the role of administrative agencies in the investigative stage of employment discrimination matters.
- c. Understanding of the federal and state laws and regulations governing labor law.
- d. Understanding of the role and impact of employment and labor law in the United States including current debates and controversies relating to workplace policies and practices.

Second Tier/WP Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict management, and managing relationships in the workplace law context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.
- b. Competency in interviewing and counseling clients in workplace cases.
- c. Competency in managing conflict for effective problem-solving.
- d. Competency in listening and in communication modes and skills in different settings in the workplace law context.

Second Tier/WP Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation, arbitration, and litigation in the workplace context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of negotiation theory and terminology.
- b. Understanding of the role and practice of arbitration in the labor and employment context.
- c. Understanding of the ethical issues in employment negotiation, labor bargaining, arbitration, and trial practice.
- d. Competency in planning for and conducting effective negotiations in labor and employment cases, both with and without a mediator.
- e. Understanding of how to plan for and conduct effective arbitrations in labor and employment cases.
- f. Understanding of how to plan for and conduct effective litigation in labor and employment cases.

Concentrations

There are eight optional concentrations offered within the juris doctor degree program.

- Civil Advocacy and Dispute Resolution (p. 604)
- Criminal Law and Advocacy (p. 605)
- Family Law (p. 607)
- Health Law (p. 608)
- Intellectual Property (p. 610)
- International Law and Policy (new Fall 2017) (p. 611)
- Tax Law (p. 612)
- Workplace Law (p. 613)

Part-Time Juris Doctor

Part-Time Evening JD Program

This program is designed for those students who are employed or otherwise occupied for most of their time, and who are able to devote only a portion of their time to the study of law. The completion of this program requires four academic years and one or two summer sessions of residence. Part-time students are admitted for evening courses. They may be allowed to enroll in day classes if space is available. All part-time students are required to take the prescribed program of required courses listed below and at least four of the core electives as described below (see Academic Regulations (p. 617), section I.B. and I.C, Requirements

for Graduation). In addition, prior to graduation, students must take the course in Lawyers' Professional Responsibility, satisfy the Professional Skills Requirement (for students matriculating before Fall 2016) or the Experiential Learning Requirement (for students matriculating Fall 2016 or later), and satisfy the Advanced Writing Requirement (p. 617).

Flex-Time Day JD Program

This program is designed for a limited number of students who, because of work or family commitments, cannot attend either the full-time day or part-time evening program. Students admitted to this program must meet with the associate dean for academic affairs to arrange an appropriate schedule.

Summer Session

One seven-week session is offered each summer. Summer courses are taught in the late afternoon or evening and are open to all students. Under some circumstances, a full-time or part-time student may accelerate graduation by attending summer sessions.

Part-Time Juris Doctor Program of Study

General Electives	6	
Credits		11

Spring Semester

Core Elective ¹	4	
Generals Electives	7	
Credits		11
Total Credits		86

¹ Part-time students must take two core electives by the end of the second year. Fewer core elective credits in the second year can be taken if one or more core electives in the summer between the first and second years have been completed.

Core electives are:

- LAWS 114 - Administrative Law - 3 credits.
- LAWS 205 - Business Organizations - 4 credits.
- LAWS 305 - Federal Income Tax - 4 credits.
- LAWS 307 - Trusts & Estates - 3 credits.
- LAWS 311 - Evidence - 3 credits.
- LAWS 323 - Commercial Law - 4 credits.

Students must take a total of four core electives. One of the four must be Federal Income Tax or Commercial Law.

² **Experiential Learning Requirement** (applicable to students matriculating Fall 2016 or later): Each student also must satisfactorily complete "one or more experiential course(s) totaling at least 6 credits," as provided by current ABA Standard 303(a)(3) and related provisions. Certain courses are always designated as "experiential courses" that will satisfy the requirement. They are: all law clinics except Advanced Clinic; all externships including Field Placement II; Introduction to Representing Clients; Negotiation; Trial Practice and Advanced Trial Practice. Other courses that may satisfy this requirement, depending on the design choices that the particular professor makes, include: Advanced Family Law II: Courtroom Advocacy, Advanced Juvenile Law: Delinquency Proceedings, Alternative Dispute Resolution, Bankruptcy Lab, Commercial Transactions Workshop, Estate Planning and Drafting, Financial Planning: Principles and Taxation, Judicial Clerkship Seminar, Land Use Practicum, Representation in Mediation, and Visual Persuasion in the Law. (This list is subject to revision; each semester the registrar will designate which courses taught the following semester will satisfy the requirement.) Any paper(s) written in connection with a course or courses used to satisfy the Experiential Learning Requirement may be used to satisfy no more than three of the four papers required to satisfy the Advanced Writing Requirement.

³ Taking at least one summer course over the course of study will be necessary to reach the required 86 credits needed for graduation by the end of your fourth year.

I. Introduction

The School of Law has organized its institutional learning outcomes into two general categories: “first tier” learning outcomes and “second tier” learning outcomes.

- **First Tier Learning Outcomes** are outcomes that *all* students should achieve by graduation, regardless of the practice area(s) in which they expect to focus in post-law school employment.
- **Second Tier Learning Outcomes** are tailored to particular areas of the law in which students plan to focus in post-law school employment. For that reason, the law school does not expect that *all* students will achieve *all* of these second tier outcomes.

Students who have not yet settled upon a particular focus for post-law school employment should achieve *at least* the first tier learning outcomes, and they should also aspire to achieve those second tier learning outcomes that relate to their likely future practice focuses.

II. First Tier Learning Outcomes

Outcome 1: Graduates are expected to demonstrate competency in legal analysis and reasoning and legal problem solving.

Specific Criteria

Graduates are expected to demonstrate competency in the following:

- a. Reading cases, statutes and regulations effectively to glean rules and –if in play–the developmental history and policies underlying the rules.
- b. Recognizing issues and possible rules implicated in new and unfamiliar factual situations.
- c. Applying applicable rules effectively to understand potential arguments and counter- arguments in new and unfamiliar factual situations.
- d. Assessing what additional facts may need to be gathered for appropriate analysis of a legal issue.
- e. Assessing the relative strength of arguments and predicting likely outcomes effectively for legal issues.
- f. Analyzing applicable rules and facts to formulate and evaluate potential solutions to legal problems.

Outcome 2: Graduates are expected to demonstrate knowledge and understanding of legal theory, systems and doctrine, including core areas of substantive and procedural law and alternative methods for resolving disputes.

Specific Criteria

Graduates are expected to demonstrate knowledge and understanding of the following:

- a. The American federal and state legal systems, including their structures of rule-making and governance and their historical background.
- b. Core doctrine and theory in “foundation” areas, including those that will be tested on the bar examination.
- c. The range of dispute resolution processes and the ability to advise clients and others on choices of process/forum.
- d. Appellate review standards and practices.

- e. The impact of law and legal rules on society and its various sub-groups.

Outcome 3: Graduates are expected to demonstrate competency in oral and written communication in the legal context.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. Competency in cogently communicating analysis and advice orally in a range of settings and contexts.
- b. Competency in listening effectively to clients and others.
- c. Competency in cogently communicating analysis and advice in writing across a range of types of writings (e.g., memos, briefs and client letters).
- d. At least a basic understanding of principles of logic and rhetoric.
- e. At least novice-level understanding of and competency in a spectrum of advocacy skills.

Outcome 4: Graduates are expected to demonstrate competency in legal research and understanding of the factual research needed to solve legal problems.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. Competency in legal research, including effective use of technology for that research.
- b. Understanding of factual investigation, including an understanding of effective strategies and practices for gathering the facts needed to evaluate legal issues or problems.

Outcome 5: Graduates are expected to demonstrate knowledge and understanding of the attorney’s professional and ethical responsibilities to clients and the legal system.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. Knowledge and understanding of the professional rules and the ability to recognize and resolve ethical dilemmas in a range of practice settings.
- b. Knowledge and understanding of the attorney’s ethical obligation to represent clients diligently and competently.
- c. Knowledge and understanding of the attorney’s ethical obligation to behave professionally and civilly.
- d. Knowledge and understanding of the attorney’s ethical obligation to behave in accordance with the rules governing confidentiality and conflicts of interest.
- e. Knowledge and understanding of the attorney’s ethical obligation to strive to promote justice (including access to justice) and fairness and to assist the profession in providing legal services to those who cannot afford to pay for them.

Outcome 6: Graduates are expected to demonstrate at least novice-level competency in other professional skills needed for competent, effective and ethical participation as a member of the legal profession.

Specific Criteria

Graduates are expected to demonstrate the following:

- a. At least novice-level understanding of and competency in approaches for managing conflict for effective problem solving.
- b. At least novice-level competency in collaborative work approaches.
- c. At least novice-level understanding of and competency in effective approaches for client interviewing and counseling.
- d. At least novice-level understanding of and competency in effective negotiation practices.
- e. At least novice-level understanding of and competency in “learning how to learn” (techniques for finding guidance for unfamiliar tasks).
- f. Competency in interviewing for employment and planning for long-term career development.

III. Second Tier Learning Outcomes

(Approved December 5, 2018)

FOR ALL GRADUATES EARNING CIVIL ADVOCACY AND DISPUTE RESOLUTION CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/CADR Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict management.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.
- b. Competency in managing conflict for effective problem-solving.
- c. Competency in listening and in communication modes and skills in different settings.
- d. Competency in the ability to self-evaluate, by reflecting on and learning from past performances in order to improve effectiveness.
- e. Competency in giving and receiving feedback.

Second Tier/CADR Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of negotiation theory and terminology.
- b. Understanding of, and competency in, the use of both cooperative and competitive negotiation strategies.
- c. Understanding of the psychology of decision-making.
- d. Understanding of the ethical issues in negotiation.

- e. Competency in planning for and conducting effective negotiation, both with and without an ongoing relationship between the parties.
- f. Competency in conducting negotiation in presence of mediator, by interacting with the mediator effectively.

Second Tier/CADR Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, mediation.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of mediation theory and terminology, including the fundamental principles of mediation and the range of possible mediator approaches.
- b. Understanding of the Standards of Conduct for Mediators.
- c. Understanding of the current controversies and issues in the use of mediation as a dispute resolution process.
- d. Understanding of effectiveness as a consumer of mediation.
- e. Competency as an advocate in the mediation context.
- f. Competency in participating in a mediation in accordance with the fundamental principles of mediation, including the appropriate use of joint and caucus sessions, and the ability to encourage the creative generation of potential solutions.

Second Tier/CADR Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of the nature of arbitration.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the rules and regulation of arbitration.
- b. Understanding of the contractual issues and framework of arbitration.
- c. Understanding of the current controversies and issues in the use of arbitration as a dispute resolution process.
- d. Understanding of, and competence in, advocating for clients in arbitration.

Second Tier/CADR Learning Outcome 5: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, trial advocacy.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the litigation process, and the current issues and controversies in the use of trial as a dispute resolution process.
- b. Understanding of the elements of effective advocacy in litigation, including pretrial and trial phases.
- c. Understanding of, and competency in, the application of the rules of evidence, including presenting evidence through witness testimony, introduction of documentary evidence, and the making of and defending objections.
- d. Understanding of, and competency in, direct and cross examination techniques.
- e. Understanding of, and competency in, delivering persuasive argument, including opening and closing arguments.

FOR ALL GRADUATES EARNING CRIMINAL LAW AND ADVOCACY CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/CLA Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of criminal law and criminal procedure.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the substantive law of crimes including the construction of criminal statutes, elements of crimes, and defenses to crimes, as well as the concepts of causation, criminal responsibility and capacity, justification and excuse.
- b. Understanding of the investigative stage of the criminal justice process including the constitutional limitations on law enforcement—and the means of enforcing those limitations—with respect to arrest, stop and frisk, search and seizure, eavesdropping, wiretapping, identification procedures, and questioning of suspects.
- c. Understanding of the adjudicative stage of the criminal justice process including the initial appearance following arrest, the decision to prosecute, the preliminary hearing, bail, indictment, pleas and plea bargaining, the trial, double jeopardy, and the constitutional limitations on the adjudication of criminal matters.
- d. Understanding of the role and impact of the criminal justice system in the United States including current debates and controversies relating to criminal justice policies and practices.

Second Tier/CLA Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, pretrial, trial, and sentencing advocacy.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the pretrial, trial, and sentencing phases of criminal cases.
- b. Understanding of the elements of effective advocacy in criminal cases including the pretrial, trial, and sentencing phases.
- c. Understanding of, and competency in, the application of the rules of evidence, including presenting evidence through witness testimony, introduction of documentary evidence, and the making of and defending objections.
- d. Understanding of, and competency in, direct and cross examination techniques.
- e. Understanding of, and competency in, delivering persuasive argument, including opening and closing arguments.

- f. Understanding of, and competency in, developing and using mitigating evidence in sentencing advocacy.

Second Tier/CLA Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict and relationship management.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.
- b. Competency in managing conflict for effective problem-solving.
- c. Competency in listening and in communication modes and skills in different settings.
- d. Competency in the ability to self-evaluate, by reflecting on and learning from past performances in order to improve effectiveness.
- e. Competency in giving and receiving feedback.

Second Tier/CLA Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of negotiation theory and terminology.
- b. Understanding of the psychology of decision-making.
- c. Understanding of the ethical issues in negotiation and plea bargaining in criminal cases.
- d. Competency in planning for and conducting effective negotiations in criminal cases.

FOR ALL GRADUATES EARNING FAMILY LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/FAMILY Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of doctrine and related topics in family law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of topics in family law such as marriage, divorce, jurisdiction, spousal and child support, property division, and custody and parenting issues.
- b. Understanding of the emotional and psychological impact of divorce on family members.

- c. Understanding of child development principles and how parental separation and conflict affects child development.
- d. Understanding of the dynamics of domestic violence, including child abuse, and the array of criminal and civil responses to it.
- e. Understanding of the financial and property aspects of divorce, including the tax implications.

Second Tier/FAMILY Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, working with professionals from other disciplines and navigating the ethical aspects of the practice of family law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, working with mental health professionals, as treating professionals, consultants, witnesses, and expert witnesses.
- b. Understanding of, and competency in, working with financial professionals, such as divorce financial planners, business evaluators, and tax advisors.
- c. Understanding of, and competency in, the special ethical challenges of serving as an advocate and an advisor for clients in family law, particularly when there are children in the family.
- d. Understanding of, and competency in, providing for the physical and emotional safety in the lives of clients.
- e. Understanding of, and competency in, educating clients about the need for reducing conflict and enhancing the ability of parents to co-parent children.

Second Tier/FAMILY Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict management, managing relationships, and on-going self-improvement of dispute resolution skills.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in managing relationships with clients, other parties, and with counterparts.
- b. Understanding of, and competency in, interviewing and counseling family law clients.
- c. Competency in managing conflict for effective problem-solving.
- d. Competency in listening, and in using effective communication skills.
- e. Competency in the ability to self-evaluate, by reflecting on and learning from past performances in order to improve effectiveness.

Second Tier/FAMILY Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation and mediation in the family law context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of negotiation and mediation theory and terminology.
- b. Competency in planning for and conducting effective negotiation, especially cooperative strategies for clients with an ongoing relationship.
- c. Understanding of the ethical and negotiation principles in Collaborative Practice.

- d. Understanding of the psychology of decision-making.
- e. Understanding of the ethical issues in negotiation and mediation.
- f. Understanding of how to conduct negotiation in the presence of mediator, by preparing clients for mediation and interacting with the mediator effectively.

Second Tier/FAMILY Learning Outcome 5: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, trial advocacy in the family law context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the litigation process, and current issues and controversies in the use of trial as a dispute resolution process in family law.
- b. Understanding of the elements of effective advocacy in litigation, including pretrial and trial phases.
- c. Understanding of, and competency in, the application of the rules of evidence, including presenting evidence through witness testimony and expert witnesses, introduction of documentary evidence, and the making of and defending objections.
- d. Understanding of, and competency in, direct and cross examination techniques.
- e. Understanding of, and competency in, delivering persuasive argument, including opening and closing arguments.
- f. Understanding of, and competency in, working with child advocates in court.

FOR ALL GRADUATES EARNING HEALTH LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/HEALTH Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, business and financial activities and transactions relating to health care organizations.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in negotiating, drafting, and interpreting contracts related to commercial enterprises in the healthcare industry.
- b. Competency in reading and interpreting financial reports, profit and loss statements, and budget documents.
- c. Understanding of how insurance reimbursement policies affect the health care delivery system.
- d. Understanding of the federal and state tax implications associated with for-profit and not-for-profit corporations.

- e. Competency in demonstrating the necessary personal integrity, sound judgment, and commitment to accountability in negotiating health care-related transactions.

Second Tier/HEALTH Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level of understanding of, and competency in, health care regulation including federal, state, and local laws impacting the delivery of health care.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- Understanding of the major health law statutes including, but not limited to:
Medicare
Medicaid
Patient Protection and Affordable Care Act
Health Information and Technology for Economic and Clinical Health Act (HITECH)
Emergency Medical Treatment and Active Labor Act (EMTALA)
Health Insurance Portability and Accountability Act (HIPAA)
The Antitrust Statutes (Sherman Act, Clayton Act, Federal Trade Commission Act, Robinson Patman Act)
Fraud and Abuse Statute
Ethics in Patient Referrals Act (Stark Act)
- Understanding of the connection between the legislative process and regulatory agency rule-making.
- Competency in conducting research and drafting correspondence that interprets statutory and regulatory requirements related to a client's particular circumstances.
- Understanding of federal and state regulations affecting labor relations, institutional and professional licensing, not-for-profit and for-profit organizations, and patients' rights.

Second Tier/HEALTH Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level of understanding of the evolving nature of health care policy and competency in health law practices.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- Competency in analyzing the financial, antitrust and patient care-related issues associated with hospital acquisition of physicians' practices.
- Understanding of the shift in the focus of patient care from inpatient-centric, sick care to outpatient, technology-centric, preventive well care.
- Understanding of the key policy questions relating to public health insurance.
- Understanding of the negative impact on patient care caused by lack of coordination within the United States health care system.
- Understanding of the statutory and historical basis for the peer review process for disciplining physicians.
- Understanding of the policy and political forces driving a shift away from a fee-for-service payment system to a value-based care payment system.

Second Tier/HEALTH Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level of understanding of, and

competency in examining, the connection between health, health care, health care inequities and social determinants of health.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- Competency in describing and analyzing the connection between the practice of medicine, the practice of health law, and the impact of law on medicine.
- Understanding of, and competency in, examining and discussing the question of whether or not there is a "right" to health care for both citizens and immigrants.
- Competency in analyzing and discussing the connection between the formation of the doctor-patient relationship and medical malpractice.
- Understanding of the tension between the ethical expectations and the legal obligations of physicians.
- Competency in analyzing the police powers of the states to restrict private autonomy in the name of public health promotion and protection.
- Understanding that shifting legislative priorities in response to political changes have resulted in creation of new health-related rights.

FOR ALL GRADUATES EARNING INTERNATIONAL LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term "understanding" to refer to knowledge and the term "competency" to refer to skills. We expect graduates to attain at least a "novice-level" understanding and competence. By "novice-level" we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/IL Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, using the foundational international law sources.

Specific Criteria

Concentration graduates are expected to demonstrate competency in the following:

- Competency in reading and understanding treaties, other dual nation and multilateral accords, international customs, generally recognized principles of international law, and international judicial decisions and juristic writings.
- Competency in recognizing issues and possible rules implicated in new and unfamiliar factual situations in the international context.
- Competency in applying applicable rules effectively to understand potential arguments and counter arguments in new and unfamiliar factual situations in the international context.
- Competency in analyzing applicable rules and facts to formulate and evaluate potential solutions to legal problems in the international context.

Second Tier/IL Learning Outcome 2: Concentration graduates are expected to demonstrate at least novice-level understanding of, and competency in, oral and written communication and advocacy in the international legal context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in cogently communicating analysis and advice orally in a range of settings in the international context.
- b. Competency in cogently communicating analysis and advice in written form in a range of settings in the international context.
- c. Competency in listening effectively to clients and others in the international context.
- d. Understanding of, and competency in, use of the principles of logic and rhetoric as they apply in the international context.
- e. Understanding of, and competency in, use of a spectrum of advocacy skills as they apply in the international context.

Second Tier/IL Learning Outcome 3: Concentration graduates are expected to demonstrate at least novice-level competency in legal research and understanding of the factual research needed to solve legal problems in the international context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in legal research, including effective use of technology for that research, in the international context.
- b. Understanding of, and competency in, factual investigation, including an understanding of effective strategies and practices for gathering the facts needed to evaluate legal issues or problems in the international context.

Second Tier/IL Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of the attorney's professional and ethical responsibilities to clients and the legal system in the international context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the ethical implications of differing political systems.
- b. Understanding of the ethical implications of differing legal systems.
- c. Understanding of the ethical implications of differing levels of economic development.

FOR ALL GRADUATES EARNING INTELLECTUAL PROPERTY CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term "understanding" to refer to knowledge and the term "competency" to refer to skills. We expect graduates to attain at least a "novice-level" understanding and competence. By "novice-level," we mean a level of

knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/IP Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, the substantive and procedural law of intellectual property, and legal analysis, reasoning and legal problem solving in the context of intellectual property.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the law of patents, trademarks, copyrights, and trade secrets.
- b. Competency in reading cases, statutes, and regulations effectively to glean rules, and understand the developmental history and policies underlying the rules in the context of IP matters.
- c. Competency in analyzing applicable rules and facts to formulate and evaluate potential solutions to clients' IP problems.
- d. Understanding of the structures of rule-making and governance and their historical background with respect to patents, trademarks, copyrights and trade secrets.

Second Tier/IP Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level competency in oral and written communication in the legal context as relates to intellectual property matters.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in listening effectively to clients and others in order to understand and address clients' IP matters.
- b. Understanding of, and competency in, a spectrum of oral and written advocacy skills on behalf of IP clients.
- c. Competency in listening and in oral and written communication modes.

Second Tier/IP Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, factual and legal research in intellectual property matters.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in IP legal research, including effective use of specialized resources for IP matters.
- b. Understanding of, and competency in, effective strategies and practices for gathering the facts needed to evaluate legal issues relating to IP matters.

Second Tier/IP Learning Outcome 4: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict and relationship management and dispute resolution skills in the context of intellectual property matters.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.

- b. Competency in managing conflict for effective problem-solving.
- c. Competency in advising clients on choices of process/forum in the context of the specific IP problem.
- d. Understanding of, and competency in, the use of both cooperative and competitive negotiation strategies as a means to resolve IP disputes.

Second Tier/IP Learning Outcome 5: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, trial advocacy in the intellectual property context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of, and competency in, the litigation process in validity and enforcement proceedings in one or more of trademark, copyright, or patent matters.
- b. Understanding of the current issues and controversies in the use of trial as a dispute resolution process in the context of patent, trademark, and copyright validity and enforceability matters.

FOR ALL GRADUATES EARNING TAX CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/TAX Learning Outcome 1: Concentration graduates are expected to demonstrate at least novice-level understanding of, and competency in, reading and engaging with the sources of tax law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in reading and comprehending case law related to tax law.
- b. Competency in reading and comprehending the Internal Revenue Code and Regulations.
- c. Competency in reading and comprehending various other sources of tax law, such as Private Letter Rulings and other administrative pronouncements, legislative histories, tax treaties, and major secondary sources/compilations of tax law.
- d. Understanding of the relative importance, and legal weight of authority, of these various sources of tax law.
- e. Understanding of major administrative procedures related to the enactment and enforcement of tax law.

Second Tier/TAX Learning Outcome 2: Concentration graduates are expected to demonstrate at least novice-level understanding of, and competency in, applying tax law to specific problems faced by tax clients.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Competency in identifying relevant facts presented by a client and identifying the tax principles implicated by those facts.
- b. Competency in determining which provisions of the Internal Revenue Code are relevant to a given factual situation.
- c. Competency in assessing the likely tax implications of actions of a client.
- d. Competency in communicating analysis and advice regarding tax matters, both orally and in writing.

Second Tier/TAX Learning Outcome 3: Concentration graduates are expected to demonstrate at least novice-level understanding of, and competency in, engaging in in-depth study of specific issues in tax law.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of tax law, policy, and procedure.
- b. Competency in tax research.
- c. Competency in written analysis of issues in tax law.

FOR ALL GRADUATES EARNING WORKPLACE LAW CONCENTRATION

All graduates are expected to achieve all of the First Tier Learning Outcomes. In addition, all students who earn a concentration are expected to achieve additional learning outcomes specific to the particular concentration.

For the outcomes and specific criteria we describe below, we use the term “understanding” to refer to knowledge and the term “competency” to refer to skills. We expect graduates to attain at least a “novice-level” understanding and competence. By “novice-level,” we mean a level of knowledge or skill expected of a very junior lawyer (e.g., a lawyer in the first or second year of practice) in that area of practice.

Second Tier/WP Learning Outcome 1: Concentration graduates are expected to demonstrate at least a novice-level understanding of the legal theory, systems, and doctrine in the law involving the workplace.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- a. Understanding of the substantive law of public and private labor law in union and non-union-settings, employment law, employment discrimination, disability, worker compensation, and benefits.
- b. Understanding of administrative law and procedures, and the role of administrative agencies in the investigative stage of employment discrimination matters.
- c. Understanding of the federal and state laws and regulations governing labor law.
- d. Understanding of the role and impact of employment and labor law in the United States including current debates and controversies relating to workplace policies and practices.

Second Tier/WP Learning Outcome 2: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, conflict management, and managing relationships in the workplace law context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- Understanding of, and competency in, managing relationships with clients, other parties, and with counterparts.
- Competency in interviewing and counseling clients in workplace cases.
- Competency in managing conflict for effective problem-solving.
- Competency in listening and in communication modes and skills in different settings in the workplace law context.

Second Tier/WP Learning Outcome 3: Concentration graduates are expected to demonstrate at least a novice-level understanding of, and competency in, negotiation, arbitration, and litigation in the workplace context.

Specific Criteria

Concentration graduates are expected to demonstrate the following:

- Understanding of negotiation theory and terminology.
- Understanding of the role and practice of arbitration in the labor and employment context.
- Understanding of the ethical issues in employment negotiation, labor bargaining, arbitration, and trial practice.
- Competency in planning for and conducting effective negotiations in labor and employment cases, both with and without a mediator.
- Understanding of how to plan for and conduct effective arbitrations in labor and employment cases.
- Understanding of how to plan for and conduct effective litigation in labor and employment cases.

Pre-Law

Students or graduates who have an interest in law school should contact the Quinnipiac University pre-law adviser, via email at prelawadvising@qu.edu, for further information and should join the Pre-Law Society to learn more about the LSAT, law school admissions and financial aid.

Law School Qualifications

Students interested in attending law school must have and should work toward success in each of the following during undergraduate study:

- Undergraduate degree:** Student must have earned a bachelor (BA or BS) degree.
- Standardized test:** Completion of the Law School Admission Test (LSAT) is required by most American Bar Association–approved law schools; some others will accept the Graduate Record Examination (GRE) in addition to or in lieu of the LSAT.
- Curriculum:** No single pre-law course of study is required or recommended. Several broad objectives of pre-legal education, however, have been set forth by the Association of American Law Schools:
 - Developing fundamental reading skills;
 - The ability to think and write clearly and succinctly;
 - Logical reasoning and analytical skills; and
 - An appreciation of the social, political and economic foundations and complexities of our society.

Toward this end, every pre-law student should carefully choose, with the assistance of their academic adviser and/or the pre-law adviser, courses that will help build these skills and areas of knowledge.

Law School at Quinnipiac

Undergraduate students who wish to attend the School of Law at Quinnipiac may take one of two paths:

- Accelerated:** Participate in the Accelerated Dual-Degree Bachelor's/JD (3+3) program (p. 600) which allows students to complete their undergraduate and their law degree in six years, one year less than the traditional path.
- Traditional:** Obtain a BA or BS degree in four years followed by three years of law school. (NOTE: Attending Quinnipiac University as an undergraduate student does not guarantee admission to the Quinnipiac School of Law.)

Accelerated Dual-Degree Bachelor's/JD (3+3) Program

Accelerated Dual-Degree Bachelor's/JD (3+3) Program

Quinnipiac University offers an innovative Bachelor's/Juris Doctor accelerated program, which will shorten the usual seven-year sequence to just six years to earn a BA or BS in a major in the College of Arts and Sciences or the Schools of Business, Communications, Engineering or Health Sciences, and the JD from the Quinnipiac School of Law. This program is designed for students who know they want to attend law school at Quinnipiac.

Benefits

The Accelerated Dual-Degree Bachelor's/JD (3+3) program provides a number of benefits. In addition to the opportunity to complete both degrees in only six years, students may:

- Live in Quinnipiac housing for four years.
- Participate in specific programming including interacting with the law school dean and faculty throughout the undergraduate years.
- Enroll in a 1-credit LSAT prep class offered to help students prepare for the exam.

Applicants accepted through the Office of Undergraduate Admissions prior to their first year at QU will also receive financial benefits consistent with Quinnipiac University's accelerated dual-degree programs (<https://www.qu.edu/one-stop-student-administrative-services/managing-student-finances/policy-information/accelerated-dual-degree-programs-financial-policy/>) policy:

- Frozen tuition and student fee rate for the first four (three undergraduate and one law/transition) years.
- January term courses (up to 3 credits) and summer courses (up to 7 credits per summer term) during the first three (undergraduate) years included in annual tuition.
- Renewed merit scholarships throughout law school, subject to law school renewal policies.

For more information, visit the Accelerated Dual-Degree Programs Financial Policy. (<https://www.qu.edu/one-stop-student-administrative-services/managing-student-finances/policy-information/accelerated-dual-degree-programs-financial-policy/>)

Students who enter the 3+3 program post-matriculation have access to January term courses (up to 3 credits) and summer courses (up to 7 credits per summer term) within annual tuition but neither of the other financial benefits apply (i.e., frozen tuition and fees, renewed merit scholarships).

Qualifications

The Accelerated Dual-Degree Bachelor's/JD (3+3) program is designed for students who know that they want to attend law school at Quinnipiac School of Law. Entrance into the 3+3 program can happen in two ways:

Upon Matriculation

Entering students who indicate Pre-Law or the Accelerated Dual-Degree program on their Admissions application must:

- Be admitted to a major in the College of Arts and Sciences or in the Schools of Business, Communications, Computing and Engineering or Health Sciences at Quinnipiac.
- Earn a 3.5 grade point average (GPA) in high school.
- Rank in the top 20 percent of their high school class.
- Achieve a combined critical reading and math SAT score of at least 1200 or a composite ACT of at least 25 or higher.

*Students interested in the program who are close to but do not meet the admission criteria may apply to the Office of Undergraduate Admissions for special consideration.

Post-Matriculation

First-year students and sophomores attending Quinnipiac, as well as first-year and sophomore transfer students, may apply to the program through the Pre-Law Advising Office. Students must:

- Meet or be close to the same eligibility criteria for first-year students entering the program directly through the Office of Undergraduate Admissions.
- Sophomores entering the program must have a minimum of 27 credits with at least a 3.0 GPA at the end of their first year.

Program Requirements

Students admitted to the Accelerated Dual-Degree Bachelor's/JD (3+3) program are required to:

- Complete all major and University Curriculum requirements before entering the School of Law.
- Complete at least 60 undergraduate (non-law) credits at Quinnipiac immediately prior to matriculation in the School of Law.
- Regularly meet with Quinnipiac's pre-law adviser as well as the academic adviser in their major to be certain they have completed all major and University Curriculum requirements before entering the School of Law.
- Complete course overloads as necessary to satisfy the undergraduate degree requirements in the accelerated time period.

Program Structure

There are two options for completion of the program:

- Option 1 requires completion of a minimum of 90 undergraduate credits, including all major and University Curriculum requirements, by the end of the third year. Students following Option 1 will:
 - Use the first year of law school for their fourth year of undergraduate credits and count up to 30 law school credits toward their undergraduate degree.

- Be full-time law students in the first semester of their fourth year.
- Earn a bachelor's degree at the end of their first year of law school/fourth year of college.
- Option 2 requires completion of a minimum of 105 undergraduate credits by the end of the third year. Students following Option 2 will:
 - Participate in a "bridge" semester – the fall semester of the fourth year – consisting of 6 credits of undergraduate courses and 10 credits of law school courses.
 - Be considered full-time law students in the second semester of the fourth year.
 - Enroll in 6 credits of law school courses in the summer between the fourth and the fifth years.
 - Receive their bachelor's degree at the end of the bridge semester.

Law School Transition

In their third year, students in the Accelerated Dual-Degree Bachelor's/JD (3+3) program must:

- Have a cumulative GPA of 3.4 by the end of the third year.
- Take the Law School Admission Test (LSAT) no later than March of that academic year and achieve a score equal to, or greater than, the law school's first year class median at the time the law school application is submitted.
- File a law school application with the Law School Admissions Council (LSAC) receiving assistance from the Quinnipiac School of Law Admissions Office if necessary.
- Pass review by the Quinnipiac School of Law Admissions Committee ensuring that the prerequisites are met and there are no character and fitness issues. Students who do not meet the minimum GPA or LSAT score requirements may still be considered by the Law School Admissions Committee. If they are admitted, they would not be guaranteed the scholarship awarded at the undergraduate level.

Accelerated Dual-Degree Bachelor's/JD (3+3)

Program of Study

Option 1

Students will use the first year of law school for their fourth year of undergraduate credits and count up to 30 law school credits toward their undergraduate degree. Students will earn a bachelor's degree by the end of their first year of law school/fourth year of undergraduate.

The program is structured as follows:

Years 1 through 3 (Undergraduate)

Students will focus efforts on working toward their undergraduate degree program requirements according to the Academic Catalog and guidance from their academic and pre-law adviser.

By the end of the third year, students must:

- Complete all major and University Curriculum requirements for a total of at least 90 credits (which can include any AP or advanced standing credits as determined when they enter as first-year students) with a minimum cumulative 3.4 GPA.
- Complete at least 60 undergraduate (non-law) credits at Quinnipiac immediately prior to matriculation at the School of Law.

- Take the Law School Admission Test (LSAT) no later than March of their third year and achieve an LSAT score equal to, or greater than, the law school's first year class median.
 - Students who do not meet the GPA and/or LSAT score requirements may still be considered by the Admissions Committee to determine whether they are eligible for early admission to the law school, and if so, whether they will receive merit scholarship funds.
 - A score of 155 or higher may be sufficient to increase undergraduate scholarship to a higher level as the student enters the School of Law, subject to the law school renewal policy.

If those prerequisites are met, and there are no character and fitness issues, the student would be admitted to the law school and guaranteed a scholarship in the amount awarded to them as undergraduates, subject to the law school renewal policy.

Year 4 (Law)

Students will be full-time law students upon entering the law school. Students will complete their undergraduate degree (BA or BS) by the end of the spring semester of their fourth year and will participate in the undergraduate Commencement ceremony in May. All courses in this option will be day courses.

Code	Title	Credits
Fall Courses		
LAWS 101	Civil Procedure I	2-3
LAWS 103	Contracts I	2-3
LAWS 107	Torts	4
LAWS 111	Legal Skills I	2
LAWS 113	Criminal Law	3
Spring Courses		
LAWS 102	Civil Procedure II	2-3
LAWS 104	Contracts II	3-4
LAWS 105	Property	4
LAWS 110	Constitutional Law	4
LAWS 112	Legal Skills II	2

Summer courses are not required.

Years 5 and 6

Students will complete the remaining JD program requirements, including optional clinics and externships, according to the Law Academic Catalog and with the guidance of a law faculty adviser.

Accelerated Dual-Degree Bachelor's/JD (3+3) Program of Study Option 2

The fall semester of the fourth year will be a "bridge" semester during which students can complete 6 credits of undergraduate work (for example, a senior "capstone" course) along with 10 credits in the School of Law. Up to 10 of those law course credits will count toward the 120-122 credits required for the undergraduate degree.

Years 1 through 3 (Undergraduate)

Students will focus efforts on working toward their undergraduate degree program requirements according to the university Catalog and guidance from their academic and pre-law adviser.

By the end of the third year, students must:

- Complete all major and University Curriculum requirements for a total of at least 90 credits (which can include any AP or advanced standing credits as determined when they enter as first-year students) with a minimum cumulative 3.4 GPA.
- Complete at least 60 undergraduate (non-law) credits at Quinnipiac immediately prior to matriculation at the School of Law.
- Take the Law School Admission Test (LSAT) no later than March of their third year and achieve an LSAT score equal to, or greater than, the law school's first year class median.
 - Students who do not meet the GPA and/or LSAT score requirements may still be considered by the Admissions Committee to determine whether they are eligible for early admission to the law school, and if so, whether they will receive merit scholarship funds.
 - A score of 155 or higher may be sufficient to increase undergraduate scholarship to a higher level as the student enters the School of Law, subject to the law school renewal policy.

If those prerequisites are met, and there are no character and fitness issues, the student would be admitted to the law school and guaranteed a scholarship in the amount awarded to them as undergraduates, subject to the law school renewal policy.

Year 4 (Law)

Students will complete their undergraduate degree (BA or BS) by the end of the fall semester of their fourth year and will participate in the undergraduate Commencement ceremony in May. The law school will be flexible in designing a schedule of first-year law courses to accommodate each student's needs for the completion of the undergraduate requirements.

Code	Title	Credits
Fall Courses		
Two undergraduate courses		6
LAWS 101	Civil Procedure I	2-3
LAWS 103	Contracts I	2-3
LAWS 107	Torts	4
LAWS 111	Legal Skills I	2
Spring Courses		
LAWS 102	Civil Procedure II	2-3
LAWS 104	Contracts II	3-4
LAWS 105	Property	4
LAWS 112	Legal Skills II	2
Elective		2

Summer courses:

- Courses vary depending on need. Generally students will complete 6 credits in the summer term.

Years 5 and 6

Students will complete the remaining JD program requirements, including optional clinics and externships, according to the law academic catalog and with the guidance of a law faculty adviser.

Dual-Degree JD/MBA

In today's changing and competitive marketplace, there is an increasing need for lawyers who are fully trained in all aspects of business, management and administration. Students who are seeking a comprehensive and sophisticated business education for their legal or business careers will find the Dual-Degree JD/MBA program extremely attractive.

Taken separately, the MBA normally requires 45 credits, and the JD normally requires 86 credits. However, the dual-degree program requires only 33 business credits and 77 law credits, a savings of 20 credits.

Students may apply for acceptance to both the Law School and the MBA program and, upon completion of both programs, receive a business and a law degree. A student in the dual-degree program may not obtain either degree until the requirements for both have been met.

To enroll in the dual-degree program, a student must apply to and be accepted by both of the schools. Students may begin at either school. Each school assists in adapting the program to the needs and interests of the enrolled student by approving schedules and joint credits for courses. Students may apply to both schools before they actually begin classes. Students must file separate applications and take the Law School Admission Test (LSAT). Students who begin a single degree program either in the School of Law or the School of Business may apply to the other school at a later time (prior to the completion of degree requirements) to be considered for the dual-degree program.

Upon admission to the dual-degree program, the enrolled student must meet with the director of the MBA program and the associate dean for academic affairs of the Law School for academic counseling. Students may attend either full-time or part-time.

View the MBA curriculum (p. 705).

View the JD curriculum (p. 583).

Dual-Degree JD/MELP

Quinnipiac School of Law has partnered with Vermont Law School to offer students the exciting opportunity to earn a Dual-Degree Juris Doctor/Master of Environmental Law and Policy (JD/MELP). Students in the program earn their JD from Quinnipiac and their MELP from Vermont Law. The program can be completed in three academic years, the same amount of time typically needed to earn the JD degree alone.

This flexible program allows students to pursue their MELP coursework online or on campus during the summer. Students also complete a required MELP externship during the summer, which can be scheduled anywhere in the United States or abroad. A number of Quinnipiac law courses have been approved to satisfy the requirements of both programs. In addition, students will be allowed to transfer 6 credits of their Vermont Law MELP coursework toward their Quinnipiac JD graduation requirements.

The joint degree requires a 30-credit program (including required courses), comprising: Vermont Law MELP courses (14 credits); Vermont Law MELP externship (7 credits); and Quinnipiac Law courses (from

approved course list) (up to 9 credits). Students will participate in the externship during the summer of their second year.

Dual-Degree JD/MERL

Quinnipiac School of Law has partnered with Vermont Law School to offer students the exciting opportunity to earn a Dual-Degree Juris Doctor/Master of Energy Regulation and Law (JD/MERL). Students in the program earn their JD from Quinnipiac and their MERL from Vermont Law. The program can be completed in three academic years, the same amount of time typically needed to earn the JD degree alone.

This flexible program allows students to pursue their MERL coursework online or on campus during the summer. A number of Quinnipiac law courses have been approved to satisfy the requirements of both programs. In addition, students will be allowed to transfer 6 credits of their Vermont Law MERL coursework toward their Quinnipiac JD graduation requirements.

The joint degree requires a 30-credit program (including required courses), comprising: Vermont Law MERL courses (12 credits); Vermont Law MERL Project/Writing Requirement courses; Energy Electives (6 credits) and Quinnipiac Law courses (from approved course list) (up to 9 credits).

Dual-Degree JD/MFALP

Quinnipiac School of Law has partnered with Vermont Law School to offer students the exciting opportunity to earn a Dual-Degree Juris Doctor/Master of Food and Agriculture Law and Policy (JD/MFALP). Students in the program earn their JD from Quinnipiac and their MFALP from Vermont Law. The program can be completed in three academic years, the same amount of time typically needed to earn the JD degree alone.

This flexible program allows students to pursue their MFALP coursework online or on campus during the summer. A number of Quinnipiac law courses have been approved to satisfy the requirements of both programs. In addition, students will be allowed to transfer 6 credits of their Vermont Law MFALP coursework toward their Quinnipiac JD graduation requirements.

The joint degree requires a 30-credit program (including required courses), comprising: Vermont Law MFALP courses (9 credits); Vermont Law MFALP Food and Agriculture elective courses (9 credits); general elective courses (3 credits); project/writing requirement courses (2 credit minimum); and Quinnipiac law courses (from approved course list) (up to 9 credits).

Dual-Degree JD/MSW

Program Contact: Carol R. Awasu (carol.awasu@qu.edu) 203-582-6433; Carolyn Kaas (carolyn.kaas@qu.edu) 203-582-3234

Students interested in earning both a JD degree and a Master of Social Work degree may earn both degrees on an accelerated basis by enrolling in the Dual-Degree JD/MSW program.

The two degree programs, if completed separately, require 146 credits – 86 for the JD and 60 for the MSW. Students in the dual-degree program are required to complete only 131 total credits. Dual-degree students earn 1) their JD with 77 law credits and 9 social work credits (from courses approved in advance by the law school associate dean for academic affairs); and 2) their MSW with 54 social work credits and 6 law

credits (from courses approved by the MSW program director). The two programs, which require five years of study if taken separately, can be completed in 4½ years in the ordinary course, or in 4 calendar years if 11 law credits are earned during summer semesters.

Students must apply and be accepted separately to each program. Ideally, students would apply to both programs before starting either but a student enrolled in either program could, during the first year (and possibly later), apply for and be accepted to the other program. Upon admission to the dual-degree program, the enrolled student must meet with the MSW program director and the law school associate dean for academic affairs.

Students may begin their study in either program but must complete the first year in each program before any advanced courses can be taken in that program. To obtain either degree, students must complete all graduation requirements for both degrees, including the core upper-level law courses, legal writing requirements, lawyer professional responsibility course, experiential law credits and the social work field work requirements.

For more information on this program, see the Social Work page. (p. 807)

Civil Advocacy and Dispute Resolution

Students who earn the certificate for this concentration develop an understanding of a variety of advocacy methods, dispute resolution tools, and remedies, in an array of civil law contexts. Skill development focuses on litigation, negotiation, mediation and arbitration.

The civil advocacy and dispute resolution concentration lets you explore all the varied ways that lawyers help clients solve problems and resolve conflicts. You will hone your skills as a creative negotiator, as a wise adviser and as an effective courtroom litigator. You'll learn the theory and the practice of the different alternative methods to resolve disputes, make deals and reach settlements outside of court, such as mediation and arbitration. Most important, you can help us achieve our vision: to reimagine the law as a healing profession.

Our dispute resolution program was ranked 14th in the nation by U.S. News & World Report. Our Center on Dispute Resolution – with its Quinnipiac/Yale Workshop Speaker Series, training sessions and student-run Society for Dispute Resolution – are all valuable resources that are at your disposal. The center's programs offer you the opportunity to learn and train with practicing professionals in the field. The highly decorated student competition teams provide you the stage to hone your advocacy skills through regional and national mock trial, moot court, negotiation, mediation and client counseling competitions.

After two semesters, you'll have the opportunity to practice what you are learning in the classroom in one of our legal clinics and in our diverse externship program. As a certified legal intern, you can counsel actual clients, negotiate, mediate cases and argue in courts.

Civil Advocacy and Dispute Resolution Concentration

Prerequisites

To be eligible for the Civil Advocacy and Dispute Resolution concentration, you must take LAWS 311 as one of your core electives. Credits for this course do not count toward the 21-credit concentration requirement, but the grade in this prerequisite does count toward the concentration GPA requirement.

Requirements

1. Coursework

To receive the certificate for this concentration, you must earn 21 civil advocacy and dispute resolution specialty credits, divided as follows (not all courses are offered every year):

Required Coursework

In addition to LAWS 311 (credits for which do not count toward the 21-credit requirement), you must take the following courses. Credits for these courses will count toward your 21-credit concentration requirement.

Code	Title	Credits
LAWS 315	Trial Practice Exp	2-3
LAWS 428	Negotiation	2-3
LAWS 515	Alternative Dispute Resolution Exp.	2-3

¹ In lieu of ADR, students may substitute LAWS 374 Introduction to Mediation and either LAWS 356 Arbitration or LAWS 683 Advocacy in Arbitration.

Remaining Credits

The balance of the credits are to be earned from the following advocacy and dispute resolution-related courses. Courses marked with an asterisk (*) are particularly recommended for this concentration. (Not all of these courses are offered every year.)

Code	Title	Credits
LAWS 114	Administrative Law (*)	3
LAWS 316	Advanced Trial Practice (*)	2
LAWS 338	Visual Persuasion in the Law Exp (*)	3
LAWS 347	Remedies (*)	3-4
LAWS 356	Arbitration (*)	3
LAWS 357	Federal Courts (*)	3
LAWS 372	Representation in Mediation Exp (*)	2
LAWS 374	Introduction to Mediation (*)	2
LAWS 438	Advanced Family Law II (*)	2-3
LAWS 539	Intro. to Dispute Res. in Healthcare (*)	2-3
LAWS 574	Pretrial Litigation in State Courts (*)	2-3
LAWS 599	Intro to Representing Clients (*)	2
LAWS 683	Advocacy in Arbitration Exp (*)	2-3
LAWS 686	Negotiation in Criminal Practice (*)	2

Other related courses:

LAWS 305	Federal Income Tax	4
LAWS 327	Labor Law	3
LAWS 370	Family Law	2-3
LAWS 371	Divorce and the Divorcing Family	2
LAWS 373	Products Liability	3
LAWS 384	Juvenile Law	3
LAWS 393	Business Planning	4
LAWS 431	Criminal Procedure - Adj.	3
LAWS 434	Employment Law	3
LAWS 435	Advanced Family Law I - S	2
LAWS 525	Moot Court I	1
LAWS 526	Moot Court II	1-2
LAWS 528	Moot Court III	1
LAWS 564	Poverty Law	2
LAWS 604	Medical Malpractice	2

Substantial-paper courses or independent study where the paper is devoted to an advocacy and/or dispute resolution topic approved by the concentration director.

Additional clinic or externship courses in addition to those required above, as approved by the concentration director.

Other courses or journal work as approved by the concentration director in consultation with the course instructor.

Competitions: The concentration director may deem participation in a noncredit competition in mock trial, negotiation or representing clients in mediation to satisfy the requirement of 1 or 2 credits of coursework in this category.

2. Clinical Requirement

At least 3 credits must be earned in a clinic and/or externship placement approved by the concentration director in consultation with the director of the relevant clinic or externship. Credits for IRC (LAWS 599) do not count toward this clinical requirement.

3. Writing Requirement

A substantial paper or a series of shorter writings that together comprise a substantial amount of written work on a topic or topics related to advocacy and/or dispute resolution. (If you write a substantial paper, you may use that paper to satisfy the law school advanced writing requirement, provided that you meet the guidelines for the advanced writing requirement as set forth in the Academic Regulations (p. 617), section I.E.) The concentration director must approve the topic or topics for the written work used to satisfy this requirement. A paper written for a journal may qualify, if the concentration director approves the topic.

4. Honors

Students who achieve a GPA of 3.2 or better in the coursework used for the concentration will receive the certificate for the concentration with honors. A student may designate the grade in any course or paper as not counting toward the concentration GPA, so long as the course is not required for the concentration and the student meets the concentration requirements with another course or paper.

5. Waivers

Students who are interested in this concentration but fall short of specific credits or coursework may apply for a waiver of requirements, to be granted at the discretion of the concentration director and the associate dean of academic affairs.

Criminal Law and Advocacy

Students who earn the certificate for this concentration encounter a variety of experiences to help develop an understanding of criminal law and procedure in both a theoretical and practical context. They explore both the substantive criminal law as well as the constitutional overlay of criminal procedure. In addition, they experience aspects of criminal trial and motion work. Development focuses on advocacy skills: litigation, negotiation and other alternate dispute resolution methods that apply in a criminal context.

You'll develop cutting-edge trial skills, such as the innovative use of visual persuasion techniques in the courtroom, and you'll examine ethical issues unique to criminal practice settings. You'll experience the criminal justice system in action in our clinics and externships, which will refine your ability to engage in both prosecution and defense work. You can advocate for real clients at the trial or appellate levels, represent the government, or help judges in criminal cases. You also can work on national criminal justice reform projects, such as advocating for more humane treatment of children charged with crimes, or challenging the death penalty.

Your negotiation and litigation skills will be honed through participation in mock trials and courtroom simulations, and every year we host the Northeast Regional Criminal Justice Trial Advocacy Competition. Our active Criminal Law Society sponsors several networking events and activities focused on helping you connect with legal professionals.

Criminal Law and Advocacy Concentration Prerequisite

To be eligible for the Criminal Law and Advocacy Concentration, you must take Evidence (LAWS 311) as one of your core electives. Credits for this course do not count toward the 21-credit concentration requirement, but the grade in this prerequisite does count toward the concentration GPA requirement in determining whether or not the certificate is awarded with honors. All students must also successfully complete the required course of Criminal Law (LAWS 113).

Requirements**1. Coursework**

To receive the certificate for this concentration, you must earn 21 Criminal Law and Advocacy specialty credits, divided as follows (not all courses are offered every year):

Clinical Requirement:

You must earn at least 3 credits through participation in the following programs. No more than 6 clinical credits count toward the 21-credit requirement for the concentration, except with the permission of the concentration director. The credit allotted to coursework in conjunction with a clinic counts as a course credit, not as a clinic credit.

Code	Title	Credits
	Defense Appellate Clinic (LAWS 299 & LAWS 300)	6
	Prosecution Appellate Clinic (LAWS 301, LAWS 302, & LAWS 303)	6
	An externship placement at a site dedicated to criminal defense or prosecution	3-6
	A judicial externship placement in a court at which the director can certify has a significant criminal docket	3-6

Required Coursework:

In addition to LAWS 311 (credits for which do not count toward the 21-credit requirement), you must take the following courses. Credits for these courses will count toward your 21-credit concentration requirement.

Code	Title	Credits
LAWS 315	Trial Practice Exp	2-3
LAWS 431	Criminal Procedure - Adj.	3
LAWS 432	Criminal Procedure Inv.	3
	Select one of the following courses:	2-3
LAWS 428	Negotiation	
LAWS 515	Alternative Dispute Resolution Exp.	

The remaining credits needed to satisfy the requirements for this concentration should come from the following designated courses:

Code	Title	Credits
LAWS 292	Independent Research Project W	2
LAWS 293	Independent Research Project W	3
LAWS 315	Trial Practice Exp	2-3
LAWS 316	Advanced Trial Practice	2
LAWS 318	Mock Trial ²	1-2
LAWS 338	Visual Persuasion in the Law Exp	3
LAWS 360	International Criminal Law	3
LAWS 367	Counterterrorism Law	2
LAWS 384	Juvenile Law	3
LAWS 386	Domestic Violence: Law, Practice and Pol	2
LAWS 387	Advanced Juvenile Law: Delinquency Proceedings	2
LAWS 410	Theories of Punishment S,W	2
LAWS 412	Habeas Corpus	2
LAWS 423	State Constitutional Law	2-3
LAWS 429	International Human Rights	2
LAWS 515	Alternative Dispute Resolution Exp. ¹	2-3
LAWS 525	Moot Court I ³	1
LAWS 551	Federal Criminal Law	2
LAWS 599	Intro to Representing Clients	2

LAWS 602	Law and Forensic Science	2
LAWS 615	Conn. Adjudicative Criminal Procedure	2
LAWS 636	Sentencing, Prisons, and Reentry	2

- ¹ Alternate Dispute Resolution interscholastic competitions (but not intramural) may count if the concentration director finds there is a substantial criminal law and/or criminal procedure component. The participation must be connected to the legal questions in roles such as advocate, problem drafter, etc. The efforts of organizers, coaches, schedulers, while extremely important, are not eligible for credit. (1, 2, or 3 credits)
- ² Mock trial interscholastic competitions (but not intramural) may count if the concentration director finds there is a substantial criminal law and/or criminal procedure component. The participation must be connected to the legal questions in roles such as litigator, problem drafter, etc. The efforts of organizers, coaches, and schedulers, while extremely important, are not eligible for credit. Participation in the legal aspects – i.e., litigator, problem drafter – of the Quinnipiac University School of Law Criminal Trial Advocacy Competition will count. (1, 2, or 3 credits)
- ³ Moot Court interscholastic competitions (but not intramural) may count if the concentration director finds there is a substantial criminal law and/or criminal procedure component. The participation must be connected to the legal questions in roles such as litigator, problem drafter, etc. The efforts of organizers, coaches, schedulers, while extremely important, are not eligible for credit. (1, 2, or 3 credits)

2. Writing Requirement

You must write a substantial paper (or a series of shorter writings that, taken together, comprise a substantial amount of written work) on a topic or topics related to Criminal Law or Procedure. (If you write a substantial paper, you may use that paper to satisfy the law school's Advanced Writing Requirement, as set forth in the Academic Regulations (p. 617), section I.E., as well as the Criminal Law and Advocacy certification program.) A paper written for a journal may qualify if the concentration director approves the topic. A brief written for a moot court competition or within an externship position may qualify if the student can attest that the work was his or her own. The concentration director must approve the topic and the format for the written work used to satisfy this requirement. Note: It is possible for completed work to count for more than one concentration if there is sufficient coverage of both subject matters.

3. Honors

Students who achieve a GPA of 3.2 or better in the coursework used for the concentration will receive certificate for the concentration with honors.

4. Options

If you have excess credits, you may designate any course or paper as not counting toward the concentration, so long as it is not required for the concentration, and you meet the concentration requirements with another course. If you have more than 21 credits, the concentration director will count the courses with the highest grades in determining whether or not to bestow the honors designation. Note that the GPA calculation includes all courses required for the concentration, including LAWS 311 – Evidence.

5. Waiver

The concentration director and the associate dean for academic affairs may waive any requirement for the concentration (other than the GPA

requirement), if both agree to do so. Any waiver requests must be submitted in writing with the application for the concentration.

Family Law

The Family Law concentration uses an innovative, interprofessional approach that gives you an opportunity to collaborate with other professionals – such as social workers – to develop creative solutions to potentially volatile cases. Because litigation is rarely the most appropriate course of action for families, you'll learn alternative methods of dispute resolution, including mediation and other negotiation and collaborative approaches that promote the abilities of families to thrive and communicate peacefully, well after the legal case has ended.

Quinnipiac's extensive clinic and externship courses let you go out in the field and serve family law clients while honing your skills. Our Family and Juvenile Law Society is a valuable resource for career development events and networking opportunities with lawyers in the field. And our nationally recognized Center on Dispute Resolution hosts a variety of symposia, professional workshops and special training sessions aimed at building sophisticated problem-solving skills that are particularly key in the practice of family law.

For specific information on the program offerings, please contact:

Family Law Concentration

Prerequisites

To be eligible for the Family Law concentration, a student must take both LAWS 311 and LAWS 305 as two of the core electives. Credits for these courses do not count toward the 18-credit concentration requirement, but grades in these prerequisites do count toward the concentration GPA requirement.

Requirements

To receive the certificate for this concentration, a student must earn 18 family law credits, divided as follows (not all courses are offered every year):

1. Coursework

Required Coursework

In addition to LAWS 311 and LAWS 305 (credits for which do not count toward the 18-credit concentration requirement) a student must take the following courses. Credits for these courses will count toward the 18-credit concentration requirement:

Code	Title	Credits
LAWS 370	Family Law	2-3
LAWS 435	Advanced Family Law I - S	2-3
LAWS 438	Advanced Family Law II	2-3
LAWS 371	Divorce and the Divorcing Family	1-3
Select one of the following courses:		2-3
LAWS 372	Representation in Mediation Exp	

LAWS 374	Introduction to Mediation
LAWS 428	Negotiation
LAWS 515	Alternative Dispute Resolution Exp.

Recommended Core Courses

(Not all of these are offered every year.)

Code	Title	Credits
LAWS 307	Trusts and Estates	3
LAWS 384	Juvenile Law	3
LAWS 385	Advanced Juvenile Law - Child Protection Practices	2
LAWS 386	Domestic Violence: Law, Practice and Pol	2
LAWS 387	Advanced Juvenile Law: Delinquency Proceedings	2
LAWS 388	Elder Law	2-3
LAWS 600	Law and Gender	2
LAWS 644	Elder Law Lab Exp	1-2
LAWS 646	Children, Social Science, and the Law	3
LAWS 684	Race, Child Welfare, and Juven	3

Other courses as approved by the concentration director in consultation with the course instructor.

Remaining Credits

The balance of the credits, if any, are to be earned from the following family law–related courses, or from other core courses listed above. (Not all of these are offered every year.)

Code	Title	Credits
LAWS 114	Administrative Law	3
LAWS 205	Business Organizations	4
LAWS 292	Independent Research Project W	2
LAWS 293	Independent Research Project W	3
LAWS 313	Advanced Individual Income Tax	3
LAWS 314	Employee Benefits	2
LAWS 315	Trial Practice Exp	2-3
LAWS 369	Real Estate Transactions	3
LAWS 396	Bankruptcy and Creditors' Rights	3
LAWS 471	Education Law	2
LAWS 549	Bioethics	3
LAWS 564	Poverty Law	2
LAWS 572	Immigrat'n & Natural'n Law	3
LAWS 599	Intro to Representing Clients	2

Substantial paper courses where the paper is devoted to a family or juvenile law topic approved by the concentration director.

LAWS 525	Moot Court I ¹	1
LAWS 526	Moot Court II ¹	1-2
LAWS 528	Moot Court III ¹	1

Other courses or journal work as approved by the concentration director in consultation with the course instructor.

¹ Moot Court credits, if the student participates in the Family Law Moot Court Competition (1, 2, or 3)

2. Clinical Requirement

At least 3, but no more than 3, of the 18 family law credits must be earned in the Civil Justice Clinic and/or in a family and/or juvenile law–related externship placement. Credits for IRC (LAWS 599) do not count toward the clinical requirement. (A student may exceed 3 credits for the clinical course but may only count 3 credits toward the clinical requirement of this concentration.)

- The concentration director will determine the family-law status of any given clinic or externship.
- The clinical requirement may be waived if the student has substantial family or juvenile law work experience. The concentration director will make this determination.
- If the clinical requirement is waived, the student must still earn 18 credits elsewhere within the concentration to receive the concentration.

3. Writing Requirement

A student must write a substantial paper – or a series of shorter writings that together comprise a substantial amount of written work – on a topic or topics related to family or juvenile law. (If a student writes a substantial paper, it may be used to satisfy the Advanced Writing Requirement, provided that the guidelines are met as set forth in the Academic Regulations (p. 617), section I.E.) The concentration director must approve the topic or topics for the written work used to satisfy this requirement. A paper written for a journal may qualify, if the concentration director approves the topic.

4. Honors

Students who achieve a GPA of 3.2 or better in the coursework used for the concentration will receive the certificate for the concentration with honors.

5. Options

A student may designate any course or paper as not counting toward the concentration, so long as it is not required for the concentration and the student meets the concentration requirements with another course or paper.

6. Waiver

The concentration director and the associate dean for academic affairs may waive any requirements for the concentration (other than the GPA requirement), if they both agree to do so.

Health Law

This concentration offers a comprehensive foundation in the areas in which health law intersects with business, public policy and a variety of federal regulations concerning the pharmaceutical and biomedical industries.

You'll examine key topics such as bioethics, public health law, health care fraud and disability law, and you'll explore methods of dispute resolution used specifically in health care. We also give you the flexibility to chart your own path through the program and select courses that most interest you and that provide the skills to assist the type of clientele you plan to represent.

Because the School of Law shares a campus with our medical, nursing and health sciences schools, you'll also have opportunities for interprofessional collaboration and access to a wide range of research materials related to the health care industry. Starting in your second year, you can participate in our diverse clinic and externship courses, and be part of our medical-legal partnership, or our Health Law Externship, where you may be placed with the Department of Public Health, a hospital or pharmaceutical legal department, or a law firm practicing health law. And you may apply to write for Quinnipiac's Health Law Journal, join the Health Law Society and attend our speaker series that invites prominent figures from the health law field to campus.

For specific information on the concentration offerings, please contact:

Professor Leonard Dwarica
 Quinnipiac University School of Law
 275 Mount Carmel Avenue
 Hamden, CT 06518
 Telephone: 203-582-3879
 Fax: 203-582-3244
 Email: leonard.dwarica@qu.edu (leonard.dwarica@quinnipiac.edu)

Health Law Concentration Requirements

(effective for students entering their second year in Fall 2018 or later):

To be eligible for the Health Law Concentration Certificate, a student must complete 21 credits as described below.

- Students must take Administrative Law (LAWS 114) (3 credits) and either Business Planning (LAWS 393) (4 credits) or Business Organizations (LAWS 205) (4 credits). Credits for these courses will not count toward the 21-credit concentration requirement, but grades will count toward the GPA honors requirement. If a student elects to take both Business Organizations and Business Planning, the higher grade will count towards the GPA honors requirement, but the credits will not.
- In addition, students must take Health Law LAWS 345) (3 credits). Credits for Health Law will count toward the 21-credit concentration requirement and grades will count toward the GPA honors requirement.
- These three courses do not have to be taken prior to taking other courses in the concentration, but it is strongly recommended that Administrative Law and Health Law be taken in a full-time student's second year, if possible. Part-time students should try to take them in the second semester of their second year or the first semester of their third year.

1. Coursework

In addition to the above requirements, in order to receive the Certificate for this Concentration, a student must earn an additional eighteen (18) health law specialty credits, divided as follows:

Core Health Law Courses:

At least 12 credits must be earned from the Core Health Law courses. (Not all of these courses are offered every year.)

Code	Title	Credits
LAWS 320	Public Health Law	3
LAWS 350	Health Care Antitrust	3-4
LAWS 352	Health Care Business Transactions	3
LAWS 409	Drug and Device Law	2-3

LAWS 539	Intro. to Dispute Res. in Healthcare	2-3
LAWS 545	Healthcare and Hospital Administration	2
LAWS 549	Bioethics	3
LAWS 601	Managed Health Care	2
LAWS 625	Health Information Privacy and Security	2-3
LAWS 633	Intellectual Property in Health Care	2
LAWS 685	Health Policy	3

Non-Core Health Law Courses:

The balance of the credits (to 18), if any, may be earned from the Core Health Law courses above or from the following Non-Core Health Law courses. (Not all of these courses are offered every year.)

Code	Title	Credits
LAWS 292	Independent Research Project W	2
LAWS 293	Independent Research Project W	3
LAWS 340	Corporate Compliance in Health Care Industry ¹	3
LAWS 344	Law, Science and Technology	3
LAWS 349	Antitrust	3
LAWS 370	Family Law	3
LAWS 373	Products Liability	3
LAWS 379	Environmental Law	3
LAWS 384	Juvenile Law	3
LAWS 388	Elder Law	2-3
LAWS 414	Food Law	2-3
LAWS 450	Nonprofit Organizations	2
LAWS 457	Health Care Compliance Law ¹	3
LAWS 587	Disability Law	2
LAWS 588	Health Law Journal I	3
& LAWS 589	and Health Law Journal II	
LAWS 564	Poverty Law	2
LAWS 604	Medical Malpractice	2
LAWS 676	Anatomy for Lawyers	2

¹ Online course.

2. Recommended Client-Based Courses

Students should consider what group(s) of clients they plan to represent in their practice of health law. The following recommendations are intended to assist the students in determining which courses are best suited toward different types of clients. These are only recommendations. Students are free to choose any courses they wish, as long as they take the required concentration courses and achieve the required 21 credits, as described above.

Code	Title	Credits
Providers (e.g., hospitals, physician groups, nursing homes)		
LAWS 549	Bioethics	3
LAWS 350	Health Care Antitrust	3-4
LAWS 625	Health Information Privacy and Security	2-3
LAWS 539	Intro. to Dispute Res. in Healthcare	2-3

LAWS 320	Public Health Law	3
LAWS 545	Healthcare and Hospital Administration	2
LAWS 676	Anatomy for Lawyers	2
LAWS 604	Medical Malpractice	2
LAWS 601	Managed Health Care	2
LAWS 352	Health Care Business Transactions	3
LAWS 450	Nonprofit Organizations	2
LAWS 457	Health Care Compliance Law	3
LAWS 340	Corporate Compliance in Health Care Industry	3

Code Title Credits

Business & Governmental Entities (e.g., insurance carriers, pharmaceutical and device manufacturers, biotechnology research/manufacturing entities, regulatory agencies)

LAWS 340	Corporate Compliance in Health Care Industry	3
LAWS 344	Law, Science and Technology	3
LAWS 350	Health Care Antitrust	3-4
LAWS 352	Health Care Business Transactions	3
LAWS 373	Products Liability	3
LAWS 409	Drug and Device Law	2-3
LAWS 414	Food Law	2-3
LAWS 457	Health Care Compliance Law	3
LAWS 539	Intro. to Dispute Res. in Healthcare	2-3
LAWS 601	Managed Health Care	2
LAWS 625	Health Information Privacy and Security	2-3
LAWS 633	Intellectual Property in Health Care	2

Code Title Credits

Private Parties (e.g., patients, LLCs, individual practitioners)

LAWS 350	Health Care Antitrust	3-4
LAWS 370	Family Law	3
LAWS 373	Products Liability	3
LAWS 384	Juvenile Law	3
LAWS 388	Elder Law	2-3
LAWS 549	Bioethics	3
LAWS 587	Disability Law	2
LAWS 604	Medical Malpractice	2
LAWS 676	Anatomy for Lawyers	2

3. Clinical Requirement

Students must earn at least 3 credits (not including IRC) in a Clinic (i.e., Civil Justice Clinic, Tax Clinic, Prosecution Appellate Clinic, Defense Appellate Clinic) and/or in a health law externship. These credits are in addition to the basic 21-credit concentration requirement.

- Determination of the "health law" status of any given externship will be made by the concentration director and the director of field placement programs.
- The clinic/externship requirement will be waived only in rare circumstances, and only if the student has substantial health law-

related work experience or substantial experience in the health care field. This determination will be made by the concentration director. *A full-time student seeking a waiver from the clinic/externship requirement must apply for the waiver no later than the beginning of the first semester of their third year.*

c. If the clinical requirement is waived, the student must earn the 3 credits by taking an additional course(s) in the concentration.

4. Writing Requirement

The substantial paper written to fulfill the Advanced Writing Requirement (p. 617) must be on an approved health law topic. The topic must be approved, in advance, by the concentration director unless the paper is written in connection with one of the listed “core” courses or for the Quinnipiac Health Law Journal. A paper written for another journal may qualify, if the topic is approved, in advance, by the concentration director.

5. Honors

Students who achieve a GPA of 3.2 or better in the coursework used for the concentration will receive the certificate for the concentration with honors.

6. Waiver of Requirements

The concentration director and the associate dean for academic affairs may waive any requirements for the concentration (other than the GPA requirement), if they both agree to do so.

Intellectual Property

Students in our intellectual property concentration investigate key issues related to patents, trademarks, copyrighting and trade secrets.

These students develop a firm grounding in a variety of fields that intellectual property law affects by exploring topics such as computer and internet law, patent litigation, sports law and cybersecurity law. They also can participate in an externship within a law firm or corporate legal department to gain practical experience regarding the types of intellectual property work that lawyers do, and to gain insight in regard to protecting the creativity of artists, musicians and inventors.

Students in the IP concentration also can utilize externships to gain exposure to Connecticut’s extensive base of biomedical, aerospace and entertainment industries, which are fertile sectors for lawyers who specialize in IP law. Through such an externship opportunity, the student can learn IP law in a hands-on manner, while contributing to social needs at the intersection of law, the arts and technology.

For specific information on the program offerings, please contact:

Professor Dale Carlson
Director, Intellectual Property Concentration
Quinnipiac University School of Law
275 Mount Carmel Avenue
Hamden, CT 06518

Intellectual Property Concentration

Prerequisite

To be eligible for the intellectual property concentration, a student must take Administrative Law (LAWS 114) as one of the core electives.

Credit for that course does not count toward the 18-credit concentration requirement.

Requirements:

1. Coursework

To receive the certificate for this concentration, a student must earn 18 intellectual property specialty credits, divided as follows (not all courses are offered every year):

Required Coursework

At least 15 of the 18 credits must be earned from the following list of basic intellectual property courses:

Code	Title	Credits
Required Course		
LAWS 331	Intellectual Property	3-4
Choose from the following basic intellectual property courses:		
LAWS 116	Unfair and Deceptive Trade Practices	3
LAWS 117	Trademarks and Copyright in the Digital Age	2
LAWS 292	Independent Research Project W	2
LAWS 293	Independent Research Project W	3
LAWS 329	Communications Laws	3
LAWS 332	Patent Law	2
LAWS 333	Advanced Patents	2-3
LAWS 335	Patent Litigation	2
LAWS 417	Intellectual Property Externship ¹	2-5
LAWS 437	Computer and Internet Law	2
LAWS 506	Entertainment Law	2
LAWS 509	Sports Law	2
LAWS 596	Franchise Law	3

¹ Externship with intellectual property emphasis – up to 6 credits with written approval by the concentration director. Independent research credit with an intellectual property emphasis is also available with written approval by the concentration director and the supervising professor.

Remaining Credits

Code	Title	Credits
Choose from the following courses related to intellectual property:		
LAWS 344	Law, Science and Technology	3
LAWS 349	Antitrust	3
LAWS 350	Health Care Antitrust	3-4
LAWS 409	Drug and Device Law	2-3
LAWS 430	International Trade	3
LAWS 516	International Business Trans.	3
LAWS 633	Intellectual Property in Health Care	2
LAWS 650	Information Privacy Law	2-3

Other coursework or journal work as approved by the concentration director

IP-related courses taken at other law schools or in summer programs (with approval of the concentration director) up to 5

2. Writing Requirement

Students must write a substantial paper—or a series of shorter writings that together comprise the equivalent of a substantial paper—on a topic or topics related to intellectual property. (If a student writes a substantial paper, a student may use that paper to satisfy the Advanced Writing Requirement, provided that the paper meets the guidelines set forth in the Academic Regulations (p. 617), section I.E.) The concentration director must approve the topic or topics for the written work used to satisfy this requirement. A paper written for a journal may qualify if the concentration director approves the topic and the paper as written.

3. Honors

Students who achieve a GPA of 3.2 or better in the coursework used for the concentration will receive the certificate for the concentration with honors.

4. Opt-Out Option

A student may designate any course or paper as not counting toward the concentration, so long as it is not required for the concentration and the student meets the concentration requirements with another course or paper.

5. Waiver

The concentration director and the associate dean for academic affairs may waive any requirements for the concentration (other than the GPA requirement for honors), if they both agree to do so.

International Law and Policy

Students who earn the certificate for this concentration not only develop an understanding of one or more of the major areas of International Law and Policy, such as International Human Rights, Dispute Resolution, Environmental, Health, Tax and Criminal Law, but also get the opportunity to develop a literacy in the language of international relations, which can prepare them to advocate, negotiate, mediate and litigate globally as well as locally. Skill development focuses on cross-cultural understanding, negotiation and a general proficiency in law on an international stage. As outlined below, the requisites for the International Law and Policy concentration include coursework, an international experience and a writing component.

(charles.pillsbury@quinnipiac.edu)

International Law and Policy Concentration

Requirements

1. Coursework

Certificate recipients must earn 18 international law credits from the following categories of courses (not all courses are offered every year), including at least 11 credits from the following required and core courses.

Code	Title	Credits
Required courses		
LAWS 361	International Law	3
LAWS 516	International Business Trans.	3
Core courses		
LAWS 360	International Criminal Law	3
LAWS 363	International Comparative Health Law	2
LAWS 429	International Human Rights	2
LAWS 430	International Trade	3
LAWS 477	International Tax	2
LAWS 517	Int'l Humanitarian Law of Armed Conflict	2
LAWS 634	Int'l Human Rights Law & Trans. Justice	1-2
Elective courses		
Certificate recipients must earn the balance of their 18 credits from the following courses (not all of these courses are offered every year). In addition, a concentration co-director may approve, on an ad hoc basis, courses that, in a particular semester, have a significant international content.		
LAWS 362	National Security Law	2-3
LAWS 367	Counterterrorism Law	2
LAWS 374	Introduction to Mediation	2
LAWS 379	Environmental Law	3
LAWS 428	Negotiation	2-3
LAWS 437	Computer and Internet Law	2
LAWS 515	Alternative Dispute Resolution Exp.	2-3
LAWS 572	Immigrat'n & Natural'n Law	3
Other university courses		
You may apply toward the 18 credits you need to earn for the International Law and Policy concentration up to 6 credits earned in other Quinnipiac University departments. You must obtain the permission of the professor teaching the course, a concentration co-director, and the law school's associate dean for academic affairs before enrolling in these courses.		
EC 350	International Economics	3
IB 201	Globalization and International Business	3
IB 311	International Marketing	3
IB 324	Negotiating Internationally	3
PL 337	Human Rights: Theory and Practice (PO 337)	3

PO 211	Introduction to International Relations	3
PO 311	Topics in International Relations	3
PO 331	Topics in Comparative Government	3
PO 321	Comparative Government	3

Modern Languages

You may apply up to 6 credits of modern language study toward your concentration requirements.

2. International Experience Requirement

Concentration earners must also complete one of these international experiences:

- Participation in the World Summit of Nobel Peace Laureates, in conjunction with the International Human Rights Law and Transitional Justice course
- Participation in the Law School's delegation to the Oxford University Human Rights and Humanitarian Action Seminar
- Participation in the Law School's delegation to the annual Human Rights and Humanitarian Action Seminar at Yale, Quinnipiac, and the United Nations
- Participation in the Law School/International Human Rights Law Society Nicaragua experience
- Participation in the Law School's summer program at Trinity College in Dublin, Ireland (the 6 credits from this program apply toward the concentration requirements)
- Domestic or international externship or other experiences approved by both a concentration co-director and the associate dean for academic affairs; if an externship, the placement must also be approved by the externship professor

3. Writing Requirement

Students must complete a paper of a quality that would satisfy the Advanced Writing Requirement (p. 617) and that addresses an international law topic approved by a concentration co-director. A concentration co-director must approve the topic in advance, unless the paper is written in connection with one of the listed required or core courses. A paper written for a journal may qualify if a concentration co-director approves the topic in advance.

4. Honors

Students who achieve a GPA of 3.2 or better in the coursework used for the concentration will receive the certificate for the concentration with honors.

5. Options

A student may designate any course or paper as not counting toward the concentration, so long as it is not required for the concentration and the student meets the concentration requirements with another course or paper.

6. Waiver

A concentration co-director and the associate dean for academic affairs may waive any requirements for the concentration (other than the GPA requirement), if they both agree to do so.

Tax Law

Tax attorneys work to ensure that clients understand the tax implications of business and personal transactions, maximizing tax savings in a manner that is ethical and complies with the tax laws. The knowledge you'll gain and skill sets you'll develop in our program will make you an

invaluable resource, not only to law firms but to government agencies, accounting firms and businesses of all types. You'll study the structure of the current income tax system and become familiar with statutes, regulations, case law and legislative history, and apply them to tax planning and tax controversies. You'll also consider the importance of tax policy and ethics.

While studying the nuances of tax law, you can put your skills into practice in our Tax Clinic – the oldest continuously operating clinic of its kind in the country – or through an externship with a judge, tax attorney or the Internal Revenue Service, or by assisting community residents with income tax preparation through our Tax Law Society's Volunteer Income Tax Assistance program.

For specific information on the program offerings, please contact:

Professor Jeffrey A. Cooper
Associate Dean for Faculty Research and Development
Director, Tax Concentration
Quinnipiac University School of Law
275 Mount Carmel Avenue, Hamden, CT 06518

Fax: 203-582-3244
Email: jeffrey.cooper@qu.edu

Tax Law Concentration

(Updated effective September 1, 2020)

Requirements

To receive the certificate for this concentration, you must earn 20 tax credits (consisting of 17 credits in tax and related coursework and 3 credits of clinical/externship work) and meet all of the other concentration requirements. In addition, you must take Federal Income Tax (LAWS 305) as one of your core electives. Credits for LAWS 305 do not count toward the 20-credit concentration requirement, but the grade in this prerequisite does count toward the GPA requirement for honors.

1. Required Coursework

In addition to Federal Income Tax (LAWS 305) (credits for which do not count toward the 20-credit requirement), you must take at least 17 credits from the following lists of courses, all of which count toward the 20-credit requirement for the concentration.

Tax Courses

At least 11 of the credits used for the concentration must come from the following list of tax courses. (Note: Not all of these courses are offered every year.)

Code	Title	Credits
LAWS 292	Independent Research Project W ¹	2
LAWS 293	Independent Research Project W ¹	3
LAWS 309	Estate and Gift Taxation	2
LAWS 312	Partnership Tax	2-3
LAWS 313	Advanced Individual Income Tax	3
LAWS 314	Employee Benefits	2
LAWS 393	Business Planning	4
LAWS 395	Corporate Tax	2
LAWS 450	Nonprofit Organizations	2
LAWS 454	Advanced Corp. Tax	2
LAWS 475	Tax Procedure - Civil	2

LAWS 477	International Tax	2
LAWS 504	Tax Policy- S, W	2
LAWS 519	State & Local Tax	2
LAWS 580	Taxation of Bus. Enterprises	4
LAWS 581	Tax Research - S,W ¹	2
LAWS 631	Financial Planning: Principles and Taxat	2-3
LAWS 670	Tax Deals Workshop	2

¹ Independent research with tax emphasis (with written approval of concentration director and supervising professor).

Related Courses

Up to 6 credits used for the concentration may come from the following list of "Related Courses." (Note: Not all of these courses are offered every year.)

Code	Title	Credits
LAWS 205	Business Organizations	4
LAWS 307	Trusts and Estates	3
LAWS 355	Corporate Finance	3
LAWS 369	Real Estate Transactions	3
LAWS 370	Family Law	2-3
LAWS 435	Advanced Family Law I - S	2
LAWS 505	Mergers & Acquisitions	2
LAWS 516	International Business Trans.	3
LAWS 628	Estate Planning & Drafting	2

2. Clinical Requirement

At least 3 credits must be earned through participation in the Tax Clinic and/or externship placement approved by the concentration director. No more than 3 credits count toward the 20-credit requirement for the concentration, except with permission of the concentration director in consultation with the director of the clinic or externship. The director of the clinic may waive IRC as a requirement for the Tax Clinic. If a student does enroll in IRC, credits for it will not count toward the clinical requirement.

If a student meets this requirement through an externship placement, the seminar portion of the externship DOES NOT count toward the 3 required clinical credits. If a student meets this requirement through the Tax Clinic, ONE CREDIT of the seminar portion of the externship counts toward the 3 required clinical credits.

The concentration director may waive the clinical requirement if the student has substantial tax law work experience. If the concentration director waives the clinical requirement, the student must earn additional credits in tax courses (or any related courses specifically allowed by the concentration director) to qualify for the concentration.

3. Writing Requirement

A student must write a substantial paper — or a series of shorter writings that together comprise a substantial amount of written work — on a topic or topics related to tax. (If a student writes a substantial paper, the student may use that paper to satisfy the School of Law's advanced writing requirement, provided that the work meets the guidelines for the advanced writing requirement as set forth in the academic catalog Academic Regulations (p. 617), section I.D.) The topic or topics for the written work used to satisfy this requirement must be approved by

the concentration director. A paper written for a journal may qualify, if the topic is approved by the concentration director.

4. Honors

Students who achieve a GPA of 3.2 or better in the coursework used for the concentration will receive the certificate for the concentration with honors. A student may designate any course or paper as not counting toward the concentration, so long as it is not specifically required for the concentration, and the student meets the concentration requirements with another course or paper.

5. Waiver

The concentration director and the associate dean for academic affairs may waive any requirements for the concentration (other than the GPA requirement), if they both agree to do so.

Workplace Law

Students who earn the certificate for this concentration develop an understanding of a variety of workplace law principles and remedies, in an array of civil law contexts involving employment law, employment discrimination law, labor law, arbitration, mediation, negotiation and administrative law.

Workplace law is a dynamic and challenging field that affects about 140 million civilian workers and their employers. Specializing in this field opens the door to working with large government agencies such as the U.S. Department of Labor, the Commission on Human Rights and the National Labor Relations Board. You'll also build the legal foundation you need to represent unions or corporations, or to start a private practice.

A substantial component of workplace law involves settling disputes, and Quinnipiac is uniquely positioned to ensure that you have a competitive advantage in that area. Our Center on Dispute Resolution's training and its Quinnipiac/Yale Workshop on Dispute Resolution are both valuable assets for our law students. The center holds workshops, sponsors prominent speaking events on campus and offers opportunities to train with lawyers in the field. You can also gain practical experience participating in national and regional mock trial and dispute resolution competitions.

In our Civil Justice Clinic, you'll have opportunities to represent real clients with cases relating to unemployment and unpaid wages. And in our employment and labor externship program, you'll perform the work that workplace lawyers do, whether you choose a law firm, a government agency, or work in-house at a corporation. Because this concentration offers a wide variety of courses, you can individualize your experience and focus on a specific area in workplace law that interests you, such as mediation and arbitration, discrimination law or workers' compensation.

For specific information on the program offerings, please contact:

Professor Brad Saxton
 Director, Workplace Law Concentration
 Quinnipiac University School of Law
 275 Mount Carmel Avenue
 Hamden, CT 06518

 Email: brad.saxton@qu.edu

Workplace Law Concentration Requirements

1. Coursework

To receive the certificate for this concentration, you must take Evidence (LAWS 311) and Administrative Law (LAWS 114) as two of your four required core electives, plus 21 credits of workplace law courses as specified below. Credits for Evidence and Administrative Law do not count toward the 21-credit concentration requirement, but the grades in these courses do count toward the concentration GPA requirement. (Note: Not all courses are offered every year).

Required Courses

In addition to Evidence (LAWS 311) and Administrative Law (LAWS 114), you must take the following courses, which will count toward the 21 required credits:

Code	Title	Credits
LAWS 434	Employment Law	3
LAWS 426	Employment Discrimination Law	3
LAWS 327	Labor Law	3
LAWS 515	Alternative Dispute Resolution Exp. or LAWS 42 Negotiation	2-3

Core Courses

In addition to the required courses, you must also take at least two of the following core workplace law courses:

Code	Title	Credits
LAWS 314	Employee Benefits	2
LAWS 356	Arbitration	2-3
LAWS 372	Representation in Mediation Exp	2
LAWS 428	Negotiation	2-3
LAWS 508	Worker's Compensation	2
LAWS 587	Disability Law	2

Remaining Credits

The balance of the credits is to be earned from the following courses, if you have not already fulfilled the 21-credit requirement from the courses listed above:

Code	Title	Credits
LAWS 205	Business Organizations	4
LAWS 315	Trial Practice Exp	2-3
LAWS 338	Visual Persuasion in the Law Exp	3
LAWS 347	Remedies	3-4
LAWS 357	Federal Courts	3
LAWS 572	Immigrat'n & Natural'n Law	3
LAWS 574	Pretrial Litigation in State Courts	2-3

Independent Research Project, where the paper is devoted to a workplace law topic approved by the concentration director.

Clinical or externship courses in addition to those required below, as approved by the concentration director.

Other courses or journal work as approved by the concentration director in consultation with the course instructor.

2. Clinical Requirement

At least 3 credits counting toward the 21-credit requirement must be earned in one or more clinic and/or externship placements approved by the concentration director in consultation with the director of the relevant clinic or externship.

3. Writing Requirement

You must complete a substantial paper or a series of shorter writings that together comprise a substantial amount of written work on a topic or topics related to Workplace Law. If you write a substantial paper, you may also use that paper toward your Advanced Writing Requirement. The concentration director must approve the topic or topics for any written work used to satisfy this requirement. A paper written for a journal may qualify if the concentration director approves the topic and the paper meets the guidelines for satisfying the substantial paper portion of the Advanced Writing Requirement (see Academic Regulations (p. 617)).

4. Honors

Students who achieve a GPA of 3.2 or better in the coursework used to satisfy the concentration requirements will receive the concentration with honors. A student may designate the grade in any course or paper as not counting toward the concentration GPA if the course is not required for the concentration and the student meets the concentration requirements with another course or paper.

5. Waiver

Students who fall short of specific credits or coursework needed to satisfy the concentration requirements (other than the GPA requirement) may apply for a waiver of requirements, to be granted at the discretion of the concentration director and the associate dean for academic affairs.

Privacy, Cybersecurity and Information Technology Law

The privacy, cybersecurity and information technology law concentration is designed to provide a legal, ethical and practical framework for students who aspire to serve as stewards of privacy and protect clients from cyberattacks. The course material and experiential learning opportunities within the concentration provide future lawyers with the necessary tools to lead this dynamic practice area.

Inside the classroom, students will build a strong foundation as they explore basic constitutional rights to privacy, existing legislative and regulatory protections, and new developments in international law. Through experiential learning opportunities, students will further develop the practical skills and ethical sensitivity they will need as lawyers to guide individual, corporate, governmental and non-governmental clients involved in collecting and protecting information.

Privacy, Cybersecurity and Information Technology Law Concentration

Prerequisite:

There are no prerequisites for this concentration.

Requirements:

Coursework:

To receive the certificate for this concentration, a student must earn 18 privacy, cybersecurity, and information technology specialty credits, divided as follows (not all courses are offered every year):

Required Coursework:

At least 9 of the 18 credits must be earned from the following list of basic courses:

Code	Title	Credits
LAWS 701	Cybersecurity Law	2-3
LAWS 650	Information Privacy Law	2-3
LAWS 437	Computer and Internet Law	2
	Technology Externship: Experiential Education faculty will supervise placement and related classwork.	3

Remaining Credits:

Choose from the following courses related to privacy, security and information technology

Code	Title	Credits
LAWS 117	Trademarks and Copyright in the Digital Age	2
LAWS 331	Intellectual Property	3-4
LAWS 344	Law, Science and Technology	3
LAWS 362	National Security Law	2-3
LAWS 620	Electronic Discovery & Digital Evidence	2
LAWS 625	Health Information Privacy and Security	2-3
LAWS 674	Video Game Law	2

Students may transfer up to five credits of IP-related courses taken at other law schools or in summer programs with approval from the course director. Students may also complete related coursework or journal work as approved by the concentration director.

Writing Requirement

Students are required to compose a substantial paper or series of shorter writings that together comprise a substantial amount of written work on a topic or topics related to cybersecurity and privacy. If a student writes a substantial paper, they may use that paper to satisfy the law school advanced writing requirement provided that they meet the guidelines for the advanced writing requirement set out in the Academic Regulations. The topic or topics for the written work used to satisfy this requirement must be approved by the concentration director. A paper written for a journal may qualify if the topic is approved by the concentration director.

Opt-Out Option

A student may designate any course or paper as not counting toward the concentration, so long as it is not required for the concentration and the

student meets the concentration requirements with another course or paper.

Waiver

The concentration director and the associate dean for academic affairs may waive any requirements for the concentration, other than the GPA requirement for honors, if they both agree to do so.

Clinics and Externship Courses

Beginning in the second year, students may further their individual learning and career goals by enrolling in one or more of the many clinics and externship (field placement) courses that are part of the Law School's upper-level curriculum. These courses help students to develop as lawyers by providing them with opportunities to gain practical lawyering experience in real-life settings and encouraging them to reflect on the role of lawyers, as they learn from their work as lawyers-in-training. The ability to enroll in a clinic or externship is guaranteed for every student, although not necessarily in the student's first choice of course or semester. Students must apply and be accepted before registering for a clinic or externship.

To be eligible for these courses, students must have completed 30 credits (including LAWS 111 and LAWS 112, Legal Skills I & II). They also must take any pre- or corequisite courses. Each course has a seminar component (with the exception of some of the advanced clinical courses). Some seminars meet twice weekly, some once weekly, and others once every two weeks. Students earn both in-class (seminar) and out-of-class (casework/fieldwork) credits. Some courses also satisfy part of the Advanced Writing Requirement.

LAWS 599, Introduction to Representing Clients (IRC), a 2-credit simulation course, is a pre- or corequisite for some clinic and externship courses (except for the Appellate Clinic and the Judicial, Legislative and Mediation Externships). IRC is suggested but not required for Civil Justice Clinic and Tax Clinic. IRC is designed to prepare students for individual client representation and work in other practice settings. Students explore the lawyer's role and develop interviewing, counseling and negotiation skills by representing each other in mock cases.

Law Clinics

The Legal Clinic is an in-house law firm run by the School of Law, offering free legal services in a variety of practice areas to low-income people living in the neighboring communities. The law clinic courses that comprise the Legal Clinic (Civil Justice Clinic and Tax Clinic) are one-semester courses that students may take for 4 to 6 credits and are taught by full-time faculty members. Faculty members may invite a small number of Civil Justice Clinic and Tax Clinic students to take a second-semester course called Advanced Clinic. Other law clinics that are not part of the Legal Clinic offer students alternative scheduling and are taught by experienced practitioners serving as clinical faculty. The Defense Appellate Clinic is a year-long course, for a total of 6 credits, in which students brief and argue appeals in criminal cases. Evening Clinic Projects are one-semester courses for 3 or 4 credits and are designed to permit part-time students to perform casework in the evening, although full-time students may enroll as well. In all in-house clinics, students perform most of their work at the law school, under the direct supervision of a member of the clinical faculty, who is the attorney of record for the client(s).

Defense Appellate Clinic

(LAWS 299 & LAWS 300)

(LAWS 294)

Evening Clinic: Legal Ethics Project

(LAWS 626)

Evening Clinic: Veterans Law Project

(LAWS 627)

Tax Clinic

(LAWS 295 & LAWS 301)

Advanced Clinic

(LAWS 611)

Externship Courses

In the externship (or field placement) courses, students work off campus under the supervision of experienced lawyers, judges, legislators, policymakers and mediators at established placements in law offices, legal services organizations, public interest advocacy organizations, state agencies, corporate legal departments and courthouses throughout the state. Faculty members select or approve the sites, place the individual students, oversee the on-site supervision process and teach the seminar components of the programs, but do not serve as attorneys for placement-site clients. Externships are usually taken for one semester. Some students spend an additional semester in a similar or different placement, in a 1- to 6-credit externship course (Field Placement II).

All first-time externs come together in a joint, mandatory 1-credit graded seminar, which meets approximately every other week for two hours. Legislative Externship is the only course with a separate class.

In addition to the prerequisites listed, students may be required or encouraged to complete additional courses prior to placement. Placement options may depend upon the number of credits the student elects. Judicial externs earn automatic short paper credit; other externs may earn short paper credit with faculty approval.

All fieldwork programs require hours at the placement according to the following schedule:

3 credits (2 out-of-class field credits): 10 hours/week; 150 hours/semester

4 credits (3 out-of-class field credits): 14 hours/week; 200 hours/semester

5 credits (4 out-of-class field credits): 18 hours/week; 250 hours/semester

6 credits (5 out-of-class field credits): 22 hours/week; 300 hours/semester

Note: Students may not drop an externship after the placement process has begun without written permission of the instructor (see Academic Regulations (p. 617), section V.B., Withdrawal from a Course). Once placement has been arranged, students may drop an externship only for good cause.

Externship courses are divided into two categories: those courses organized by type of placement setting and those categorized by type of law practices at the setting.

Externship Courses Based on Type of Placement Setting**Corporate Counsel Externship**

(LAWS 527)

Judicial Externship

(LAWS 296)

Legal Services Externship

(LAWS 607)

Legislative Externship

(LAWS 464)

Mediation Externship

(LAWS 523)

Public Interest Externship

(LAWS 520)

Semester in Practice Externship

Externship placements are also available in remote locations, approved by the externship professor and associate dean for academic affairs, as a "Semester in Practice." Students may earn up to 10 fieldwork credits for the time spent at the placement and must be enrolled in either Externship Seminar or Advanced Externship Seminar, in which the student will participate online (either synchronously or asynchronously) for an additional credit. Students may enroll in the university's "QU in LA Law" program or may arrange for their own placement in any national or international location (for instance, recent placements have been approved in Cape Town, South Africa), in any subject area or type of placement, with the approval of the externship professor. Semester in Practice externships are most feasible in the third year. Note: Participation in this externship does not change or waive any other graduation requirements, nor does it extend the cap of 10 fieldwork credits that may count toward graduation. Interested students should plan ahead and contact the externship professor far in advance to apply.

LLM in Health Law

Admission is limited to graduates of ABA-accredited law schools who possess a strong record of academic achievement and/or of achievement in practice.

LLM candidates are required to complete 24 credits, at least 18 of which are earned in designated health law courses. Of those 18 credits, 3 are in a required advanced research/thesis course that culminates in the writing of a master's thesis of length and quality suitable for law review publication.

Six of the 24 credits may be earned in non-health law courses, subject to the approval of the program director. Students in the LLM program may not take courses that substantially duplicate those completed in their JD program studies. LLM candidates must maintain a 2.80 GPA.

Summer Program Abroad

Trinity College

Dublin, Ireland

Quinnipiac University School of Law offers an ABA-approved summer program at Trinity College Dublin, one of Ireland's premier institutions of higher education. This program provides an introduction to the Irish legal system and Irish constitutional law as well as a variety of classes in Irish, comparative and international law.

Located in the heart of Dublin, Trinity is the constituent college of the University of Dublin, one of Europe's oldest universities, steeped in history and tradition. Trinity College Law Library, which has holdings in Irish, British and European law, has recently expanded its holding to include North American law. The college's historic Old Library contains not only the Book of Kells, a world-famous volume of ninth-century illuminated manuscripts of the gospels, but an unparalleled collection of books, art and artifacts relating to Irish history.

Enrollment in the program is limited and is open to students who have satisfactorily completed one year of full-time or part-time study at an ABA-approved or state-accredited law school and are in good academic standing. Students are responsible for securing approval, in advance,

from their own law school to transfer credit and are encouraged to check with the registrar at their home institution to determine whether residency requirements are satisfied. Early application is strongly encouraged.

It is the applicants' responsibility to check with their financial aid office regarding filing requirements and processing deadlines if they are participating in the Ireland program. Generally, students must take at least 6 credits (three courses) in the summer to qualify for federal financial aid; no student is permitted to register for more than 6 credits.

Students are encouraged to live on campus during the program. Those who choose to stay off campus will be responsible for their own accommodations. Housing information is mailed to applicants upon acceptance into the program. All travel arrangements are the responsibility of the student.

Specific questions regarding the program can be directed to:

Professor William Dunlap
Director of the Trinity Summer Program
Quinnipiac University School of Law
Phone: 203-582-3265
Email: william.dunlap@qu.edu

Academic Regulations

Academic rules and regulations are subject to change by decision of the faculty at any time. Please also refer to the Student Conduct Code (p. 631) and the Honor Code (p. 625).

Academic Regulations

I. Requirements for Graduation

A. In General

To receive the JD degree, a student must meet all of the following requirements:

- Successfully complete all required courses, the core elective requirement, the Professional Skills Requirement (for students matriculating before Fall 2016 or the Experiential Learning Requirement (for students matriculating Fall 2016 or later).
- Receive credit for 86 credits.
- Achieve a cumulative grade point average of 2.0.
- Complete all requirements no sooner than 24 months and, except in extraordinary circumstances, no later than 84 months after a student has commenced law study at this law school or a law school from which this school accepted transfer credit.
- Satisfactorily complete the Advanced Writing Requirement (p. 619).
- Complete all work for the above requirements no later than the last day of examinations of the student's final semester.

B. Required Courses

1. Policy

Because it is important for all lawyers to share a core of common knowledge and skills, the faculty has prescribed a set of required courses (listed elsewhere in this catalog).

2. Course Sequences, Variances

Required courses must be successfully completed. They must be taken in the prescribed sequence (set forth elsewhere in this catalog) unless the student has petitioned for and been granted a variance prior to registration or prior to a change in registration.

A student may, however, take a required course earlier than the prescribed semester without petitioning to do so. Authority to grant or deny such variances rests in the associate dean. Variances are granted in only the most extraordinary of circumstances. A student who has been given permission to postpone an exam in a required course must take the exam the next time the course is offered (excluding the summer term).

3. Successful Completion

A student who has received a failing grade in a required course must retake the course. Upon successful completion of this course, the student will receive a grade of "Pass," but will retain the previous grade of F as well. The "Pass" will have no numerical value and will not affect the CQPA (Cumulative Quality Point Average). The F will be included in the CQPA. The purpose of the rule is to insure at least minimal competency in all required courses but not to provide opportunities to improve a grade. The writing of a paper for a course in which the student failed an examination is prohibited.

C. Core Electives

In addition to Lawyers' Professional Responsibility, which remains required for all students, the upper-class curriculum consists of core electives and general electives. The core electives are: LAWS 114 Administrative Law, LAWS 205 Business Organizations, LAWS 323 Commercial Law, LAWS 311 Evidence, LAWS 305 Federal Income Tax, and LAWS 307 Trusts and Estates. General electives are all electives other than core electives.

1. Core Elective Requirement

Every student must take at least four of the core electives. One of the four must be either LAWS 323 Commercial Law or LAWS 305 Federal Income Tax. Students who take both Commercial Law and Federal Income Tax will be able to use both in satisfying the requirement of four.

2. Sequencing and Registration Priorities

Full-Time Students

Full-time students must complete at least three of the core electives by the end of their second year. Moreover, students who are registering for their second year have priority with respect to all of the core electives. Thus, a student who takes fewer than six of the core electives in their second year will be able to register to take the remaining core elective(s) as a third-year student only after the completion of registration by students who are registering to take core electives in their second year.

Part-time Students

Part-time students must complete at least two of the core electives by the end of their second year, and the rest of their core electives in the third and/or fourth years.

After registration in the fall, the associate dean for academic affairs will determine if there are any students who have not registered for enough core electives to complete at least three (for full-time students) or two (for part-time students) by the end of their second academic year. The associate dean will send a warning letter to such students, stating they have one week to register for sufficient core electives in the spring to total the required number for the year. If they have not done so by the deadline, the associate dean will register them for the number of core electives needed to fulfill the core elective requirement. Courses will be assigned solely in the discretion of the associate dean.

The associate dean's office is available to answer questions about the requirements and registration priorities.

3. Advice on Course Selection

Although only four of the core electives are required, the faculty recommends that students seriously consider taking all six, for the following reasons.

First, the faculty believes that these six courses are among the most important in the upper-class curriculum. Taking all six gives students exposure to a wide variety of legal areas and disciplines. In the past, students who have had summer jobs after their second years have often found that they were better prepared for their assignments than students from law schools with less extensive requirements.

Second, with the exception of LAWS 305 Federal Income Tax, the six courses cover some, though by no means all, of the most difficult material tested on most bar examinations. Taking all five of the other courses does not, of course, guarantee success on any bar examination, nor does taking all six guarantee success in practice. Moreover, different instructors may stress different aspects of the material and even different material in different sections of the courses. Yet students who take all six will thereby enhance their chances of passing a bar examination and will become sensitized to potential tax consequences of transactions and other activities in a wide variety of legal practice areas.

Third, all of the six courses provide foundations for other courses in the curriculum. In combination with the required first-year curriculum, they develop students' skills in statutory, administrative, and common-law reasoning. They also introduce students to many of the concepts that clients expect lawyers to understand.

Fourth, students' notions of where their interests lie often change with exposure to new material. In the past, many students who have entered the law school without definite career plans have discovered interests in areas covered in one or more of the six courses. Even students whose plans were definite at the outset have sometimes changed their minds and pursued careers in areas they discovered only when they took one of the six.

D. Experiential Learning Requirement

Each student must also satisfactorily complete "one or more experiential course(s) totaling at least 6 credits," as provided by current ABA Standard 303(a)(3) and related provisions. Certain courses are always designated as "experiential courses" that will satisfy the requirement. They are: all law clinics except Advanced Clinic; all externships including Field Placement II; Introduction to Representing Clients; Negotiation; Trial Practice and Advanced Trial Practice. Other courses that may satisfy this requirement, depending on the design choices that the particular professor makes, include: Advanced Family Law II: Courtroom Advocacy, Advanced Juvenile Law: Delinquency Proceedings, Alternative Dispute Resolution, Bankruptcy Lab, Commercial Transactions Workshop, Estate Planning and Drafting, Financial Planning: Principles and Taxation, Judicial Clerkship Seminar, Land Use Practicum, Representation in Mediation, and Visual Persuasion in the Law. (This list is subject to revision; each semester the registrar will designate which courses taught the following semester will satisfy the requirement.) Any paper(s) written in connection with a course or courses used to satisfy the Experiential Learning

Requirement may be used to satisfy no more than three of the four papers required to satisfy the Advanced Writing Requirement.

E. Advanced Writing Requirement

1. The Requirement

To ensure continued development of those research and writing skills stressed in the first-year Legal Skills Program, each student must write at least four papers after the first year, preferably one each semester. At least one, the "substantial paper," must be at least 10-15 pages in length with a non-trivial research component. The three others constitute the "short paper" requirement. A student may not begin the advanced writing requirement before completing LAWS 111 Legal Skills I and LAWS 112 Legal Skills II.

2. Modes of Satisfaction

A student will ordinarily submit a paper as part of the work for a substantive or clinical course. The class schedule published each semester will indicate which courses automatically satisfy either a short paper or substantial paper requirement. Most elective courses that do not automatically satisfy a paper requirement will have a limited number of places for students who wish to write a paper for that course. Procedures for signing up for a paper are published each semester after the close of the add/drop period. The paper must count for at least 25 percent of the final grade for the course.

Ordinarily a student may not satisfy two paper requirements in the same semester. An exception will be made if a student takes more than one course that automatically satisfies a paper requirement. The associate dean may waive the one-paper limitation for good cause.

A member of the Law Review, the Probate Law Journal, or the Health Law Journal may satisfy the substantial paper requirement by preparing a long note or comment that the editorial board determines is of publishable quality. A student may satisfy the substantial paper requirement by submitting an appellate brief prepared for the intramural competition used to select members for the Moot Court Society. To satisfy the paper requirement, the brief must be critiqued and approved by a faculty member, who may require additional work on the paper. The faculty member must transmit the approval to the registrar. The student does not need to be selected to the Moot Court Society in order for their brief to satisfy the requirement.

3. Full-Time Faculty

The courses designated as satisfying the advanced writing requirement shall ordinarily be limited to those taught by full-time faculty. In exceptional circumstances, the associate dean may approve the designation of a course taught by a part-time member of the faculty.

4. Duplicative Use

The principal part of any work prepared in satisfaction of any part of the writing requirement will be completed after the date that the topic is approved by the faculty supervisor. Any prior work on the topic, either research or writing, must be fully disclosed to the faculty supervisor prior to the approval of the topic.

Any paper written in connection with a course or courses used to satisfy the 6-credit Experiential Education Requirement may be used to satisfy a short paper requirement but not the substantial paper requirement.

F. Limit on Out-of-Class Credits

A law student may elect a maximum of 20 out-of-class credits toward the satisfaction of the 86 semester hours required to receive the JD, consisting of up to 10 fieldwork credits and up to 10 non-classroom credits, as follows:

1. Fieldwork Credits

A law student shall be permitted to elect a maximum of 10 fieldwork credits during the student's residency at the school. Fieldwork hours, as currently in the curriculum, include the following:

- a. all but 4 of the credits elected by a student taking for the first time an in-house clinic taught by a full-time faculty member (Civil Justice Clinic and Tax Clinic),
- b. all but 2 of the credits elected by a student taking Civil Justice Clinic (LAWS 294) after taking Tax Clinic (LAWS 295) or vice versa, and
- c. all but 2 of the credits elected by a student taking Appellate Clinic I - Defense (LAWS 299) or other clinic that is not taught by a full-time faculty member, and
- d. all but 1 of the credits for Advanced Clinic (LAWS 611), and
- e. all but 1 of the credits for an externship.

The rules of the various state bar examiners vary in respect to the number of fieldwork credits an applicant may present. Each student is responsible for making certain that their curriculum conforms to the requirements of the state or states to which the student may apply.

2. Non-Classroom Credits

In addition to any fieldwork credits under the preceding section, a law student shall be permitted to elect a maximum of 10 non-classroom credits during the student's residency at the school. Non-classroom credits, as currently in the curriculum, include the following: a. all credits elected for Moot Court, and b. all credits elected for Health Law Journal, Law Review or Probate Law Journal, and c. all credits elected for an Independent Research Project. The rules of the various state bar examiners vary in respect to the number of non-classroom credits an applicant may present. Each student is responsible for making certain that their curriculum conforms to the requirements of the state or states to which the student may apply.

3. The following summarizes the limits on out-of-class credits:

Fieldwork Credits: 10 credits maximum

Externship (non-seminar work)

Advanced Clinic (non-seminar work)

All but 4 Civil Justice/Tax Clinic credits (if a student takes Civil Justice Clinic and then Tax Clinic (or vice versa), then all but 2 credits of the second clinic would be fieldwork credits)

Other clinics (non-seminar work)

Non-Classroom Credits: 10 credits maximum

Moot Court (3-credit limit)

Independent Research Project (6-credit limit)

Journal (4-credit limit)

Credits from other parts of university

G. Independent Research Project

The Independent Research Project permits a student to conduct a major research and writing project under the supervision of a full-time member of the Law School faculty. The paper must be at least 20 pages in length, exclusive of footnotes, per credit assigned.

A student who wishes to write an independent research paper must submit to the supervising faculty member a written proposal that demonstrates that he or she has a viable topic for research. The student must register for the course, with the approval of the faculty member, no later than the beginning of the student’s next to last semester of school. Prior to registration, the student must present to the registrar a contract signed by the supervising faculty member. Contracts are available in the associate dean’s office.

An Independent Research Project may satisfy the substantial paper component of the Advanced Writing Requirement (p. 619) if the project is for either 2 or 3 credits.

The Advanced Writing Requirement provision on Duplicative Use applies to the Independent Research Project.

No student shall register for more than one Independent Research Project in any semester or session, nor more than two Independent Research Projects for all semesters or sessions at the School. No student may complete more than one Independent Research Project with any individual faculty member. A student may enroll in an Independent Research Project during the same semester or session in which the student is enrolled in a clinical program, subject to the rules regarding Limit on Non-Classroom Credits, and provided that the student is enrolled in at least one other school course with regular class meetings. Only full-time law school faculty members may supervise an Independent Research Project. The associate dean may waive any of these requirements under exceptional circumstances.

H. Visitor and Credit-Transfer Policy

1. Visitor Policy

Students may by permission of the associate dean visit at another law school at any time after completing their second semester, provided that they complete at least two-thirds of their credits toward their degree at the Quinnipiac University School of Law. Such visiting status may be granted when it is determined that an exceptional change in the student’s personal circumstances requires the student to relocate for the period of visiting status, or when some exceptional educational opportunity arises. Credits will be accepted for transfer only if the visiting student earns at least a C or its equivalent.

2. Transfer of Credits

This school will grant no more transfer credits for a course taken at another school than the number of credits granted for the course by that school. For students who transfer to this school, no credits are transferred in courses in which the student has earned a grade below C (2.0). The maximum number of credits a student can transfer from another law school is 30. For Quinnipiac students who visit at another law school, see paragraph 1 above. Credits accepted from other schools are transferred with the grade of “Pass.”

3. Required Courses and Core Electives

Except with express written permission of the associate dean for reasons of hardship, students may not receive credit for required courses or core electives taken at other law schools. Written permission must be obtained before taking the course elsewhere.

4. Summer Sessions

Except with express written permission of the associate dean for reasons of hardship or sound academic reasons, students may count toward graduation no more than six credits earned in summer programs of other law schools. Written permission must be obtained before taking the course elsewhere.

I. Courses Taken at Another University School or College

For good cause shown, the associate dean may allow a student to register and earn credit toward the JD for courses taken in another school or college of the university. Law school credit will be pass/fail only, and given only for courses in which the student earns a grade of C (2.0) or better.

II. Grades, Grading and Examinations

A. Grades

The School records letter grades and attributes to those grades a quality point equivalent based upon a four-point system, as follows:

A	4.00
A-	3.67
B+	3.33
B	3.00
B-	2.67
C+	2.33
C	2.00
C-	1.67
D+	1.33
D	1.00
F	0.0 and no credit

The school awards honors to graduates according to the following standards:

- 3.00 to 3.29 - cum laude
- 3.30 to 3.59 - magna cum laude
- 3.60 to 4.00 - summa cum laude

Several courses—including Civil Justice Clinic, Tax Clinic, Appellate Clinic and Externships—may be graded (at least in part) as Honors, High Pass, Pass, Low Pass, and Fail. Except for Fail, none of these grades has a numerical equivalent; hence they do not affect the student’s Cumulative Quality Point Average. A Fail, however, counts as a 0.0 in calculating the CQPA. Grades for courses taken at other institutions for which credit is given shall be recorded as Pass, subject to the Transfer of Credits policy described in section I.G.2 above.

B. Grading

1. Anonymous Examinations

Except as specified hereunder, grades are based solely on written examinations that are graded anonymously. Approximately one week before examinations each semester, students must obtain from the registrar their examination number. That number must be used on all examinations in lieu of the student’s name.

2. Extensive Written Work

Some courses involve extensive written work. Such work and such courses need not be graded anonymously. However, written final examinations in such courses are graded anonymously.

3. Clinical Courses

Clinical Courses and other courses involving extensive non-written performance need not be graded on the basis of anonymous examinations.

4. Classroom Performance

The faculty believes that student performance in the classroom is an essential part of the educational process. Faculty members have the authority to evaluate such performance and to raise or lower a student's final grade by one-third of a letter grade, based on such performance. A faculty member who implements this policy must announce it to their class beforehand. Failure to adopt such a policy at the beginning of a semester shall not stop the faculty member from doing so thereafter, provided the required notice is given.

5. Attendance and Class Preparation

Excessive student absences in a required course will lead to an administrative withdrawal from the course with a grade of F. (See section VI.A, Attendance Policy (p. 623), below.)

6. Grade Changes

After submitting grades in a course to the Registrar's Office, a faculty member has no authority to change a grade except upon satisfying the associate dean that the change is due to mathematical or other clerical error or egregious substantive error. No change requested by a student shall be approved unless the student has sought review from the instructor within three weeks after the posting of the grade, or within three weeks of the beginning of the semester immediately following, whichever is later. In no event shall a grade change be made after the last day of the semester next following the semester or session in which the examination was administered.

7. Grades of Incomplete

A student who is given a grade of Incomplete in a course, and has not completed all course requirements by the end of the semester following that in which the Incomplete was given, shall automatically have the Incomplete converted to an F. Exceptions to this rule will be made only in cases of extreme hardship (such as extended illness), on proof of same satisfactory to the associate dean.

8. Grading Guidelines

The recommended median grade in required courses (Contracts, Torts, Civil Procedure, Criminal Law, Constitutional Law, Property, and Legal Skills I & II) is C+ or B-. The recommended median grade in core electives (Tax, Business Organizations, Evidence, Administrative Law, Commercial Law, and Trusts and Estates) and in Lawyers' Professional Responsibility is B- or B. Faculty may deviate from these recommended medians after consulting with the associate dean. There are no recommended medians for other courses.

C. Examinations

1. Honor Code

The following honor code pledge will be attached to every examination, take-home and in-class. Students must sign the pledge prior to taking the examination.

HONOR CODE PLEDGE

"On my honor, I pledge that I will follow the Honor Code regarding this examination. Specifically, I pledge that I have not given or received, and will not give or receive, prohibited assistance on this examination, and that I will neither work on nor retain this examination after the time allotted has elapsed. I understand that it is my duty to report any conduct that I know constitutes a violation of the Honor Code."

Signature (please use examination number, not your name):

Date:

Course:

Professor:

2. When Taken; Excuses

(a) Examinations must be taken at the time and place specified unless the student is excused by the associate dean on account of illness or for other sufficient reason. Where possible, the student shall secure the associate dean's written permission prior to the date of the examination. **To preserve anonymity, the student must not notify the instructor.** In the event of an emergency that makes prior written approval impractical, the student shall notify the associate dean as soon as possible of their inability to take the examination at the scheduled time.

(b) A student who becomes ill during an examination and is unable to complete the examination may, in the discretion of the associate dean, be permitted to take the examination in the same course the next time it is offered, provided the student has notified the associate dean or delegate before the end of the examination.

(c) A student who has three or more examinations within a 24-hour period may, with the permission of the associate dean, postpone one of the exams until later in the examination period.

3. Rescheduling of Examinations

If the associate dean has excused a student from taking an examination at the scheduled time, the associate dean may, with the concurrence of the instructor, allow the student to take the same examination at a later time. In no event may a student take an examination prior to the scheduled time.

4. Deferred Examinations

If the associate dean has excused a student from taking an examination, but the student has not been permitted to take the same examination at a later time under the preceding section, the student will be permitted to take a different examination at a time and place to be determined by the instructor, but in no event later than the end of the examination period in the semester in which the course is next offered.

5. Reexaminations

The school does not permit reexaminations.

D. Class Ranking Policy

1. In general

- 1L Students: Students who attempted the full-time course load of 30 credits during the academic year are ranked together as full-time students. Students who attempted fewer than 30 credits are ranked together as part-time students.
- 2L Students: Full-time and part-time are ranked together in one 2L ranking.

- 3L and 4L Students: Full-time and part-time are ranked together in one 3L/4L ranking.

2. For determining eligibility for law journals

- Selection of candidates for the Law Review, Probate, and Health Law Journals will take place twice a year, after the fall and the spring semesters. The eligible pool of students shall include those students who at the selection point have attained at least 23 credits as of the conclusion of the immediately preceding semester.
- At each selection point:
- Students in the top 7% of the eligible pool of students will be invited to walk on to the journal of their choice.
- Students in the next 8% of the eligible pool of students will be invited to walk on to their choice of either the Health Law Journal or the Probate Law Journal.
- Students in the top 50% of the eligible pool of students will be eligible to be selected to join the Law Review through the write-on competition.
- Any student in the eligible pool of students who has attained a cumulative GPA of 2.0 or higher at the selection point will be eligible to be selected to join the Health Law Journal or the Probate Law Journal through the write-on competition. However, to be selected to join either of these journals, a student who is not in the top 50% of the eligible pool of students shall be required to meet a heightened standard in the write-on competition.

III. Course Loads

A. Full-Time Distinguished from Part-Time

1. Fall and Spring Semesters

A full-time student for American Bar Association purposes is one who enrolls in at least 13 credits per semester. The normal course load for full-time students, however, is 13-15 credits. A part-time student is one who enrolls in 8-12 credits per semester. Written permission of the associate dean is required to deviate from these norms.

2. Summer Session

No student may register for more than eight credits in a Quinnipiac summer session. A part-time student (one who is employed for more than 20 hours per week) may not register for more than 6 credits in a summer session. (See sections I.G.3 and I.G.4 above regarding summer credits taken at other institutions.)

B. Transfer Between Day and Evening Programs

Evening students may take day courses, and full-time day students may take evening courses only on a space-available basis.

C. Outside Employment

Full-time students must devote substantially all of their working hours to the study of law. For purposes of this rule, a full-time student is one who is enrolled for 13 or more credits. A student may not work in excess of 20 hours per week while attending school on a full-time basis. This restriction applies during the summer in the same manner as during the normal year if the student is enrolled for a summer session.

D. Maximum Number of Credits per Semester

Pursuant to ABA requirements, a student may enroll for no more than 17 credits in a semester and no more than 8 credits in a summer session. The law school has no authority to waive this rule.

IV. Continuance in Residence; Review for Academic Deficiency

A. Academic Deficiency; Minimum CQPA

1. Generally

Each student will be reviewed for academic deficiency at the end of every academic year. A student must maintain a minimum overall Cumulative Quality Point Average (CQPA) of 1.80 at the end of a year in which the student has attempted 17 or more credits, 1.90 at the end of a year in which the student has attempted 36 or more credits, and 2.00 at the end of a year and every year thereafter in which the student has attempted 54 or more credits.

2. Transfer Students

A student who transfers here from another law school must maintain a 1.9 CQPA in all courses taken here by the end of their second semester here (excluding summer school), and a 2.0 by the end of the second year and every year thereafter.

3. Discounting of Course with Most Detrimental Grade

If a student has not maintained the appropriate minimum CQPA, a second calculation will be performed. Removing from consideration the student's most detrimental grade, the student must have attained a 2.2 average in all remaining courses. The most detrimental grade is the one that most adversely affects the student's CQPA. This procedure of discounting the most detrimental grade will be repeated each semester, if necessary, so long as the student maintains a 2.2 CQPA in all other courses from the time he or she entered law school.

B. Dismissal

Any student falling below the required minimum CQPA will be dismissed automatically.

1. If the student has completed only two part-time or full-time semesters, the dismissal is final and there is no right of petition or appeal.

2. If the student has completed three or more semesters, the dismissal is final, with no right of petition or appeal, unless the student is within .05 of the minimum CQPA required to remain in residence. A student who is within .05 of the minimum CQPA may appeal the dismissal to the Academic Status Committee. The appeal should be addressed to the chair of the Academic Status Committee, in care of the associate dean, and must be postmarked no later than 14 days after receipt of a letter from the associate dean notifying the student of their dismissal. If the student files an appeal, the dismissal will not become final until the committee has reviewed the case and denied the appeal. A student may apply for a leave of absence during the semester in which an appeal is pending before the committee. (See IV.C.) A student is allowed only one such appeal during the student's entire time at the school. If the committee grants the appeal and allows the student to remain in residence, the student will be reviewed at the end of the academic year and must have brought the CQPA up to the minimum required to remain in residence as of the later semester.

3. A student who has been academically dismissed after the second year or later may petition the Academic Status Committee for reinstatement. The committee may reinstate a student upon an affirmative showing that the student possesses the requisite ability, that there is a high probability that the student will successfully complete the course of study, and that the prior disqualification

does not indicate a lack of capacity to complete the course of study. A student reinstated under this rule will lose all credit for the academic year in which the CQPA fell below the required level. The committee may impose such conditions as it deems appropriate. The decisions of the committee are final and not subject to appeal to the faculty as a whole.

4. No course, including summer courses, taken after a semester in which a student was dismissed automatically may count toward the student's CQPA. Even if the later course were to bring the CQPA above the average required to remain in residence, the student will be dismissed from the school and withdrawn from the later course(s) with a 100% tuition refund.

C. Leaves of Absence

Leaves of absence will be granted liberally by the associate dean to students who believe that they have problems that might interfere with academic performance.

V. Withdrawal from a Course

A. Written Permission of Associate Dean; When Required

A student may withdraw from a course only with the prior written permission of the associate dean in the following circumstances:

1. Withdrawal is from a required course, or
2. Withdrawal from the course would reduce the student's course load below the minimum required (see section III, Course Loads, above), or
3. Withdrawal is from a course in which the student missed more than 20% of the class hours scheduled in the course.

B. Instructor's Permission; When Required

A student may withdraw from a course only with the permission of the instructor in the following circumstances:

1. In a course in which students are assigned substantial presentations, a student may withdraw within two weeks of their assigned presentation only with the written permission of both the instructor and the associate dean.
2. In a clinical course, after the third week of the course a student may withdraw only with the permission of the instructor.
3. Externships

C. Withdrawal as of Right

In all other circumstances a student is entitled to withdraw from a course at any time during the first week of classes by using Student Planning. After the first week, a student must email the registrar. A student who has not followed this procedure has not withdrawn from a course.

VI. Attendance, Preparation, and Participation Policy

A. Statement of Law School Policy

The faculty believes that class attendance, preparation, and participation are critical elements of the educational process.

B. General Attendance Requirement

An instructor may withdraw a student who misses 20% of the class hours in any course. A student so withdrawn from a required course will also receive a grade of F in that course. For purposes of this rule, the term "required course" does not include the courses listed as core electives in Rule I.C. In making the decision to withdraw a student, the instructor may consider such factors as the number of absences and the legitimacy

of the reasons for them. In calculating the number of absences, an instructor may not take into account absences from classes held at times other than in the published course schedule. The instructor may deem the failure to sign an attendance sheet as conclusive evidence of a student's absence if the instructor has notified students of this policy in writing no later than the first class.

C. Additional Rules for Clinical Courses

Students who are enrolled in clinics must appear personally on the first day of the semester or as may be required by the clinic faculty. Absences from clinic courses will be permitted only for illness and pressing personal matters (bereavement, illness in the family, placement interviews, legal matters, inter-law school competitions), and such absences must be made up. The faculty member supervising the clinic shall have the discretion to decide whether the circumstances justify an absence and when the absence shall be made up.

D. Notice

An instructor who withdraws a student shall notify the associate dean of the withdrawal no later than one week after the last class. The associate dean shall notify the student.

E. Constructive Absences

An instructor may mark absent a student who is inadequately prepared for class or refuses to participate when required to do so, whether or not the instructor requires the student to leave the classroom. The instructor must immediately advise the student that he or she has been marked absent.

F. Petitions

1. A student withdrawn from a course may petition the Academic Status Committee for reinstatement. If a student files such a petition, the withdrawal will not become final until the committee has reviewed the case and denied the petition. Attendance, preparation and participation requirements will remain in effect during the pendency of the petition. The committee may reinstate a student in the course if, after giving appropriate deference to the instructor's determination, the committee finds that the instructor's decision was not reasonable. In making its determination, the committee may consider any additional failures by the student in complying with the attendance, preparation, and participation requirements that occur after the initial withdrawal and while the appeal is pending. In the event that the committee decides to grant the petition, it may impose such conditions upon reinstatement as it deems appropriate.

Upon request by the losing party, the committee shall issue a written statement explaining the basis for its ruling.

2. The committee's decision is final. Neither party may appeal the decision to the faculty. The committee may refer any matter to the faculty for review.

G. General Preparation Requirement

For each course, a student is expected to spend an amount of time on out-of-class work that satisfies the Law School's ABA Standard 310 Policy, attached as Appendix B to these regulations.

VII. Good Standing

To be in good standing, a student must have the minimum CQPA required under section IV.A.1 above and be current in their financial obligations to the law school.

Refund Policy

Refund Policy

A student may withdraw from one or more courses during the add/drop period by doing so on Student Planning. After the add/drop period, a student must contact the associate dean or registrar. A student who wishes to withdraw completely from the School of Law must submit a statement to that effect to the associate dean.

Refunds are based on Quinnipiac University Policy and the return of unearned Title IV funds as required by the U.S. Department of Education.

For purposes of clarification and for reference, the policies described below have been categorized into two groups:

- a. Quinnipiac University Policy
- b. Return of Unearned Title IV Funds — Federal Policy

Federal guidelines require that any unearned Title IV funds be returned to the program(s) that provided the aid. The required order of returning refunds is as follows: Title IV, HEA programs, other federal and state programs, university grants, private or institutional financial assistance and finally to the student. Examples of refund calculations are available upon request.

Quinnipiac University School of Law Refund Policy

The policy described below gives consideration to two groups:

- a. prior to the start of classes and
- b. after the start of classes

Refund Policies, Prior to the Start of Classes

A new incoming student who has rendered either of the \$400 or \$600 tuition deposits and then withdraws from the university will forfeit the deposits. In all instances noted above, any balance on the account, less financial aid, will be refunded.

Refund Policies, After the Start of Classes

Law students who withdraw from any of their classes after the published "Last Day for Late Registration/Schedule Changes" will not be entitled to any adjustment of their charges for tuition and fees.

Students who affect a complete withdrawal or leave of absence from the university, regardless of the reason, including medical, will be granted a pro-rata refund of tuition and fees, less an administrative fee of \$100. Late fees are non-refundable either in total or pro-rata. The prorata refunds will be computed on the following basis:

Fall and Spring Terms:

Withdrawal first week 80%
 Withdrawal second week 60%
 Withdrawal third week 40%
 Withdrawal fourth week 20%
 Withdrawal after fourth week 0%

Summer Term:

Withdrawal first week 80%
 Withdrawal second week 50%
 Withdrawal third week 30%
 Withdrawal fourth week 0%

The date of withdrawal for purposes of calculating the refund is the date on which the student makes written notice to the associate dean's office for withdrawal. No retroactive withdrawals are permitted for refund purposes. The refund schedule listed above is applied regardless of the reason for withdrawal, including medical reasons.

Dismissals and Suspensions

A student who is either dismissed or suspended by the university for any reason during either academic semester will receive a refund based on the applicable refund percentage in effect at the time of the student's dismissal or suspension (first four weeks). After the fourth academic week, the refund policy as stated above will be applied. In addition, a student who is dismissed or suspended will be charged all administrative fees and board fees as prescribed.

Payment Plan

Students using the university's payment plan who withdraw during the refund period (first four weeks) should note that their forfeiture will be computed on the full amount charged regarding tuition and fees, and not on the amount remitted via the payment plan. In addition, the \$75 service charge for using the payment plan will also be included in the list of charges. After the fourth week, the balance due under the payment plan will be due and payable on the date of withdrawal.

Return of Title IV Funds

In addition to the university's refund policy that prorates tuition charges during the first four weeks of the semester, the university is obliged to return to the federal government that portion of federal aid that is unearned. An award of Title IV funds is based on a payment period or term.

Please note: It is important to understand that if your withdrawal date is on or before the completion of 60 percent of the semester, "unearned aid" will result. If you have received a refund as a result of aid applied to your account prior to your withdrawal date, you will have a balance due the university on your student account.

A withdrawal requires the university to calculate the unearned portion of aid awarded as of the student's official withdrawal date.

The university must determine the following:

- a. The official date of withdrawal. A student must formally withdraw or request a leave of absence, in writing, to the associate dean of the law school. The date of withdrawal must be documented.
- b. The payment period, term identified.
- c. The aid that has been disbursed or could have been disbursed.
- d. The percentage of federal aid earned by the student as of the withdrawal date.
- e. The percentage of Title IV aid that has not been earned by the student.

The percentage of a payment period completed is determined by dividing the number of calendar days in the payment period into the number of calendar days completed as of the withdrawal date.

The university will notify the student if the student is eligible for a post withdrawal disbursement.

- a. The offer, (if eligible) of post withdrawal disbursement, will be made in writing within 30 days of the withdrawal date.
- b. The student must respond within 14 days of the notification.

- c. The university will disburse funds within 90 days of the date of withdrawal.
- d. If the student does not respond, no portion of the late disbursement that is not credited to the student's account will be disbursed.
- e. The student will be notified electronically or in writing of the outcome of the late disbursement.

The total amount of unearned assistance to be returned is the lesser of (a) the total amount disbursed minus the total amount earned or (b) the institutional charges time the percentage of aid unearned. The student is responsible for returning the remainder of unearned aid that is calculated by taking the total of unearned aid and subtracting the amount the university is required to return.

The student retains Title IV eligibility for 45 days during which the student must:

- a. Repay in full.
- b. Make satisfactory arrangements to repay the university.
- c. Make satisfactory arrangements to repay the U.S. Department of Education.

The university is required to report all overpayments to NSLDS and must report within 30 days after:

- a. The student takes timely action on the options offered.
- b. The student fails to repay the overpayment or sign an agreement with the university within a 45-day period.
- c. The student fails to meet the terms of the agreement signed with the school.

Title IV funds must be returned in the following order:

- a. Unsubsidized Federal Direct Loans
- b. Subsidized Federal Direct Loans
- c. Federal Direct Plus Loans
- d. Other Title IV assistance

Quinnipiac School of Law Honor Code

I. Statement of Purpose

Quinnipiac University School of Law operates under an Honor Code.¹ The legal profession is responsible for enforcing its own standards of conduct, and the School of Law operates accordingly. Law students are preparing for entry into a profession that requires ethical conduct and integrity of its members. In order for graduates to enter the profession, the school must certify that they are of good moral character. Accordingly, students at the School of Law are expected to abide by the standards of conduct contained in this Honor Code in their dealings with members of the School of Law community and in their personal affairs.

Each law student shall be responsible for the Honor Code's implementation. Students are therefore obligated not only to follow these standards of conduct, but also to take an active role in encouraging other students to respect them. As with the American Bar Association's *Model Rules of Professional Conduct*, the keystone of our Honor Code is self-regulation.

The Honor Code Committee will be responsible for administration of the Code. If in doubt as to whether past conduct triggers a duty to report under this code, students are encouraged to make appropriate

inquiries of either the committee or a faculty member designated as a "confidential adviser" for purposes of this code and obligated to keep all information pertaining to an alleged violation confidential, except as otherwise provided in subsection IV.E(3). If in doubt as to whether future conduct would constitute a violation of this code, students are encouraged to make appropriate inquiries of their professors or, if necessary, the committee. This responsibility to inquire is analogous to the one that students will have in the future, as members of the bar, to make inquiries of the appropriate bar officials if in doubt as to whether particular conduct violates applicable rules of professional conduct.

The Honor Code is based on a common law approach rather than a statutory one. That is, behavior that is impermissible is not defined in exhaustive detail. Instead, broad categories are stated, followed by examples. The broad categories of acceptable behavior refer to standards of the academic world as well as to rules and regulations of the profession and of everyday life.

II. Jurisdiction

A. Persons Subject to this Code

This Honor Code applies to every student enrolled or matriculated in the School of Law, except as provided in subsection IV.AA of this Code ("Administration of Code After Graduation or Other Separation").

B. Matters Subject to this Code

(1) This Honor Code applies to *all academic matters*, including, but not limited to:

- (a) Any work performed for a course, writing program, or seminar, such as an examination, research, or other assignment;
- (b) Any work performed in connection with participation in an activity for which credit may be given, such as law review, moot court, or clinics and externships;
- (c) Any work performed in connection with participation in law-related competitions; and
- (d) Any written or oral representation made with respect to academic achievement, such as a transcript, resume, educational record, or statement about grade point average or academic honors.

(2) This Honor Code applies to *non-academic matters* to the extent that they fall within the scope of Rule 8.4 of the ABA Model Rules of Professional Conduct.

C. Broad Construction; Overlapping Jurisdiction

This Honor Code shall be construed broadly in accordance with its Statement of Purpose. Any acts, whether undertaken within the School of Law, on university property, or elsewhere, are subject to all other applicable policies, procedures, rules, sanctions, and conditions of the School of Law and university. Thus, the institution of proceedings and results reached under this Honor Code shall not limit the authority of the School of Law or university, or its faculty or administrators, from enforcing all other applicable policies, procedures, rules, sanctions, and conditions. For example, nothing in this Honor Code shall limit the authority of: (a) the School of Law or university from acting administratively to protect public safety and the educational mission of the School of Law or university; (b) the School of Law from enforcing the Student Conduct Code; (c) the School of Law Admissions Committee from acting on any misrepresentation made in a student's application for admission; (d) School of Law faculty from lowering a student's

grade or requiring the student to retake an examination; or (e) School of Law and University administrators from enforcing the law school's Sexual Harassment Policy. Likewise, enforcement of applicable policies, procedures, rules, sanctions, and conditions by the School of Law or university, or its faculty or administrators, shall not preclude the institution of proceedings or limit the results reached under this Honor Code.

D. Relationship to Rules of Bar Examining Committees and Similar Organizations.

The disclosures and reporting obligations required by this Code (for example, the "Duty to Disclose" and the "Duty to Report" under subsections III.C and IV.E(1) of this Code, respectively) are independent of the disclosures required of students, staff, and faculty by any bar examining committee or similar organization. Nothing in this Code shall expand, limit, or otherwise control the disclosures and reporting obligations required by any bar examining committee or similar organization. For example, a student's disclosure of a criminal conviction to the dean of the School of Law ("dean") pursuant to this code does not obviate the need for the student to disclose that conviction to a bar examining committee requesting such information. Similarly, nothing in this code shall prevent the dean from making any disclosures that may be required by a bar examining committee or similar organization.

III. Standards of Conduct

A. Honesty in Use of Ideas and Information

(1) *Inappropriate use of others' work.* In contexts in which citation is expected, a student may not use the words, thoughts, or ideas of another without attribution consistent with standard legal citation manuals (e.g., *ALWD Citation Manual* or *Bluebook*), so that they seem as if they are the student's own. This type of misconduct can take many forms. The most flagrant forms include a student's copying someone else's work word-for-word or turning in a paper written by another with the student's name as the author. Other examples include, but are not limited to, rewriting someone else's work with only minor changes, summarizing another's work, or taking another person's ideas without acknowledging the source through proper attribution and citation.

Evidence that a student has inappropriately used the work of others includes, but is not limited to:

- (a) when significant sections of the paper match other sources and no attribution is given to those sources;
- (b) when any portion of the paper borrows heavily from a particular source, including the Internet — whether verbatim or paraphrased — and the source is not acknowledged; and
- (c) when a student fails to follow conventions for indicating direct quotations (e.g., when a paraphrase is too close to the original or when an actual direct quotation is not indicated). Failure to identify direct quotations is evidence of inappropriate usage regardless of whether the source is actually cited.

Students sometimes make minor mistakes in completing academic assignments. While one missing citation in a paper will, in most instances, be considered a careless mistake rather than inappropriate use of another's work, multiple instances of failing to provide proper attribution through quotation marks or citations are evidence that a student has inappropriately used the work of others. If in doubt as to

whether citation is expected or what constitutes inappropriate use of others' work, a student should consult with the professor.

(2) *Cheating.* A student may not use or attempt to use prohibited materials or sources in connection with any academic matter. If in doubt as to what materials or sources are prohibited, a student should consult with the professor.

(3) *Prohibited assistance or collaboration.* A student may not give or receive prohibited aid on any academic matter. If in doubt as to what aid is prohibited, a student should consult with the professor.

(4) *Multiple submissions.* Except as provided below, a student may not submit work that the student has done in connection with any previous academic matter as if it were new and original work, nor may a student submit the same work in contemporaneous academic matters. Although professors occasionally may be willing to let students use previous work as the basis for new work, professors expect students to do new work for each class. A student seeking to submit a piece of work for more than one class must have the express prior approval of both professors. If in doubt as to what may constitute a multiple submission, a student should consult with both professors.

B. Honesty with Respect to Academic Achievement

A student may not lie about or misrepresent the student's work, academic records, credentials, or other academic matters or information. Examples of deception and misrepresentation include, but are not limited to, forging signatures, forging letters of recommendation, forging a transcript, falsifying internship or clinic documentation, falsifying pro bono records, and falsifying information in an application or on a resume.

C. Duty to Disclose

(1) *Failing to make timely disclosure of factual irregularities, discrepancies, and material omissions in admissions application.* A student has a continuing responsibility to ensure the completeness and correctness of the student's admissions application to the School of Law by disclosing to the associate dean for academic affairs any factual irregularities, discrepancies, or material omissions in the student's application from the time the student submits the application to the School of Law until the time the student graduates. Disclosure must be made within thirty (30) business days of when the student actually or constructively knows of the irregularity, discrepancy, or omission.

(2) *Failure to make timely disclosure of charges, arrests, convictions, and formal accusations.* A student has an obligation to disclose any conviction on the student's admissions application to the School of Law. Furthermore, from the time the student submits an admissions application to the School of Law until the time the student graduates, a student has a continuing obligation to disclose to the associate dean for academic affairs any charge, arrest, or conviction, and any formal accusation that the student engaged in conduct involving dishonesty, fraud, deceit, harassment, or misrepresentation. When events requiring disclosure occur after submission of an admissions application, disclosure must be made within thirty (30) business days of such charge, arrest, conviction, or formal accusation.

D. Respect for Standards of Conduct

(1) *Failure to cooperate with administration of code.* Failure to cooperate with the administration of this code as set forth in Section IV ("Administration of Honor Code") is, itself, a violation of this code. Failure to cooperate with the administration of this code includes, but is not limited to, failing to report conduct that a student knows is a violation

of this code or making an accusation with no reasonable grounds for believing that the accused student has violated this code.

(2) *Attempting to violate or facilitating a violation of code.* A student may not attempt to violate, or knowingly help someone else violate or attempt to violate, this Honor Code. Facilitating a violation includes, but is not limited to, giving someone work product to submit as his or her own or allowing someone to cheat from one's examination, research, or assignment.

E. Fair and Equal Access to the Education Process

(1) *Misappropriation of and damage to academic materials.* A student may not damage, misappropriate, or disable academic resources so that others cannot use them. This includes, but is not limited to, removing pages from books, stealing books or articles, and deleting or damaging computer files intended for others' use.

(2) *Inappropriate use of technology.* A student may not use network or computer access inappropriately. Examples include, but are not limited to: tampering with another student's account so that the student cannot complete or submit an assignment; stealing a student's work through electronic means; knowingly spreading a computer virus; or misusing a Westlaw or Lexis account.

(3) *Compromising examination security.* A student may not invade the security maintained for the preparation or storage of examinations, tamper with exam-making or exam-taking software, identify oneself on an exam without the express prior approval of the professor, or discuss any part of an examination with a student who has not yet taken that examination but is scheduled to do so.

(4) *Unfair Advantage.* A student may not commit any act that the student knows may give the student or another student an unfair advantage or may interfere with the education process. Examples of violations of this subsection include, but are not limited to: (a) falsification of hours on a project where the number of hours is a requisite for credit; (b) use of materials in a research project which are prohibited by the written assignment instructions; (c) use of unauthorized materials in the course of preparing for or taking an exam; (d) intentional dishonesty in oral arguments for Moot Court, Trial Practice courses, or other scholastic competitions; (e) obtaining an unauthorized copy of or unauthorized information about an examination or other assignment prior to its distribution or facilitating another's attempt to do so; (f) continuing to write, edit, or otherwise work on an examination or other assignment when the time allotted has elapsed; and (g) misappropriating examinations or other assignments for any purpose after they are completed. If in doubt as to what may constitute an unfair advantage, a student should consult with the professor.

F. Compliance with Model Rules of Professional Conduct

As a prospective lawyer, a student must comply with Rule 8.4 of the ABA Model Rules of Professional Conduct. Any conduct that would bring sanctions under Rule 8.4 of the Model Rules violates the Honor Code. This includes, but is not limited to, engaging in conduct involving dishonesty, fraud, deceit, harassment, or misrepresentation; or committing a criminal act that reflects adversely on the lawyer's honesty, trustworthiness, or fitness as a lawyer in other respects. Relationship to fitness shall be construed in accordance with the Model Rules and relevant case law. Generally speaking, offenses involving violence, dishonesty, breach of trust, or serious interference with the administration of justice reflect adversely on one's fitness as a lawyer. A pattern of repeated offenses, even ones of minor significance when

considered separately, can also reflect adversely on one's fitness as a lawyer.

IV. Administration of Honor Code

A. Notice of Honor Code; Honor Code Affirmation

Notice of this Honor Code shall be provided to each student upon his or her acceptance to the School of Law. Each student who enrolls at the School of Law must affirm as follows, both verbally and in a signed writing, and before beginning classes:

"I [state name], as a student entering Quinnipiac University School of Law, understand that I am joining an academic community and am embarking on a professional career. The School of Law and the legal profession share important values that are reflected in the School of Law's Honor Code. I have read this Code and will conduct my academic, professional, and personal life to honor the values reflected therein."

B. The Honor Code Pledge

Although the Honor Code applies generally to all students' actions, the submission of examinations presents a unique opportunity to reinforce its importance. Therefore, all students shall sign the following Honor Code Pledge, using their examination number:

"On my honor, I pledge that I will follow the Honor Code regarding this examination. Specifically, I pledge that I have not given or received, and will not give or receive, prohibited assistance on this examination, and that I will neither work on nor retain this examination after the time allotted has elapsed. I understand that it is my duty to report any conduct that I know constitutes a violation of the Honor Code."

C. Honor Code Committee

The Honor Code Committee shall consist of four (4) faculty members appointed by the dean at the beginning of each academic year, and eight (8) students chosen by the Student Bar Association ("SBA"), in any manner the SBA deems suitable, at the beginning of each academic year. The dean shall designate one faculty member as committee chair.

At the beginning of the semester, the dean shall designate one (1) additional faculty member as an alternate faculty member. The alternate faculty member will serve on the committee if a faculty member on the committee becomes unable to serve for any reason. The SBA shall likewise designate one (1) alternate student to serve on the committee if a student on the committee becomes unable to serve for any reason.

D. Questions Regarding Future Conduct

If in doubt as to whether future conduct would constitute a violation of this code (e.g., whether a proposed act would constitute an unfair advantage), a student is encouraged to make appropriate inquiries of their professors or, if necessary, the committee.

E. Reporting Violations

(1) *Duty to Report.* A person who knows that a student has violated the Honor Code must report the alleged violation within a reasonable time to the associate dean for academic affairs or to any member of the Honor Code Committee. Any person who does not know – but has reasonable grounds for believing – that a student has violated the Honor Code may report the possible violation within a reasonable time to the associate dean for academic affairs or to any member of the Honor Code Committee. The associate dean or committee member (other than the Honor Code committee chair) shall not conduct an inquiry into the alleged violation but shall instead notify the Honor Code committee chair.

(2) *Inquiries of Suspected Violator Encouraged.* A student who observes or learns of an apparent violation is encouraged to make inquiries of the suspected violator. If an explanation is given that clears up the matter, i.e., the witnessing student believes there was no violation, this should end the matter.

(3) *Inquiries of "Confidential Adviser" or Honor Code Committee Members Encouraged.* A student who is uncertain whether past conduct triggers a duty to report under this code is encouraged to make appropriate inquiries of a faculty member who is designated as a "confidential adviser" for purposes of this code. A confidential adviser is obligated to keep all information pertaining to an alleged violation confidential, except that confidentiality is waived if: (a) an accused student invokes the confidential adviser's advice as a defense to an alleged violation; or (b) the alleged violation constitutes criminal conduct or a threat to public safety. At the beginning of each academic year, the dean shall designate two (2) faculty members who are not Honor Code committee members as "confidential advisers."

A student who is uncertain whether past conduct triggers a duty to report under this code may also make appropriate inquiries of the committee. Members of the committee are not confidential advisers; they have a duty under this code to report conduct they know constitutes a violation of the code.

F. Preliminary Inquiry/Reasonable Grounds Determination

Upon receipt pursuant to Section IV.E(1) of a report of an alleged Honor Code violation, the Honor Code committee chair shall conduct a preliminary inquiry to determine whether reasonable grounds exist to support the conclusion that the alleged or possible violation occurred. If the committee chair so concludes, the committee chair shall refer the matter as soon as possible to an Advocate Team, pursuant to Section IV.G. If the committee chair concludes that there are not reasonable grounds for concluding that the alleged violation occurred, the committee chair shall deem the matter concluded.

In conducting the preliminary inquiry required by this subsection IV.F, the Honor Code committee chair shall consult with the associate dean of academic affairs.

On a periodic basis, the Honor Code committee chair shall report to the Honor Code Committee on any recent matters that the chair deemed concluded after the chair's preliminary inquiry revealed no reasonable grounds for concluding that an alleged Honor Code violation had occurred.

G. Advocate Team and Faculty Adviser

The Advocate Team shall consist of two (2) students from the Honor Code Committee, both appointed by the committee chair in rotation. The Team shall be responsible for investigating alleged violations of the Honor Code; deciding whether to bring charges against the accused student; preparing and presenting the case against the accused student before a Hearing Panel; and structuring and conducting negotiations with the accused student, or with the student, private attorney, or other person assisting the accused student, after charges have been brought.

The committee chair shall also appoint a faculty member on the committee to serve as a faculty adviser to the Advocate Team. Under no circumstances shall the faculty adviser present the case against the accused student – that responsibility belongs to the Advocate Team alone.

H. Investigation and Charging Decision

The Advocate Team may investigate in any reasonable manner, including meeting with the accused student.

(1) *Request for Meeting and Advisement of Rights.* Before meeting with the accused student, the Advocate Team shall give him or her the following Request for Meeting and Advisement of Rights, in writing:

QUINNIPIAC UNIVERSITY SCHOOL OF LAW

HONOR CODE ADVOCATE TEAM

REQUEST FOR MEETING AND ADVISEMENT OF RIGHTS

As members of the Quinnipiac School of Law Honor Code Advocate Team, we are conducting an investigation into allegations that you violated the Honor Code. This is an investigation only, and no charges have been brought against you. As part of our investigation, we would like to speak with you about the alleged violations of the Honor Code.

You have the right to choose not to meet with us. If you choose not to meet with us, or if you choose to meet with us but refuse to answer questions, a Hearing Panel may treat your failure to cooperate as a basis for drawing adverse inferences.

You also have the right to have someone present at the meeting to assist you. In accordance with the Honor Code, you may secure assistance from any student, private attorney, or other individual you choose, provided that the person has familiarized himself or herself with the Honor Code. A law school faculty member, however, may not represent a student in an Honor Code matter.

If we decide to bring charges against you, anything you say at such a meeting may be used against you at an Honor Code Hearing. For the sake of convenience, we will record our meeting (if you agree to such a meeting), on a laptop.

Please complete the following and return to us no later than *[date]*. The failure to respond to this Request for Meeting in the time allotted constitutes a failure to cooperate with administration of the Honor Code and is therefore, itself, a violation of the Code. If you have any questions about this Request, please contact us immediately.

I, *[name]*, have read and understand the QUSL Honor Code Advocate Team Request for Meeting and Advisement of Rights.

Check the appropriate box(es):

I do not wish to meet with the Honor Code Advocate Team.

I wish to meet with the Honor Code Advocate Team, and

I do not wish to be represented at the meeting; or

I wish to have the following person represent me at the meeting: *[name and contact information]*.

[sign name][date]

(2) *Consultation with faculty adviser.* Before bringing or declining to bring charges against the accused student, the Advocate Team shall consult with the faculty adviser. In the event that the faculty adviser and Advocate Team cannot agree on a course of conduct, the Advocate Team shall consult with the Honor Code committee chair, whose decision shall

govern. If the chair determines that charges should be brought, the chair shall not serve on the Hearing Panel.

(3) *Decision to Bring Charges.* When the investigation discloses insufficient evidence of a violation, the Advocate Team shall promptly inform the Honor Code committee chair, in which case no charges shall be brought.

The Advocate Team may, in some circumstances and for good cause consistent with the interest of the School of Law community, decline to bring charges notwithstanding sufficient evidence of a violation. In such circumstances, the student's record shall reflect that disposition, including the Advocate Team's reasons for exercising its discretion to decline to bring charges. Factors that the Advocate Team may consider in exercising its discretion include, but are not limited to:

- (a) the severity of the violation and extent of the harm caused by the violation;
- (b) possible improper motives of the person who reported the alleged violation;
- (c) reluctance of the person who reported the alleged violation to testify;
- (d) self-reporting by the accused student;
- (e) remedial action taken by or negotiated with the accused student;
- (f) availability and likelihood of: (1) the institution of criminal proceedings against the accused student under state or federal law; or (2) the enforcement of other applicable policies, procedures, rules, sanctions, and conditions against the accused student by the School of Law or University, or its faculty or administrators; and
- (g) the likelihood that the Hearing Panel will not find that the accused student violated the Honor Code.

(4) *Advocate Team's Disclosure Materials.* As soon as possible after deciding to bring charges, the Advocate Team shall prepare and give to the chair of the Honor Code Committee its disclosure materials. These materials shall consist of: a list of the witnesses who will be called to testify against the accused student; brief (one- or two-sentence) summaries of the substance of their expected testimony; and copies of any documents to be offered in evidence against the accused student. The Advocate Team's disclosure materials shall also include a memo listing and offering to make available for examination by the accused student at a time and location to be agreed on by the parties any tangible objects to be offered in evidence, as well as any evidence known to the Advocate Team that tends to exonerate the accused student or mitigate the degree of culpability.

I. Honor Code Hearing Panel

If the Advocate Team decides to bring charges, the team shall promptly inform the Honor Code committee chair, who shall appoint an Honor Code Hearing Panel to hear and determine the matter. A Hearing Panel shall consist of one (1) faculty member from the committee and four (4) students from the committee, each appointed by the committee chair in rotation.

J. Assistance with Defense

Any student, private attorney, or other individual may – at the request of the accused student – assist the student in defense of the charges, provided that the person has familiarized himself or herself with the Honor Code. A law school faculty member, however, may not represent a student in an Honor Code matter. Moreover, any student who is not yet

licensed to practice law cannot serve as the accused student's "attorney" in connection with an Honor Code matter. Any assisting student provides such assistance as part of the educational mission of the law school and not as the practice of law. All conversations between the accused student and the person assisting the accused are confidential.

K. Information Furnished to Accused Student

As soon as possible after receiving the Advocate Team's disclosure materials and notice that the Advocate Team has chosen to charge the accused student, the Honor Code committee chair shall give the accused student:

- (1) a Written Notice of Charges, setting forth the name of the accused student, the name of the accuser or accusers, the Honor Code provision(s) allegedly violated, and the nature of the charges with sufficient particularity to enable the accused student to answer them;
- (2) the Advocate Team's disclosure materials; and
- (3) a copy of the Honor Code.

The committee chair shall give these materials to the accused student in the manner most likely to provide the student with prompt notice.

L. Information Furnished to Advocate Team

The Written Notice of Charges shall require the accused student to file with the committee chair:

- (1) A written Answer admitting, denying, or admitting in part and denying in part the charges. An Answer should contain specific admissions or denials for each allegation of fact in the charge, and shall not contain only general denials;
- (2) Disclosure materials similar to that given to the accused student – i.e., a list of the witnesses who will be called to testify on behalf of the accused student; brief (one- or two-sentence) summaries of the substance of their expected testimony; copies of any documents to be offered in evidence in support of the accused student; and a memo listing and offering to make available for examination by the Advocate Team at a time and location to be agreed on by the parties any tangible objects to be offered in evidence; and
- (3) A Written Statement of Accused responding to every allegation of fact in the charge that the accused student has denied in the Answer, and about which he or she has any information.

The Advocate Team may enter the answer, the accused student's disclosure materials, and, if applicable, the Written Statement of Accused into evidence at an Honor Code Hearing. The chair shall specify in the Written Notice of Charges a date on which these documents shall be due, but in no event shall the due date be less than ten (10) business days from the issuance of the Written Notice of Charges. The chair, upon request of the accused student and for good cause shown, may extend the time for filing these documents.

M. Continuing Duty to Disclose

If either the Advocate Team or the accused student intends to call a witness not already disclosed or offer into evidence documents or tangible objects not already disclosed, the Advocate Team or accused student will promptly make such disclosure to the other party consistent with subsections IV.H(4) ("Advocate Team's Disclosure Materials") and IV.L(2) ("Information Furnished to Advocate Team") of this Code. Likewise, the accused student and the Advocate Team shall correct

or supplement any disclosure that either side learns to be false or incomplete.

There shall be no process prior to the hearing for ruling on disputes relating to this disclosure process. The Hearing Panel may, however, treat a failure to disclose or cooperate as a basis for excluding testimony or evidence, or for drawing adverse inferences.

N. Hearing

As soon as possible following the issuance of the Written Notice of Charges, but no earlier than ten (10) business days thereafter, the Honor Code Committee Chair shall schedule a hearing date. The chair shall provide the accused with notice of the date, place, and time of the Hearing. A record of the Hearing shall be made by audio or videotape recording, or stenographic means, as determined by the chair. The Hearing shall be completed no later than the end of the semester after the one in which the violation was reported, unless the chair, upon request of the accused student or Advocate Team and for good cause shown, grants a continuance. The hearing shall be open or closed at the election of the accused student, subject to the School of Law's need to maintain order. An accused student wishing a continuance, an open hearing, or both shall notify the committee in writing at least two (2) business days prior to the hearing date.

O. Rights of Accused Student

At the hearing, the accused student shall have the following rights:

- (1) To be assisted by a student, a private attorney retained by the accused, or other individual; provided, however, that a law school faculty member may not represent an accused student in an Honor Code matter.
- (2) In person or through his or her representative, to summon and present witnesses and other evidence on his or her behalf;
- (3) In person or through his or her representative, to confront and cross-examine the accuser and all other witnesses;
- (4) To refuse to testify on his or her own behalf. If an accused student refuses to testify, or chooses to testify but refuses to answer questions, the Hearing Panel may draw a negative inference from the refusal.
- (5) To bring to the attention of the Hearing Panel any facts or circumstances that would or would appear to compromise the impartiality of a member of the Panel. Any member of the panel who knows of such circumstances, whether or not presented by the student, shall recuse himself or herself. If a panel member declines to recuse himself or herself upon request by the accused or another panel member, the dean shall make the final decision. Any recused member shall be replaced in the same manner as the member was originally appointed.

P. Evidence

Formal rules of evidence shall not apply to the Honor Code Hearing. Any oral or documentary evidence may be received, but irrelevant, immaterial, or unduly repetitious evidence may be excluded. The Hearing Panel will designate one member of the panel to rule on evidentiary matters at the Hearing. When a hearing will be expedited and the interests of the School of Law or the student will not be prejudiced substantially, evidence may be received in the form of copies and excerpts if the original is not readily available. The Hearing Panel may take notice of the records and written policies of the School of Law and of the university. The parties shall be informed of the materials the panel notices, and shall have an opportunity to contest those materials.

Q. Negotiated Settlement

After bringing charges, the Advocate Team may enter into a settlement with the accused student. Any negotiated settlement between the Advocate Team and the accused shall be subject to approval by the Hearing Panel. In the absence of an admission of an Honor Code violation by the accused, the panel may impose *conditions* pursuant to a negotiated settlement, but not *sanctions*.

R. Burden of Proof; Panel Decision

After a contested hearing, the Hearing Panel shall reach a decision regarding the existence of an Honor Code violation and the appropriate sanction or condition for any violation. The decision shall be upon a majority vote of the panel, based upon clear and convincing evidence, and communicated in writing to the student within ten (10) business days after the decision is made.

S. Summary of Adverse Decision

If the decision is adverse to the student, the panel shall, within twenty (20) business days of mailing the decision, prepare a written summary of the evidence and its findings. A copy of the summary and a record of the hearing shall be mailed to the student and given to the dean. If no appeal is taken by the student within the time limit prescribed below, the dean shall implement the sanction or condition imposed by the Hearing Panel.

T. Appeal

(1) *Timing and Content of Appeal.* The student may, within ten (10) business days after receipt of the written Summary of Adverse Decision, appeal to the dean who may affirm, reverse or remand the decision, or reduce the sanction or condition. The student must specify in writing the basis of the appeal. The dean may request a response in writing from the Hearing Panel. No new evidence shall be presented by either the student or the Hearing Panel.

(2) *Standard of Review on Appeal.* Appeals alleging factual errors shall be governed by a clearly-erroneous standard. Appeals alleging procedural errors or erroneous interpretation of the code shall be reviewed for prejudicial error.

(3) *Final Disposition.* The dean shall specify in writing the reason for any reversal, remand, or reduction. The dean's disposition of the appeal shall be final and no further appeal of the Hearing Panel's decision may be taken. This subsection represents the extent of appeal rights under this Code – there are no additional School of Law or university appeal rights under this code.

U. Petition for Rehearing

A student who has received a sanction or condition may petition the Honor Code Committee for a rehearing on the grounds of newly discovered evidence. Upon receipt of the petition, the Honor Code committee chair shall appoint an Advocate Team to consider whether the petition has merit and whether justice requires a rehearing. If the petition has merit and justice so requires, the Advocate Team shall promptly inform the Honor Code committee chair, who shall appoint an Honor Code Hearing Panel. The panel shall convene a hearing to consider the new evidence and reconsider the findings in light of the new evidence. Following such a hearing, the Hearing Panel shall enter an order affirming, modifying, or reversing its original decision and shall notify the petitioner and dean of its decision.

V. Student Witnesses

A student's refusal to give a statement or attend and testify truthfully at any Hearing upon summons by either the Advocate Team or the accused student shall constitute a violation of this code.

W. Confidentiality

(1) *General Rule.* Except as provided below, all Honor Code proceedings and accompanying information, including Advocate Team investigations, shall remain confidential to the maximum extent possible.

(2) *Exceptions to General Rule.*

(a) Confidentiality is waived if the accused student elects a public hearing or breaches this code's confidentiality provision.

(b) The Honor Code Committee shall issue Public Reports as described in subsection IV.X of this Code ("Public Reports"). Under no circumstances shall the names of any students appear in the Public Reports mandated by this code, except that the accused student may elect to have his or her own name appear in such reports.

(3) *Breach of Confidentiality.* Any breach of this confidentiality provision by any student shall be a violation of this code.

X. Public Reports

The Honor Code Committee shall issue periodic Public Reports, to be posted in the School of Law, summarizing the matters resolved by the committee in the reported period. Such Public Reports shall omit the names of all students except as provided in subsection IV.W(2)(b) ("Exceptions to General Rule" of Confidentiality). The Public Reports shall also – to the greatest extent possible – omit details about the reported matters that would risk revealing the identity of the student(s) involved.

Copies of all Public Reports shall be kept on file with the associate dean for academic affairs.

Y. Sanctions and Conditions

Sanctions and conditions that may be imposed by the Hearing Panel or dean include, but are not limited to, one or more of the following:

(1) Expulsion from the School of Law or revocation of School of Law diploma, as the case may be;

(2) Suspension from the School of Law, or any course or other School of Law-related activity, for one or more semesters, or for the balance of any semester;

(3) Withdrawal of credit in a course;

(4) Academic probation;

(5) A written reprimand;

(6) An oral admonition;

(7) Restitution;

(8) Conditions, such as mediation, referral of the accused student to the University Counseling Center, or a letter of apology or explanation of conduct.

Z. Record-Keeping

The following dispositions shall be noted in an accused student's permanent file:

(1) The Advocate Team's decision not to bring charges despite the presence of sufficient evidence of a violation and the reason for that decision, as set forth in subsection IV.H(3) ("Decision to Bring Charges");

(2) An approval of settlement by the Hearing Panel as set forth in subsection IV.Q ("Negotiated Settlement"), including any admission of an Honor Code violation by the accused student and any sanction or condition imposed;

(3) The Hearing Panel's dismissal of charges against an accused student;

(4) After the expiration of the appeal period, the Hearing Panel's determination of an Honor Code violation, and the sanction or condition imposed; and

(5) The Dean's affirmance, reversal, or remand of the Hearing Panel's determination of an Honor Code violation on appeal, and any sanction or condition imposed.

AA. Administration of Code After Graduation or Other Separation

Proceedings may be initiated or continued after the student has graduated or otherwise separated from the School of Law, provided that the alleged violation occurred while the student was enrolled or matriculated in the School of Law. If an Honor Code matter is pending when a student is scheduled to graduate from the School of Law, the student's degree may be withheld at least until the matter is resolved.

V. Periodic Review; Effective Date; No Retroactivity

The Honor Code Committee shall review this code periodically and recommend any amendments it deems necessary to ensure that this code remains consistent with the Statement of Purpose set forth in Section I of this code.

This code shall become effective on the date specified by the faculty at the time of adoption. This code, and any amendment to this code from time to time, shall be deemed to apply only to conduct occurring on or after the effective date of this code or such amendment, as the case may be.

¹ Initial version adopted by the faculty on May 2, 2012, with an effective date of September 1, 2012. Revised version adopted by the faculty with an effective date of February 14, 2018.

Policies and Procedures COVID-19 Assumption of Risk Students:

The university has taken steps to implement substantial precautions to prevent the spread of COVID-19. By entering onto the Quinnipiac University campus, the student agrees to abide by all university policies and procedures related to COVID-19. The student voluntarily and knowingly assumes the risk of exposure to or infection of COVID-19 by using the services or premises, and that such exposure or infection may result in personal injury or illness. The student also acknowledges that it is impossible to fully mitigate the risk of becoming exposed to or infected by COVID-19 and that such exposure or infection may result from the actions, omissions, or negligence of the student, university faculty and staff and other students or visitors to campus. The university will follow

all state guidelines and provide guidance on proper protection to alleviate and/or decrease the spread of viruses.

Vendors:

The university has taken steps to implement substantial precautions to prevent the spread of COVID-19. By entering onto the Quinnipiac University campus, the vendor agrees to abide by all university policies and procedures related to COVID-19. The vendor voluntarily and knowingly assumes the risk of exposure to or infection of COVID-19 by using the services or premises, and that such exposure or infection may result in personal injury or illness. The vendor also acknowledges that it is impossible to fully mitigate the risk of becoming exposed to or infected by COVID-19 and that such exposure or infection may result from the actions, omissions, or negligence of the vendor, university faculty and staff and other students or visitors to campus. The university will follow all state guidelines and provide guidance on proper protection to alleviate and/or decrease the spread of viruses.

Faculty and Staff:

The university has taken steps to implement substantial precautions to prevent the spread of COVID-19. By entering onto the Quinnipiac University campus, the employee agrees to abide by all university policies and procedures related to COVID-19. The employee also acknowledges that it is impossible to fully mitigate the risk of becoming exposed to or infected by COVID-19 and that such exposure or infection may result from the actions, omissions, or negligence of the employee, university faculty and staff, students or visitors to campus. The university will follow all state guidelines and provide guidance on proper protection to alleviate and/or decrease the spread of viruses.

Alcoholic Beverages Policy

The following Alcoholic Beverages Policy is in effect with respect to all Quinnipiac School of Law student-sponsored functions:

On-Campus Events

Except where permission has been granted by the associate dean of students, alcohol may **not** be served at student organization-sponsored events at the School of Law. Student organizations seeking to serve beer and/or wine must request permission from the associate dean of students at least two weeks in advance of the event, outlining the specifics of the event. If the associate dean of students grants permission for beer and wine to be served, special conditions may be imposed that the student organization must follow (such as a two-drink ticket system). The event is also subject to the Quinnipiac University Alcohol and Drug Policy (<http://catalog.qu.edu/handbooks/graduate/university-policies/policy-statement-prevention-alcohol-abuse-drug-use-abuse/>) and the Student Code of Conduct. (<http://catalog.qu.edu/handbooks/graduate/student-code-conduct-process/>)

Set forth below are the procedures that must be followed if/when the associate dean of students grants permission for alcohol to be served at student organization-sponsored events:

When alcohol is served at an *on-campus* School of Law event:

- a. The associate dean of students must approve the amount of alcohol purchased for each event.
- b. Alcohol may never be consumed or served in classrooms, the library, the student meeting room, student organization offices, or the Courtroom. Non-alcoholic beverages must also be available.

- c. Substantial food must be available, such as sandwiches, wraps, etc. Pretzels, potato chips and similar snack foods do not constitute a substantial food for this purpose. When the food is gone, the serving of alcohol must cease.
- d. Beer and wine are the only alcoholic beverages that may be served. Mixed drinks are not permitted. If approved for use, kegs must be closed or capped at the end of the event and removed from campus as soon as possible.
- e. **Two non-drinking representatives of the sponsoring student organization must be present where alcohol is being served.** The president of the sponsoring organization must notify the associate dean of students *prior to the event* who these two representatives will be. These students are responsible for reporting violations of the alcohol policy to the associate dean of students.
- f. The sponsoring organization **must** hire a bartender from the university's catering department (Chartwells). The bartender must be on duty for the entire length of time alcohol is dispensed.
- g. Attendance at alcohol-related events is limited to **law school students, faculty, staff and their escorted guests**. NO undergraduates are permitted at any time.
- h. The faculty adviser for the sponsoring organization or a member of the administration (dean, associate dean) must attend the event.
- i. Immediately after the event has concluded, all open bottles of alcohol must be disposed of. Unopened bottles must be placed in a locked and secure location within the law school, such as the associate dean of students office.

When alcohol is served at an *off-campus* School of Law event:

- a. Events held at off-campus establishments require the purchase of any alcohol to be made directly from the off-campus establishment. The associate dean of students may still require a two-drink ticket system be used to ensure that such purchases be limited to no more than two drinks per student.
- b. Attendance at alcohol-related events is limited to law school students, faculty, staff and their escorted guests. NO undergraduates are permitted at any time.
- c. It is the student organization's responsibility to ensure that off-campus establishments hold the appropriate municipal and state liquor licenses, as well as the required insurance. All distribution of alcohol must comply with the restrictions indicated in Connecticut law.

The sale of alcoholic beverages: No alcohol shall be sold at on-campus School of Law events.

Legal drinking age: Beer and wine may be dispensed only to individuals who are 21 and older. In accordance with Connecticut state law, alcoholic beverages shall not be dispensed to any intoxicated person.

Damages: Any damage to property incurred at events at which alcohol is served is the responsibility of the sponsoring organization.

Transportation of alcohol: The event-sponsoring organization is responsible for preventing attendees from bringing personal alcoholic beverages into the event and for preventing attendees from taking alcohol out of the event. The only exception is where alcohol is being transported by a representative of the sponsoring organization from a retail outlet to the event.

Policy violations: Violation of any of the aforementioned alcoholic beverage policies may result in the loss of privileges to the sponsoring

group or organization and the disciplinary sanctions set forth in the University Alcohol and Drug Policy and Student Code of Conduct.

COMPLAINT PROCEDURE

- a. **In general.** There are two types of complaints: those that implicate the ABA Standards for Approval of Law Schools (https://www.americanbar.org/groups/legal_education/resources/standards/) and those that do not. To determine if the substance of a complaint implicates the Standards, a student should read the Standards.
- b. **Submitting a formal complaint that implicates the Standards.** Any student at the law school who wishes to bring a formal complaint to the administration of the law school concerning a significant problem that directly implicates the school's program of legal education and its compliance with the ABA Standards should do the following:
 - A. If the complaint concerns an academic matter, submit it in writing, via Quinnipiac University email, to the associate dean for academic affairs. If the complaint concerns a nonacademic matter, submit it in writing, via Quinnipiac University email to the associate dean of students.
 - B. The writing should describe in detail the behavior, program, process or other matter that is the subject of the complaint. It should explain how the matter implicates the law school's program of legal education and its compliance with one or more specific, identified ABA Standard(s).
 - C. The writing must provide the name, official law school email address, and a street address of the complaining student, for further communication about the complaint.
 - D. The administrator to whom the complaint is submitted will acknowledge the complaint within three business days of receipt of it. Acknowledgment will be made by email.
 - E. Within 10 business days of acknowledgment of the complaint, the administrator, or the administrator's designee, shall either meet with the complaining student, or respond to the substance of the complaint in writing. In this meeting or in this writing, the student will either receive a substantive response to the complaint or information about what steps are being taken by the law school to address the complaint or to further investigate the complaint. If further investigation is needed, when the investigation is completed, the student shall be provided either a substantive response to the complaint or information about what steps are being taken by the law school to address the complaint. The response shall be provided to the student via email within 10 business days after completion of the investigation.
 - F. Appeals regarding decisions on complaints may be taken to the dean of the law school. The student may further appeal to the university's senior vice president for academic affairs. Any decision on appeal to the academic vice president shall be final.
 - G. A copy of the complaint and a summary of the process and resolution of the complaint shall be kept in the office of the dean where it was originally filed.
- c. **Submitting a complaint that does not implicate the Standards.**
 - A. If the complaint concerns an academic matter, the student should make an appointment to meet with the associate dean for academic affairs or submit the complaint via QU email.
 - B. If the complaint concerns a nonacademic matter, the student should make an appointment to meet with the associate dean of students or submit the complaint via QU email.
 - C. If the complaint is submitted at a meeting, the student may present the complaint either orally or in writing.

D. The dean to whom the complaint has been submitted shall respond to the complaint in writing to the student's QU email address within 10 business days.

E. Appeals regarding decisions on complaints may be taken to the dean of the law school. The student may further appeal to the university's senior vice president for academic affairs. Any decision on appeal to the academic vice president shall be final.

Bias, Harassment and Discrimination Policy

Quinnipiac University values diversity, multiculturalism and respect for others in an environment free from bias. The university is committed to providing a safe and respectful educational and work environment that prohibits discrimination and harassment on the basis of race, color, religion, national origin, sex, gender, (including identity and expression), sexual orientation, age or disability. Such behaviors or attitudes undermine the environment of equity and mutual respect that is essential to fulfill the university's mission.

Discriminatory or bias-related acts by students, faculty or staff will be addressed through the appropriate disciplinary processes. Any act of reprisal, interference, restraint, penalty discrimination, coercion or harassment against the university community for using these policies responsibly interferes with free expression and openness and violates this policy. Accordingly, members of the university community are prohibited from acts of reprisal against those who report incidents to the university, are involved as witnesses or otherwise try to responsibly use this policy. This policy will help to create an atmosphere in which allegations of discrimination or harassment are dealt with in a timely, private, fair and effective manner.

Title IX Policy Against Gender-Based Discrimination and Sexual Misconduct

Title IX of the Education Amendments of 1972 prohibits discrimination on the basis of sex in educational programs and activities that receive federal financial assistance. Quinnipiac University is committed to complying with Title IX and providing an educational, working and living environment free from gender or sex discrimination and sexual misconduct. Quinnipiac seeks to ensure that no student, faculty or staff member is excluded from participation in or denied the benefits of any university program or activity on the basis of sex.

Quinnipiac University School of Law affirms its commitment to an environment that is fair, humane and respectful for all members of the law school community. Behaviors at the School of Law that inappropriately assert sexuality are unacceptable and will not be condoned. Behaviors that constitute sexual harassment include unsolicited verbal, nonverbal and/or physical conduct of a sexual nature that creates an intimidating, hostile or offensive environment.

The School of Law has identified associate dean for academic affairs, Robert Farrell, and associate dean of students, Kathy Kuhar, as administrators to whom law students who believe themselves to have been subjected to harassment or discrimination as defined above may report their complaints. Where appropriate, the School of Law will first try to resolve problems without formal hearings. When such efforts are not successful, individuals have available to them a formal process, outlined further in the University's Student Handbook (<http://catalog.qu.edu/handbooks/graduate/student-code-conduct-process/>) and in the University's Title IX Policy (p. 121). In all cases, the School of Law will

protect the confidentiality of both the complainant and respondent so far as the described process permits.

Policies and Procedures for Students with Disabilities

Quinnipiac University is committed to providing equal educational opportunities and full participation for students with disabilities. Consistent with its responsibilities to comply with the Americans with Disabilities Act of 1990 (ADA) and Section 504 of the Rehabilitation Act of 1973, Quinnipiac University provides reasonable accommodations to promote equal educational opportunity. Documentation from a licensed evaluator is required to substantiate the presence of a disability, defined by the ADA as “a physical or mental impairment that substantially limits one or more major life activities,” and to establish the need for reasonable accommodations at Quinnipiac University.

Responsibilities of the student:

- a. Contact the associate dean of students at the time of enrollment so that appropriate accommodations can be made in a timely manner. The student is also responsible for reviewing the need for accommodation on a semester-by-semester basis with the associate dean of students.
- b. Provide to the associate dean of students appropriate medical, psychological, psychoeducational or neuropsychological documentation indicating the student’s disability and suggested reasonable accommodations.
- c. Provide signed consent authorizing the associate dean of students or designee to discuss the student’s need for reasonable accommodations, academic adjustments, and/or auxiliary aids with the professional(s) providing the documentation.
- d. Meet the timelines and procedural requirements established by the School of Law for scheduling exams and requesting assistance. If the student with a disability fails to provide adequate notice of the need for space and/or assistance, the associate dean of students will attempt to provide the accommodation to the extent possible under the circumstances.

Student Conduct Code

(Revised to June 2001)

Quinnipiac University’s Basic Policy and Student Code of Conduct are hereinafter incorporated by reference.

- a. **Student Discipline Committee**
A standing committee shall be appointed by the dean at the beginning of each academic year. The membership of this committee shall be at least six faculty members and four students, the latter to be chosen by the Student Bar Association in any manner it deems suitable.
The committee chairperson shall appoint one or more members of the faculty, from the committee if possible, to serve as law school advocates and one or more faculty members to serve as defense counsel. For each complaint of a possible violation of this Student Conduct Code, the committee chairperson shall assign one faculty law school advocate and one student to serve as an advocate team. All student committee members are eligible to serve as members of an advocate team. The advocate team shall be responsible for investigating alleged offenses, for preparing and presenting the case against the accused at disciplinary hearings, and for conducting negotiations with the accused or accused’s counsel, and shall have

sole discretion to decide whether or not to bring charges and whether or not to enter into negotiations. In the event that the faculty and student members of the advocate team cannot agree on a course of conduct, the faculty member’s decision shall govern.

Hearing panels consisting of one student and two faculty members selected by the chairperson shall hear and determine all cases. The committee chairperson shall select faculty members to serve on the hearing panel from the faculty in rotation, and shall select student members from the committee.

Any faculty member may serve as defense counsel, at the request of the accused student. Alternatively, the accused student may elect to be represented by a faculty member who serves as appointed defense counsel. Any faculty member representing an accused student, whether appointed or selected by the accused student, shall represent the accused student without fee and shall cooperate with retained outside defense counsel if the latter so requests.

- b. **Student Conduct Code: General Statement of Purpose**
This code shall be construed liberally in accordance with its purpose, which is to promote the highest ethical standards.
Acts of a non-academic nature, whether undertaken within the law school, on university property or elsewhere may be subject to all applicable law school and university rules and sanctions. Thus, the institution of proceedings under this code shall not preclude the institution of proceedings by the university, and the institution of proceedings by the university shall not preclude the institution of proceedings under this code. When proceedings are instituted by both the law school and the university, neither shall be ousted from jurisdiction by either the institution of proceedings or by the result reached by the other.
Nothing in these rules or procedures shall limit the authority of the School of Law or Quinnipiac University to act administratively to protect public safety and the educational mission of the School of Law or Quinnipiac University.
- c. **Violations**
The following acts are prohibited. Any student found guilty of one or more such acts shall be subject to the sanctions authorized by this code.

A. Cheating on any examination or other law school assignment, as illustrated by, but not limited to:

1. The unauthorized giving or receiving of aid or assistance;
2. The unauthorized use of information;
3. The unauthorized submission of work which has already been submitted in satisfaction of other coursework;
4. The giving or obtaining of any unfair advantage.

B. Plagiarism on papers or other law school assignments, as illustrated by, but not limited to:

1. The knowing or reckless copying or paraphrasing without proper attribution of any material written by another;
2. The knowing or reckless submission as one’s own of research assignment or papers, class work, or other projects which have been prepared in any part by another;
3. The knowing or reckless use of the exact language of another without identification as a direct quotation, by quotation marks or otherwise, even though the source is cited in the student’s work;

4. Knowledge or recklessness may be inferred from the circumstances.

C. Any act which reflects adversely upon fitness to practice law. Relationship to fitness shall be construed in accordance with the American Bar Association Rules of Professional Conduct, and relevant case law.

D. Any attempt to commit any act prohibited by this code.

d. Procedures

A. When an alleged offense is brought to the attention of the committee, or any member thereof, neither the committee nor any of its members shall conduct any inquiry, but shall instead refer the matter to the advocate team for investigation, as soon as is feasible. The team members may investigate in any reasonable manner. When the investigation discloses insufficient evidence of a violation, the case shall be dismissed at this stage with no notation in the student's record.

B. As soon as is practical after receiving notice that the advocate team has chosen to charge the accused student, the chairperson of the committee shall advise the student in writing of the name of the accuser or accusers, and of the nature of the charges with sufficient particularity to enable the student to answer them. The chairperson shall give notice in the manner most likely to provide the student with prompt notice.

The notice shall require the student to file a written answer to the charges with the committee chairperson, admitting, denying, or admitting in part and denying in part the charges. An answer should contain specific admissions or denials for each allegation of fact in the charge, and shall not contain only general denials. The chairperson shall specify in the notice a date on which the answer shall be due. An accused student shall have at least seven days from the issuance of the notice of charge in which to file an answer. The chairperson, upon request, may extend the time for filing an answer.

C. After the filing of the answer, the accused must prepare a written statement responding to every allegation which he or she has denied in the answer, and about which the accused has any information. The advocate team may enter this statement into evidence at a hearing. As soon as is practical after the filing of the statement, the advocate team and the accused shall each prepare and provide to each other a summary of the testimony of each witness, and copies or descriptions of any physical evidence. The accused and the advocate team shall correct or supplement any disclosure that either side learns to be false or incomplete. There shall be no process prior to the hearing for ruling on disputes relating to this disclosure process. The Hearing Panel may, however, treat a failure to disclose or to cooperate as a basis for excluding testimony or evidence, or for drawing adverse inferences.

D. As soon as is practical following the giving of notice of a pending charge, but no earlier than ten days thereafter, the committee chairperson shall schedule a hearing date. The chairperson shall provide the accused with notice of

the date, place and time of the hearing. The hearing shall be completed no later than the end of the semester after the one in which the committee chairperson first receives the complaint, unless the accused student, or his or her representative, requests a continuance. The hearing shall be open or closed at the election of the accused student, subject to the need to maintain order. A student wishing a continuance, an open hearing, or both shall notify the committee in writing at least two days prior to the hearing date.

E. At the hearing the student shall have the following rights:

1. To be advised and represented by the appointed defense counsel, any other faculty member, or by any attorney or representative retained by the accused, including another student;

2. To confront and cross-examine, in person or through their representative, the accuser and all other witnesses;

3. To testify;

4. To summon and present witnesses and other evidence in their behalf;

5. The student whose case is to be heard by the hearing panel may bring to its attention any facts or circumstances that would or would appear to compromise the impartiality of a member of the panel. Any member of the panel who knows of such circumstances, whether or not presented by the student, shall recuse themselves. If a panel member declines to recuse themselves upon request by the accused or another panel member, the dean of the law school shall make the final decision. Any recused member shall be replaced in the same manner as the member was originally appointed.

6. The accused student has no right to refuse to testify or give a statement pursuant to Section 4.C. unless the testimony or statement would incriminate him or her under state or federal law. If the accused refuses to testify or give a statement under this provision, the Hearing Panel may draw a negative inference from the refusal.

F. Any oral or documentary evidence may be received, but irrelevant, immaterial or unduly repetitious evidence may be excluded. The Hearing Panel will rule on evidentiary matters at the hearing. The panel shall give effect to privileges recognized by Connecticut law that do not conflict with the express provisions of this code. When a hearing will be expedited and the interests of the law school or of the student will not be prejudiced substantially, evidence may be received in written form of copies and excerpts if the original is not readily available. The panel may take notice of the records and written policies of the law school and of the university. The parties shall be informed of the matter the panel notices,

and shall have an opportunity to contest the material so noticed.

G. Any negotiated settlement between the advocate team and the accused or accused's counsel shall be subject to approval by the Hearing Panel. The panel may not impose sanctions pursuant to an agreement of the parties in the absence of an admission of guilt by the accused.

H. After a contested hearing, the panel shall reach a decision regarding guilt or innocence, and sanction. The decision shall be upon a majority vote, based upon clear and convincing evidence, and communicated in writing to the student within 10 days after the decision is made.

I. If the decision is adverse to the student, the panel shall, within 20 days of mailing the decision, prepare a written summary of the evidence and its findings. A copy of the summary shall be mailed to the student.

J. The student may, within 10 days after receipt of the written summary, appeal to the dean who may affirm, reverse or remand the decision, or reduce the sanctions. The student must specify the basis of the appeal. No new evidence shall be presented on appeal. The dean shall specify in writing the reason for any reversal or reduction.

K. Any student who refuses to attend and testify at any hearing upon summons by either the panel or the student accused, shall be guilty of a violation of this code. No witness has a right to refuse to testify or give a statement unless the testimony or statement would incriminate him or her under state or federal law.

L. Prior to a finding or admission of guilt by a panel, all proceedings and accompanying information shall be confidential, except insofar as the student may elect a public hearing. Any breach of confidentiality shall be a violation of the code, and if by the accused, shall also operate as a waiver of any obligation of confidentiality on the part of others. After a finding or admission of guilt and the expiration of the appeal period, or of the affirmance of the decision by the dean, the disciplinary matter may become public information. In the event the panel finds that the student is not guilty, the panel and/or the committee chairperson may inform the complainant and any witnesses who testified at the hearing of the outcome of the matter.

M. If the case is dismissed at any stage prior to the imposition of a sanction, or the accused is found innocent, no record of the matter shall be placed in the student's file.

N. The committee may post a public notice of its disposition of any matter, so long as the information does not violate the confidentiality provision of Section 4.L.

e. Sanctions and Their Imposition

Sanctions which may be imposed by the Hearing Panel include, but are not limited to, one or more of the following which are set forth in descending order of severity:

A. Expulsion from the law school;

B. Suspension from the law school, or any course or courses, for one or more semesters, or for the balance of any semester.

C. A grade of "F" in any course to which the offense pertains;

D. Withdrawal of credit in a course;

E. Lowering of grade in any course to which the offense pertains;

F. A retake of an examination in a course, or the doing or repetition of any work less than the entire course in such a manner and subject to such conditions as the panel shall recommend;

G. Academic probation;

H. A written reprimand;

I. An oral admonition.

J. The committee may direct restitution in addition to or as an alternative to any of the foregoing.

K. In any matter when there is a conviction or an admission of guilt and the panel has imposed a sanction, such action shall be noted in the student's permanent file. After the imposition of a sanction, the notation thereof shall not be erased from the file as a result of the student's later successful completion of certain conditions.

L. In any matter where the dean reverses a conviction, the dean shall state whether or not the reversal has the effect of a dismissal and results in the erasure of the matter from the student's permanent file.

f. Exclusions

Nothing in this code shall preclude:

A. The establishment and enforcement by the Law faculty, administration, librarian or individual instructor, of rules pertaining to the administration of exams, papers, or assignments, or the maintenance of classroom or library decorum;

B. The use of authority on the part of the instructor to do those things believed necessary to fulfill responsibilities in the classroom, including devices to promote effective class participation, to prevent disturbance of the classroom situation, and ensure punctual and regular class attendance.

STUDENT DISCIPLINE COMMITTEE

Under the Student Conduct Code, alleged violations are investigated by a team consisting of one faculty member and one student. If the team decides to bring charges, the matter is heard by a panel of two faculty members and one student, who are appointed in a rotation.

Each year, the dean appoints a committee of several faculty members, and the SBA designates at least four students to serve on the committee. Anyone having reason to believe that a student has violated the Student Conduct Code may bring the matter to the attention of the committee chair, who will assign the team to investigate the matter.

Appendix A

Complying with the New York State Bar's Heightened Experiential Requirement

The School of Law will certify that students taking the New York Bar Exam have satisfied Pathway 1 of 22 NYCRR Part 520.18(a), if they meet the following requirements:

- Completed and passed all required courses, including the four upper-level core courses; *and*
- Completed and received at least a C in LPR; *and*
- Received at least a C in each course in *one* of the following arrays of experiential courses:
 - Option A: [Total of 6 or 7 credits]
 - Introduction to Representing Clients; and
 - Either Negotiation or ADR; and
 - One of the following litigation-based simulation courses:
 - Trial Practice
 - Visual Persuasion and the Law; or
 - One of the following transactional simulation courses:
 - Commercial Transactions Workshop
 - Estate Planning and Drafting.
 - Option B: [Total 6 credits]
 - Civil Justice Clinic, for at least 4 credits; and
 - Either Negotiation or ADR.
 - Option C: [Total 7 or 8 credits]
 - Any law clinic other than Civil Justice Clinic, or any externship for at least 3 credits; and
 - Introduction to Representing Clients; and
 - Either Negotiation or ADR.

Appendix B

Compliance with ABA Standard 310

A. Classroom Courses

1. Notification in Syllabus

Every faculty member shall include in the syllabus, or other document distributed at the beginning of the course, for each classroom course taught the following language:

Standard 310 of the American Bar Association's Accreditation Standards requires that for each credit hour earned, a student must do an amount of work that reasonably approximates at least 50 minutes of classroom instruction per week and at least an average of 120 minutes of out-of-class work per week for 15 weeks. Out-of-class work includes class preparation, post-class review, outlining, time spent on written and other class assignments, meeting with study groups, meeting or otherwise communicating with the professor to discuss course-related topics, and exam preparation. The 15-week period includes one week for examinations.

In my judgment, based on the average length and difficulty of the reading assignments and the number and average difficulty of other course exercises and assignments, at least [credit hours x 2] or more hours of out-of-class work will be required on average per

week to prepare adequately for class, complete all assignments, master the course material, and perform satisfactorily on all course assessments.

At the end of the course, students will be asked to indicate approximately how much out-of-class time they have spent per week per credit hour in this course, so please be mindful of this requirement as the course progresses.

2. Course Evaluation Form

The course evaluation form for every class will include the following question:

On average, how much out-of-class time did you spend per credit hour working on this course each week? Out of-class work includes class preparation, post-class review, outlining, time spent on written and other class assignments, meeting with study groups, meeting or otherwise communicating with the professor to discuss course-related topics, and exam preparation.

The question asks how much time you spent outside of class on this course each week, on average, **per credit hour**. So, for a **3-credit** course (e.g.), you should answer "1" if you spent **less than 3 hours per week**, on average, working on the course outside of class; "2" if you spent **3-6** hours per week; "3" if you spent **about 6 hours** per week; "4" if you spent **6-9** hours per week; or "5" if you spent **more than 9 hours per week**.

- a. Less than 60 minutes (<1 hour) per credit
- b. 60–120 minutes (1-2 hours) per credit
- c. About 120 minutes (2 hours) per credit
- d. 120–180 minutes (2-3 hours) per credit
- e. More than 180 minutes (>3 hours) per credit

B. Clinical and Externship Courses

Credit for clinics and externships includes classroom and out-of-class work, with the exception of some advanced clinical courses. Hours will be computed for all classroom and out-of-class credits together, and will require an aggregate of not fewer than 45 hours per credit per semester. Classroom time for clinical courses will be determined as follows: For clinical courses with a one-credit seminar, not fewer than 12.5 hours will be scheduled as classroom seminar time for the semester, held on a periodic schedule; for clinical courses with a two-credit seminar, not less than 25 hours will be scheduled as classroom seminar time per semester, held on a weekly schedule. For any advanced clinical course without a seminar credit, students may be required to meet together with the faculty member periodically in a classroom setting, but there is no minimum classroom time.

The balance of the required hours will include the aggregate of all other obligations: case work, field work, supervision, preparation for class including reading assignments, written assignments, skill-building exercises, and administrative obligations. For all clinical courses, students will be required to perform case work and field work pursuant to a weekly schedule and to keep contemporaneous records of time spent on all tasks.

C. Journal Credits

Members of each law journal typically earn four credits for the substantive work they perform as members on the journal. The credits are earned over two years but are ordinarily awarded in the member's second year on the journal. The editors of the law journals and the law faculty have determined that the amount of time devoted to substantive

journal work that is required to earn the journal credits is not less than 45 hours per credit, for a total of not less than 180 hours. Students can elect whether or not they wish to take some or all of the credits they have earned, but shall complete journal work of not less than 180 hours in order to satisfy their membership requirements.

The tasks performed by journal members include some or all of the following:

- a. **Cite-checking;**
- b. **Writing a student note**, intended to produce a final paper of publishable quality. In the process of writing a note, each student must identify an original topic, conduct research, write multiple drafts, and coordinate with the Journals Committee and student note editors;
- c. **Issue editing:** confirming student cite-check work, performing more substantial above-the-line edits, and working with authors to finalize papers; and
- d. **Student note editing.** These duties in the aggregate require not less than 180 hours of substantive work over the course of four semesters.

With the permission of the associate dean, who shall consult with the relevant editor-in-chief, students who have completed at least 45 hours of work in their first year of membership may elect to earn one of their journal credits in the spring semester of their first year of journal membership. Students are eligible to earn the balance of the journal credits in the second year of membership. Certification of hours of work:

Each academic year, the Editorial Board of each journal shall prepare a detailed estimate of the number of hours they reasonably believe that members and editors will have to perform in order to complete assignments, for the purpose of assuring that all students will be required to perform at least 45 hours of substantive work per credit. The Editorial Board of each journal may require members to track their time spent in whatever way deemed appropriate, such as by time sheets or other means.

For any semester in which a journal member wishes to elect to earn journal credits, the editor-in-chief shall certify to the registrar and to the Journals Committee that the student has performed journal work equal to at least 45 hours per credit. For the editor-in-chief of each journal, the Journals Committee shall certify to the registrar that the editor-in-chief has performed journal work equal to at least 45 hours per credit.

D. Moot Court Credits

Students typically earn three credits for their work with the Moot Court Society. The credits may be earned over two years but are ordinarily awarded in the second year in the Society. The officers of the Moot Court Society and the law faculty have determined that the amount of time devoted to substantive work that is required to earn the Moot Court credits is not less than 45 hours per credit.

Credit 1: Intramural Credit

Students earn one credit by participating in the Quinnipiac School of Law Terrence H. Benbow Moot Court intramural competition. This requires the student to submit a 12-18 page brief and to prepare and argue both sides of the case in front of a panel of judges. At least 45 hours of work are required to earn the first Moot Court credit.

Credit 2: External Competition Credit

Students earn one credit by participating in external competitions. Each participant must submit a 25- to 40 page brief and prepare and argue both sides of the case in front of a panel of judges. At least 45 hours of work are required to earn the second Moot Court credit.

Credit 3: Coaching Credit

Students earn one credit by coaching an extramural team. This work includes the following:

- a. learning the fact pattern and legal issues and precedents;
- b. preparing participants for oral argument;
- c. supervising competition preparation with outside judges; and
- d. attending at least two oral arguments at the competition. At least 45 hours of work are required to earn the third Moot Court credit.

Certification of hours of work:

Each academic year, the Moot Court Board shall prepare a detailed estimate of the number of hours they reasonably believe that society members will have to perform in order to complete assignments, for the purpose of assuring that all students will be required to perform at least 45 hours of substantive work per credit earned. The board may require members to track their time spent in whatever way deemed appropriate, such as by time sheets or other means.

For any semester in which a society member wishes to elect to earn Moot Court credits, the president shall certify to the registrar and to the faculty adviser of the society that the student has performed substantive moot court work equal to at least 45 hours per credit. For the Moot Court Society president, the faculty adviser shall certify to the registrar that the president has performed substantive society work equal to at least 45 hours per credit.

E. Independent Research

To earn credit for Independent Research, a student must write a paper that is 20 or more pages in length, exclusive of footnotes, per credit earned. In order to produce a final work product that satisfies this requirement, a student must consult with a faculty member on the choice of topic, research the appropriateness of the topic, prepare an initial outline, complete research for the paper, write drafts of the paper, and edit the writing in consultation with the faculty supervisor. It is the judgment of the faculty that this process will require at least 45 hours per credit earned.

FRANK H. NETTER MD SCHOOL OF MEDICINE

The Frank H. Netter MD School of Medicine has been designed to be a model for educating diverse, patient-centered physicians who are partners and leaders in an interprofessional workforce responsive to healthcare needs in the communities they serve. Students from diverse backgrounds attain their highest personal and professional potential in a collaborative student-centered environment that fosters the university's commitment to academic excellence, scholarship, lifelong learning, respect and inclusivity. Accordingly, the school values:

- excellence in education that places the student at the center of the learning experience, and nurtures the student's independence as a lifelong learner
- diversity and inclusiveness in all students, faculty and staff
- a learning environment that promotes the provision of holistic, patient-centered care
- interprofessional education and service-learning experiences to promote teamwork in the care of patients
- clinical partners who support and promote the school's vision, mission and values
- social justice and the education of physicians to address healthcare inequalities
- partnerships within our community that provide students with learning and service opportunities to improve the health of the community
- advancement and support of primary care education and health services research through the school's Institute for Primary Care
- advancement of global health through the school's Institute for Global Public Health by promoting community medicine, public health and international partnerships
- advancement of rehabilitation medicine, through the school's Institute for Rehabilitation Medicine by promoting interprofessional care, services and research programs especially for wounded military personnel

Right to Modify

This Catalog is intended to serve as a convenient reference source for students. It is not guaranteed to be free from errors. Moreover, the programs, policies and courses described here are subject to continual review and reevaluation and may be changed at any time without prior notice. The School of Medicine reserves the right to modify the academic requirements, admission requirements and program of study; to change the arrangement and content of courses, the instructional material and the tuition and fees; to alter any regulation affecting students; to refuse readmission at any time; or to dismiss any student at any time, should it appear to be in the best interest of the school or student to do so. The School of Medicine also reserves the right to change the semester schedule and examination times and locations. Nothing in this Catalog should be regarded as setting terms of a contract between a student or prospective student and Quinnipiac University or its School of Medicine.

Educational Program Objectives

Care of Individual Patients (CIP)

CIP 1. Gather accurate comprehensive and focused medical histories from patients and families using patient-centered interviewing skills.

CIP 2. Correctly perform comprehensive and focused physical examinations relevant to common chief concerns.

CIP 3. Interpret common laboratory data, imaging studies and other tests in the course of routine practice.

CIP 4. Make informed decisions about diagnostic and therapeutic interventions based on patient information and preferences, using up-to-date scientific information, evidence-based reasoning, and clinical judgment.

CIP 5. Develop a differential diagnosis, a problem list, and carry out a patient management plan using problem-solving and critical-thinking skills.

CIP 6. Review, interpret and create electronic health records for optimal patient care.

CIP 7. Demonstrate proficiency with common medical, diagnostic and surgical procedures.

CIP 8. Educate patients and their families on health promotion, disease prevention and management strategies to empower them to participate in their care and enable shared decision-making.

CIP 9. Provide appropriate referral of patients including ensuring continuity of care throughout transitions between providers or settings, and following up on patient progress and outcomes.

CIP 10. Adapt patient care approaches to remote forms of care provision through telemedicine and telehealth.

Knowledge for Practice (KP)

KP 1. Apply established and emerging anatomical, biological, pathological and pathophysiological scientific concepts fundamental to health care for patients and populations.

KP 2. Discuss the fundamentals of human development and behavior throughout the lifespan, including embryology and end-of-life.

KP 3. Recognize the biological, cultural, societal and economic aspects of human nutrition in health and disease.

KP 4. Apply principles of social-behavioral sciences to provision of patient care, including assessment of the impact of psychosocial and cultural influences on health, disease, care-seeking, care compliance, and barriers to and attitudes toward care at the global, national, community, family and individual levels.

KP 5. Apply established and emerging principles of diagnostic imaging and laboratory testing to clinical problem-solving and evidence-based patient care.

KP 6. Develop a clinical question so as to effectively and efficiently gather, appraise and interpret medical evidence to apply new knowledge at the point of care.

KP 7. Apply biostatistical and critical analytical skills to interpret relevant literature.

KP 8. Explain the principles and comparative benefits of pharmacological and non-pharmacological therapeutics.

KP 9. Apply principles of epidemiological sciences and public health to the identification of health problems, risk factors, treatment strategies, resources and disease prevention/health promotion efforts for patients and populations.

KP 10. Explain and apply the principles of infection control, including but not limited to: transmission-based precautions, screening and appropriate use of personal protective equipment (PPE).

Interpersonal and Communication Skills (ICS)

ICS 1. Communicate effectively and respectfully with patients, families and the public across a broad range of socioeconomic and cultural backgrounds.

ICS 2. Communicate effectively and respectfully with colleagues within one's profession or specialty, other health professionals and health related agencies.

ICS 3. Accurately communicate patient data with other health professionals through complete, timely and organized medical records and presentations.

ICS 4. Demonstrate sensitivity, honesty and compassion in communicating medical information to patients including diagnosis, prognosis, diagnostic and therapeutic plans, ambiguity and uncertainty, and cost of care, adapting delivery to individual patients needs and literacy level.

ICS 5. Demonstrate sensitivity, honesty and compassion in difficult conversations, including those about adverse events, bad news, end of life, death, disclosure of errors and other sensitive topics, adapting delivery to individual patients needs and literacy level.

Professionalism (PROF)

PROF 1. Demonstrate compassion, honesty, integrity and respect in all interactions with patients.

PROF 2. Apply ethical principles with reference to end-of-life care, confidentiality, informed consent, conflicts of interest, disclosure of errors – in compliance with relevant laws, policies and regulations.

PROF 3. Identify patient-specific contexts and preferences including but not limited to diversity in gender, race, culture, language, age, sexual orientation, religious beliefs or ability – to implement equitable care for all patients.

PROF 4. Represent the ideals of altruism, justice and patient advocacy.

PROF 5. Demonstrate accountability to society and the profession.

Interprofessional Collaboration (IPC)

IPC 1. Identify the roles, responsibilities, training and skills of other health professionals relative to the health care needs of patients and populations.

IPC 2. Work with other health professionals, establishing and maintaining a climate of mutual respect, dignity, diversity, ethical integrity and trust to learn and take care of patients.

IPC 3. Communicate and collaborate with other health professionals in a responsive and responsible manner within a team-based care model.

Adaptive Learning and Scholarship (ALS)

ALS 1. Identify strengths, deficiencies and limits in one's knowledge, skills and/or attitudes.

ALS 2. Set specific, measurable, attainable, realistic and timely goals to plan for learning.

ALS 3. Select, engage in, and complete learning activities that address one's limits in knowledge, skills and/or attitudes.

ALS 4. Reflect upon learning progress using informed self-assessment and external feedback, and appropriately adjust learning strategies.

ALS 5. Design, implement and complete a scholarly project that is framed by and fulfills Glassick's six criteria for scholarship: clear goals, adequate preparation, appropriate methods, meaningful results, effective presentation and reflective critique.

Personal and Professional Development (PPD)

PPD 1. Use and cultivate self-awareness of knowledge, skills and emotional limitations to engage in appropriate and timely development-seeking behaviors.

PPD 2. Engage and build rapport with fellow learners, teachers and patients in physical and online learning contexts and settings.

PPD 3. Identify and maintain balance between personal and professional responsibilities.

PPD 4. Develop and demonstrate healthy coping mechanisms to respond to short-term and long-term forms of stress.

PPD 5. Practice flexibility and maturity in adjusting to change, ambiguity and uncertainty with the capacity to alter one's behavior.

PPD 6. Recognize, acknowledge and reach out if experiencing symptoms of burnout in one's self or colleagues, and demonstrate healthy coping mechanisms related to personal and patient care responsibilities.

PPD 7. Demonstrate self-confidence and ownership, in the context of ongoing responsibility, that puts patients, families and members of the healthcare team at ease.

Practice-Based Learning and Improvement (PBLI)

PBLI 1. Set learning and improvement goals.

PBLI 2. Implement continuous quality improvement practices at the individual and system level.

PBLI 3. Locate, appraise and assimilate current best evidence from scientific studies related to patients' health problems.

PBLI 4. Employ practice guidelines, clinical pathways information and value-based care principles to improve the care of individual patients and populations.

Systems-Based Practice (SBP)

SBP 1. Apply health system science to practice decisions, including political, economic, technological, value-based perspectives.

SBP 2. Incorporate cost awareness and risk-benefit analysis in decision-making about patient and/or population-based care.

SBP 3. Incorporate transferable skills and work effectively in various health care delivery settings and systems.

SBP 4. Perform administrative and practice management responsibilities to ensure ongoing quality control of practice.

SBP 5. Advocate for quality patient care, health equality and optimal patient care systems, and engage in efforts to reduce health disparities and address social determinants of health.

SBP 6. Participate in identifying system errors and consider potential systems solutions.

Community Partnership and Civic Responsibility (CPCR)

CPCR 1. Identify the resources and barriers to health of the local and regional community, and advocate for all vulnerable and marginalized populations within those communities.

CPCR 2. Apply principles of strategic partnership development from a stance of intellectual and cultural humility to understand the local and regional community.

CPCR 3. Actively engage the local and regional community by meeting (and ideally exceeding) formal graduation requirements for community service.

Candidates must have a bachelor's degree from a regionally accredited college or university, or an international equivalent degree. Permanent residents or Green Card applicants may apply. Deferred Action for Childhood Arrivals (DACA) students should contact the Admissions Office directly. We do not accept transfer students for entrance into any year.

Upper-level courses and AP credit may be used to satisfy basic requirements when applicable. Online courses of prerequisites will be considered on a case-by-case basis.

Applicants must complete a minimum equivalent of 32 semester/trimester/quarter hours of the prerequisites in biology, chemistry and physics from an accredited college or university in the United States or Canada. Coursework recommended, but not required, includes natural sciences, human physiology, genetics and cell biology, psychology, sociology, ethics, health policy, foreign language, humanities, communications or computer literacy.

- General Biology - 2 semesters/trimesters/quarters (with labs)
- General Chemistry - 2 semesters/trimesters/quarters (with labs)
- Organic Chemistry - 1 semester/trimester/quarter (with lab)
- Biochemistry - 1 semester/trimester/quarter
- General Physics - 2 semesters/trimesters/quarters
- College English/Writing Intensive - 2 semesters/trimesters/quarters
- College Math or Statistics - 2 semesters/trimesters/quarters (college algebra or above)

View detailed information about the Frank H. Netter MD School of Medicine Admission Policy (p. 652).

Vision

The Frank H. Netter MD School of Medicine will be a vibrant healthcare community that educates and nurtures diverse, compassionate physicians who promote wellness and patient-centered care for all members of society.

Mission

The Frank H. Netter MD School of Medicine is dedicated to educating current and future physicians to serve our community, as well as our profession. We accomplish this goal in a student-centered, collaborative environment that values compassionate care, integrity and inclusivity, academic excellence and scholarship, adaptability and social responsibility.

Values

- a. **Primary Care Education:** providing education focused on partnering with patients to promote health as well as first-line care and chronic disease management.
- b. **Personal and Professional Integrity:** achieving our highest potential as humans and healers by consistently acting with honesty and in accordance with strong moral values.
- c. **Academic Excellence:** creating a stimulating, student-centered environment that supports both learners and faculty to excel in their scholastic activities.
- d. **Inclusiveness and Diversity:** reflected in our students, faculty and staff and their respect of all people.
- e. **Compassion and Patient-Centeredness:** putting the patient at the center of the healthcare experience.
- f. **Social Justice:** seeking to address healthcare inequalities both locally and globally and provide all patients with equal access to care.
- g. **Scholarship:** advancing the field of medicine by promoting discovery, application, integration and dissemination of knowledge throughout one's career.
- h. **Interprofessional Collaboration:** promoting teamwork between disciplines and across institutions to deliver high-quality care.
 - i. **Community Partnership:** developing learning and service opportunities that improve the health of our community.
 - j. **Social Responsibility:** advocating to improve the broader determinants of health in the setting of finite resources.

Commitment to Diversity

The Frank H. Netter MD School of Medicine at Quinnipiac University is committed to providing an academic and work environment that respects the contributions, talent, and diverse experiences of all of our students, faculty, and staff. Our mission and core values include a commitment to diversity, collaboration, inclusivity, and mutual respect. We understand that excellence in medical education, scholarship, and the provision of clinical care is best achieved through promoting diversity in its broadest definition and maintaining an academic and work environment free of discrimination. We pledge to build and sustain a learning community where diversity is celebrated, and to foster access to medical education for learners from all segments of society. We consider inclusivity to be a responsibility of everyone in our learning environment.

Academic Calendar

Frank H. Netter MD School of Medicine Class of 2026 Y1 Calendar Academic Year 2022–23*

August 1–5	Monday– Friday	Orientation
August 8	Monday	Classes Begin
September 5	Monday	Labor Day – University closed
October 5	Wednesday	Yom Kippur – University closed

November 21–25	Saturday– Sunday	Thanksgiving Break
November 28	Monday	Classes Resume
December 17–January 2	Saturday– Monday	Winter Break
January 3	Tuesday	Classes Resume
January 16	Monday	Martin Luther King Jr. Day – University closed
March 13–17	Monday– Friday	Spring Break
April 7	Friday	Good Friday – University closed
May 27	Saturday	Break Begins

Class of 2025 Y2 Calendar Academic Year 2022–23*

August 8	Monday	Classes Begin
September 5	Monday	Labor Day – University closed
October 5	Wednesday	Yom Kippur – University closed
November 21–25	Saturday– Sunday	Thanksgiving Break
November 28	Monday	Classes Resume
December 17–January 2	Saturday– Monday	Winter Break
January 3	Tuesday	Classes Resume
January 16	Monday	Martin Luther King Jr. Day – University closed
March 31	Friday	Final Block Exam

Class of 2024 Year 3 Academic Year 2022–23*

April 25–June 3	Monday– Friday	Step 1
June 6–June 10	Monday– Friday	Orientation
June 13–July 17	Monday– Sunday	Block 1
July 18– August 21	Monday– Sunday	Block 2
August 22– September 25	Monday– Sunday	Block 3
September 26–October 28	Monday– Friday	Block 4
October 31– November 11	Monday– Friday	Exam Block LMC I
November 14– December 23	Monday– Friday	Block 5 (Thanksgiving, November 21–27)
December 24–January 2	Saturday– Monday	Break
January 3– February 5	Tuesday– Sunday	Block 6
February 6– March 12	Monday– Sunday	Block 7
March 13– April 14	Monday– Friday	Block 8

April 17–April 28	Monday– Friday	LMC II Exam Period
-------------------	-------------------	--------------------

Class of 2023 Y4 Academic Year 2022–23*

May 9–May 13	Monday– Friday	M4 Orientation
May 15– June 10	Monday– Sunday	Block 1
June 13–July 8	Monday– Sunday	Block 2
July 11– August 5	Monday– Sunday	Block 3
August 8– September 2	Monday– Sunday	Block 4
September 5– September 30	Monday– Sunday	Block 5 (Block begins on September 6 due to Labor Day)
October 3– October 28	Monday– Sunday	Block 6
October 31– November 25	Monday– Sunday	Block 7
November 28– December 23	Monday– Sunday	Block 8
December 26– January 20	Monday– Sunday	Block 9
January 23– February 17	Monday– Sunday	Block 10
February 20– March 17	Tuesday– Sunday	Block 11
March 20– April 14	Monday– Sunday	Block 12
April 17–May 12	Monday– Sunday	Block 13
May 12	Friday	Commencement

*Calendars are subject to change

Master of Medical Sciences

The Master of Medical Sciences degree acknowledges the accomplishments of students who have successfully completed the first two years of the MD program, but are unable to complete the full program. Students are eligible to apply after withdrawing from the MD program and may do so within 3 years of successful completion of the first two years of the MD program. Students are not eligible to apply directly into the Master of Medical Sciences program.

Medical Doctor

The curriculum at the Frank H. Netter MD School of Medicine prepares students to become highly qualified, compassionate and culturally sensitive doctors. No matter which medical specialty is chosen, our students learn to view your patients through the lens of a holistic physician—always with an emphasis on patient-centered care.

Throughout their four years of medical school, students work closely with faculty mentors, career advisers and clinical faculty physicians in

various medical settings. They offer assistance when choosing courses, help plan the required and elective fourth-year clerkships, and identify residency programs that align to your interests and career goals. You will learn evidence-based medicine through the integration of basic science concepts in Foundations of Medicine (FOM) and rigorous clinical training through Clinical Arts and Sciences (CAS). To reinforce critical thinking skills and self-directed learning, you will also complete a project under the guidance of a mentor in the Scholarly Reflection and Concentration/Capstone course (SRCC).

For your clinical experiences during the third and fourth year, the school has affiliations with several community hospitals in urban, suburban and rural settings. Our principal hospital affiliates are St. Vincent's Medical Center in Bridgeport, Connecticut, and St. Francis Hospital in Hartford, Connecticut. You will experience a variety of clinical work placements that help you decide on your future specialty and practice setting.

The medical school is located on the interprofessional North Haven Campus with the schools of health sciences, nursing and law. This creates a collaborative learning environment for students pursuing degrees in a multitude of healthcare professions, including physical therapy, occupational therapy and physician assistant. Our state-of-the-art facilities include an operating suite with high-fidelity simulation rooms that function as patient simulators and labs with the latest imaging equipment. Our facility includes 16 patient rooms where students practice examining simulated patients.

Medical Doctor Program of Study

The four years of the medical curriculum comprise two years of pre-clerkship foundational instruction and two years of clinical clerkships. Our curriculum is linked to our Netter Educational Program Objectives, which fit into nine categories: Care of Individual Patients, Knowledge and Scholarship, Inter-professional Collaboration, Interpersonal and Communication Skills, Professionalism, Practice-Based Learning and Improvement, Systems-Based Practice, Citizenship and Service, and Concentrated and Independent Learning.

During the first two years, the curriculum consists of three integrated courses: Foundations of Medicine (FOM), Clinical Arts and Sciences (CAS) and the Scholarly Reflection and Concentration/Capstone course (SRCC). During the clerkship years, students clinical learning is organized around the six ACGME Competencies: Medical Knowledge, Patient Care, Interpersonal and Communication Skills, Professionalism, Practice Based Learning and Improvement and Systems Based Practice.

For a visual depiction of the curriculum, see this Curriculum Map (<https://www.qu.edu/4a0fb2/globalassets/global/media/qu/documents/academics/school-of-medicine/netter-curriculum-map.pdf>).

Pre-Clerkship Years

Year 1

MED 811 - Foundations of Medicine I

Course Goal: The goal of Foundations of Medicine (FOM) I is for medical students to achieve foundational knowledge in the basic medical sciences, with an emphasis on gaining a detailed understanding of common and representative illnesses. By the end of year one, students are knowledgeable in human biology and the impact that psychological, social, cultural and economic forces have on human health. They are able to discuss the epidemiology and prevention of major medical conditions. Knowledge gained in FOM I will be revisited and expanded the following year in FOM II.

The course is divided into foundational and organ system blocks with horizontal and vertical integration across the blocks and with the other courses. The School of Medicine's longitudinal themes of pharmacology, nutrition, behavioral and social sciences, biomedical ethics and epidemiology also are integrated throughout the curriculum as they relate to specific organs and diseases throughout each block.

The course is taught through a variety of teaching methods including lectures and small group events that employ case-based learning activities. Dissection-based anatomy is integrated across all of the organ system blocks in the first year.

MED 812 - Clinical Arts and Science I

Clinical Arts and Sciences (CAS) I is an innovative introduction to clinical medicine course that aims to teach foundational clinical skills in a safe, collaborative environment incorporating experiential learning in both simulated and real clinical settings. CAS has two sections providing up to 6-8 hours of curricular activity each week.

Foundations of Clinical Care (FCC): This section is dedicated to teaching clinical skills, predominantly in a small group setting of eight students and two experienced physicians. Students learn patient-centered interviewing, history taking, communication and physical examination. Medical documentation and oral presentations are emphasized throughout the academic year. Clinical reasoning and advanced communication skills are introduced in semester two. Basic procedural skills training, telemedicine training, and interprofessional activities centered around ultrasound training also provide significant experiential learning opportunities.

Simulated practice with standardized patients (SPs) is one of the predominant features of this section of the course. Student knowledge of clinical skills is assessed via formative objective structured clinical examinations (OSCEs) on a monthly basis and with a summative OSCE at the end of the academic year. Faculty complete a summative evaluation of student performance each semester. The course also encourages learners' understanding of professionalism and professional identity formation with self-assessments such as video review and goal setting opportunities, in addition to peer feedback and feedback from the SPs and faculty.

Medical Student Home (MeSH): This section pairs a medical student with a practicing community physician with the purpose of providing each medical student with a supervised environment to practice the foundational clinical skills learned in FCC. Students spend one afternoon a week, 4 hours at a time, in the physician's office-based practice. Physicians directly observe students interview and examine patients. Physicians provide formative feedback through a workplace-based assessment program. A summative faculty evaluation of students is also completed.

MED 813 - Scholarly Reflection & Concentration Capstone I

Course Goal: Scholarly Reflection and Concentration/Capstone (SRCC) is a four-year course focused on seven core domains: Evaluating Information Sources, Critical Appraisal of Literature, Interacting with and Interpreting Data, Self-Reflection, Personalized Curriculum, Responsible Research Practice, and Scholarship.

SRCC allows learners to personalize their curriculum and prepare for scholarly endeavors during residency and future practice. They self-design and execute a capstone project in an area they are passionate about. Learners use narrative medicine and mentoring to develop

personally and professionally. They gain both conceptual understanding and practical skills in research methods, epidemiology, medical informatics, biostatistics, evaluating information sources, and critical appraisal of medical literature. The information presented in this course is integrated whenever possible with material in the Foundations of Medicine and the Clinical Arts and Sciences courses, to enable learners to apply biostatistics, epidemiology, and medical informatics to community and public health, medical literature interpretation, and clinical decision-making.

Year 2

MED 821 - Foundations of Medicine II

Course Goal: Building on the foundation provided by the FOM I curriculum, the goal of FOM II is for medical students to attain essential knowledge and skills related to the pathophysiology and epidemiology of diseases. In addition, students develop a broad understanding of treatment paradigms for common medical disorders. The longitudinal themes of behavioral and social sciences, biomedical ethics, epidemiology, pharmacology and nutrition are interwoven into curricular content in FOM II.

Problem Based Learning (PBL) is a major instructional component in FOM II and integrates active and self-directed learning with the development of clinical reasoning skills in the assessment of patient symptoms, signs and laboratory findings. Collaborative and professional participation in this activity are essential components of PBL.

MED 822 - Clinical Arts and Science II

Clinical Arts and Sciences (CAS) II is an innovative introduction to clinical medicine course that aims to teach foundational clinical skills in a safe, collaborative environment incorporating experiential learning in both simulated and real clinical settings. CAS has two sections providing up to 6-8 hours of curricular activity each week.

Foundations of Clinical Care (FCC): This section is dedicated to teaching clinical skills, predominantly in a small group setting of eight students and two experienced physicians. Students build upon the skills they learned in CAS I. Clinical reasoning becomes a central component of the course in year two, with monthly instructional sessions that are well integrated with the foundational topics being covered in the FOM course. Sessions are also dedicated to advanced physical examination techniques as well as advanced communication skills such as delivering unwelcome news and sharing medical information. Medical documentation and oral presentations continue to be emphasized throughout the academic year with a focus on assessment and plan in CAS II. Basic procedural skills training, telemedicine and interprofessional activities centered around ultrasound training also provide significant experiential learning opportunities.

Simulated practice with standardized patients (SPs) is one of the predominant features of this section of the course. Student knowledge of clinical skills is assessed via formative objective structured clinical examinations (OSCEs) on a monthly basis and with a summative OSCE at the end of the academic year. Faculty complete a summative evaluation of student performance each semester. The course also encourages learners' understanding of professionalism and professional identity formation with self-assessments such as video review and goal setting opportunities, in addition to peer feedback and feedback from the SPs and faculty.

Medical Student Home (MeSH): This section pairs a medical student with a practicing community physician with the purpose of providing each medical student with a supervised environment to practice the foundational clinical skills learned in FCC. Students spend one afternoon a week, 4 hours at a time, in the physician's office-based practice. Physicians directly observe students interview and examine patients. Physicians provide formative feedback through a workplace-based assessment program. A summative faculty evaluation of students is also completed.

MED 823 - Scholarly Reflection & Concentration Capstone II

Course Goal: Scholarly Reflection and Concentration/Capstone (SRCC) is a four-year course focused on seven core domains: Evaluating Information Sources, Critical Appraisal of Literature, Interacting with and Interpreting Data, Self-Reflection, Personalized Curriculum, Responsible Research Practice, and Scholarship.

SRCC allows learners to personalize their curriculum and prepare for scholarly endeavors during residency and future practice. They self-design and execute a capstone project in an area they are passionate about. Learners use narrative medicine and mentoring to develop personally and professionally. They gain both conceptual understanding and practical skills in research methods, epidemiology, medical informatics, biostatistics, evaluating information sources, and critical appraisal of medical literature. The information presented in this course is integrated whenever possible with material in the Foundations of Medicine and the Clinical Arts and Sciences courses, to enable learners to apply biostatistics, epidemiology, and medical informatics to community and public health, medical literature interpretation, and clinical decision-making

Clerkship Years

Year 3

In July 2020, the Netter School changed its clerkship model for third-year students to a LMC. Most of the student will participate in this model; a select group of students will have the option to participate in a longitudinal integrated clerkship in Maine (see MED 837).

MED 839 - Longitudinal Multi-specialty Clerkship (LMC)

The LMC is designed to ensure a robust, flexible learning experience by combining core specialties into "clinical clusters" with shared academic half days. There is also an integrated block, where students get additional clinical experiences in each core specialty as well as exposure to areas such as radiology, anesthesiology, neurology, outpatient medicine and other subspecialty electives. Students also have dedicated time for their Capstone scholarly project in this block. The LMC model includes a longitudinal curriculum of didactics that covers the core content for each specialty along with cross-cutting curricula in narrative medicine, clinical reasoning and health systems science, including health equity.

The third year comprises in-depth clinical experiences in six core specialties: primary care, internal medicine, pediatrics, psychiatry, obstetrics and gynecology, and general surgery. Students receive training in both ambulatory and inpatient settings where they learn through direct patient care as well as teaching attending rounds, lectures and case discussions. Our principal hospital affiliates are St. Vincent's Medical Center in Bridgeport, Connecticut, Waterbury Hospital and Connecticut Children's and St. Francis Hospital in Hartford, Connecticut. We also have affiliations with several community hospitals and numerous outpatient practices in urban, suburban and rural settings. The variety of clinical settings enables students to see a broad range of patient presentations

and determine where they envision practicing in their residency and beyond.

Assessment of students includes clinical evaluations, direct observation with feedback, teaching attending evaluations, national board exams, self-assessments, Objective Structured Clinical Exams, and additional specialty-specific assessments. Students receive regular feedback throughout each clinical cluster and take practice board exams. Students receive two weeks of dedicated study time at the end of each cluster to prepare for the specialty specific national exams. All students will take USMLE® Step 1 before starting their fourth year clinical rotations.

Cluster A

Internal Medicine/Primary Care/Surgery/Integrated Block

5 weeks each

Cluster B

Ob-Gyn/Pediatrics/Psychiatry/Integrated Block

5 weeks each

MED 837 - Longitudinal Integrated Clerkship

The Maine Longitudinal Integrated Clerkship is designed for students who are committed to the care of rural communities. A select group of third-year medical students complete an innovative curriculum of integrated clinical experiences that are designed to treat the whole patient and family across a continuum of care. They work at Northern Maine Medical Center, a modern, fully accredited, 49-bed hospital offering complete obstetric, surgical, pediatric and general medical services. It also provides a state-of-the-art, six-bed intensive care unit for critically ill patients and offers the only child, adolescent and adult inpatient psychiatric units in northern Maine. The center belongs to the 15,000 people in the hospital's service area, the Upper St. John Valley and neighboring communities.

The flexibility and personalized nature of the Maine rural program enables students to tailor their learning. Building on a strong, mentoring foundation of faculty-to-student relationships makes it possible to create a customized patient care experience. Each week, the students have four days of structured and comprehensive educational content in various clinical formats that will address each of the six core clerkships: primary care, inpatient medicine, pediatrics, psychiatry, obstetrics and gynecology, and general surgery. They will also have a half day of didactics and a half day of open space for scholarship or personal needs, and regular clinical exposure in the emergency room setting.

Year 4

Students will complete a four-week required selective in emergency medicine or critical care, a sub-internship and electives. Students will also complete and present their Capstone project and take the USMLE® Step 2 Clinical Knowledge examination. There is ample time to meet with career advisers and work on residency applications and interviews during this year. At the end of the year, there is an optional residency prep course to ensure readiness for intern year.

MED 841 - Emergency Medicine

By the end of the four-week Emergency Medicine clerkship, students should be able to gather information, formulate differential diagnoses, and propose evidence-based management for patients with common presentations in an Emergency Room setting. They will learn to recognize emergent medical conditions and initiate stabilization plan as

well as demonstrate proficiency with basic procedural skills. Students will demonstrate knowledge in managing the following conditions: chest pain, shortness of breath/respiratory distress, abdominal/GI emergencies, fever/infections/sepsis, endocrine/electrolyte emergencies, altered mental status, trauma, intoxication, psychosis/agitation, stroke/TIA, critical patients requiring ACLS, and pediatric acute concerns.

MED 842 - Critical Care

By the end of the four-week Critical Care clerkship, student should be able to gather information, formulate differential diagnoses, and propose evidence-based management for patients with common presentations in an intensive care setting. Students will learn to provide direct care to patients with critical illness and injury, including life threatening multi-system organ failure. By the end of this rotation, students should demonstrate knowledge in managing the following conditions: shock, acute respiratory failure, acute renal failure, acute GI hemorrhage, diabetic ketoacidosis/hyperosmolar hyperglycemic state, strokes/seizures, sepsis, healthcare associated infections, and end of life care/delirium. They will also learn the skills of resuscitation, laryngoscopy and intubation techniques, ventilator management and basic bedside procedures.

MED 844 - Internal Medicine Sub I

In the four-week Internal Medicine Sub-Internship, students will provide autonomous patient care to hospitalized patients to develop competence and readiness for clinical practice as an intern. Students will be an integral part of the team and will actively participate in care transitions for patients including admission, transfer between services, sign-outs between various teams, and discharge from the hospital, as well as cross-coverage roles. At the end of the Internal Medicine Sub-Internship clerkship, each student should be able to gather information, formulate differential diagnoses, and propose evidence-based management for patients with common conditions in an inpatient care setting, including but not limited to the following: atrial fibrillation, COPD/asthma exacerbation, acute/chronic/end stage renal disease, electrolyte disorders, community acquired pneumonia, GI bleed, stroke, and alcohol withdrawal.

MED 845 - Pediatric Sub I

The Pediatric Sub-Internship is a four-week inpatient experience that serves as a bridge between the Pediatric Clerkship and Pediatric Residency. During this rotation, students will learn to take a history in a more targeted manner than in third year, organize their work, formulate a differential diagnosis and a therapeutic plan and implement it while engaging in self-directed learning. By the end of the sub-internship, students should be able to describe the epidemiology, pathophysiology, clinical findings, diagnostic evaluation and management of common pediatric conditions that require hospitalization including but not limited to: surgery-requiring conditions, respiratory distress, gastrointestinal illnesses, dermatological disease, endocrinological emergencies, electrolyte imbalance, sepsis/fever, and central nervous system disorders.

MED 846 - Surgery Sub I

The Surgery Sub-Internship is a four-week inpatient based experience to develop the skills required to diagnose and begin to manage surgical conditions as a surgical intern. The primary focus of the Surgery Sub-I is to foster student development through direct patient care, on the fly learning, exposure to increased complexity of patient conditions, and independent study. Students will formulate comprehensive assessments,

diagnostic and therapeutic plans for common acute and chronic surgical conditions, demonstrate the ability to perform common and necessary surgical skills and work collaboratively to coordinate surgical patient care in a variety of health care delivery settings. The final grade for the rotation will be assigned by the clerkship director using the clinical assessment summary provided by the site director and in consultation with the supervising attending physicians.

MED 847 - Family Medicine Sub I

The Family Medicine Sub-Internship is a four-week long primarily in-patient experience, blended with a few half days of out-patient experience, to develop competence and readiness for clinical practice as a family medicine resident. Students actively participate in care transitions for hospitalized patients including admission, transfer between services, sign-outs between various teams, and discharge from the hospital, as well as cross-coverage roles. Students are expected to provide high-value, evidence-based care for patients with common family medicine conditions including but not limited to: abdominal pain, acute kidney injury, chest pain, congestive heart failure, diabetes mellitus, electrolyte imbalance, hypertension, sepsis, shortness of breath and urinary tract infections.

MED 861 - OB-GYN Sub I

The Obstetrics & Gynecology Sub-Internship is a four-week experience either on the Maternal Fetal Medicine (MFM) or the Gynecology Oncology service. Students will work in both inpatient and outpatient settings and participate as an integral member of the team. Students on the MFM service will learn about the care of high-risk ob-gyn patient conditions including but not limited to: gestational diabetes mellitus, fetal macrosomia, premature rupture of membranes, critical care in pregnancy, multifetal gestation, fetal aneuploidy and prenatal diagnosis of genetic disorders as well as learn ultrasound in pregnancy. Students on the Gynecology Oncology rotation will learn about the care of patients with gynecology malignancies including symptoms, presentation, and diagnosis; treatment and outcomes, including pelvic surgery, radiation and chemotherapy; and post-operative, inpatient, and outpatient management. Students will improve their basic procedural and surgical skills during this rotation to prepare them for internship.

MED 862 - Psychiatry Sub I

The Psychiatry Sub-Internship is a four-week experience designed to give medical students an opportunity to integrate their academic knowledge and clinical experience into practice on both the adult and child/adolescent inpatient units. The goal is to provide future physicians the opportunity to treat a variety of patients with a diverse range of mental illness to develop competence in diagnosing and treating mental illness across the spectrum. By the end of this sub-internship, students will be able to develop an empathic doctor-patient relationship, conduct a clinical interview and perform a complete mental status exam, apply basic science knowledge of neurobiology and psychosocial experiences in the pathogenesis and treatment of psychiatric illnesses, formulate a diagnosis based on DSM-V, understand the different treatment approaches of major psychiatric syndromes, and practice as an effective team member in a multi-disciplinary team.

Electives

Students take a minimum of 28 weeks of electives of their choice. Electives can be taken at the Netter School of Medicine or students can participate in away rotations—internationally or domestically as available and meeting criteria. Electives encompass diverse patient care experiences as well as skills development in areas such as teaching or

leadership. Custom electives are also an option, subject to approval. Elective choices vary depending on site availability.

Accreditation

The medical school is accredited by the Liaison Committee on Medical Education. The LCME is jointly sponsored by the Association of American Medical Colleges (AAMC) and the American Medical Association (AMA).

Technical Standards

Quinnipiac University is committed to admitting qualified applicants without regard to race, ethnicity, age, national or ethnic origin, disability, gender identity, sexual orientation, marital status or religion. Qualified applicants to the Frank H. Netter MD School of Medicine are individuals who demonstrate the cognitive and physical abilities, and behavioral and communication skills required to complete a rigorous curriculum and meet certain technical standards for medical students and physicians. The MD degree signifies the acquisition of general knowledge in the fields necessary for the practice of medicine. A graduate of the Frank H. Netter MD School of Medicine of Quinnipiac University must have the knowledge and skills to function in various clinical settings and to provide a wide spectrum of care.

In order to acquire the requisite knowledge and skills, students must possess both sensory and motor abilities that permit them to accomplish the activities described in these standards, with or without reasonable accommodations. A student must be able to effectively process information through their sensory functions, with or without a reasonable accommodation, and do so consistently, rapidly and accurately. Students must be able to learn, integrate, analyze and synthesize data.

Providing care for patients' needs is essential to the role of a physician and comprises a significant component of training. A student must be able to tolerate physically challenging workloads and function under stress. The responsibilities of medical students may require their presence and attention during daytime and nighttime hours.

A student in the School of Medicine must be able to meet the following standards, with or without a reasonable accommodation:

1. Observation

Students must have sufficient visual ability to be able to observe patients accurately from a distance and close at hand. They must be able to observe and participate in laboratory exercises and demonstrations. They must be capable of viewing and developing the skills needed to interpret diagnostic modalities. Students must be able to obtain a medical history and perform a complete physical exam, including detecting and interpreting non-verbal communication such as change in posture, body language, mood and facial expressions demonstrated by patients.

2. Communication

Students must be able to communicate effectively, in both written and oral English, and must be able to speak with and comprehend patients, their families, and other members of the healthcare team. Students must be capable of establishing rapport with patients and families. Students must be able to compose and record information accurately and clearly.

3. Motor and Sensory Function

Students must have sufficient motor and sensory function necessary to conduct a routine history and physical examination, differentiate normal from abnormal findings, and document their findings. Students must have sufficient motor function in order to conduct movements required

to provide general care and emergency treatment to patients according to acceptable medical practices. Students must have sufficient motor ability to access and perform at clinical sites required for mandatory experiences.

4. Intellectual, Conceptual, Integrative and Quantitative Ability

Students must have sufficient cognitive abilities to master the body of knowledge comprising the curriculum of the School of Medicine. They must be able to recall large amounts of information, perform scientific measurements and calculations, and understand and learn through a variety of instructional modalities including but not limited to: classroom instruction, small group discussion, individual and self-directed study of materials, preparation and presentation of written and oral reports, peer review and assessment, as well as use of computer-based technologies. Students must demonstrate reasoning abilities necessary to gather, analyze, synthesize and integrate information from varying sources efficiently and effectively. They must be able to measure and calculate accurately and be able to perceive 3D relationships and understand the spatial relationships of systems.

5. Attitudinal, Behavioral, Interpersonal and Emotional Characteristics

Students must have the capacity to learn and understand ethical principles, professional standards for physicians, and state and federal laws governing the practice of medicine. Students must demonstrate the maturity, emotional stability and sensitivity required to form effective relationships with patients, faculty, staff, colleagues and all members of the healthcare team. They must exhibit honesty, integrity, self-sacrifice and dedication.

Students must have the capacity to effectively communicate with and provide care, in a non-judgmental manner, for individuals whose culture, spiritual beliefs, physical or mental abilities, sexual orientation or gender expression differ from their own. They must be able to examine the entire patient, male and female, regardless of their social, cultural or religious beliefs. Students must have the capacity to develop the requisite skills needed to identify personal biases, reactions and responses as well as recognize differing points of view, and not allow personal attitudes, perceptions or stereotypes to compromise patient care.

Students must be of sufficient emotional and mental health to utilize fully their abilities, exercise sound judgment and complete educational and patient care responsibilities safely, effectively, and with courtesy, compassion, and respect. They must be capable of modifying their behavior in response to feedback and evaluation. Students must exhibit adaptability and be able to work effectively under stress and tolerate an often physically taxing workload. Individuals whose performance is impaired by abuse of substances, including alcohol, are not suitable candidates for admission, promotion or graduation.

6. Ethical and Legal Considerations

Candidates for admission must meet the legal standards to practice medicine in the State of Connecticut. Candidates must therefore provide written explanation of any felony offenses or disciplinary actions taken against them prior to matriculation, and commit to notifying the associate dean for student affairs immediately in the event of conviction of any felony offense while a student of the School of Medicine. Serious instances of unethical conduct or conviction of a felony offense, or the failure to disclose such conduct or felony offense, may lead to disciplinary action by the School of Medicine, including dismissal.

The Frank H. Netter MD School of Medicine will consider any candidate who demonstrates the ability to perform the skills specified in these technical standards, with or without reasonable accommodation. Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 address the provision of services and accommodations for qualified individuals with disabilities. Services for students with disabilities are provided to qualified students to ensure equal access to educational opportunities, programs and activities in the most integrated setting possible. In the consideration of students for admission and in the training of students for the MD degree, it is essential that the integrity of the curriculum be maintained, that elements of the curriculum considered necessary for the education of a physician be preserved and that the health and safety of patients be considered vital. The use of a trained intermediary is not acceptable in clinical situations as judgment is mediated by someone else's power of selection, observation and interpretation. As such, students must be able to perform in an independent manner with or without such accommodations.

Students who are interested in requesting accommodations are instructed to take the following steps:

- Submit a completed Accommodation Request Form for Students with Disabilities (found on the university website) to the university Office of Student Accessibility
- Provide current, supporting documentation from a licensed physician, psychologist, or other appropriately credentialed evaluator.
- Candidates for the MD degree will be assessed on a regular basis by the Office of Accessibility according to the academic and Technical Standards of the School of Medicine on their abilities to meet the curricular requirements.
- The Office of Accessibility will work with the School of Medicine associate dean for student affairs who, in concert with course and clerkship directors, will ensure that reasonable accommodations are in place.

Students must complete the following requirements to be eligible for graduation from the School of Medicine:

- Obtain a satisfactory grade in each course
- Successfully complete Scholarly Reflection & Concentration Capstone course including the concentration/capstone project
- Successfully complete the Year 3 and Year 4 clerkships and electives
- Pass USMLE® Steps 1 and 2 CK
- Complete the Frank H. Netter MD School of Medicine's interprofessional education, community service and service learning requirements
- Demonstrate the personal, professional and ethical attitudes and behaviors expected of a physician graduate of the Frank H. Netter MD School of Medicine

Students must complete the requirements of each academic year within a two-year period, but must complete the curriculum and meet all graduation requirements within a six-year period. Additional time to complete the curricular requirements may be stipulated as part of an accommodation made under the provisions of the Americans with Disabilities Act. Approved leaves of absence (refer to section XIX. Leaves of Absence) do not count toward time needed to complete curricular requirements. The Promotions and Performance Standards Committee

has the discretion to determine whether portions, or all, of an academic year are counted toward this requirement.

Netter School Code of Conduct On Professionalism

In order to uphold the mission and aims of the Frank H. Netter MD School of Medicine at Quinnipiac University, students, faculty and staff are given the responsibility of conducting themselves in a manner that positively reflects the School of Medicine and the interests of patients. As such, the standard of professionalism is defined by our interactions with colleagues, commitment to excellence in theory and in practice, courteous behavior between colleagues, faculty, administration, patients, and community partners, and maintenance of accountability, effective communication, presentation to others, consistency in work, and commitment to adhering to the standards and guidelines enumerated in the Netter School of Medicine Code of Conduct.

The Code of Conduct for the Frank H. Netter MD School of Medicine is based on the following principles.

- Compassion
- Duty
- Honesty
- Integrity
- Respect
- Professionalism

All members of the School of Medicine, including faculty, students and staff are expected to abide by the standards articulated in this Code of Conduct as well as current university policies and procedures. Faculty, administration, students and staff are expected to recognize and address violations of the Code of Conduct. Violations of the Code of Conduct may result in submission of Reports of Concern and/or lead to review by the Professionalism Board and/or other disciplinary actions.

I. GENERAL STANDARDS

Conduct of Faculty, Administrators and Staff

- Members of the School of Medicine shall perform their duties in a fair and ethical manner in accordance with established policies, procedures and regulations.
- Members of the School of Medicine shall carry out their duties with professionalism, and in accordance with the guiding principles of this Code of Conduct.
- Supervisors and administrators shall provide equal opportunity and access to the school's programs, benefits and services.
- Supervisors and administrators shall demonstrate compliance with the Code of Conduct within their unit.
- Inappropriate personal relationships between supervisors and those they supervise are prohibited.

Civility

- Members of the School of Medicine shall promote a spirit of civility and collegiality that allows open and constructive intellectual debate.
- Members of the School of Medicine have a responsibility to treat each other with consideration and respect. Administrators and supervisors have an elevated responsibility to demonstrate these behaviors and to promote their expression in the workplace.
- Engaging in behaviors that harass, intimidate, bully, threaten or harm another member of the School of Medicine, or other members of

the community with whom we learn and/or provide patient care, undermine a respectful and civil work environment, and are expressly forbidden.

Non-Discrimination

- Members of the School of Medicine are dedicated to fostering a safe working and learning environment for all; all forms of discrimination and acts of intolerance including, but not limited to, sexual harassment, intimidation and retaliation, are condemned.

Harassment

- Members of the School of Medicine are dedicated to fostering a safe working and learning environment for all, and condemns all forms of discrimination and acts of intolerance including, but not limited to, sexual harassment, intimidation and retaliation.

Confidentiality

- Members of the School Medicine respect and maintain the confidentiality of faculty, staff, patient, student and research records in accordance with university and clinical site policies and procedures, state regulations and federal laws.

Attire

- All students shall familiarize themselves with the Dress Code policy set forth in Section XVII of the Academic Policies ("the Dress Code Policy"). Students should remain cognizant that the Dress Code Policy is in place to ensure (i) patient and student safety; (ii) patient comfort; and (iii) general standards of professionalism. The Dress Code Policy applies to clinical sites, CAS events where standardized patients are present or any other event where faculty explicitly advises students that students shall dress in accordance with the Dress Code Policy. If a student violates the Dress Code Policy, such student shall be informed of such violation by a faculty member. Additionally, students may inform their fellow students of their concerns regarding violations of the Dress Code Policy by either speaking directly with the student or by submitting a Report of Concern.

Timeliness/Punctuality

- Students should be prepared and ready to participate at the start time of all events. Accordingly, students should strive to arrive at least five minutes prior to the stated session start time to ensure that they have had time to unpack and are ready to actively participate when the event begins. This punctuality will add to the respectful, professional and cooperative learning environment one's peers and faculty deserve. Arriving late to a required event is both disruptive and disrespectful to fellow learners. As such, arriving after the start time of a required event would be considered a violation of the student Code of Conduct.
- Similarly, faculty should begin educational events on time. Unless otherwise noted, educational events in the pre-clerkship curriculum conclude 10 minutes prior to the hour.
- Students will complete educational tasks/assignments by the prescribed deadline.

Computer/Telecommunications Use

- Employees, students and volunteers are provided with access to the university's computer and telecommunication networks to allow them to carry out the functions of the institution, and are responsible for the appropriate use of these resources.
- The members of the School of Medicine understand, support and abide by the policies concerning the ethical and responsible use of computers and electronic information at Quinnipiac University.

- Students at clinical sites abide by the site policies concerning the ethical and responsible use of computers and electronic information.

Regulatory Compliance

- Members of the School of Medicine strive to ensure that they meet the highest possible standards wherever relevant federal, state and local regulations, laws and guidelines apply.

Health and Safety

- Members of the School of Medicine are responsible for complying with all workplace safety and health regulations and will report unsafe conditions, equipment or practices to appropriate School of Medicine, university or clinical site officials.
- Members of the School of Medicine should not participate in academic activities, including patient care (simulated or real), under the adverse influence of psychotropic substances (including alcohol), whether prescribed or non-prescribed; or if they are otherwise impaired such that it would affect the safety of patients or others.

Conflict of Interest

- Medical professionals on occasion engage in activities where there may be a real or perceived conflict of interest. A conflict of interest is defined as a situation when a reasonable observer may perceive that a member of the School of Medicine, or a family member, is acting based on personal interests or gain rather than their obligations to the School of Medicine and/or university. Members of the School of Medicine, and their immediate family, should avoid or minimize real and perceived conflicts of interest whenever possible. If faced with a potential conflict of interest, members of the School of Medicine will disclose the nature of the conflict to the appropriate administrator or supervisor, and a plan for managing the conflict of interest must be developed.
- Members of the School of Medicine will not accept gifts from any person or entity that is seeking to do business with the School of Medicine, the university, or clinical site when such gifts are intended or may be perceived to secure or influence a business relationship.
- Members of the School of Medicine should not accept gifts from any person or entity that may be viewed as seeking preferential treatment; that may cross professional boundaries; or that is of excessive value. Likewise, they should not proffer gifts in order to seek preferential treatment or cross professional boundaries.
- Members of the School of Medicine will not engage in secondary employment or activity that impairs their independence or judgment in their official duties or that will require them to disclose confidential School of Medicine or university information, unless authorized by the School of Medicine.
- Members of the School of Medicine will not use their positions for personal financial gain beyond official compensation, or for the financial benefit of their family members or domestic partners, unless authorized by the School of Medicine.
- Members of the School of Medicine will not use School of Medicine or university resources for purposes unrelated to their School of Medicine responsibilities.

II. EDUCATIONAL STANDARDS

The most important mission of the School of Medicine is the education of medical students and other learners. To ensure the highest standards of conduct in all interactions between faculty and learners, members of the School of Medicine shall abide by the following compact.

Compact Between Faculty and Learners

Preparation for a career in medicine demands the acquisition of a large fund of knowledge and a host of special skills. It also demands the strengthening of those virtues that embody the doctor/patient relationship and that sustain the profession of medicine as a moral enterprise. This Compact serves both as a pledge and as a reminder to teachers and learners that their conduct in fulfilling their mutual obligations is the medium through which the profession inculcates its ethical values.

The teacher-learner relationship between faculty and medical learners—students, residents and fellows—should demonstrate the highest standards of ethical conduct in all educational settings and be conducted without abuse, humiliation, harassment and exploitation of relationships for personal gain or advantage.

Guiding Principles

Duty: Medical educators have a duty not only to convey the knowledge and skills required for delivering the profession's contemporary standard of care, but also to instill the values and attitudes required for preserving the medical profession's social contract across generations.

Integrity: The learning environments conducive to conveying professional values must be suffused with integrity. Medical learners gain enduring lessons of professionalism by observing and emulating role models who epitomize authentic professional values and attitudes.

Respect: Fundamental to the ethic of medicine is respect for every individual. Mutual respect between learners, as novice members of the medical profession, and their teachers, as experienced and esteemed professionals, is essential for nurturing that ethic. Given the inherently hierarchical nature of the teacher/learner relationship, teachers have a special obligation to ensure that students are always treated respectfully.

Communication among Faculty, Staff and Students: The School of Medicine values an environment of civility that promotes open and constructive intellectual debate. The School of Medicine expects that faculty, staff and students will:

- Treat all students, administrators, staff, peers and patients (real or simulated) with respect and dignity both in their presence and in discussions with others.
- Engage in professional and respectful discourse, manifest by the language used and the timeliness of responses, whether verbal, in writing or via digital platforms.
- Promptly report experiences of mistreatment or instances of witnessed unprofessional behavior to appropriate faculty or staff. All such reports are treated as confidential and reprisals or retaliations of any kind will not be tolerated. Any documented unprofessional behavior will be referred to the appropriate department chair/or Dean's office staff for further action.

Commitments of Faculty: Members of the faculty agree to do our utmost to ensure that all components of the educational program for medical learners are of high quality. As mentors for learner colleagues, faculty will:

- Maintain high professional standards in all interactions with patients, colleagues and staff.
- Recognize the importance of personal wellness and, as such, support learners' needs to have sufficient time to fulfill personal and family obligations, enjoy recreational activities, and obtain adequate rest.

- Nurture both the intellectual and the personal development of learners. Abuse or exploitation of medical learners will not be tolerated.

Commitments of Students, Residents and Fellows: Learners agree to do their best to acquire the knowledge, skills, attitudes and behaviors required to fulfill all educational objectives established by the faculty. Trainees will:

- Cherish the professional virtues of honesty, compassion, integrity, fidelity and dependability.
- Treat all faculty members, administrators, staff, peers and patients (real or simulated) with respect and dignity both in their presence and in discussions with others, and without regard to gender, race, national origin, religion or sexual orientation.
- Embrace the highest standards of the medical profession and conduct themselves accordingly in all of interactions with patients, colleagues, faculty and staff.
- Work collaboratively in interprofessional teams to enhance patient safety and quality of care.
- Assist fellow students and residents in meeting their professional obligations while fulfilling their own obligations as professionals.

III. SCHOLARSHIP STANDARDS

The School of Medicine is committed to the highest standards of professional conduct and integrity in scholarship. These standards include honesty, trustworthiness, objectivity, accountability, openness, respect and fairness when dealing with other people, and a sense of responsibility toward others.

We understand that academic freedom is essential to creating an atmosphere in which scholarship flourishes. Promotion of intellectual freedom is consistent with assuring a climate of integrity and the School of Medicine has the right and the obligation to inquire into all instances of alleged or apparent misconduct in scholarly activities. All scholarly activity at the School of Medicine will be conducted according to the following standards:

Scholarly Integrity

All members of the School of Medicine will:

- Properly collect, record and maintain data related to scholarly activity.
- Take responsibility for all publications and presentations of which we are author or co-author.
- Appropriately acknowledge, in publications and presentations, those who have contributed to our scholarly activity.
- Grant access to data related to scholarly activity to co-investigators involved in generating the data.
- Grant reasonable access to our resources to other university members involved in scholarly activity.
- Not interfere with the scholarly activity conducted by students or faculty.
- Neither commit nor tolerate plagiarism, falsification or fabrication of data, or other misconduct related to scholarly activity.

Human Research

All members of the School of Medicine will:

- Abide by all federal and state laws and regulations, in addition to the university's policies and procedures, when performing studies involving human subjects.
- Respect human research participants and be committed to their safety.
- Protect subjects by securing institutional review and approval for any human research.
- Adhere to approved protocols and obtain prospective institutional approval of any changes in those protocols.
- Engage all human subjects, or their appropriate representatives in a meaningful informed consent process, including explanations of possible risks and benefits before initiating a research protocol.
- Allow potential or current participants to withdraw from a study at any time without prejudice.
- Notify human subjects in a timely fashion of any serious adverse events associated with a human-subjects study.
- Conduct appropriate education and training before initiating a human subjects study.

Animal Research

All members of the School of Medicine will:

- Abide by all federal and state laws and regulations, in addition to the university's policies and procedures, regarding the care, transport, maintenance and use of research animals.
- Be committed to the humane treatment of animals in research in accordance with state and federal laws and guidelines.
- Protect research animals by securing appropriate institutional review and approval prior to initiation of any research involving vertebrate animals.
- Adhere to approved protocols and obtain prospective institutional approval of any changes in those protocols.
- Conduct appropriate education and training of all involved individuals before initiating animal research.

Laboratory Safety

All members of the School of Medicine will:

- Abide by all federal and state laws and regulations, in addition to the university's policies and procedures, concerning laboratory safety.
- Seek prior approval of appropriate university committees when research involves hazardous chemical substances, biohazardous materials or radioactive materials.
- Properly document, store, handle, transport and dispose of radioactive, biohazardous, and hazardous chemical materials, pharmaceuticals and investigative drugs.
- Participate in appropriate education and training before initiating studies involving such materials.

- Comply with all workplace safety and health regulations and report unsafe conditions, equipment or practices to supervisors or other appropriate university officials.
- Complete required instructional and training sessions when dictated by funding or oversight agencies.

Research Support

All members of the School of Medicine will:

- Use research funds only for their designated purposes.
- Accurately account for time and effort related to research funding.
- Disclose financial conflicts of interest to university administrators and, as appropriate, manage such conflicts in accordance with existing policies and procedures.
- Properly acknowledge sponsorship of research in our publications and presentations.
- Disclose inventions produced from our research to the university, in accordance with the university's policy, so that consideration is given to the protection of intellectual property.

IV. SERVICE STANDARDS

Members of the School of Medicine are expected to engage in service, and in so doing be good citizens within the School of Medicine, and across the university. Importantly, members of the School of Medicine should engage in service and learning activities within the communities in which we work and learn. Because service within the community reflects on the School of Medicine and the university, its members abide by the following public engagement standards and:

- Believe the reputation of the School of Medicine and university is tied to its responsiveness to the needs of the citizens and communities in which we work and learn.
- Reach out to and engage with communities in reciprocal partnerships.
- Respect community members, demonstrate cultural competence in their interactions with them, and comply with School of Medicine and university policies, as well as the policies of the community entity.
- Strive for responsible, engaged scholarship and community-based programs to the benefit of communities by involving our partners in the planning, execution and dissemination of the knowledge gained by such programs.
- Recognize and respect the knowledge and behaviors of partners and the value of fostering a collaborative environment.
- Encourage students to engage in community-based service learning experiences.

V. PATIENT CARE STANDARDS

As a school dedicated to training health professionals, we are committed to modeling and providing care that is of the highest quality, compassionate and patient-centered. To meet this commitment, we abide by the following standards related to patient care and interactions. All members of the School of Medicine involved in patient care activities will:

- Understand and support the applicable Patient's Bill of Rights and Responsibilities.
- Strive to deliver health care that is based on contemporary scientific knowledge and technology.
- Provide educational resources and opportunity for consultations with other healthcare programs and professionals to assist our patients in the planning of their treatment.
- Strive to consider the physical, emotional and spiritual needs of our patients in making our treatment recommendations.
- Not extend or receive payments or benefits in exchange for referrals, and base our health care and referrals solely on the well-being of and best treatment for our patients.
- Recognize that patients have a right to ask members of their healthcare team about the role of students and residents in their care, and explain to our patients the importance of our educational mission as relates to their treatment.
- Provide our patients with information necessary to make informed healthcare decisions.
- Prepare clear, honest and accurate patient medical documentation in a timely manner.
- Maintain the confidentiality of patient information in accordance with existing policies and procedures, federal laws and state regulations, including but not limited to the Health Information Portability and Accountability Act (HIPAA).
- Not engage in romantic, sexual or other non-professional relationships with a patient (simulated or real) currently under the care of the trainee.
- Not misrepresent themselves as a licensed or certified health care provider.

VI. BUSINESS AND OTHER STANDARDS

All members of the School of Medicine will:

- Utilize such School of Medicine and university resources properly and protect them against loss, theft, misuse and waste.
- Use any form of intellectual property covered by copyright and license agreements in compliance with copyright law and the terms of the license agreement under which it was obtained.
- Accurately account for time and provide proper documentation when seeking reimbursement for work-related expenses.
- Not make representations on behalf of the School of Medicine or university without official authorization.

VII. VIOLATIONS OF THE CODE OF CONDUCT

All members of the School of Medicine have a duty and responsibility to report violations of the Code of Conduct to an appropriate administrator or supervisor. Faculty members particularly have a crucial responsibility to report student unprofessionalism to maintain a professional and positive educational learning environment. Recurrent or egregious tardiness may result in submission of Reports of Concern and/or lead to review by the Professionalism Board.

VIII. PRACTICAL CONSIDERATIONS

The following examples are intended to illustrate application of the Code of Conduct, and is not intended to encompass all circumstances.

Members of the Netter community will:

- Respond within an appropriate timeframe to official communications from the school. This ideally means within 24-hours, not to exceed 48 hours unless extenuating circumstances such as travel and/or limited means of communication prevents a response within 48 hours.
- Attend all required sessions unless an excused absence is granted by the appropriate school representative.
- Avoid tardiness as outlined in section VIIA above.
- Meet all deadlines for course and clerkship assignments and evaluations unless officially excused by the appropriate school representative.
- Maintain the integrity of examinations if granted the privilege of an 'early take' or 'late take' of an examination by not revealing or discussing examination content with peers. Students granted a 'no take' may not be present during the examination. Students may only take an examination in the location(s) designated by the school. Cheating will not be tolerated.
- Offer original work for each assignment or learning task, and properly cite the work of others. Violations and plagiarism will not be tolerated.
- Admit errors and not knowingly mislead others in the classroom and clinical setting (real or simulated).
- Recognize the limitations of their knowledge, skills, or physical or emotional state, and seek supervision, advice or appropriate help before acting.
- Learn to recognize when their ability to function effectively is compromised, ask for relief or help, and notify the responsible person if something interferes with the ability to perform course work, clinical or research tasks, safely and effectively.
- Accept constructive feedback from faculty, peers and other health professional team members and student colleagues, asking clarifying questions when needed, and implement steps to improve performance based on feedback provided. Maintain a respectful and professional environment throughout feedback sessions.
- Strive to apply principles of team dynamics and strategies to prevent and resolve conflict.
- Not alter or falsify academic, patient or simulated patient documents (both paper and electronic).
- Not gain or provide unauthorized access to academic or administrative files, patient medical records, or research documents, via computer or other means or method. Protect patient and standardized patient privacy to full ability.

School of Medicine Admission Policy

Frank H. Netter MD School of Medicine Admission Policies 2021-2022

Admissions Committee Summary

The Admissions Committee is responsible for performing the essential function of evaluating candidates for admission to the Frank H. Netter MD School of Medicine at Quinnipiac University. The role of the Admissions Committee is to ensure that the quality and diversity of the class match the mission of the school to train highly qualified, culturally sensitive, patient-centered physicians. The committee strives to select students who represent a range of values and beliefs, interests and experiences, as well as intellectual and cultural viewpoints.

Each applicant will be evaluated on their capability to become a competent physician, as well as, on their potential to contribute to the educational experience of their fellow students at Quinnipiac University. It is the responsibility of the Admissions Committee to ensure that the Netter School selects students with academic promise and personal attributes that will allow for success in their medical studies, and also develop into skilled and empathetic physicians with a high degree of professionalism and strong communication skills.

As a model for selecting students, the admission process looks at each candidate's application holistically – taking into account their *Experiences, Attributes and Metrics*.

Admissions Committee Membership

The Admissions Committee will consist of the associate dean for admissions (*ex-officio member*), a chair (non-voting; note also that the associate dean for admissions can be appointed as the Admissions Committee chair), one other non-voting *ex-officio member*, and 22 voting members. The voting members of the Admissions Committee include medical sciences faculty, clinical faculty, and medical students.

The voting committee members determine admissions policy. For decisions on individual medical school candidates, the committee is divided into two equivalent subcommittees; each subcommittee reviews

University Policies

The following general university policies are followed by the School of Medicine:

applications and makes decisions on individual candidates by their voting (“Accept,” “Wait List,” or “Deny”). The roles of each voting member are to review the applications of candidates they will be interviewing and voting on during committee meetings, conduct interviews, and attend Admissions Committee meetings on a regular basis during the interview cycle.

The voting members for each subcommittee can include up to:

Seven Department of Medical Sciences faculty members appointed by the chair of the medical sciences department. They are appointed to three-year renewable terms.

Two Clinical faculty members appointed by the chairs of clinical departments. They are appointed to three-year renewable terms.

Four (two active per meeting; two alternate) Second-year medical students are appointed by the associate dean for students in consultation with the associate dean for admissions. They are appointed for a one-year term.

The associate dean for admissions and the chair of the admissions committee do not vote. The assistant dean for health career pathways serves as an *ex-officio*, non-voting member of the Admissions Committee.

At the beginning of each admissions cycle, committee members are required to sign a Conflict of Interest form.

Interviewer Pool Membership

Members of the interviewer pool make an important contribution to selecting our medical students by performing interviews. The pool is composed of medical students, faculty and staff.

Admissions Training

Each year, the Office of Admissions will provide interview training, a copy of the Netter SOM Admissions Policies document, the Netter SOM Interview Handbook, and other AAMC literature pertaining to medical school admissions and holistic review of medical school applicants. All new interviewers will also review an asynchronous Implicit Bias training module.

Application Screening and Interview Procedures

Overview

Applicants to the Netter School of Medicine are required to apply through the American Medical Colleges Admissions Service (AMCAS). Verified AMCAS applications are screened by the Office of Admissions staff to determine eligibility for receiving an invitation to submit a secondary application. Candidates who submit a secondary application are screened by trained admissions staff and select faculty. The screened applications are then reviewed by the associate dean for admissions and the chair of admissions, who decide on who is invited for an interview. Candidates who choose to be interviewed are evaluated by the Admissions Committee.

Preliminary Selection Process

The Office of Admissions will invite qualified applicants the opportunity to submit a secondary application. Applicants invited to submit a secondary application must attest to reading our Technical Standards before they are able to submit the secondary application. Applicants who do not meet the criteria established by the Admissions Committee are notified via email of the decision not to move forward with their application.

Selection to Interview

Members of the Office of Admissions and select faculty review all completed AMCAS and secondary applications. Applicants are reviewed holistically (i.e., their experiences, attributes and metrics) using the applicant’s portfolio (AMCAS Application and Secondary Application). These reviews are guided by the *Guidelines and Rules for Offering an Interview*, written and approved by the Admissions Committee.

Guidelines and Rules for Offering an Interview

The Admissions Committee is charged with selecting students who fit the mission and vision of the Netter School of Medicine. The ultimate goal of our institution is to train highly qualified, culturally competent physicians. In addition to being academically strong, we place great emphasis on selecting candidates for attributes and experience that align with our mission and also enhance the inclusive and diverse culture that we hope to establish and maintain. In selecting applicants for an interview, and ultimately for matriculation, we consider the following attributes to be important:

Diversity: race, ethnicity, gender, gender identity, sexual orientation, upbringing (e.g., urban, rural), socioeconomic status, and whether they are the first generation of their family to attend college.

Maturity and Character: empathy, integrity, resilience (i.e., “grit”), adaptability, persistence, and cross-cultural awareness.

Skills and Abilities: motivation, aptitude, interpersonal communication, curiosity and critical thinking.

In addition to being mindful of the attributes listed above, we request that application screeners, appointed by the associate dean for admissions, consider the following characteristics when deciding to recommend an applicant for an interview:

Necessary

- Evidence of exposure to medical practice (e.g., physician shadowing, clinical volunteering, etc.).
- Evidence of community engagement/citizenship.
- Evidence of the capacity to handle the academic rigor of medical school.
- Strong letters of recommendation from referees with in-depth knowledge of the applicant.

Desirable

- Evidence of exposure to medical practice (e.g., physician shadowing, clinical volunteering, etc.).
- Work, volunteer and/or shadowing experience in clinical setting(s) that are substantively related to primary care, rehabilitative medicine, and/or global health.
- Explicit statement of interest in primary care, rehabilitative medicine, and/or global health made in AMCAS and/or secondary application essays.
- Substantive evidence of distance traveled.
- Substantive evidence of tenacity/overcoming personal obstacles.
- Work, scholastic or volunteer experience that has positively impacted medically underserved or vulnerable populations.
- Work experience that demonstrates personal growth and maturity.

- Research experience that has culminated in a favorable letter of recommendation from mentor(s) with or without related publications in the peer-reviewed literature.
- Evidence of a well-rounded education, including classes in the humanities.

The following cohorts shall be prioritized to receive early interview scheduling, if possible:

- Individuals from SES disadvantaged backgrounds.
- Underrepresented in medicine applicants.
- Military veterans.
- Fluent or advanced Spanish language speakers.
- Those with truly exceptional academic credentials (GPA and MCAT).

In addition to these guidelines, screeners are also instructed to consider the following criteria:

- Netter-Identified Diversity Categories: socioeconomically disadvantaged, African American and Hispanic/Latino, Spanish language proficient, and Armed Service Veterans.
- Educational Diversity: applicants from challenging socioeconomic backgrounds; applicants graduating from a Historically Black College or University, a Hispanic Serving Institution, Tribal College/University, or from a Minority Serving Institution; age; language; geography; gender; military service; self-disclosed disability; LGBTQ+ (gender identity/orientation).
- Experiences (medical/clinical): EMT; hospital; hospice; nursing home; clinic; doctor's office; shadowing; or medical service trips.
- Community Service: social service; educational; public health; environmental; mental health; or faith-based.
- Extracurricular Activities: student clubs/organizations; art; music; theatre; athletics; Greek life; or part-time employment.
- Leadership (appointed/elected): student government; club/organization; athletics (e.g., captain); or activity officer.
- Intellectual Curiosity: academic research; clinical research; membership in academic associations; entrepreneurship; innovation of any kind; participation in college level academic enrichment programs; fellowships; publications/professional meetings.
- Full-Time Work Experience
 - Secondary Application Personal Statement: motivation for career in medicine; interest in a primary care specialty, evidence of compassion, empathy and self-awareness; evidence of collaboration/teamwork, adaptability and growth.

The screeners complete an evaluation form that includes a summary recommendation on how well the applicant might "fit" the Netter SOM (e.g., "Poor Fit," "Questionable Fit," "Acceptable Fit," "Strong Fit," "Ideal Fit"). The associate dean for admissions and the chair of admissions review their evaluations and decide whether or not to invite the applicant for an interview.

The Interview

The interview day and interviews are conducted virtually with the Zoom platform. Interview days are on Mondays, Fridays and some Wednesdays. Invitations to interview are sent via email by the Office of Admissions. Applicants are asked to choose from several available interview dates. Once the applicant selects an interview date, the Office of Admissions sends a confirmation email with the interview day itinerary.

Admissions Committee Decision

Overview

After each interview, the two assigned interviewers complete an electronic rating form; interviewers can view the evaluation of the other interviewer. Prior to each Admissions subcommittee meeting, the chair of the Admissions Committee sets the agenda. After discussion of a candidate's application and their interview performance, the committee votes on whether to Accept, Deny, or Wait List an applicant. Votes are confidential and cast electronically. The outcome of votes can only be seen by the associate dean for admissions, the chair and the admissions staff members who are assisting with the voting process. As voted by the Admissions Committee, members may take notes during candidate deliberations, but those notes are to be destroyed at the conclusion of the meeting.

Because applicants are admitted on a rolling basis, the Admissions Office and the Admissions Committee will do everything within their power to ensure that desired candidates who interview late in the admissions cycle have the opportunity to attend the Netter SOM.

Decision Procedures

- No vote can be held unless a quorum is present. A quorum is defined as a 2/3 majority of the *active* voting membership of a subcommittee. The associate dean for admissions, the chair of the Admissions Committee, and the assistant dean for health careers pathways do not vote and do not count toward a quorum. Student votes can never represent the majority of the vote.
- A simple majority of the total subcommittee voting membership is required for any final action on a candidate ("Accept," "Deny," "Wait List"). If consensus is not reached, the candidate's application is brought back before the committee at a future meeting.
- If the Admissions Committee votes to wait list an applicant, the committee then ranks the applicant by assigning a score of 1-10, with 1 being a low score. The dean or his/her designated staff member, throws out the low and high score, computes the average score and standard deviation. If Wait List applicants have the same average score, the lower standard deviation acts to break the tie. Wait List applicants are offered admission based on their ranking.

Offer of Admission

Within a week of the Admissions Committee's decision, applicants are sent an email with the committee's decision on their candidacy. Accepted applicants intending to enroll must submit a deposit of \$100 (refundable until April 30). Candidates are strongly encouraged to follow all current AAMC Traffic Rules related to medical school admissions. Accepted applicants are also sent information about financial aid, an invitation to Second Look Weekend, information about immunizations, housing information, and the Technical Standards document.

Matriculation will become official after the student has satisfied all admissions requirements, met the technical standards, and successfully passed the criminal background check.

Final Authority of Admissions Committee

The final authority for admissions decisions rests solely with the voting membership of the Admissions Committee. No individual or other constituted body can exert influence over an Admissions Committee decision or reverse an Admissions Committee decision.

School of Medicine Satisfactory Academic Progress Policy

Standards for Satisfactory Academic Progress for Financial Aid Recipients and Applicants

Medical students who wish to receive assistance through any federal, state or institutionally supported scholarships, grants or loans must comply with the following Satisfactory Academic Progress standards. Satisfactory Academic Progress measures the quality of the academic work, and the rate of progress toward the Doctor of Medicine (MD) degree. Students who fail to comply are not eligible for financial aid.

I. Qualitative Measurement – The quality of a student's academic work and professionalism.

All medical students must maintain professionalism as defined (by the promotions committee) as well as passing grade(s) at the end of each academic year.

II. Quantitative Measurement – The rate of a student's progress toward a degree. Students must complete a minimum of two-thirds (.67) of the blocks for which they are enrolled and be making progress to complete their degree within the 6-year rule.

Satisfactory Academic Progress is measured once per year at the end of the second semester. To be considered satisfactory, students must successfully complete or remediate all of the academic work toward their medical degree during a period of consecutive and required blocks and semesters.

Students may not receive financial aid for more than 150% of the published program length (maximum time to complete program is 6 years).

Please note that both the qualitative and quantitative measurements indicate the passing grade(s) as well as the number of completed blocks needed to meet satisfactory academic progress requirements for financial aid and do not reflect the medical school's recommended requirements.

Implementation of the Satisfactory Academic Progress Policy

Satisfactory Academic Progress is reviewed once per year, at the conclusion of the second semester after final grades have been posted.

Students whose performance or progress does not meet the required standards will be notified by the director of financial aid and will be considered ineligible for aid, including federal, state, institutional and most private loans. Students with financial aid applications on file for the upcoming year will receive a communication indicating the loss of aid after final grades are posted. Students who are not making satisfactory progress and have not filed an application for financial aid will not receive this correspondence until the financial aid application has been filed.

Students may appeal their loss of aid based on extenuating circumstances. Appeals must be submitted in writing to the director of financial aid and will be reviewed for decision by the Financial Aid Appeals Committee. Students who do not appeal, or whose appeal is denied, will not regain financial aid eligibility until all academic standards are met. Remediation courses may be considered in repairing deficiencies.

If an appeal is granted, the student will be placed on financial aid probation for one semester or year and an academic plan will be prescribed for the student to follow. The student's academic progress will be reviewed at the end of the probationary term and they must have met the conditions of the academic plan to receive financial aid. A student who fails to meet these conditions will lose eligibility for financial aid. Additional appeals will not be considered.

Nursing is a profession based on science, a culture of compassion, commitment to best practices, and connection to individuals. The practice of nursing is research-based, goal-directed, creative and concerned with the health and dignity of the whole person. The art of delivering quality nursing care depends upon the successful mastery and application of intellectually rigorous nursing knowledge.

Undergraduate Program Information

The undergraduate nursing curriculum, which integrates holism, fosters professional socialization for future roles and responsibilities within the profession. Graduates are prepared as generalists to provide evidence-based care. Bachelor's degree nursing education prepares the graduate for entry into professional nursing practice and provides the foundation for graduate study. Three programs are offered: a Bachelor of Science in Nursing for high school graduates, an Accelerated BSN program for second-degree students, and an RN to BSN completion program (online).

The School of Nursing is not accepting applications to the RN to BSN program at this time.

Graduate Program Information

The School of Nursing offers five programs leading to a Master of Science in Nursing: Operational Leadership (p. 921), RN to MSN Completion (p. 924), Adult-Gerontology Acute Care Nurse Practitioner (p. 912), Adult-Gerontology Primary Care Nurse Practitioner (p. 916) and Family Nurse Practitioner (p. 918). In addition, those completing one of the nurse practitioner programs have the option to continue to the DNP degree immediately or up to two years after MSN conferral without reapplying. A Post-Master's Certificate is also offered for the Adult-Gerontology Acute Care Nurse Practitioner (p. 927).

A doctoral-level graduate program preparing nurse anesthetists is available for post-bachelor's degree nurses. The school offers three doctoral-level post-master's programs. For more information about these offerings, please see the Graduate Studies (p. 898) section of the catalog.

The School of Nursing is not accepting applications to the RN to MSN program at this time.

Career Development

In the School of Nursing, the assistant dean of clinical education for faculty and students works with students to explore majors and career interests through individual consultations and group sessions, and guides them through a career development process. Assistance is provided with resume and cover letter writing, interview preparation, conducting a job search and graduate school applications. Students can participate in experiential learning through community service as well as internships, part-time and summer employment. A health professions career fair is held every spring at the North Haven Campus.

Right to Modify

This Catalog is intended to serve as a convenient reference source for students. It is not guaranteed to be free from errors. Moreover, the

programs, policies and courses described here are subject to continual review and reevaluation and may be changed at any time without prior notice. The School of Nursing reserves the right to modify the academic requirements, admission requirements and program of study; to change the arrangement and content of courses, the instructional material and the tuition and fees; to alter any regulation affecting students; to refuse readmission at any time; or to dismiss any student at any time, should it appear to be in the best interest of the school or student to do so. The School of Nursing also reserves the right to change the semester schedule and examination times and locations. Nothing in this Catalog should be regarded as setting terms of a contract between a student or prospective student and Quinnipiac University or its School of Nursing.

Mission Statement

To provide leadership in nursing and healthcare through innovative undergraduate and graduate education that embraces holism, interprofessionalism and inclusivity.

Vision

To prepare transformational leaders in healthcare.

Values

School of Nursing values include:

- diversity of ideas, persons and cultures
- supportive learning environments
- scholarly undertakings to advance education and practice
- ethical conduct in personal and professional arenas
- holistic nursing across the spectrum of healthcare
- interprofessional education and collaboration
- innovative learning methodologies
- systematic assessment and evaluation
- lifelong learning

Transforming healthcare . . . one student at a time.

Admission Requirements: Graduate Nursing

The requirements for admission to the graduate nursing program are detailed in the graduate portion of this catalog.

Admission Requirements: Undergraduate Nursing

The requirements for admission into the undergraduate nursing program are the same as those for admission to Quinnipiac University.

Advanced Standing/Placement

The Policy for Advanced Standing/Placement, as stated in this catalog, applies to students seeking admission into the undergraduate nursing program. Advanced standing or placement is considered for entering freshmen who have completed college-level credit courses through a recognized college or university, achieved an acceptable score on an appropriate examination of:

- a. the Advanced Placement Program of the College Entrance Examination Board;

- b. the International Baccalaureate; or
- c. the College Level Examination Program.

Transfer Credit

Quinnipiac normally grants transfer credit for courses appropriate to the chosen curriculum, completed with a grade of C or better, at a regionally accredited post-secondary institution. Undergraduate nursing students who take courses at another university to repeat a failed course or to repeat a course withdrawal must do so at a four-year institution.

Transfer Students from Other Colleges/Universities

Transfer students should apply for admission by mid-November for the spring (January) semester or by June 1 for fall (August) entry. Official transcripts from all institutions attended must be provided. Acceptance of transfers is based on qualification and space availability. The nursing program looks for a minimum grade point average of 3.0 for consideration. Transfer into the professional component of the nursing program can occur only in the fall term. Quinnipiac works closely with the community colleges in Connecticut and elsewhere and recommends that students follow a transfer curriculum of study if their plan is to move to a four-year university. Students may wish to arrange an admissions appointment to discuss program requirements. *Admission into the nursing major is limited due to program constraints.*

Transfer Students from Other Majors within Quinnipiac

Students who have earned credit at Quinnipiac and wish to apply for matriculation into the nursing program are invited to apply for transfer. Undergraduate enrollment is evaluated on a semester-by-semester basis. Limited space has become available and transfer applicants are evaluated for admission. The transfer applicant must be a student in good standing and have a minimum GPA of 3.0. Acceptance of transfers is based on qualification and space availability. Transfer into the professional component of the nursing program can occur only in the fall term. Email transfERNursing@qu.edu for more information.

Bachelor's Degree

- Bachelor of Science in Nursing (p. 662)
 - Traditional BSN Program for High School Graduates (p. 662)
 - Accelerated BSN Program for Second Degree Students (p. 658)
 - RN to BSN Completion Program (online) (p. 667)

Graduate Degrees

- Master of Science in Nursing (p. 911)
 - Post-bachelor's study
 - Adult-Gerontology Acute Care Nurse Practitioner (p. 912)
 - Adult-Gerontology Primary Care Nurse Practitioner (p. 916)
 - Family Nurse Practitioner (p. 918)
 - Operational Leadership (p. 921)
 - RN to MSN Completion program (p. 924)

- Post-Master's Certificate (p. 927)
 - Adult-Gerontology Acute Care Nurse Practitioner (p. 927)
- Doctor of Nursing Practice (p. 898)
 - Post-bachelor's study
 - Nurse Anesthesia (p. 899)
 - Post-master's study
 - Doctor of Nursing Practice Care of Populations (p. 906)
 - Doctor of Nursing Practice Nursing Leadership (p. 909)
 - Nurse Practitioner (p. 904) (only for QU MSN NP graduates)

Accreditation and Endorsement

The Bachelor of Science in Nursing program, Master of Science in Nursing program, and Doctor of Nursing Practice program at Quinnipiac University are accredited by the Commission on Collegiate Nursing Education (ccneaccreditation.org).

The Doctor of Nursing Practice (DNP) program for Nurse Anesthesia is accredited by the Council on Accreditation of Nurse Anesthesia Educational Programs (COA).

Both undergraduate and graduate nursing programs in Quinnipiac University's School of Nursing are endorsed by the American Holistic Nurses Credentialing Corporation.

Accelerated BSN Program for Second Degree Students

Program Contact: Claire Puzarne (claire.puzarne@qu.edu) 203-582-6574

The Accelerated BSN program is designed for individuals with a bachelor's degree in another discipline, who are interested in pursuing nursing as a second bachelor's degree. The curriculum builds on the individual's prior educational preparation, and the degree is completed in one calendar year, with start dates in August and January. Students concentrate solely on nursing courses during the one-year program. The curriculum is framed using The American Association of Colleges of Nursing (AACN) Essentials of Baccalaureate Education.

The accelerated BSN must be pursued on a full-time basis and consists of one full calendar year. The January start date offers night, weekend,

online and hybrid classes, labs and clinicals, while the August start date offers a more traditional schedule.

Accelerated BSN Curriculum

The BSN degree under this program is 127 credits, including: prerequisites, general education requirements and nursing courses, which are distributed as follows:

Code	Title	Credits
Accelerated BSN Curriculum Requirements		
Nursing Course Prerequisites		15
	Anatomy & Physiology I & II with labs	
	Microbiology with lab	
	Statistics	
	Transfer Credit from Previous Bachelor's Degree	51
	Total Nursing Credits	61
Professional Component Nursing Courses		
NUR 300	Core Concepts in Nursing	
NUR 302	Nursing Science and Information Literacy	
NUR 304	Health Promotion and Wellness	
NUR 306	Health Assessment	
NUR 307	Core Nursing Practicum	
NUR 318	Care of Women, Newborns and Families	
NUR 320	Care of Children and Families	
NUR 323	Women, Children and Families Practicum	
NUR 324	Care of Adults with Complex Health Needs I	
NUR 325	Adult Care Practicum I	
NUR 326	Pathophysiology and Pharmacotherapy I	
NUR 330L	Holistic Nursing Integration Lab I	
NUR 340L	Holistic Nursing Integration Lab II	
NUR 400	Psychiatric-Mental Health Nursing	
NUR 401	Psychiatric-Mental Health Practicum	
NUR 408	Evidence-Based Nursing Practice and Scholarship	
NUR 424	Care of Adults with Complex Health Needs II	
NUR 425	Adult Care Practicum II

NUR 432	Contemporary Issues and Roles in Nursing	
NUR 433	Capstone Practicum	
NUR 434L	Capstone Seminar Lab	

NUR 440L Holistic Nursing Integration Lab IV

Total Credits**127**

The curriculum for the professional component is subject to modification as deemed necessary by the nursing faculty to provide students with the most meaningful educational experience and to remain current with professional standards and guidelines. Nursing courses must be taken in the sequence presented in the Accelerated BSN curriculum and students must successfully complete one semester or term before progressing to the next.

Graduates are eligible to take the NCLEX-RN® examination, and qualify for entry-level nursing positions or graduate study. Those students contemplating applying for graduate study in nursing at Quinnipiac should refer to the Graduate Studies (p. 897) section of the catalog.

Student Learning Outcomes

Upon completion of the program, the BSN graduate will demonstrate the following competencies:

- Integrate** the university's core liberal education into generalist nursing practice.
- Apply** principles of basic organizational and system leadership to deliver high-quality and safe patient care.
- Employ** evidence to deliver best practices in healthcare.
- Utilize** information management and patient care technologies to deliver safe and effective health care.
- Recognize** the impact of healthcare policy, finance and regulatory environments on the delivery of patient care.
- Demonstrate** interprofessional communication and collaboration for improving health outcomes.
- Incorporate** the concepts of prevention and population health in the delivery of health care.
- Exhibit** professional standards and values.

Admission Requirements: Undergraduate Nursing

Admission requirements include graduation from a regionally accredited college or university with a cumulative GPA of at least 3.0 (B) and completion of prerequisite course work. All prerequisite courses must be taken **within the last five years** with a grade of B- or better; and must be completed prior to entering the accelerated program. Transfer credit is evaluated according to university policy. A criminal background check and drug screening are required prior to attending the mandatory orientation. Incoming and current students are advised that final acceptance and continuation is dependent on a successful background investigation and clearance. The application deadline is January 2 for the August start date, and September 1 for the January start date; decision letters are sent during the months of March and November. Applicant information is available on the Quinnipiac website (<https://www.qu.edu/admissions/>).

Professional Progression Policy

- To progress and remain in good standing, accelerated nursing students must attain a semester GPA of 2.67 (B-) and receive a grade of C or higher in each classroom and laboratory experience (73 or higher) and a Pass (P) in all clinical practica.
- A student who receives less than a C (73) in one nursing course (C-, D, F) is unable to progress to the next semester or term. This student

will be given the opportunity to repeat the failed nursing course at the time of the next course offering and at the student's expense.

- A student who receives less than a C (73) in more than one nursing course (C-, D, F) will not be permitted to progress in the program and will be required to change their major out of nursing.
- A student who receives a grade of Incomplete (I) in any nursing course (lecture, lab or practicum) must meet ALL course requirements for conversion to a letter grade or Pass (P) before the start of the subsequent semester or term or according to a specific written academic plan approved by the program chair or designee. Failure to do so will require the student to withdraw from the nursing major.
- A student who earns grades of C or better in all nursing courses yet has less than a 2.67 semester GPA will be placed on academic probation and will receive an academic plan to progress in the nursing major. This student must achieve a 2.67 semester GPA by the end of the next semester or term. The student who does not meet these academic criteria will be required to change their major out of nursing.
- A student must achieve a 2.67 semester GPA and a cumulative GPA of 3.00 in the final semester to meet the graduation requirements for the Bachelor of Science in Nursing.
- A student who is performing at an unsatisfactory level either academically or clinically at the mid-semester point will be notified by the program chair. Written notification will be sent to the student via email. Any student who is having difficulty with academic performance and needs help with study skills or test taking strategies will be advised to utilize the resources offered by the Learning Commons.
- At the end of each semester, course grades, semester and cumulative GPAs for each nursing student are reviewed by the program chair.

Appeal Process

A student who wishes to appeal a progression decision must write a letter to the chair of the undergraduate nursing program within one week of receiving notice of their inability to progress.

- Appeals will be considered by the Progression Appeal Committee, chaired by the associate dean.
- Decision and procedural actions will be communicated in writing to the student.

The full policy for progression appeal is available in the Undergraduate Student Resource Manual located in the Student Community on Blackboard.

A student wishing to appeal a course grade should follow the grade appeal process detailed in the University Catalog.

Eligibility for Licensure

Graduates are eligible for registered nurse licensure in Connecticut or other states upon satisfactory achievement of the National Council Licensure Examination for Registered Nurses (NCLEX-RN®). In Connecticut, the laws of the state limit the licensure eligibility for any person convicted of a felony or an act that does not conform to the accepted standards of the profession. (Section 19a-14 of the Connecticut General Statutes.) A copy of the act is available for review in the School of Nursing.

Clinical Requirements

Students must arrange their own transportation to and from clinical agencies. CPR certification for the healthcare provider must be obtained prior to enrolling in the first nursing course, and maintained throughout the program. The School of Nursing has additional health and clinical readiness requirements in addition to those required by the university. A criminal background check and drug screening are required. Incoming and current students will be advised that final program acceptance and continuation is dependent on a successful background investigation and clearance.

NUR 300. Core Concepts in Nursing. 3 Credits.

This course introduces students to core concepts in nursing, and focuses on assessment and nursing interventions to support and protect health. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 302, NUR 306, NUR 330L, NUR 307.

Offered: Every year, Fall and Spring

NUR 302. Nursing Science and Information Literacy. 3 Credits.

This course examines historical and contemporary nursing science. Students are introduced to patterns of knowing, clinical reasoning and select disciplinary and interdisciplinary concepts and theories useful in nursing practice. This course also focuses on information literacy and information management in the delivery of quality patient care. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 300, NUR 306, NUR 330L, NUR 307.

Offered: Every year, Fall

NUR 304. Health Promotion and Wellness. 3 Credits.

This course focuses on health promotion, wellness and disease and injury prevention across the lifespan. Individual prevention strategies and health interventions are explored.

Offered: Every year, Fall and Spring

NUR 306. Health Assessment. 3 Credits.

This course focuses on health assessment of individuals across the lifespan. Students are introduced to a holistic approach to assessment taking into consideration bio-psycho-social-spiritual, environmental and cultural aspects. Knowledge, attitude, and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 330L, NUR 307.

Offered: Every year, Fall and Spring

NUR 307. Core Nursing Practicum. 2 Credits.

This clinical practicum is taken concurrently with NUR 300, 302, 306 and 330L. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN program: Take NUR 300, NUR 302, NUR 306, NUR 330L.

Offered: Every year, Fall and Spring

NUR 318. Care of Women, Newborns and Families. 2 Credits.

This course examines topics related to nursing management for women, newborns and families, and emphasizes health promotion, wellness and the illness states of childbearing families. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 320, NUR 323, NUR 324, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring and Summer

NUR 320. Care of Children and Families. 2 Credits.

This course examines topics related to nursing management of infants, children and families, and emphasizes health promotion, wellness and the illness states of these populations. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 323, NUR 324, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring and Summer

NUR 323. Women, Children and Families Practicum. 2 Credits.

This clinical practicum is taken concurrently with NUR 318 and NUR 320. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 324, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring and Summer

NUR 324. Care of Adults with Complex Health Needs I. 3 Credits.

This course examines concepts of nursing management for adults with complex health care needs. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring

NUR 325. Adult Care Practicum I.**2 Credits.**

This clinical practicum is taken concurrently with NUR 324. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 324, NUR 326, NUR 340L.

Offered: Every year, Spring

NUR 326. Pathophysiology and Pharmacotherapy I.**3 Credits.**

This course integrates pathophysiology and pharmacotherapy relevant to concurrent junior spring semester nursing courses. Students are introduced to medications used for health maintenance and the treatment of illness. Legal, ethical and regulatory issues also are examined.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 324, NUR 325, NUR 340L.

Offered: Every year, Spring

NUR 330L. Holistic Nursing Integration Lab I.**2 Credits.**

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, and to practice skills relevant to concurrent junior fall semester nursing courses. Students participate in learning modalities such as guided practice, clinical simulation and problem-based learning activities to develop clinical reasoning. (5 hrs./week, 70 hrs./semester)

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 306, NUR 307.

Offered: Every year, Fall and Spring

NUR 340L. Holistic Nursing Integration Lab II.**2 Credits.**

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, and to practice skills relevant to concurrent junior spring semester nursing courses. Students participate in learning modalities such as guided practice, clinical simulation, and problem-based learning activities to develop clinical reasoning. (5 hrs./week, 70 hrs./semester)

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 324, NUR 325, NUR 326.

Offered: Every year, Spring

NUR 400. Psychiatric-Mental Health Nursing.**3 Credits.**

This course examines concepts of nursing management for individuals with psychiatric-mental health needs across the lifespan. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 401, NUR 408, NUR 424, NUR 425, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 401. Psychiatric-Mental Health Practicum.**2 Credits.**

This clinical practicum is taken concurrently with NUR 400. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 408, NUR 424, NUR 425, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 408. Evidence-Based Nursing Practice and Scholarship.**2 Credits.**

This course focuses on the related knowledge, attitudes, and skills necessary for evidence-based decision making in clinical practice. Students learn the basic elements of evidenced based practice and participate in the process of retrieval, appraisal, and synthesis of evidence. Students develop scientific literacy and enhanced information fluency.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 424, NUR 425, NUR 426, NUR 430L.

Offered: Every year, All

NUR 424. Care of Adults with Complex Health Needs II.**3 Credits.**

This course examines concepts of nursing management for adults with complex, high-acuity health care needs requiring sophisticated patient care technologies. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 425, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 425. Adult Care Practicum II.**2 Credits.**

This clinical practicum is taken concurrently with NUR 424. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 426. Pathophysiology and Pharmacotherapy II.**2 Credits.**

This course integrates pathophysiology and pharmacotherapy relevant to concurrent senior fall semester nursing courses. Students are introduced to medications used for health maintenance and the treatment of illness. Legal, ethical and regulatory issues also are examined.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 425, NUR 430L.

Offered: Every year, Fall and Summer

NUR 428. Community and Public Health Nursing.**3 Credits.**

This course focuses on concepts of community and public health nursing. Emphasis is on primary, secondary and tertiary prevention and nursing management for individuals, groups and populations with health problems in community settings. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 429, NUR 432, NUR 433, NUR 450L, NUR 454.

Offered: Every year, Spring

NUR 429. Community and Public Health Nursing Practicum. 2 Credits.

This clinical practicum is taken concurrently with NUR 428. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 432, NUR 433, NUR 450L, NUR 454.

Offered: Every year, Spring

NUR 430L. Holistic Nursing Integration Lab III. 2 Credits.

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, as well as to practice skills relevant to concurrent senior fall or summer semester nursing courses.

Students participate in learning modalities such as guided practice, clinical simulation and problem-based learning to develop clinical reasoning. (5 hrs./week, 70 hrs./semester)

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 425, NUR 426.

Offered: Every year, Fall and Summer

NUR 432. Contemporary Issues and Roles in Nursing. 3 Credits.

This course analyzes trends and issues in contemporary health care and their effect on the consumer, the nursing profession and society. It incorporates social intelligence, diversity awareness, creativity and sensitivity required for leadership roles and management functions in dynamic health care environments. Knowledge, attitude and skill opportunities are provided in campus lab and applied in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 429, NUR 433, NUR 450L, NUR 454.

Offered: Every year, All

NUR 433. Capstone Practicum. 2 Credits.

This capstone practicum facilitates the transition from nursing student to professional nurse. Synthesis of knowledge from all course work is integrated into the delivery of safe, evidence-based, holistic, patient-centered care. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 429, NUR 432, NUR 450L, NUR 454.

Offered: Every year, All

NUR 434L. Capstone Seminar Lab. 1 Credit.

This capstone seminar provides the opportunity for students working in small faculty-mentored groups to complete a capstone project that demonstrates synthesis of program learning outcomes, and American Association of Colleges of Nursing Essentials of Baccalaureate Education for Professional Nursing Practice. Students participate in 35 hours of a seminar lab in which they create and disseminate evidence-based capstone projects. For accelerated nursing students only.

Offered: Every year, Fall and Summer

NUR 440L. Holistic Nursing Integration Lab IV. 2 Credits.

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, and to practice skills relevant to concurrent senior summer semester nursing courses.

Students participate in learning modalities such as guided practice, clinical simulation and problem-based learning activities to develop clinical reasoning. Students also prepare for the nursing licensure examination (NCLEX-RN ©) with emphasis on content review, transition into professional nursing practice and computer-simulated test taking using web-based technology. For accelerated nursing students only. (70 hrs./semester)

Offered: Every year, Fall and Summer

Bachelor of Science in Nursing

Program Contact: Teresa Twomey
(Teresa.Twomey@quinnipiac.edu) 203-582-8873

The undergraduate nursing program at Quinnipiac University prepares students with the knowledge, skills and attitudes to provide holistic care for diverse individuals, families and populations across the lifespan. Achievement of the student learning outcomes (p. 663) enables graduates to practice as nurse generalists within complex healthcare systems. The curriculum is framed using The American Association of Colleges of Nursing (AACN) *Essentials of Baccalaureate Education* (2008).

BS in Nursing Graduation Requirements

Code	Title	Credits
Foundations of Inquiry		12
EN 101	Introduction to Academic Reading and Writing	
EN 102	Academic Writing and Research	
FYS 101	First-Year Seminar	
	Math Course (MA 275 or 206)	
Disciplinary Inquiry (one course from each of the four disciplinary areas)		13
BIO 101 & 101L	General Biology I and General Biology I Lab	
	Humanities	
	Social Sciences	
	Fine Arts	
Personal Inquiry (three additional courses from three different disciplinary areas)		10
BIO 102 & 102L	General Biology II and General Biology Lab II	
	Humanities	
	Social Sciences	
	Fine Arts	
Personal Inquiry II (9 additional credits from the disciplinary areas or UC breadth electives)		9
Nursing Major Requirements		16
BIO 211	Human Anatomy and Physiology I	
BIO 211L	Human Anatomy and Physiology Lab I	
BIO 212	Human Anatomy and Physiology II	
BIO 212L	Human Anatomy and Physiology II Lab	

CHE 106	Chemical Principles with Biological Applications	
BMS 213	Microbiology and Pathology	
Open Elective		3
Integrative Capstone Experience		3
Professional Component Nursing Courses		61
NUR 300	Core Concepts in Nursing	
NUR 302	Nursing Science and Information Literacy	
NUR 304	Health Promotion and Wellness	
NUR 306	Health Assessment	
NUR 307	Core Nursing Practicum	
NUR 318	Care of Women, Newborns and Families	
NUR 320	Care of Children and Families	
NUR 323	Women, Children and Families Practicum	
NUR 324	Care of Adults with Complex Health Needs I	
NUR 325	Adult Care Practicum I	
NUR 326	Pathophysiology and Pharmacotherapy I	
NUR 330L	Holistic Nursing Integration Lab I	
NUR 340L	Holistic Nursing Integration Lab II	
NUR 400	Psychiatric-Mental Health Nursing	
NUR 401	Psychiatric-Mental Health Practicum	
NUR 408	Evidence-Based Nursing Practice and Scholarship	
NUR 424	Care of Adults with Complex Health Needs II	
NUR 425	Adult Care Practicum II	
NUR 426	Pathophysiology and Pharmacotherapy II	
NUR 428	Community and Public Health Nursing	
NUR 429	Community and Public Health Nursing Practicum	
NUR 430L	Holistic Nursing Integration Lab III	
NUR 432	Contemporary Issues and Roles in Nursing	
NUR 433	Capstone Practicum	
NUR 450L	Holistic Nursing Integration and Transition Into Practice Lab	
NUR 454	Nursing Capstone	
Total Credits		127

The curriculum for the professional component is subject to modification as deemed necessary by the nursing faculty to provide students with the most meaningful educational experience and to remain current with professional standards and guidelines. Nursing courses must be taken in the sequence presented in the curriculum and students must successfully complete one semester before progressing to the next. Initial placement in English and mathematics courses is determined by examination.

Graduates are eligible to take the NCLEX-RN® examination, and qualify for entry-level nursing positions or graduate study. Those students contemplating applying for graduate study in nursing at Quinnipiac should refer to the Graduate Studies (p. 897) section of the catalog.

Student Learning Outcomes

Upon completion of the program, the BSN graduate will demonstrate the following competencies:

- Integrate** the university's core liberal education into generalist nursing practice.
- Apply** principles of basic organizational and system leadership to deliver high-quality and safe patient care.
- Employ** evidence to deliver best practices in healthcare.
- Utilize** information management and patient care technologies to deliver safe and effective health care.
- Recognize** the impact of health care policy, finance and regulatory environments on the delivery of patient care.
- Demonstrate** interprofessional communication and collaboration for improving health outcomes.
- Incorporate** the concepts of prevention and population health in the delivery of health care.
- Exhibit** professional standards and values.

Admission Requirements: Undergraduate Nursing

The requirements for admission into the undergraduate nursing program are the same as those for admission to Quinnipiac University.

Advanced Standing/Placement

The Policy for Advanced Standing/Placement, as stated in this catalog, applies to students seeking admission into the undergraduate nursing program. Advanced standing or placement is considered for entering freshmen who have completed college-level credit courses through a recognized college or university, achieved an acceptable score on an appropriate examination of:

- The Advanced Placement Program of the College Entrance Examination Board;
- The International Baccalaureate; or
- The College Level Examination Program.

Transfer Students from Other Colleges/Universities

Transfer students should apply for admission by mid-November for the spring (January) semester or by June 1 for fall (August) entry. Official transcripts from all institutions attended must be provided. The nursing program looks for a minimum grade point average of 3.0 for consideration. Transfer into the professional component of the nursing program can occur only in the fall junior year term. Quinnipiac works closely with the community colleges in Connecticut and elsewhere and recommends that students follow a transfer curriculum of study if their plan is to move to a four-year university. Students may wish to arrange an admissions appointment to discuss program requirements.

Transfer Students from Other Majors within Quinnipiac

Students who have earned credit at Quinnipiac and wish to apply for matriculation into the nursing program are invited to apply for transfer. Undergraduate enrollment is evaluated on a semester-by-semester basis. Limited space has become available and transfer applicants

are evaluated for admission. The transfer applicant must be a student in good standing and have a minimum GPA of 3.0. Transfer into the professional component of the nursing program can occur only in the fall junior year term. Email transfERNursing@qu.edu for more information.

Preprofessional Progression Policy

- Students must complete all preprofessional component courses, including all sciences, prior to starting the professional component in the fall of the junior year.
- Students must earn a C- or better in BIO 101, BIO 101L, BIO 102, BIO 102L, CHE 106, BMS 213 and BMS 213L to progress to the professional component in the fall of the junior year.
- Students must earn a C or better in BIO 211, BIO 211L, BIO 212, BIO 212L, NUR 304 and all nursing courses. The student who earns less than a C in BIO 211, BIO 211L, BIO 212, BIO 212L or NUR 304 will need to repeat the course the next time it is offered at the student's expense.
- A minimum cumulative grade point average of 3.0 is required for progression from the sophomore year to the junior year.
- A student who does not meet the preprofessional progression requirements will be required to transfer to another major.

Professional Progression Policy

- To progress and remain in good standing, junior and senior nursing students must attain a semester GPA of 2.67 (B-) and receive a grade of C or higher in each classroom and laboratory experience (73 or higher) and a Pass (P) in all clinical practica.
- A student who receives less than a C (73) in one nursing course (C-, D, F) is unable to progress to the next semester. This student will be given the opportunity to repeat the failed nursing course at the time of the next course offering and at the student's expense.
- A student who receives less than a C (73) in more than one nursing course (C-, D, F) will not be permitted to progress in the program and will be required to change their major out of nursing.
- A student who receives a grade of Incomplete (I) in any nursing course (lecture, lab or practicum) must meet ALL course requirements for conversion to a letter grade or Pass (P) before the start of the subsequent semester or according to a specific written academic plan approved by the program chair or designee. Failure to do so will require the student to withdraw from the nursing major.
- A student who earns grades of C or better in all nursing courses yet has less than a 2.67 semester GPA will be placed on academic probation and will receive an academic plan to progress in the nursing major. This student must achieve a 2.67 semester GPA by the end of the next semester. The student who does not meet these academic criteria will be required to change their major out of nursing.
- A student must achieve a 2.67 semester GPA and a cumulative GPA of 3.00 in the final semester to meet the graduation requirements for the Bachelor of Science in Nursing.
- A student who is performing at an unsatisfactory level either academically or clinically at the mid-semester point will be notified by the program chair. Written notification will be sent to the student via email. Any student who is having difficulty with academic performance and needs help with study skills or test taking strategies will be advised to utilize the resources offered by the Learning Commons.

- At the end of each semester, course grades, semester and cumulative GPAs for each nursing student are reviewed by the program chair.

Appeal Process

A student who wishes to appeal a progression decision must write a letter to the chair of the undergraduate nursing program within one week of receiving notice of their inability to progress.

- Appeals will be considered by the Progression Appeal Committee, chaired by the associate dean.
- Decision and procedural actions will be communicated in writing to the student.

The full policy for progression appeal is available in the Undergraduate Student Resource Manual located in the Student Community on Blackboard.

A student wishing to appeal a course grade should follow the grade appeal process detailed in the University Catalog.

Eligibility for Licensure

Graduates are eligible for registered nurse licensure in Connecticut or other states upon satisfactory achievement of the National Council Licensure Examination for Registered Nurses (NCLEX-RN®). In Connecticut, the laws of the state limit the licensure eligibility for any person convicted of a felony or an act that does not conform to the accepted standards of the profession. (Section 19a-14 of the Connecticut General Statutes.) A copy of the act is available for review in the School of Nursing.

Clinical Requirements

Students must arrange their own transportation to and from clinical agencies. CPR certification for the health care provider or professional rescuer must be obtained prior to enrolling in the first nursing course, and maintained throughout the program. The School of Nursing has additional health and clinical readiness requirements in addition to those required by the university. A criminal background check and drug screening are required. Incoming and current students will be advised that final program acceptance and continuation is dependent on a successful background investigation and clearance.

NUR 300. Core Concepts in Nursing.

3 Credits.

This course introduces students to core concepts in nursing, and focuses on assessment and nursing interventions to support and protect health. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 302, NUR 306, NUR 330L, NUR 307.

Offered: Every year, Fall and Spring

NUR 302. Nursing Science and Information Literacy. 3 Credits.

This course examines historical and contemporary nursing science. Students are introduced to patterns of knowing, clinical reasoning and select disciplinary and interdisciplinary concepts and theories useful in nursing practice. This course also focuses on information literacy and information management in the delivery of quality patient care. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 300, NUR 306, NUR 330L, NUR 307.

Offered: Every year, Fall

NUR 304. Health Promotion and Wellness. 3 Credits.

This course focuses on health promotion, wellness and disease and injury prevention across the lifespan. Individual prevention strategies and health interventions are explored.

Offered: Every year, Fall and Spring

NUR 306. Health Assessment. 3 Credits.

This course focuses on health assessment of individuals across the lifespan. Students are introduced to a holistic approach to assessment taking into consideration bio-psycho-social-spiritual, environmental and cultural aspects. Knowledge, attitude, and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 330L, NUR 307.

Offered: Every year, Fall and Spring

NUR 307. Core Nursing Practicum. 2 Credits.

This clinical practicum is taken concurrently with NUR 300, 302, 306 and 330L. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN program: Take NUR 300, NUR 302, NUR 306, NUR 330L.

Offered: Every year, Fall and Spring

NUR 318. Care of Women, Newborns and Families. 2 Credits.

This course examines topics related to nursing management for women, newborns and families, and emphasizes health promotion, wellness and the illness states of childbearing families. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 320, NUR 323, NUR 324, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring and Summer

NUR 320. Care of Children and Families. 2 Credits.

This course examines topics related to nursing management of infants, children and families, and emphasizes health promotion, wellness and the illness states of these populations. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 323, NUR 324, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring and Summer

NUR 323. Women, Children and Families Practicum. 2 Credits.

This clinical practicum is taken concurrently with NUR 318 and NUR 320. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 324, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring and Summer

NUR 324. Care of Adults with Complex Health Needs I. 3 Credits.

This course examines concepts of nursing management for adults with complex health care needs. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 325, NUR 326, NUR 340L.

Offered: Every year, Spring

NUR 325. Adult Care Practicum I. 2 Credits.

This clinical practicum is taken concurrently with NUR 324. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 324, NUR 326, NUR 340L.

Offered: Every year, Spring

NUR 326. Pathophysiology and Pharmacotherapy I. 3 Credits.

This course integrates pathophysiology and pharmacotherapy relevant to concurrent junior spring semester nursing courses. Students are introduced to medications used for health maintenance and the treatment of illness. Legal, ethical and regulatory issues also are examined.

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 324, NUR 325, NUR 340L.

Offered: Every year, Spring

NUR 330L. Holistic Nursing Integration Lab I. 2 Credits.

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, and to practice skills relevant to concurrent junior fall semester nursing courses. Students participate in learning modalities such as guided practice, clinical simulation and problem-based learning activities to develop clinical reasoning. (5 hrs./week, 70 hrs./semester)

Prerequisites: Traditional BSN Program: all preprofessional courses, NUR 304.

Corequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 306, NUR 307.

Offered: Every year, Fall and Spring

NUR 340L. Holistic Nursing Integration Lab II. 2 Credits.

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, and to practice skills relevant to concurrent junior spring semester nursing courses. Students participate in learning modalities such as guided practice, clinical simulation, and problem-based learning activities to develop clinical reasoning. (5 hrs./week, 70 hrs./semester)

Prerequisites: Traditional BSN Program: Take NUR 300, NUR 302, NUR 304, NUR 306, NUR 307, NUR 330L.

Corequisites: Traditional BSN Program: Take NUR 318, NUR 320, NUR 323, NUR 324, NUR 325, NUR 326.

Offered: Every year, Spring

NUR 400. Psychiatric-Mental Health Nursing. 3 Credits.

This course examines concepts of nursing management for individuals with psychiatric-mental health needs across the lifespan. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 401, NUR 408, NUR 424, NUR 425, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 401. Psychiatric-Mental Health Practicum. 2 Credits.

This clinical practicum is taken concurrently with NUR 400. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 408, NUR 424, NUR 425, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 408. Evidence-Based Nursing Practice and Scholarship. 2 Credits.

This course focuses on the related knowledge, attitudes, and skills necessary for evidence-based decision making in clinical practice. Students learn the basic elements of evidenced based practice and participate in the process of retrieval, appraisal, and synthesis of evidence. Students develop scientific literacy and enhanced information fluency.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 424, NUR 425, NUR 426, NUR 430L.

Offered: Every year, All

NUR 424. Care of Adults with Complex Health Needs II. 3 Credits.

This course examines concepts of nursing management for adults with complex, high-acuity health care needs requiring sophisticated patient care technologies. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 425, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 425. Adult Care Practicum II. 2 Credits.

This clinical practicum is taken concurrently with NUR 424. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 426, NUR 430L.

Offered: Every year, Fall and Summer

NUR 426. Pathophysiology and Pharmacotherapy II. 2 Credits.

This course integrates pathophysiology and pharmacotherapy relevant to concurrent senior fall semester nursing courses. Students are introduced to medications used for health maintenance and the treatment of illness. Legal, ethical and regulatory issues also are examined.

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 425, NUR 430L.

Offered: Every year, Fall and Summer

NUR 428. Community and Public Health Nursing. 3 Credits.

This course focuses on concepts of community and public health nursing. Emphasis is on primary, secondary and tertiary prevention and nursing management for individuals, groups and populations with health problems in community settings. The delivery of safe, evidence-based, holistic, patient-centered care is emphasized. Knowledge, attitude and skill acquisition opportunities are provided in campus lab and applied in clinical practicum.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 429, NUR 432, NUR 433, NUR 450L, NUR 454.

Offered: Every year, Spring

NUR 429. Community and Public Health Nursing Practicum. 2 Credits.

This clinical practicum is taken concurrently with NUR 428. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 432, NUR 433, NUR 450L, NUR 454.

Offered: Every year, Spring

NUR 430L. Holistic Nursing Integration Lab III. 2 Credits.

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, as well as to practice skills relevant to concurrent senior fall or summer semester nursing courses. Students participate in learning modalities such as guided practice, clinical simulation and problem-based learning to develop clinical reasoning. (5 hrs./week, 70 hrs./semester)

Prerequisites: Traditional BSN Program: all 300 level nursing courses.

Corequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 425, NUR 426.

Offered: Every year, Fall and Summer

NUR 432. Contemporary Issues and Roles in Nursing. 3 Credits.

This course analyzes trends and issues in contemporary health care and their effect on the consumer, the nursing profession and society. It incorporates social intelligence, diversity awareness, creativity and sensitivity required for leadership roles and management functions in dynamic health care environments. Knowledge, attitude and skill opportunities are provided in campus lab and applied in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 429, NUR 433, NUR 450L, NUR 454.

Offered: Every year, All

NUR 433. Capstone Practicum. 2 Credits.

This capstone practicum facilitates the transition from nursing student to professional nurse. Synthesis of knowledge from all course work is integrated into the delivery of safe, evidence-based, holistic, patient-centered care. Students participate in 84 hours of supervised clinical practice in a variety of health care settings.

Prerequisites: Traditional BSN Program: Take NUR 400 NUR 401 NUR 408 NUR 424 NUR 425 NUR 426 NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 429, NUR 432, NUR 450L, NUR 454.

Offered: Every year, All

NUR 450L. Holistic Nursing Integration and Transition Into Practice Lab. 3 Credits.

This integrated campus laboratory experience provides the opportunity to develop nursing knowledge and attitudes, and to practice skills relevant to concurrent senior spring semester nursing courses. Students participate in learning modalities such as guided practice, clinical simulation and problem-based learning activities to develop clinical reasoning. Students also prepare for the nursing licensure examination (NCLEX-RN ©) with emphasis on content review, transition into professional nursing practice, and computer-simulated test taking using web-based technology. For traditional BSN students only. (7.5 hrs./week, 105 hrs./semester)

Prerequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 425, NUR 426, NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 429, NUR 432, NUR 433, NUR 454.

Offered: Every year, Spring

NUR 454. Nursing Capstone. 3 Credits.

This nursing capstone course provides a framework within which the student intentionally reflects upon and integrates the experiences that represent the meaning of their collegiate learning. Each student designs a final signature work, which demonstrates a scholarly representation of those experiences. For traditional BSN students only.

Prerequisites: Traditional BSN Program: Take NUR 400, NUR 401, NUR 408, NUR 424, NUR 425, NUR 426, NUR 430L.

Corequisites: Traditional BSN Program: Take NUR 428, NUR 429, NUR 432, NUR 433, NUR 450L.

Offered: Every year, Spring

Curriculum Notes:

General Education course descriptions are listed in the College of Arts and Sciences and School of Health Sciences catalog sections.

RN to BSN Completion Program (online)

Program Contact: Peter Longley (Peter.Longley@qu.edu) 203-582-7676

The RN to BSN completion program is designed for individuals who are licensed as a registered nurse and are interested in pursuing a part-time bachelor's degree in nursing using a distance education format. The curriculum builds on the individual's prior educational preparation and incorporates the American Association of Colleges of Nursing (AACN) Essentials of Baccalaureate Education.

The School of Nursing is not accepting applications to the RN to BSN program at this time.

An RN to MSN completion program is available. For more information, please visit the Graduate Studies (p. 924) section of the Catalog.

Nursing Major Requirements

Students take 31 required credits for the nursing major: nursing courses (28 credits), and an open elective (3 credits) or NUR 540. All nursing courses are offered online. Fieldwork is a required component of several courses to successfully complete this program of study. Students finish with up to 10 credits toward their MSN. If they don't take NUR 540, they have 7 credits toward their MSN.

Graduation Requirement: 120 credits

The nursing curriculum is subject to modification as deemed necessary by the nursing faculty to provide students with the most meaningful educational experience and to remain current with professional standards and guidelines.

¹ Note: If less than 90 credits are awarded, then Advanced Core courses and/or electives are required.

Student Learning Outcomes

Upon completion of the program, the BSN graduate will demonstrate the following competencies:

- Integrate** the university's core liberal education into generalist nursing practice.
- Apply** principles of basic organizational and system leadership to deliver high-quality and safe patient care.
- Employ** evidence to deliver best practices in healthcare.
- Utilize** information management and patient care technologies to deliver safe and effective health care.
- Recognize** the impact of healthcare policy, finance and regulatory environments on the delivery of patient care.
- Demonstrate** interprofessional communication and collaboration for improving health outcomes.
- Incorporate** the concepts of prevention and population health in the delivery of health care.
- Exhibit** professional standards and values.

Admission Requirements: RN to BSN Completion Program

Admission requirements include graduation from a regionally accredited college or university with an associate's degree or a diploma in nursing with a cumulative grade point average of at least 2.7; a current registered nurse license in good standing; two letters of recommendation (one from a current supervisor); a personal statement, transcripts from all postsecondary institutions attended; and a resume or curriculum vitae. A criminal background check and drug screening is required prior to entering the program. Incoming and current students will be advised that final acceptance and continuation is dependent on a successful background investigation and clearance.

Qualified students enrolled in the RN to BSN completion program may pursue a seamless transition into the MSN in Operational Leadership (p. 921) program. A total of 7-10 credits from the undergraduate RN to BSN program may be utilized in the MSN program.

Advanced Placement Credits

Students with an associate's degree in nursing may transfer up to 90 credits for this program. Those students who do not have 90 transfer credits can make up the deficit with Advanced Core credits and electives taken at Quinnipiac.

Advanced Core Credits

BSN completion students can take up to 20-credit advanced core. The advanced core reflects the aims and goals of the traditional University Curriculum and the Essential Learning Outcomes while acknowledging the prior general education work completed at the associate degree level.

Professional Progression Policy (RN to BSN Program only)

- To progress and remain in good standing, RN to BSN students must attain a semester GPA of 2.0 (C) and receive a grade of C or higher in each classroom and laboratory experience (73 or higher) and a Pass (P) in all fieldwork.
- A student who receives less than a C (73) in one nursing course (C-, D, F) is unable to progress to courses that require that course as a prerequisite. This student will be given the opportunity to repeat the failed nursing course at the time of the next course offering and at the student's expense.
- A student who receives less than a C (73) in more than one nursing course (C-, D, F) will not be permitted to progress in the program and will be required to change their major out of nursing.
- A student who earns grades of C or better in all nursing courses yet has less than a 2.0 semester GPA will be placed on academic probation and will receive an academic plan to progress in the RN to BSN program. This student must achieve a 2.0 semester GPA by the end of the next semester. The student who does not meet these academic criteria will be dismissed from the program.
- At the end of each semester, course grades, semester and cumulative GPAs for each nursing student are reviewed by the program director.

Appeal Process

A student who wishes to appeal a progression decision must write a letter to the chair of the undergraduate nursing program within one week of receiving notice of their inability to progress.

- Appeals will be considered by the Progression Appeal Committee, chaired by the associate dean.
- Decision and procedural actions will be communicated in writing to the student.

The full policy for progression appeal is available in the Undergraduate Student Resource Manual located in the Student Community on Blackboard.

A student wishing to appeal a course grade should follow the grade appeal process (p. 110) detailed in the University Catalog.

Fieldwork Requirements

Students must arrange their own transportation to and from clinical agencies. CPR certification for the healthcare provider or professional rescuer must be obtained prior to enrolling in the fieldwork course, and maintained annually until all fieldwork is completed. The School of Nursing has health requirements and technical standards, criminal background check and drug screening requirements. Incoming and current students are advised that final program acceptance and continuation is dependent on a successful background investigation and clearance.

NUR 382. Nursing Science and Information Literacy. 3 Credits.

This online course examines nursing science and its use in nursing practice. Students are introduced to clinical reasoning and disciplinary and interdisciplinary concepts. This course also focuses on information literacy and information management in the delivery of quality patient care.

Offered: Every year, Fall Online

NUR 410. Integrative Health and Healing. 3 Credits.

This course explores the core holistic concepts of nutrition, fresh air, light, quiet, and cleanliness as they relate to contemporary integrative health practices and interventions ranging from nutrition to meditation and their application to whole person health.

Offered: Every year, Spring and Summer Online

NUR 412. Health Assessment. 3 Credits.

This online health assessment course prepares the Registered Nurse to complete a comprehensive, holistic assessment. The focus is on history taking, interviewing skills and assessment techniques for patients throughout the lifespan. Students demonstrate their assessment skills with video clips as well as concisely presenting their findings to course faculty.

Offered: Every year, Fall Online

NUR 478. Evidence-Based Nursing Practice. 3 Credits.

This course focuses on the knowledge, attitudes, and skills necessary for evidence-based decision making in clinical practice. Students learn the basic elements of evidence-based practice and use evidence to improve practice. The course includes one credit of application in a fieldwork setting.

Offered: Every year, Summer Online

NUR 480. Interprofessional Practice and Quality Improvement. 3 Credits.

This course describes and applies quality improvement methods to address problems identified in practice and actions needed to effect a positive change for care. The process and significance of interprofessional practice and collaboration in the delivery of patient care and in engagement with performance improvement are described. Open to RN-BSN students only.

Offered: Every year, Spring Online

NUR 484. Community and Population Health Nursing. 3 Credits.

This course investigates concepts of community and public health nursing. Emphasis is on health promotion with a focus on the role of the community and public health nurse for individuals, groups, and populations. The delivery of safe, evidence-based, holistic centered care is demonstrated during fieldwork conducted in a community setting.

Offered: Every year, Fall Online

NUR 486. Contemporary Issues and Roles in Nursing Practice. 3 Credits.

This course analyzes trends and issues in contemporary health care and their effect on the consumer, the nursing profession, and society. It incorporates social intelligence, diversity awareness, creativity and sensitivity required for leadership roles and management functions in dynamic health care environments. This course includes 1 credit of clinical practice.

Offered: Every year, Spring Online

NUR 500. Biostatistics. 1 Credit.

This biostatistics course is an introduction to probability concepts and statistical tests currently used in the biological and health sciences. The course covers the application of statistics to data analysis. An emphasis is placed on inferential statistics, which includes estimation, confidence intervals, means, variances and proportions.

Offered: Every year, All Online

NUR 514. Epidemiology and Population Health. 2 Credits.

This course introduces epidemiologic principles, methods and data used in advanced nursing practice. Data and evidence from research are used to: assess acute and chronic population health problems/topics, provide effective possible interventions; and address and examine outcomes.

Offered: Every year, Spring and Summer Online

NUR 516. Health Policy and Organizational Systems. 2 Credits.

This course provides an introduction to various social and political policy environments impacting advanced nursing practice and health care systems. Students examine issues that inform health care policy, organization and financing. Nursing's advocacy role in shaping policy in organizational, social and political venues is emphasized.

Offered: Every year, Fall and Summer Online

NUR 540. Educational Principles for the Health Care Professional. 3 Credits.

This course examines the theoretical perspectives of education as it relates to educational leadership and professional development for adult learners. Teaching/learning theories, models and principles are examined as preparation for the design, development, evaluation and revision of professional development-related curricula. Instructional strategies and teaching techniques adapted for diverse populations are explored.

Offered: Every year, Fall Online

NUR 542. Introduction to Health Care Finance. 2 Credits.

This 2-credit online graduate course provides an overview of basic budgeting concepts and processes integral to project planning and project management. Students also are introduced to foundational principles of marketing.

Offered: Every year, Summer Online

Advanced Core course descriptions are listed in the corresponding College or School catalog sections.

Seamless Transfer Agreement with Gateway Community College (GCC), Housatonic Community College (HCC) and Norwalk Community College (NCC)

Under this Transfer Agreement, GCC, HCC and NCC graduates will be guaranteed admission into a bachelor's degree program with third year (junior) status at Quinnipiac University on the condition that they:

- Graduate with an associate in arts, an associate in science in business, College of Technology engineering science, nursing or an allied health degree with a minimum cumulative GPA of 3.0 (this may be higher in specific programs). **The student with the associate degree in nursing is eligible for transfer into the RN to BSN completion program. An admission requirement for the RN to BSN completion program is a cumulative grade point average of at least 2.7.**
- Satisfy all other Quinnipiac University transfer admission requirements and requirements for intended major.

Quinnipiac University agrees to accept the general education embedded in these associate degree programs in accordance with Quinnipiac preferred choices for general education as meeting all the requirements of its undergraduate general education except for the Integrative Capstone Experience and where courses are encumbered by the major (e.g., General Chemistry for the Disciplinary Inquiry Natural Science requirement for a Biochemistry major).

PART-TIME UNDERGRADUATE STUDIES

Office of Undergraduate Admissions Echlin Center

Title	Name	Phone	Email
Transfer & Part-Time Admissions		203-582-8600	transfer@qu.edu

Quinnipiac University offers the ability to obtain a degree on a part-time basis in select programs. Part-time students are an integral part of the university and benefit from the many resources and services (p. 24) available to students. For example, academic support is available in the Learning Commons (p. 30), which maintains evening hours. In addition, Quinnipiac offers several ways to use previous collegiate and noncollegiate learning experiences to award college credit and also recognizes student financial needs through payment plans and financial assistance.

Non-Matriculated Students

Part-time students may take a limited number of courses without applying for admission (non-matriculated) if they are attempting to build an academic record after many years of absence from school, or are not ready to pursue a degree program. To be considered for non-matriculated study, the student must have earned a high school diploma. A maximum of 6 credits may be taken in any semester on a space-available basis. Advanced courses may require specific prerequisites and permission for registration. Non-matriculated students must contact the registrar's office for further information about registration.

A student who does not meet the above requirements may not register as a non-matriculated student and must contact the admissions office at 203-582-8600 to apply for part-time study and provide official high-school and college transcripts. Current non-matriculated students are encouraged to apply for admission/change of status as soon as possible to ensure guidance with course selection and a degree program. No more than 12 credits may be completed by non-matriculated students in the School of Business.

Changing Status—Non-Degree to Degree

Students who have earned credit at Quinnipiac and wish to apply for matriculation into a degree program in the College of Arts and Sciences or the Schools of Business, Computing and Engineering, Communications or Health Sciences should initiate the admission process by filing a "Change of Status" form available from the Office of Part-Time Admissions. All appropriate documents required by the university for admission should be sent to the same office. Coursework already completed at Quinnipiac as a non-degree student is considered in the admission process, as well as coursework from other institutions. Students should contact the Office of Transfer and Part-Time Admissions at 203-582-8600 with any questions.

Academic Good Standing Policy

All part-time students, whether matriculated or non-matriculated, are subject to the Academic Good Standing Policy of the university. See Academic Good Standing Policy for Undergraduate Students (p. 60).

Academic Policies

The detailed academic policies that govern all students are found in the undergraduate Student Handbook (<http://catalog.qu.edu/handbooks/undergraduate/>), Graduate Student Handbook (<http://catalog.qu.edu/handbooks/graduate/>) and in the policy section of this catalog (p. 60). Below are the basic academic policies that govern part-time students.

Placement Tests

To ensure appropriate placement in English courses, all transfer students with only one semester of English transferring in from another school must take the English placement test.

A math placement exam is also required to determine appropriate placement before registering for math courses required in all majors, and a language placement test is required for students continuing in a language from high school.

There is no fee for the placement exams, and arrangements can be made for taking the tests through the appropriate academic department.

Transfer of Credit

Credits for college courses taken at other regionally accredited institutions normally may be transferred if they carry a grade of C or better. Evaluation of University Curriculum transfer credit is completed by the transcript evaluator. Additional credits are reviewed by the school to which the student has transferred. The maximum number of transfer credits that may be accepted by Quinnipiac University is 75 credits. At least one-half of the courses in a major must be taken at Quinnipiac University. Certain majors may request course completion within a five-year period. Official acceptance of transfer credit is completed upon matriculation.

AP and CLEP Exam Policies

Quinnipiac University participates in the Advanced Placement (AP) program and the College Level Examination Program (CLEP), which provides an opportunity for students to obtain credit through examination (credits are accepted as transfer) for AP and CLEP exams taken prior to matriculation at Quinnipiac. Information regarding AP and CLEP exams may be obtained from the Office of Transfer and Part-Time Admissions. Quinnipiac University does not accept CLEP credits earned after a student is matriculated.

Military Credit for Prior Learning

Quinnipiac evaluates military training and experience according to the American Council on Education (ACE) standards for recommended college credit. Veterans and service members may be eligible for college credit based on their military experience, coursework, or other training as documented on their Joint Services Transcript—(JST)/ Community College of the Air Force (CCAF) transcript. Determination of credit award is based on competencies and approved by school or college dean's offices. Students must be matriculated at Quinnipiac to earn credit for military experience.

Registration

Course offerings and registration forms are available on the Registrar's Office website (<https://www.qu.edu/one-stop-student-administrative-services/registrar/>). Registration is completed by submitting the electronic forms. Currently enrolled students may register via Student Planning within their scheduled window each semester. Students

should check course descriptions for any specific prerequisites prior to registering.

Special Programs

Accelerated Online Courses

Part-time students may be able to complete some requirements more rapidly and shorten the path to their degrees with these options. A limited number of accelerated (seven-week) online courses are offered year-round.

Auditing Courses

Alumni and seniors (65 and older) may audit courses on a space-available basis. The student is responsible for the registration fee and any technology fees. In addition, seniors may take courses for credit, on a space-available basis, by paying the registration fee and any technology fees. Questions should be directed to the Registrar's Office.

Bachelor's Degrees

- Bachelor of Arts in Professional Studies (p. 672)
- Bachelor of Science in Health Science Studies (p. 672)

Bachelor of Arts and Bachelor of Science Traditional Majors

Part-time students may enroll in the bachelor's degree programs offered by the College of Arts and Sciences, School of Business, School of Communications and School of Computing and Engineering. Part-time students may only enroll in the following bachelor's degree programs offered by the School of Health Sciences: Biomedical Sciences, Health Science Studies and Medical Microbiology/Immunology. While some evening courses may be available, most degree programs cannot be completed solely through evening work. More information on these programs can be found in the sections for the Schools of Business (p. 303), Communications (p. 359), Computing and Engineering (p. 409), Health Sciences (p. 468) and the College of Arts and Sciences (p. 139).

Part-Time Admission Procedures

Adult students starting college for the first time, returning to school after an absence, or considering transferring to the College of Arts and Sciences or the Schools of Business, Communications, Computing and Engineering or Health Sciences should contact the Office of Transfer and Part-Time Admissions at 203-582-8600 for an appointment at any time of the year to discuss the courses or programs offered by Quinnipiac.

Applications for admission may be obtained from the Quinnipiac website (<https://www.qu.edu>). The admission requirements for undergraduate applicants listed in this catalog are the same for part-time candidates, with the following exceptions:

- Applicants who graduated high school more than five years ago or who have successfully completed the equivalent of one year (30 credits) of college study are not required to submit score results for the Scholastic Assessment Test (SAT) of the College Entrance Examination Board (CEEB) or for the American College Testing Program (ACT).
- Applicants who have earned an associate's degree from a regionally accredited college need not submit high school transcripts.
- An interview is recommended.

Financial Assistance

Federal Financial Aid Programs

Undergraduate part-time students who have been admitted by Quinnipiac into a degree program and are registered for a minimum of 6 credits each semester are eligible to apply for federal financial aid programs (loans and grants). The Free Application for Federal Student Aid (FAFSA) is available online at studentaid.gov (<https://studentaid.gov/h/apply-for-aid/fafsa/>). Students taking fewer than 6 credits may be eligible for federal Pell Grants. Contact the Financial Aid Office for information and assistance.

Employer Tuition Benefits

Quinnipiac University works with students to make the most of their employer's educational benefits plan. If your company does not have a formal agreement with Quinnipiac but does offer educational benefits, you can defer two-thirds of your tuition charges. All that is needed is an original employer letter verifying participation in the company tuition reimbursement plan during the semester for which they are registering. At registration, the student pays one-third of the tuition plus fees and signs a promissory note for the tuition balance. The final tuition payments are due five weeks after the last day of the semester, which allows time for tuition reimbursement checks to be issued by the employer. Contact the One Stop office for information.

Payment Plans

Students who do not participate in company tuition reimbursement plans can still set up a tuition payment plan. Plans are offered through TouchNet on an annual semester basis. There is a charge of \$75 to enroll. Contact the One Stop office for assistance.

Bachelor of Arts in Professional Studies

Program Contact: Vanessa Gonzalez-Figueroa
(Vanessa.GonzalezFigueroa@quinnipiac.edu) 203-582-7376

The BA in Professional Studies is designed for students who have completed a significant number of credits and are seeking a new pathway toward completing a bachelor's degree. This program is open to existing students, returning students and transfer students. Students have maximum flexibility in using previously earned credits and can complete the program using online or on-ground options, including Summer and January Terms. Students in the program will work with the dean of the College of Arts and Sciences (or designee) to design an individual course of study that consists of a concentration of at least 27 hours with at least 15 credits at the 300 level.

Bachelor of Science in Health Science Studies

For individuals with an associate degree or credits in science, the BS in Health Science Studies program allows students to complete a bachelor's degree and be prepared for either graduate level work or career advancement in the field of health sciences. This program is also designed to help those interested in making a complete career change to health sciences from an unrelated field. The program provides the maximum utilization of previously acquired credits from academic and clinical training. An individual curriculum plan, approved by an academic adviser, can be designed that allows flexibility in choosing courses to

build concentrations in the health sciences field, as well as in other areas such as health care management, public health and nutrition.

Mission Statement

Through its graduate programs, Quinnipiac University recognizes a substantial trend toward greater professionalism and the rapidly expanding body of knowledge in the fields of business, communications, education, social work, health management and the health care, rehabilitative and laboratory sciences. The provision of graduate degrees is a logical extension of Quinnipiac's special mission, which is "to provide opportunity for an integrated liberal and technical education" that will enable students to prepare for and advance in their professional careers and to "make responsible decisions in a society that increasingly demands understanding of the humanities, the social and natural sciences and technology."

All graduate programs at Quinnipiac share three foundations. Instruction is provided by a team of academicians who hold the highest available academic credentials and practicing professionals who hold advanced positions in their field. Every graduate student is provided with the opportunity to obtain practical experience through supervised residencies, thesis research, special projects or small laboratory classes. Study in all graduate programs is advanced and builds on both undergraduate education and professional experience. Additional prerequisite courses are needed by students who enter new fields at the graduate level.

Graduate Admission

Applications for all graduate programs, except law and medicine, may be obtained and submitted from the Quinnipiac Admissions website (<http://www.qu.edu/gradadmission/>). Applicants are required to submit an application fee and official transcripts of all college-level work completed at other institutions. Applicants also are required to submit a letter of intent and resume (as stipulated by each specific program) and to make arrangements to have two letters of reference submitted.

Individual graduate programs have additional application requirements.

The Quinnipiac physician assistant program participates in the Central Application Service for Physician Assistants. Go to the CASPA website (<https://caspa.liaisoncas.com>) for more information regarding the application process and fees. All applications, transcripts, references and other supporting materials are submitted directly to CASPA. Applicants may contact the Office of Graduate Admissions for information.

The Quinnipiac Post-Baccalaureate Doctor of Occupational Therapy program participates in the Occupational Therapist Centralized Application Service (OTCAS). More information regarding the application process and fees is available at the OTCAS website (<https://otcas.liaisoncas.com>). All application materials, including official transcripts from all undergraduate, graduate and professional schools, references and other supporting materials for all internal and external applications, are submitted directly to OTCAS. The deadline for a complete application to OTCAS is February 15. Quinnipiac does not require a supplemental application. Applicants may contact the Office of Graduate Admissions for additional information.

Submission of Graduate Record Examination scores is not required for admission into Quinnipiac's master's degree programs except for the MMSc in anesthesiologist assistant program (however, this program will accept the MCAT in lieu of the GRE). However, many program faculty find GRE scores a useful indication of a student's ability. Information about specific admissions requirements or standardized exams can be obtained from the Office of Graduate Admissions, the Admissions website (<http://www.qu.edu/gradadmission/>).

International Student Admission

Applications for graduate study from international students are welcomed. International applicants must complete their application at least three months prior to their intended start term. Upon application, international students are requested to submit English language descriptions of universities and colleges attended including status as a public or private institution as well as recognition by government and accrediting agencies of the respective country.

All applicants from non-English-speaking countries must, in addition to all of the regular admissions requirements, provide TOEFL (Test of English as a Foreign Language) scores (go to [ets.org](http://www.ets.org) (<http://www.ets.org>)). In general, a minimum TOEFL iBT score of 90, Internet-based (575 paper-based, 233 computer-based) is required for admission. In lieu of TOEFL, applicants may submit IELTS (International English Language Testing System) scores (go to [ielts.org](http://www.ielts.org) (<http://www.ielts.org>)). A minimum score of 6.5 on this exam, "B" or above on the CAE (Certificate of Advanced English), or "C" or above on the CPE (Certificate of Proficiency in English) is required. In lieu of TOEFL or IELTS, applicants may submit PTE-A (Pearson Test of English Academic) scores (available at [pearsonPTE.com](http://www.pearsonPTE.com) (<http://www.pearsonPTE.com>)). A minimum PTE-A score of 61 is required. TOEFL, IELTS and PTE scores are valid for two years.

Candidates holding degrees from foreign institutions must provide notarized English translations and an official evaluation of their post-secondary records from an academic credential evaluation service. Applicants for the PA program must possess a bachelor's degree from a regionally accredited institution in the United States or a nationally recognized foreign institution and all PA program prerequisites must be completed at a regionally accredited institution in the U.S.

International applicants are required to submit proof of adequate funds to complete their study at Quinnipiac before a visa application can be issued.

Graduate Financial Assistance and Scholarship Information

Graduate Financial Assistance

Financing a graduate education is a significant investment for students. To assist students, Quinnipiac provides several financial aid programs

to help graduate students fund their education. Financial aid is available to both full-time and part-time students. Graduate students who are matriculated, enrolled at least half-time (5–8 credits) and making satisfactory academic progress in a degree programs are eligible to receive financial aid.

Graduate Assistantships

Graduate assistantships are available on a limited basis to both full-time and part-time graduate students. There are two types of assistantships. Students whose services and skills are utilized in practical, clinical or research within the university receive a partial tuition waiver. Students whose services are in administrative areas within the university receive a paycheck.

The number of graduate assistantships vary each semester. Students who wish to be considered for an assistantship should contact either the program director or visit Quinnipiac's Graduate Work (<http://www.qu.edu/gradwork/>) webpage.

Internship Waivers

Students accepted full time into the master of arts in teaching program have the opportunity to serve as graduate student interns in a single public school. Interns receive a significant tuition reduction during the internship semesters.

Quinnipiac University Graduate Merit Scholarship

Quinnipiac University's graduate merit scholarships are awarded on a competitive basis to a select number of newly admitted full-time on-campus graduate students who demonstrate exceptional promise of achieving academic excellence. The scholarships are offered to full-time students who are entering the following traditional on-campus programs: business administration, cardiovascular perfusion, journalism, medical laboratory sciences, molecular and cell biology, nursing, pathologists' assistant, physician assistant, and social work.

Candidates are evaluated during the admissions process so no additional forms are needed. Holistic factors used to evaluate scholarship candidates include: academic performance, academic potential, program of study and outside experiences. Program directors provide recommendations during the admissions application process to the graduate admissions and financial aid offices for final selection. Financial need is not a factor in the selection.

Candidates interested in merit scholarships are encouraged to apply early in the admissions application process. Every admitted full-time applicant is considered for the scholarship as long as they have applied by the established admissions deadlines. Due to limited funding, these scholarships are not available to international students.

Scholarships are renewable so long as students maintain full-time enrollment and a cumulative grade point average of 3.25 each semester.

Quinnipiac Graduate Grant

Quinnipiac University provides institutional grants to our full-time, on-campus graduate students with the highest financial need. To determine who should be appropriately funded by this grant, we use an institutional application in conjunction with the Free Application for Federal Student Aid (FAFSA). The grant is nonrenewable.

Loan Programs

Graduate students may be eligible for several different types of loan programs offered at the university. Federal loans are available to students who meet all of the following requirements:

- Meet the general requirements as established by the Free Application for Federal Student Aid (FAFSA)
- Are U.S. citizens or eligible noncitizens
- Are registered with Selective Service (male students only)
- Are enrolled in at least 5 or more credits each semester (summer, fall or spring)

Private alternative loans also are available and do not require the same criteria as listed above. These types of loans are based on enrollment and an individual's personal credit standings.

Applying for Financial Aid

Students seeking financial aid should complete, as soon as possible, a Free Application for Federal Student Aid. This may be completed online at [fafsa.gov](http://www.fafsa.gov) (<http://www.fafsa.gov>). Be sure to indicate the federal school code 001402. In addition, a financial aid application is required to award student aid. The form can be downloaded from the Graduate Financial Aid (<https://www.qu.edu/paying-for-college/graduate/>) section of Quinnipiac's website.

Requirements for Graduation

Master of Arts in Cinematic Production Management

- Satisfactory completion of 36 credits of graduate study.
- A cumulative GPA of at least 3.00 and no grade less than a C.
- Completion of thesis production.

Master of Arts in Teaching Program

- Satisfactory completion of all MAT program requirements (including submission of edTPA portfolio).
- Satisfactory completion of the Connecticut State Department of Education's certification requirement of demonstrated competence in language arts, mathematics, natural sciences, social sciences (including a U.S. history course), the fine arts, physical education and health, a world language, and computer and other technology.
- Satisfactory results on the appropriate Praxis II or ACTFL and CT Foundation of Reading tests.
- A preferred cumulative GPA of at least 3.00.
- Completion of the full-time internship.

Master of Business Administration

- Satisfactory completion of all MBA program requirements (45 credits).
- A cumulative GPA of at least 3.00.
- A minimum grade of C in all MBA program courses taken at Quinnipiac.

Master of Science in Accounting

- Satisfactory completion of all MS in Accounting program requirements (30 credits).
- A cumulative GPA of at least 3.00.
- A minimum grade of C in all MS program courses taken at Quinnipiac.

Master of Science in Business Analytics

- Satisfactory completion of all MS in Business Analytics program requirements (33 credits).
- A cumulative GPA of at least 3.00.
- A minimum grade of C in all MS program courses taken at Quinnipiac.

Master of Science in Cybersecurity

- Satisfactory completion of all MS in Cybersecurity program requirements (30 credits).
- A cumulative GPA of at least 3.00.
- A minimum grade of C in all MS program courses taken at Quinnipiac.

Master of Science in Organizational Leadership

- Satisfactory completion of all MS in Organizational Leadership program requirements (30 credits).
- A cumulative GPA of at least 3.00.
- A minimum grade of C in all MS program courses taken at Quinnipiac.

Master of Health Science (Advanced Medical Imaging and Leadership program)

- Satisfactory completion of all MHS-AMIL curriculum requirements.
- Satisfactory completion of all American Registry of Radiologic Technologists (ARRT) examination requirements.
- A cumulative GPA of at least 3.00.

Master of Health Science (Cardiovascular Perfusion, Biomedical Sciences, Pathologists' Assistant, Physician Assistant)

- Satisfactory completion of the curriculum requirements for the selected graduate program.
- Satisfactory completion of specific course requirements.
- A cumulative GPA of at least 3.00.

Master of Health Science (Radiologist Assistant)

- Satisfactory completion of all MHS-RA curriculum requirements.
- Satisfactory completion of all American Registry of Radiologic Technologists (ARRT) examination requirements.
- A cumulative GPA of at least 3.00.

Master of Science in Instructional Design and Technology

- Satisfactory completion of all MS in Instructional Design and Technology program requirements, including capstone project (30 credits).
- A cumulative GPA of at least 3.00, with no course grade below B-.

Master of Science in Interactive Media and Communications

- Satisfactory completion of 30 credits of graduate study.
- A cumulative GPA of at least 3.00 and no grade less than a C.
- Completion of the capstone course.

Master of Science in Journalism

- Satisfactory completion of 30 credits of graduate study.
- A cumulative GPA of at least 3.00 and no grade less than a C.
- Completion of research thesis or professional project.

Master of Science in Sports Journalism

- Satisfactory completion of 36 credits of graduate study.
- A cumulative GPA of at least 3.00 and no grade less than a C.
- Completion of research thesis or professional project.

Master of Science in Molecular and Cell Biology

- Satisfactory completion of at least 34 credits of graduate study.
- A minimum grade of C in all graduate courses.
- Satisfactory completion of specific course requirements.
- Candidates must maintain a minimum cumulative GPA of 3.00 to remain in the MCB program.

Master of Science in Nursing

- Satisfactory completion of all core courses and appropriate specialty courses.
- A cumulative GPA of at least 3.00.
- Satisfactory completion of the precepted practice hour requirement.
- A minimum grade of B- in all nursing courses.

Doctor of Nursing Practice

- Satisfactory completion of all core courses and appropriate specialty courses.
- A cumulative GPA of at least 3.00.
- Satisfactory completion of the precepted practice and fieldwork hour requirement.
- A minimum grade of B- in all doctoral nursing courses; B for nurse anesthesia courses.

Post-Baccalaureate Doctor of Occupational Therapy

- Satisfactory completion of all graduate curriculum requirements.
- A minimum grade of B- in all didactic courses.
- A "pass" in all Level II Fieldwork and Doctoral Capstone courses.
- A cumulative GPA of at least 3.20 for each semester of graduate study.

Master of Occupational Therapy

- Satisfactory completion of all graduate curriculum requirements.
- A minimum grade of C+ in all didactic courses.
- A "pass" in all Level II Fieldwork courses.
- A cumulative GPA of 3.00 for each semester of graduate study.

Post-Professional Occupational Therapy Doctorate

- Satisfactory completion of all OTD program requirements (32 credits).
- A cumulative GPA of at least 3.20.

Doctor of Physical Therapy

- Satisfactory completion of all graduate curriculum requirements.
- A minimum grade of C+ in all graduate courses.
- A cumulative GPA of 3.00 for each semester of graduate study.

Master of Science in Public Relations

- Satisfactory completion of all graduate curriculum requirements (30 credits), including a capstone project.
- A cumulative GPA of at least 3.00 and no grade less than a C.

Master of Social Work

- Satisfactory completion of all MSW program requirements (60 credits), including a capstone project and field placements.
- A cumulative GPA of at least 3.00.

Sixth-Year Diploma in Educational Leadership

- Satisfactory completion of all program coursework, including the internship.
- Satisfactory results (passing) on the Connecticut Administrator Test (CAT).
- Successful completion of all performance tasks.
- A cumulative GPA of at least 3.00, with no course grade below B-.

GPA's are not rounded; they are truncated at the hundredths place.

Master of Science in Molecular and Cell Biology

Program Contact: Alexandre de Lencastre
(Alexandre.deLencastre@qu.edu) 203-582-5024

The College of Arts and Sciences offers a Master of Science in Molecular and Cell Biology program for both part-time and full-time students. Through the graduate program, the mission of the Department of Biological Sciences is to prepare students for employment in research fields available in pharmaceutical companies, universities and hospitals as well as to provide an excellent foundation for students intending to pursue studies in professional health care fields and doctoral programs. To achieve this goal, the program provides the students with highly

specialized lecture and laboratory courses relevant in this rapidly growing field.

MS in Molecular and Cell Biology Program of Study

The 34 credits required for the Master of Science in Molecular and Cell Biology include five courses (20 credits) in the science core, elective courses chosen in consultation with the program director and a thesis or non-thesis option (the non-thesis option requires the successful completion of a comprehensive examination; the thesis option requires 2 additional credits, for a total of 36 credits). Students must maintain a minimum cumulative GPA of 3.0 to remain in the MCB program. A minimum grade of C is required in all graduate courses.

MS Thesis

The MS thesis option involves original laboratory research performed under the guidance of a thesis mentor, a thesis committee and the director of the molecular and cell biology program. The thesis option requires the successful completion of 3 courses: BIO 649, BIO 650 and BIO 651. Students must have a GPA >3.5 to be eligible for the thesis track and pre-approval by program director. The thesis committee evaluates a student's progress by approving the research project, assessing student progress and advising the student whenever the need arises.

Comprehensive Examination

The written comprehensive exam (BIO 675) is a requirement of the non-thesis option for the MS in Molecular and Cell Biology. Students must demonstrate both breadth and depth of knowledge by illustrating a command of the subject matter obtained from individual courses into unified concepts, which link the student's own specialization to other fields of study. Completion of a minimum of four of the five core curriculum courses is required to register for the comprehensive examination. A minimum grade of a B- is required to pass the comprehensive examination. Students must meet with the program director before registering for the comprehensive exam.

Student Learning Outcomes

Upon completion of a Master of Science in Molecular and Cell Biology (MCB), students will demonstrate the following competencies:

- Foundational Knowledge:** Understand fundamental concepts in molecular genetics, cell biology and biochemistry and apply their knowledge to new findings in the field of molecular and cell biology.
- Application and Analysis:** Employ modern laboratory techniques used in DNA and protein research and interpret experimental data.
- Scientific Knowledge:** Analyze, synthesize and discuss primary scientific literature from peer-reviewed journals in the field.
- Communication Excellence:** Present scientific content to an audience in a professional manner.
- Advanced Knowledge:** Author scientific critiques and/or reviews in a manner consistent with the standards of professional scientific writing.

Admission

Applicants who have a bachelor's degree in a biological, medical or scientific field are eligible for admission to the Master of Science in Molecular and Cell Biology program. Applications may be obtained from the Office of Graduate Admissions (<http://www.qu.edu/gradadmission/>) and are accepted for fall or spring enrollment. A complete application consists of the following:

- application form and fee
- a letter of intent including a detailed autobiography of personal, professional and educational achievements
- two letters of recommendation (at least one letter should be from a science faculty member)
- official transcripts of all undergraduate and graduate work completed

A cumulative undergraduate GPA of 3.0 is preferred and undergraduate course work in biochemistry, microbiology, molecular biology and/or genetics is highly recommended. Although Graduate Record Examination (GRE) scores are not required, the scores can provide another indication of a student's academic readiness. Applicants should refer to the Graduate Admission Requirements (p. 675) found in this catalog.

Accelerated Dual-Degree Bachelor's/MSW (3+2)

Program Contact: Catherine Solomon
(catherine.solomon@qu.edu) 203-582-5264 Stephanie Jacobson
(stephanie.jacobson@quinnipiac.edu) 203-582-8907

This direct-entry Accelerated Dual-Degree Bachelor's to Master of Social Work (3+2) program is an excellent choice for students seeking a rewarding and successful career as a clinical social worker and mental health professional. Through this accelerated dual-degree program, students complete both their bachelor's degree and their Master of Social Work (p. 810) degree in just 5 years. Incoming first-year students in the College of Arts and Sciences majoring in psychology, sociology, criminal justice and gerontology are eligible to be assessed for admittance to this program.

Quinnipiac University's MSW program prepares social workers for specialized practice in health and mental health. The curriculum emphasizes interprofessional education to familiarize students with a team-based approach to health and mental health care. The MSW

program equips students with clinical social work skills, including counseling, crisis intervention and trauma-informed treatments, as well as the ability to access social welfare and community resources. Students are prepared for social work licensure as part of MSW coursework. Graduates of this MSW program meet eligibility requirements for both the LMSW and the LCSW.

Social work is the major provider of mental health care and one of the fastest-growing occupations in the United States. Graduates of this MSW program enter a broad range of high-demand fields. Hospitals, rehabilitation facilities, mental health clinics, schools, health departments, social welfare, criminal justice and community organizations rely on social workers to provide health and mental health care to a wide variety of clients. This includes treating persons with trauma, such as veterans with PTSD; people with chronic mental illnesses; and many others. Social workers are also a crucial link between clients and other professionals, ensuring that people receive critical mental health care, advocacy and access to resources.

Communicate with the program contacts listed above for further information on this Accelerated Dual-Degree Bachelor's to Master of Social Work (3+2) program.

Accelerated Dual-Degree Bachelor's/MSW (3+2) Curriculum Requirements

The most common majors for students who are anticipating graduate study in social work are Sociology, Criminal Justice, Gerontology and Psychology¹; however this accelerated dual-degree program is open to students in any Arts and Sciences major. Students are advised that this accelerated degree will require overloads and summer coursework to complete the bachelor's degree in three years.

Students must work with their advisers to carefully plan their course of study to ensure completion of the BA or BS degree in three years. Students admitted to the program take 9 credits of graduate coursework in their third year. Suggested curriculum is as follows:

Course	Title	Credits
First Year		
Fall Semester		
EN 101	Introduction to Academic Reading and Writing	3

Total Credits	120-121

Once admitted to the program, students must maintain an undergraduate GPA of 3.0, complete 20 credits in liberal arts, and a statistics course with a grade of C or higher. Additionally, students must achieve a grade of B or higher in their three graduate courses. A maximum of 9 credits may be used to fulfill both undergraduate and graduate requirements. Students earn their Master of Social Work upon satisfactory completion of all of the graduate curriculum requirements.

¹ Psychology majors who are interested in the dual-degree program follow a different curriculum, and should consult with their adviser.

² Courses are chosen in consultation with an adviser to meet the requirements for Personal Inquiry I and Personal Inquiry II.

³ Course counts as UC Capstone

⁴ Criminal Justice majors must complete UC Capstone.

Admission Requirements: College of Arts and Sciences

The requirements for admission into the undergraduate College of Arts and Sciences programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Please note: Students cannot be added to the Accelerated Dual-Degree Bachelor's to MSW (3+2) program after the add/drop period at Quinnipiac University.

Accelerated Dual-Degree BA in Theater/MBA (3+1)

Program Contact: Abigail Copeland (p. 7) 203-582-7301

The Accelerated Dual-Degree BA/MBA (3+1) program offers highly motivated students an opportunity to earn a BA in Theater and an MBA from the School of Business in just 4 years. Both degrees are completed in full without compromise.

This program offers advantages to students who have a passion for theater and ambitions for a career in the global business landscape. The study of theater sharpens self-confidence and public speaking skills while developing empathy. Theater students engage in hands-on problem solving, take on leadership roles, and become creative thinkers with intrinsic, "get the job done" work ethics. A student who wishes to have their resume stand out from the pack, while developing the above skills and earning a respected degree in business might consider this 3+1 program as a differentiator.

Additionally, this program offers advantages to students who wish to pursue leadership roles within the professional entertainment industry. There is a demand within the industry for skilled leaders who possess strong business administration skills paired with a core understanding of theater arts. Examples of high-paying jobs that 3+1 students would be uniquely qualified for include: executive director, producer, managing director, artistic director, director of development, business manager and operations manager. By pairing their passion for theater with the MBA degree, theater students substantially increase their employability and earning power upon graduation without compromising the personal, interpersonal and intellectual growth that a liberal arts education offers.

BA in Theater/MBA Program of Study

This rigorous program of study includes extra courses during the fall and spring sessions, as well as summer sessions to complete the degree requirements for both a BA and an MBA in just four years.

Student Outcomes

Upon completion of the BA in Theater, students will demonstrate the following competencies:

- Understanding:** Develop an understanding of the roles and responsibilities of theater artists: actor, director, scenic/lighting/costume designer, technical director and playwright.
- Conceptual and Critical Thinking:** Develop skills to think conceptually and critically about text, performance and production.
- Self-Appraisal:** Develop the skills to self-assess, critique and revise their own work.
- Literacy:** Develop a fundamental knowledge of theatrical history as well as dramatic literature.
- Production Skills and Knowledge:** Develop the skills and techniques necessary for realizing a variety of theatrical styles.
- Collaboration Skills:** Develop skills in collective problem-solving.

Upon completion of the MBA program, students will develop and emphasize skills in the following areas:

- Business Analytics:** Demonstrate facility with quantitative methods and tools and an ability to interpret financial metrics.
- Managing People:** Demonstrate an ability to understand models and applications of leadership and social intelligence.
- Managing Organizations:** Demonstrate an ability to understand organizational behavior and structures and the importance of effective communication.
- Strategic Integration:** Assess and diagnose a situation and to formulate and implement effective decisions and responses to business problems.
- Ethics:** Identify ethical issues related to business situations and to develop appropriate situational responses consistent with organizational and societal values.
- Knowledge of Business Disciplines:** Demonstrate knowledge of business disciplines (marketing, management, finance and managerial accounting) and the connection between disciplines.

Admission Requirements: College of Arts and Sciences

The requirements for admission into the undergraduate College of Arts and Sciences programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

Dual-Degree BA/MAT or BS/MAT in Elementary Education (4+1)

Program Contact: Christina Pavlak
(christina.pavlak@qu.edu) 203-582-3192

The purpose of Quinnipiac's Dual-Degree BA/MAT or BS/MAT program is to prepare graduates with perspectives, knowledge and skills to become master educators. The School of Education recognizes that the concept of educator is three-dimensional, and that successful educators must be teachers, learners and leaders. Therefore, graduates of the Master of Arts in Teaching program are teachers who lead all students to learn, learners who continue to learn as they continue to teach, and leaders who influence the culture of their schools in ways that support best practices in teaching and learning.

The program reflects the spirit and mission of Quinnipiac University with close attention to the teaching standards for the state of Connecticut and to the standards of the Council for the Accreditation of Educator Preparation (CAEP). The three values of "excellence in education, a

sensitivity to students, and a spirit of community" which are at the heart of Quinnipiac's mission statement are woven through the program.

General Information

The dual-degree program provides the means for Quinnipiac students to earn a bachelor's degree in an academic major and a master of arts in teaching degree leading to certification through the Connecticut State Department of Education. Consistent with the university's mission, arts and sciences studies are integrated with professional studies to prepare graduates who have depth and breadth of content knowledge and strong pedagogical skills.

The dual-degree program is divided into a two-year preprofessional component and a three-year professional component. The two-year preprofessional program includes a required introductory course (ED 140) that acquaints prospective teacher candidates with the teaching profession. Students are encouraged to take this course during their first year but no later than the fall semester of their sophomore year. Additional courses required before the junior year include educational philosophy and diversity (ED 250 and ED 260).

Students begin their professional component in the fall semester of their junior year. Supervised fieldwork, an integral part of the professional component, includes undergraduate observation and fieldwork, a graduate internship/residency, and student teaching. Following completion of the fourth year of study, students receive a bachelor of arts or bachelor of science degree in their academic major. Students begin their graduate work immediately following graduation. Any teacher candidate enrolled in the dual-degree program who does not complete all the requirements for undergraduate completion of the bachelor's degree as anticipated will not be allowed to enter any graduate fifth year without the written consent of the program director.

Note: Because the MAT program is subject to state review on a regular basis, prospective and current students are advised to see the School of Education for up-to-date program information.

Dual-Degree BA/MAT or BS/MAT in Elementary Education

The elementary education program is designed to prepare the teacher candidate with in-depth content knowledge across the elementary school curriculum and exemplary skills in teaching and classroom management. Students interested in elementary education may major in any discipline or have an interdisciplinary major.

Central to candidates' professional studies are undergraduate service-based courses (ED 341L, ED 342L, ED 436L and ED 468L) in which candidates gain 80 hours of hands-on experience, and the full-year graduate internship/residency experience in partner schools.

General Requirements

The following courses meet the Connecticut State Department of Education's general education requirements. A grade of "C" or better is required in these courses (except as noted).

Code	Title	Credits
EN 101	Introduction to Academic Reading and Writing ¹	3
MA 110	Contemporary Mathematics ²	
	or MA 14Pre-Calculus	
Select one of the following:		3

HS 132	U.S. History Since Reconstruction

Total Credits		60

Student Learning Outcomes

Upon completion of the Master of Arts in Teaching program, teacher candidates will demonstrate the following competencies:

- Content Knowledge:** Identify and define the major concepts of their discipline and understand that content is dynamic and ways of knowing are constantly changing.
- Instructional Strategies:** Recognize varied instructional practices and apply appropriate instructional strategies based upon principles of effective teaching.
- Learning Differences, Learner Development:** Recognize the complexity of human diversity and provide an instructional program that is responsive to the needs of diverse students.
- Instructional Strategies:** Apply appropriate technology to enhance the teaching and learning process.
- Professional Learning and Ethical Practice:** Demonstrate the skills and commitment to engage in reflective, mindful practice.
- Assessment:** Use multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision-making.
- Professional Learning and Ethical Practice:** Recognize that since content is dynamic and ways of knowing are constantly changing, the profession requires a commitment to continuous learning.
- Leadership and Collaboration:** Recognize that education has the power to be transformative and that their role as educators includes the responsibility to advocate on behalf of their students in order to promote social justice.
- Professional Learning and Ethical Practice, Leadership and Collaboration:** Demonstrate a willingness to work collaboratively with peers, practitioners in the field and/or MAT instructors to sustain a professional learning environment to support student learning.
- Leadership and Collaboration:** Demonstrate an understanding that scholarly research is essential to improving their own practice and to enhancing the knowledge base of the profession.

Admission

Admission to the dual-degree program is based on a holistic review by MAT program faculty of the following admission requirements:

- A 3.0 minimum overall undergraduate GPA (from all colleges and universities attended) for 45 credits of coursework with a subject area major or appropriate interdisciplinary major.
- Students applying to the MAT program are required to take one of the following tests: Praxis Core Mathematics, Reading and Writing tests, the SAT or the ACT. Scores will be reviewed by School of Education faculty as part of the retention review process.
- At least two written recommendations from individuals who have recent knowledge (within the last two years) of the applicant's suitability as a prospective educator, including one from a college instructor.
- A written essay completed in ED 140 that meets program standards.
- A formal retention review interview during which the applicant is expected to demonstrate: an ability to communicate clearly, a

demeanor appropriate to the teaching profession, and a maturity and attitude necessary to meet the demands of the MAT program.

Retention

Students who are accepted into Quinnipiac University as full-time students and who indicate a desire to teach are admitted into the MAT program upon acceptance, with the understanding that a retention review will be done by MAT faculty in the sophomore year.

Continuation in the dual-degree program is based on a holistic retention review during the spring sophomore semester by MAT faculty. The review requires that specific criteria have been met to remain in the teacher preparation program:

- A 3.0 minimum overall undergraduate GPA (from all colleges and universities attended) for 45 credits of coursework with a subject area major or appropriate interdisciplinary major (applicants with an overall GPA below 2.67 will not be considered).
- At least two written recommendations from individuals who have recent knowledge (within the last two years) of the applicant's suitability as a prospective educator, including one from a college instructor.
- A written essay completed in ED 140 that meets program standards.
- Evidence of strong basic skills in math, reading and writing in order. Evidence can be provided through SAT or ACT scores. Alternatively, evidence may also be provided through completion of the Praxis Core Academic Skills Test. SAT, ACT or Praxis Core results will be reviewed by the program director. Any MAT candidate whose scores indicate an area of weakness will be required to participate in a non-credit bearing remediation program that addresses any area of underperformance in math, reading or writing. Once completion of the remediation process is done by the candidate, the status of the candidate will be reviewed. All candidates will be considered probationary status until the improvement of basic skills are documented and remediated.
- A formal retention review interview during which the applicant is expected to demonstrate: an ability to communicate clearly, a demeanor appropriate to the teaching profession, and a maturity and attitude necessary to meet the demands of the MAT program.
- Effective July 1, 2010, Connecticut law requires all teacher candidates to undergo a criminal background check prior to being placed in a public school setting for field study, internship and student teaching. Because a clinical experience is an integral part of each semester, failure to abide by this law will make an applicant ineligible for admission to the program. The School of Education has procedures in place to assist candidates in obtaining the background check. The cost of the background check is the responsibility of the teacher candidate.

Teacher candidates in the MAT program at Quinnipiac are expected to demonstrate the professional behaviors and dispositions articulated in both the School of Education's Professional Attributes and Dispositions document and the CT Code of Professional Responsibility for Teachers. Candidates must maintain an overall B (3.0) undergraduate GPA with a C or better in all general education courses required for the MAT program. In addition, candidates must earn a B- or better in all education courses (undergraduate and graduate), as well as maintain 3.0 GPA for all education coursework to remain in good standing in the program. A grade of C+ or below in any education course (including the graduate

content area courses) requires the candidate to retake the course at his/her expense and earn the minimum B- grade.

If the candidate fails to maintain the minimum GPA, that candidate may be allowed to remain in the program for a single semester on probationary status. If a candidate on probation fails to meet the minimum GPA by the end of the single probationary semester, that candidate is dismissed from the program. Granting of probationary status is subject to the director's approval and is neither automatic nor guaranteed.

All candidates must maintain a minimum 3.0 GPA in all major coursework to remain in good standing in the program to be recommended for certification. In addition, teacher candidates who earn a C+ or below in two or more undergraduate courses in their major will be required to meet with the MAT program director to discuss continuation in the program.

Candidates failing to meet professional standards in the program may be subject to suspension or dismissal. In addition, candidates who exhibit a lack of effort or responsibility in the program, or who reveal interpersonal skills unsuited or inappropriate for teaching, will be required to meet with the MAT program director to discuss continuation in the program.

Completion

To qualify for teacher certification, students must complete all requirements of the MAT program. Candidates must complete all coursework, fulfill the internship/residency responsibilities and successfully complete all performance tasks, including the required licensure tests.

Clinical Experiences

Field Study

Candidates are required to complete a laboratory field study course in each semester of their junior and senior year. As part of the course requirements, each candidate must complete a minimum of 20 hours per semester in her/his assigned classroom, under the guidance of the classroom teacher who serves as the field study adviser. Candidates are assigned to one school during their junior year and a different school during their senior year. Candidates are responsible for their transportation to and from these clinical sites.

Internship/Residency

Candidates participate in an internship/residency during their graduate year. Quinnipiac has developed collaborative partnerships with school districts throughout central and southern Connecticut to provide graduate students with guided, hands-on professional practice while defraying some costs of the graduate portion of the program.

During the internship semesters, candidates serve in area schools in a variety of capacities and as substitute teachers with guidance from an on-site teacher advisor and a School of Education faculty member. Candidates have the opportunity to participate in staff meetings and take part in all school operations; in short, to become full members of the school community. During a residency, teacher candidates remain in a single classroom for 10 weeks or more as a co-teacher with a cooperating teacher and a university supervisor providing guidance and support.

Candidates must continue serving in their internship/residency through the last day of the public school calendar. Therefore, although classes end in May, the internship and the completion of the five-year MAT program do not occur until mid- to late June. Candidates are allowed to

“walk” during graduation ceremonies but do not formally receive their degrees until all of the internship/residency responsibilities are met.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Dual-Degree BA/MAT or BS/MAT in Secondary Education (4+1)

Program Contact: Christina Pavlak
(Christina.Pavlak@quinnipiac.edu) 203-582-3192

The purpose of Quinnipiac’s Dual-Degree Bachelor’s/MAT program is to prepare graduates with perspectives, knowledge and skills to become master educators. The School of Education recognizes that the concept of educator is three-dimensional, and that successful educators must be teachers, learners and leaders. Therefore, graduates of the Master of Arts in Teaching program are teachers who lead all students to learn, learners who continue to learn as they continue to teach, and leaders who influence the culture of their schools in ways that support best practices in teaching and learning.

The program reflects the spirit and mission of Quinnipiac University with close attention to the teaching standards for the state of Connecticut and to the standards of the Council for the Accreditation of Educator Preparation (CAEP). The three values of “excellence in education, a sensitivity to students, and a spirit of community” which are at the heart of Quinnipiac’s mission statement are woven through the program.

General Information

The dual-degree program provides the means for Quinnipiac students to earn a bachelor’s degree in an academic major and a master of arts in teaching degree leading to certification through the Connecticut State Department of Education. Consistent with the university’s mission, arts and sciences studies are integrated with professional studies to prepare graduates who have depth and breadth of content knowledge and strong pedagogical skills.

The dual-degree program is divided into a two-year preprofessional component and a three-year professional component. The two-year preprofessional program includes a required introductory course (ED 140) that acquaints prospective teacher candidates with the teaching profession. Students are encouraged to take this course during their first year but no later than the fall semester of their sophomore year. Additional required courses before the junior year include educational philosophy and diversity (ED 250 and ED 260).

Students begin their professional component in the fall semester of their junior year. Supervised fieldwork, an integral part of the professional component, includes undergraduate observation and fieldwork, a graduate internship/residency, and student teaching. Following completion of the fourth year of study, students receive a bachelor of arts or bachelor of science degree in their academic major. Students begin their graduate work immediately following graduation. Any teacher candidate enrolled in the dual-degree program who does not complete all the requirements for undergraduate completion of the bachelor’s degree as anticipated will not be allowed to enter any graduate fifth year without the written consent of the program director.

Note: Because the MAT program is subject to state review on a regular basis, prospective and current students are advised to see the School of Education for up-to-date program information.

Dual-Degree BA/MAT or BS/MAT in Secondary Education Curriculum

The secondary education program is designed to prepare the teacher candidate with strong teaching skills and a depth of content knowledge in the discipline they wish to teach. Students interested in secondary education must select a major from among the following: biology, English, history, mathematics or Spanish.

Central to candidates’ professional studies are undergraduate service-based courses (ED 341L, ED 343L, ED 409L, ED 452L) in which candidates gain 80 hours of hands-on experience, and the full-year graduate internship/residency experience in partner schools.

General Requirements

The following courses meet both the University Curriculum requirements and the Connecticut State Department of Education’s general education requirements. A grade of “B” or better is required in these courses.

Code	Title	Credits
EN 101	Introduction to Academic Reading and Writing ¹	3
MA 110 or MA 140	Contemporary Mathematics ² Pre-Calculus	3
Select one of the following courses:		3
HS 131	U.S. History to 1877

Student Learning Outcomes

Upon completion of the Master of Arts in Teaching program, teacher candidates will demonstrate the following competencies:

- Content Knowledge:** Identify and define the major concepts of their discipline and understand that content is dynamic and ways of knowing are constantly changing.
- Instructional Strategies:** Recognize varied instructional practices and apply appropriate instructional strategies based upon principles of effective teaching.
- Learning Differences, Learner Development:** Recognize the complexity of human diversity and provide an instructional program that is responsive to the needs of diverse students.
- Instructional Strategies:** Apply appropriate technology to enhance the teaching and learning process.
- Professional Learning and Ethical Practice:** Demonstrate the skills and commitment to engage in reflective, mindful practice.
- Assessment:** Use multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision-making.
- Professional Learning and Ethical Practice:** Recognize that since content is dynamic and ways of knowing are constantly changing, the profession requires a commitment to continuous learning.
- Leadership and Collaboration:** Recognize that education has the power to be transformative and that their role as educators includes the responsibility to advocate on behalf of their students in order to promote social justice.

- Professional Learning and Ethical Practice, Leadership and Collaboration:** Demonstrate a willingness to work collaboratively with peers, practitioners in the field and/or MAT instructors to sustain a professional learning environment to support student learning.
- Leadership and Collaboration:** Demonstrate an understanding that scholarly research is essential to improving their own practice and to enhancing the knowledge base of the profession.

Admission

Admission to the dual-degree program is based on a holistic review by MAT program faculty of the following admission requirements:

- A 3.0 minimum overall undergraduate GPA (from all colleges and universities attended) for 45 credits of coursework with a subject area major or appropriate interdisciplinary major.
- Students applying to the MAT program are required to take one of the following tests: Praxis Core Mathematics, Reading and Writing tests, the SAT or the ACT. Scores will be reviewed by School of Education faculty as part of the retention review process.
- At least two written recommendations from individuals who have recent knowledge (within the last two years) of the applicant's suitability as a prospective educator, including one from a college instructor.
- A written essay completed in ED 140 that meets program standards.
- A formal retention review interview during which the applicant is expected to demonstrate: an ability to communicate clearly, a demeanor appropriate to the teaching profession, and a maturity and attitude necessary to meet the demands of the MAT program.

Retention

Students who are accepted into Quinnipiac University as full-time students and who indicate a desire to teach are admitted into the MAT program upon acceptance, with the understanding that a retention review will be done by MAT faculty in the sophomore year.

Continuation in the dual-degree program is based on a holistic retention review during the spring sophomore semester by MAT faculty. The review requires that specific criteria have been met to remain in the teacher preparation program:

- A 3.0 minimum overall undergraduate GPA (from all colleges and universities attended) for 45 credits of coursework with a subject area major or appropriate interdisciplinary major (applicants with overall GPAs below 2.67 will not be considered).
- At least two written recommendations from individuals who have recent knowledge (within the last two years) of the applicant's suitability as a prospective educator, including one from a college instructor.
- A written essay completed in ED 140 that meets program standards.
- Evidence of strong basic skills in math, reading and writing. Evidence can be provided through SAT or ACT scores. Alternatively, evidence may also be provided through completion of the Praxis Core Academic Skills Test. SAT, ACT or Praxis Core results will be reviewed by the program director. Any MAT candidate whose scores indicate an area of weakness will be required to participate in a non-credit bearing remediation program that addresses any area of underperformance in math, reading or writing. Once completion of the remediation process is done by the candidate, the status of the candidate will be reviewed. All candidates will be considered

probationary status until the improvement of basic skills are documented and remediated.

- e. A formal retention review interview during which the applicant is expected to demonstrate: an ability to communicate clearly, a demeanor appropriate to the teaching profession, and a maturity and attitude necessary to meet the demands of the MAT program.
- f. Effective July 1, 2010, Connecticut law requires all teacher candidates to undergo a criminal background check prior to being placed in a public school setting for field study, internship and student teaching. Because a clinical experience is an integral part of each semester, failure to abide by this law will make an applicant ineligible for admission to the program. The School of Education has procedures in place to assist candidates in obtaining the background check. The cost of the background check is the responsibility of the teacher candidate.

Teacher candidates in the MAT program at Quinnipiac are expected to demonstrate the professional behaviors and dispositions articulated in both the School of Education's Professional Attributes and Dispositions document and the CT Code of Professional Responsibility for Teachers. Candidates must maintain an overall B (3.0) undergraduate GPA with a C or better in all general education courses required for the MAT program. In addition, candidates must earn a B- or better in all education courses (undergraduate and graduate), as well as maintain 3.0 GPA for all education coursework to remain in good standing in the program. A grade of C+ or below in any education course (including the graduate content area courses) requires the candidate to retake the course at his/her expense and earn the minimum B- grade.

If the candidate fails to maintain the minimum GPA, that candidate may be allowed to remain in the program for a single semester on probationary status. If a candidate on probation fails to meet the minimum GPA by the end of the single probationary semester, that candidate is dismissed from the program. Granting of probationary status is subject to the director's approval and is neither automatic nor guaranteed.

Candidates in the secondary program must maintain a minimum 3.0 GPA in all content area coursework to remain in good standing in the program to be recommended for certification. In addition, secondary teacher candidates who earn a C+ or below in two or more undergraduate content area courses will be required to meet with the MAT program director to discuss continuation in the program.

Candidates failing to meet professional standards in the program may be subject to suspension or dismissal. In addition, candidates who exhibit a lack of effort or responsibility in the program, or who reveal interpersonal skills unsuited or inappropriate for teaching, will be required to meet with the MAT program director to discuss continuation in the program.

Completion

To qualify for teacher certification, students must complete all requirements of the MAT program. Candidates must complete all coursework, fulfill the internship/residency responsibilities and successfully complete all performance tasks, including the required licensure tests.

Clinical Experiences

Field Study

Candidates are required to complete a laboratory field study course in each semester of their junior and senior year. As part of the course

requirements, each candidate must complete a minimum of 20 hours per semester in her/his assigned classroom, under the guidance of the classroom teacher who serves as the field study adviser. Candidates are assigned to one school during their junior year and a different school during their senior year. Candidates are responsible for their transportation to and from these clinical sites.

Internship/Residency

Candidates participate in an internship/residency during their graduate year. Quinnipiac has developed collaborative partnerships with school districts throughout central and southern Connecticut to provide graduate students with guided, hands-on professional practice while defraying some costs of the graduate portion of the program.

During the internship semesters, candidates serve in area schools in a variety of capacities and as substitute teachers with guidance from an on-site teacher advisor and a School of Education faculty member. Candidates have the opportunity to participate in staff meetings and take part in all school operations; in short, to become full members of the school community. During a residency, teacher candidates remain in a single classroom for 10 weeks or more as a co-teacher with a cooperating teacher and a university supervisor providing guidance and support.

Candidates must continue serving in their internship/residency through the last day of the public school calendar. Therefore, although classes end in May, the internship and the completion of the MAT program do not occur until mid- to late June. Candidates are allowed to "walk" during graduation ceremonies but do not formally receive their degrees until all of the internship/residency responsibilities are met.

The School of Education is fully accredited by the Council for the Accreditation of Educator Preparation (CAEP). The U.S. Department of Education recognizes CAEP as a specialized accrediting body for schools, colleges and departments of education.

Dual-Degree BA/MBA (4+1)

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The Dual-Degree BA/MBA (4+1) program is designed for exceptional undergraduate students outside of the School of Business. The program enables students from a wide variety of disciplines to add a core of business knowledge to their academic portfolio. Students with appropriate prerequisite knowledge take courses toward an MBA during the senior year and complete their MBA in one year beyond the bachelor's degree. Students interested in pursuing the BA/MBA option are encouraged to declare the general business minor early in their undergraduate program to build the foundation for graduate business coursework.

Dual-Degree BA/MBA (4+1) Program of Study

It is recommended that students interested in the Dual-Degree BA/MBA (4+1) program take the following undergraduate courses early in their undergraduate program to prepare for MBA classes in their senior year.

Code	Title	Credits
AC 211	Financial Accounting	3
EC 111	Principles of Microeconomics	3

EC 272	Advanced Applied Statistics	3
Total Credits		9

Students may complete up to 10 credits of MBA courses during the senior year, 9 credits of which also fulfill undergraduate open elective requirements. Students must work with their undergraduate adviser and the MBA director to ensure that the courses fit into both degree programs. Students must present satisfactory performance in their graduate coursework completed during their senior year to be officially admitted into the graduate program upon completion of their BA degree. The BA/MBA curriculum consists of the MBA core courses including a requirement to complete MBA 660 with an international travel component and MBA 688, a graduate internship.

MBA Program of Study

Code	Title	Credits
Core Business Disciplines (30 credits)		
MBA 615	Skills for Contemporary Business Issues	3
MBA 620	Financial and Managerial Accounting for Decision Making (AC 620)	3
MBA 625	Authentic Leadership within Organizations	3
MBA 630	Business Data Analytics	3
MBA 635	Supply Chain Management in a New Era	3
MBA 640	Financial Decision Making	3
MBA 645	Marketing Decision Making	3
MBA 660	Decision Making in a Global Economy ¹	3
MBA 690	Strategic Management	3
MBA 695	Action-Based Learning Lab	3
Graduate Electives ²		
	Select five graduate electives either in a specific concentration/discipline or customized by the student	15
Total Credits		45

MBA students may choose to take elective courses within one area, creating a concentration in a specific discipline, or may choose to take electives across multiple business disciplines, enhancing a broad interdisciplinary perspective.

Electives are available in such areas as business analytics, computer information systems, finance, health care management, international business, marketing, strategy, supply chain management.

¹ Students who are in the BS/MBA program are required to take MBA 660, which includes an international experience.

² Accelerated Dual-Degree (3+1) and Dual-Degree (4+1) students are required to complete MBA 688 as one of their five electives.

Interested students must apply for admission to the BA/MBA program during the last semester of the junior year using a special application form available in the School of Business.

Admission into the combined program is competitive. Only students who have earned at least 75 credits with an overall GPA of 3.0 are

considered for admission to this program. Meeting the minimum criteria for consideration does not guarantee admission.

Accelerated Dual-Degree BS in Biology/MS in Molecular and Cell Biology (3+1)

Program Contact: Deborah Clark (Deborah.Clark@qu.edu) 203-582-8270

For highly qualified students, the Accelerated Dual-Degree BS in Biology/MS in Molecular and Cell Biology (3+1) provides an opportunity for students to achieve both a Bachelor of Science in Biology and a Master of Science within the field of Molecular and Cell Biology within a 4-year time frame typically associated with only an undergraduate education. The requirements and policies for the undergraduate degree are the same as described on the Bachelor of Science in Biology (p. 161) page, except that students in the 3+1 combined BS/MS program must maintain a GPA of at least 3.0 at the end of each school year for continued participation in the program. The requirements and policies for the graduate degree are the same as described on the Master of Science in Molecular and Cell Biology (p. 168) page.

Accelerated Dual-Degree **BS in Biology/MS in Molecular and Cell Biology (3+1)** Recommended Curriculum

The minimum number of credits required for the undergraduate degree is 120, and the minimum number of credits required for the graduate degree is 34. A maximum of 9 graduate credits may be used to fulfill both undergraduate and graduate requirements.

The Accelerated Dual-Degree BS/MS program is designed for outstanding biology majors. Students are offered acceptance into the program upon admission to Quinnipiac University.

Admission Requirements: College of Arts and Sciences

The requirements for admission into the undergraduate College of Arts and Sciences programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Dual-Degree BS in Biology/MS in Molecular and Cell Biology (4+1)

Program Contact: Deborah Clark (deborah.clark@qu.edu) 203-582-8270

The Department of Biological Sciences offers a Dual-Degree BS in Biology and MS in Molecular and Cell Biology. The MS in Molecular and Cell Biology provides an excellent foundation for students intending to pursue studies in professional healthcare fields and doctoral programs. It also offers a competitive edge for students wishing to pursue a career in biotechnology and biopharmaceutical industries.

Upon satisfactory completion of all of the undergraduate curriculum requirements, students receive a Bachelor of Science in Biology. The requirements and policies for the undergraduate degree are the same as described on the Bachelor of Science in Biology (p. 161) page. Students complete graduate-level biology courses during their senior year; the requirements and policies for the graduate degree are the same as described on the Master of Science in Molecular and Cell Biology (p. 168) page. A maximum of 9 graduate credits may be used to fulfill both undergraduate and graduate requirements. Students must maintain an overall GPA of 3.0 for all graduate courses. Students earn the MS in Molecular and Cell Biology upon satisfactory completion of all of the graduate curriculum requirements.

Dual-Degree BS in Biology/MS in Molecular and Cell Biology (4+1) Curriculum

Students who choose to pursue the five-year Master's Degree in Molecular and Cell Biology are required to complete the following courses by the end of their junior year:

Code	Title	Credits
CHE 210 & 210L	Organic Chemistry I and Organic Chemistry I Lab	4
CHE 211 & 211L	Organic Chemistry II and Organic Chemistry II Lab	4
PHY 110 & 110L	General Physics I and General Physics I Lab	4
PHY 111 & 111L	General Physics II and General Physics II Lab	4

A minimum of two Biology Electives in separate elective categories (Molecular and Cellular Biology, Organismal, Physiology, or Experiential Learning).

An elective in Molecular and Cellular Biology is strongly recommended.

Recommended Curriculum

Students choose courses and follow a curriculum determined in consultation with their adviser. The minimum number of credits required for the undergraduate degree is 120, and the minimum number of credits required for the graduate degree is 34. A maximum of 9 graduate credits may be used to fulfill both undergraduate and graduate requirements. A sample course plan that fulfills the requirements for the 4+1 program is shown below.

Individual planning will vary based on a number of factors, including, for instance, Advanced Placement and/or transfer credits.

Admission Requirements: College of Arts and Sciences

The requirements for admission into the undergraduate College of Arts and Sciences programs are the same as those for admission to Quinnipiac University.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions (p. 20) page of this catalog.

Pre-Law

Students or graduates who have an interest in law school should contact the Quinnipiac University pre-law adviser, via email at prelawadvising@qu.edu, for further information and should join the Pre-Law Society to learn more about the LSAT, law school admissions and financial aid.

Law School Qualifications

Students interested in attending law school must have and should work toward success in each of the following during undergraduate study:

- *Undergraduate degree:* Student must have earned a bachelor (BA or BS) degree.
- *Standardized test:* Completion of the Law School Admission Test (LSAT) is required by most American Bar Association–approved law schools; some others will accept the Graduate Record Examination (GRE) in addition to or in lieu of the LSAT.
- *Curriculum:* No single pre-law course of study is required or recommended. Several broad objectives of pre-legal education, however, have been set forth by the Association of American Law Schools:
 - Developing fundamental reading skills;
 - The ability to think and write clearly and succinctly;
 - Logical reasoning and analytical skills; and
 - An appreciation of the social, political and economic foundations and complexities of our society.

Toward this end, every pre-law student should carefully choose, with the assistance of their academic adviser and/or the pre-law adviser, courses that will help build these skills and areas of knowledge.

Law School at Quinnipiac

Undergraduate students who wish to attend the School of Law at Quinnipiac may take one of two paths:

- *Accelerated:* Participate in the Accelerated Dual-Degree Bachelor's/JD (3+3) program (p. 600) which allows students to complete their undergraduate and their law degree in six years, one year less than the traditional path.
- *Traditional:* Obtain a BA or BS degree in four years followed by three years of law school. (NOTE: Attending Quinnipiac University as an undergraduate student does not guarantee admission to the Quinnipiac School of Law.)

Spanish Language for Medical Professionals Certificate

Program Contact: Aileen Dever (Aileen.Dever@quinnipiac.edu)
203-582-8500

There is a critical need for healthcare professionals who are proficient in medical Spanish and culturally sensitive. Students will engage in intensive listening, speaking, reading and writing activities in Spanish at the post-intermediate level to acquire the medical terminology and cultural awareness to practice more ethical, inclusive patient care. This certificate was created in the belief that limited English should never be a barrier to receiving excellent and equitable care.

Students who complete the courses during their undergraduate or graduate program will earn a certificate in Spanish Language for Medical Professionals.

Undergraduate Students

School of Business

Master of Business Administration

- Full-Time Master of Business Administration (p. 701)
- Professional Master of Business Administration (p. 712) (online)

Master of Science

- Master of Science in Accounting (p. 705)
- Master of Science in Business Analytics (p. 708) (online & on ground)
- Master of Science in Organizational Leadership (p. 711) (online)

Dual-Degree Programs

- Accelerated Dual-Degree BS/MBA (3+1) (<http://catalog.qu.edu/graduate-studies/business/business-administration-mba/accelerated-four-year-bsm-ba/>)
- Dual-Degree BA/MBA (4+1) (p. 689)
- Dual-Degree BS/MBA (4+1) (p. 704)
- JD/MBA (Juris Doctor) (p. 705)
- Accelerated Dual-Degree BS/MSA (3+1) (p. 706)
- Dual-Degree BS/MSA or BA/MSA (4+1) (p. 708)
- Accelerated Dual-Degree BS/MSBA (3+1) (p. 710)
- Dual-Degree BS/MSBA or BA/MSBA (4+1) (p. 710)

For specific information about the mission and learning goals for each of the graduate programs, please visit the university website at [qu.edu](http://www.qu.edu) (<http://www.qu.edu>).

Accounting (AC)

AC 635. Advanced Topics in Financial Accounting and Reporting. 3 Credits.

This course provides an in-depth study of advanced topics in financial accounting and reporting. The topics covered include the accounting for multinational entities, segment and interim reporting, SEC reporting, and the accounting for partnerships and corporations in financial difficulty. Students learn standard-related research skills and complete several research cases using the FASB codification database.

Prerequisites: Take one undergraduate intermediate accounting course.

Offered: Every year, Fall

AC 640. Financial Statement Analysis. 3 Credits.

In this course, students gain additional understanding of how firms communicate through financial statements. They learn how to use financial statement analysis in strategic decision making. Students learn to interpret financial statements, analyze cash flows and make judgments about the quality of earnings, assets and liabilities. Students cannot receive credit for both AC 613 and AC 640.

Prerequisites: Take one undergraduate intermediate accounting course.

Offered: Every year, Fall

AC 645. Information Assurance. 3 Credits.

This course is designed to broaden and deepen students' conceptual and technical understanding of the CPA's attest function, provide students with a framework for analyzing contemporary auditing and assurance issues, and help students understand the complete audit of a client.

This course utilizes case studies to study current issues and practices associated with information assurance services.

Prerequisites: Take one undergraduate accounting auditing course.

Offered: Every year, Fall

AC 650. Advanced Accounting Information Systems. 3 Credits.

This course provides students with in-depth knowledge of the role accounting information systems play in a business environment. Using a combination of course delivery methods, this course emphasizes information, communication and networking technology—in the context of business processes, transaction cycles and internal control structures—that enhances the production of accurate and reliable accounting information.

Prerequisites: Take one undergraduate accounting information systems course.

Offered: Every year, Fall

AC 660. Strategic Management Control Systems. 3 Credits.

This course provides students with broad exposure to the ways in which management control systems and management accounting information are used to support various organizations' strategies. The course involves both textbook/problem-based and case-based learning methods to cover issues related to strategy selection, performance evaluation, organizational profitability, customer profitability, organizational structure, and employee compensation. Special emphasis is placed on ethical considerations, not-for-profit organizations and sustainability issues.

Offered: Every year, Spring

AC 665. Forensic Accounting and Fraud Examination. 3 Credits.

This course provides a survey of forensic accounting and fraud examination. Students gain an understanding of different types of fraud, sources of evidence and analysis of fraud schemes highlighting the skills needed to identify and investigate fraudulent accounting allegations. This course employs case studies to study current issues, practices and techniques related to fraud examination and forensic accounting services.

Offered: Every year, Spring

AC 670. Advanced Business Law, Regulation, Ethics and Reporting Environments. 3 Credits.

In this course, students learn to identify and resolve complex legal and ethical issues typically encountered by businesses. Emphasis is placed on business law topics relevant to the accounting profession. Topics may include agency law and worker classification, formation and performance of contracts, debtors, creditors, guarantors, secured transactions, bankruptcy, federal securities regulation, formation, operation, termination of business entities, and liability of accountants.

Prerequisites: Take one undergraduate business law course.

Offered: Every year, Spring

AC 675. Governmental and Not-For-Profit Accounting. 3 Credits.

This course provides an in-depth study of the financial reporting concepts and standards applicable to state and local governments, and not-for-profit entities such as colleges and universities, health care entities, and voluntary health and welfare organizations. It emphasizes the differences between governmental and private sector (for-profit) accounting. Particular attention is placed on the preparation and analysis of governmental financial reports.

Prerequisites: Take one undergraduate intermediate accounting course.

Offered: Every year, Spring

AC 680. Advanced Federal Income Taxation and Tax Research. 3 Credits.

In this course, students gain the knowledge and understanding of concepts and laws relating to federal income taxation of individuals and entities. In addition, students learn how to apply the knowledge and skills gained from this course in professional tax preparation and tax advisory positions. Some of the topics covered include federal tax process, procedures, accounting and planning, as well as federal taxation of individuals, entities (C corporations, S corporations, partnerships, trusts and estates and exempt organizations) and taxation of property transactions.

Offered: Every year, Spring

Business Analytics (BAN)

BAN 220. Data Mining for Business Insights. 3 Credits.

This course focuses on analyzing data sets to find patterns and anomalies, with the goal of extracting valuable information. The course covers basic concepts, methods, and techniques used in data mining, including data exploration, dimension reduction and data preparation.

Prerequisites: Take CIS 245 or prior python programming course

Offered: Every year, Fall

BAN 300. Business Data Analysis with R. 3 Credits.

This course introduces students to R, a widely used statistical programming language. Students learn to read data, write functions, analyze data and create visualizations in R.

Prerequisites: Take EC 271 or EC 272 or MA 170 or MA 176 or MA 206 or MA 275 or MA 275H or MA 285.

Offered: Every year, Fall

- BAN 310. Web Analytics. 3 Credits.**
This course introduces students to the concept and use of web analytics. Topics covered include measurement planning, data collection, audience characteristics, traffic acquisition and user behavior. Students use Google Analytics to apply their learning and take the Google Analytics Individual Qualification exam to demonstrate their proficiency at the completion of this course.
Offered: Every year, Spring
- BAN 320. Big Data. 3 Credits.**
The course focuses on the concept and techniques used for managing big data. The course explores how big data is used within organizations to support analytics. Emphasis is on the Hadoop platform and supplemental tools that are used within a Hadoop environment to design and maintain a big data infrastructure.
Prerequisites: Take CIS 351.
Offered: As needed
- BAN 410. Social Media Analytics. 3 Credits.**
This course covers social media strategies and applications, implications for business, privacy issues associated with social media, and factors contributing to social change. Business cases evaluating the use and value of social media are examined and social network analysis and visualization are utilized.
Prerequisites: Take BAN 300 or CIS 245.
Offered: Every year, Spring
- BAN 420. Machine Learning and Artificial Intelligence for Business. 3 Credits.**
The course introduces machine learning techniques for predictive modeling of business problems and opportunities. It covers the process of formulating a business analytics research hypothesis, developing business objectives, data selection, preparation and partitioning to successfully design, build and evaluate predictive models. Predictive modeling techniques such as classification and decision trees, neural networks, regression, random forests and other techniques are covered.
Prerequisites: Take BAN 220.
Offered: Every year, Spring
- BAN 484. Business Analytics Internship. 3 Credits.**
Students gain experience by employing their skills in a professional setting under practicing professionals. This internship involves in-depth work related to analytics and is usually completed in the summer between the student's junior and senior years or during their senior year. Students must obtain approval to register for this course prior to starting the work experience. Permission of the department chair or internship coordinator is required.
Prerequisites: Take BAN 220.
Offered: Every year, All
- BAN 610. Introduction to Business Analytics. 3 Credits.**
This course develops ideas for helping to make decisions based upon the examination of data. Topics include variability, data display and summary statistics, regression, and correlation, probability, probability distributions, sampling, the central limit theorem, confidence intervals and hypothesis testing. Attention is also given to the design of experiments and analysis of variance, frequency distributions, statistical inference and sampling theory.
Offered: Every year, Fall and Spring
- BAN 615. Predictive Business Analytics. 3 Credits.**
The course introduces the techniques of predictive modeling and analytics in a data-rich business environment. It covers the process of formulating business objectives, data selection, preparation and partition to successfully design, build, evaluate and implement predictive models for a variety of practical business applications (such as marketing, customer retention, delinquency and collection analytics, fraud detection and insurance). Predictive models such as classification and decision trees, neural networks, regressions, pattern discovery analysis and other techniques are studied.
Prerequisites: Take BAN 610.
Offered: Every year, Fall
- BAN 621. Data Management. 3 Credits.**
The concepts, principles, issues and techniques for managing corporate data resources are covered, including techniques for managing the design and development of large database systems. Data warehousing, data mining and database administration are emphasized. Students engage in hands-on-learning and work individually or in teams to complete a real-world project using contemporary data management tools and techniques.
Offered: Every year, Fall and Spring
- BAN 622. Data Warehousing. 3 Credits.**
This course focuses on the design and implementation of data warehouses, identifying key architecture differences between data warehouses and transactional databases. It also focuses on the interface to data warehouses to better understand how large amounts of information are used to enable organizations to make better decisions.
Prerequisites: Take BAN 621.
Offered: Every year, Spring
- BAN 628. Data Mining for Competitive Advantage. 3 Credits.**
This course focuses on the application of common data mining techniques. Students focus on developing business solutions by applying techniques such as market basket analysis, association rules, cluster analysis and time series.
Offered: Every year, Fall
- BAN 629. Text Analytics. 3 Credits.**
This course builds upon previously introduced data mining methods, focusing specifically on techniques for text extraction and mining. Topics include efficient text indexing; document clustering and classification; information retrieval models; enhancement of structured data; scenario detection techniques; and using textual data in predictive models.
Offered: As needed
- BAN 650. Data Visualization for Managers. 3 Credits.**
This course provides an introduction as well as hands-on experience to the field of data visualization. Students learn basic visualization design and evaluation principles to create meaningful displays of quantitative and qualitative data. They learn techniques for visualizing multivariate, temporal, text-based, geospatial, hierarchical and network/graph-based data.
Prerequisites: Can only take 1 from list: BAN 650 or PMBA 626.
Offered: Every year, Fall and Spring
- BAN 660. Optimization. 3 Credits.**
This course focuses on developing computational methods to solve various business optimization problems. Students will formulate and solve a variety of optimization problems including linear, integer, mixed-integer, and non-linear. The course also covers understanding decision making under uncertainty
Offered: As needed

BAN 661. Web Analytics and Web Intelligence. 3 Credits.

This course focuses on the analysis of a variety of web metrics including tracking, traffic and visitor behavior, tactics and strategies to successfully market on the Web to make data-driven decisions. Business analytics tools and techniques are utilized to extract and analyze web-scale data to guide strategic decision making. Topics address solutions for measurably higher leads, sales, brand recognition, customer satisfaction or lower service costs.

Prerequisites: Take BAN 610.

Offered: As needed

BAN 663. Business Data Analytics with R. 3 Credits.

Students learn to program and use R for effective data analysis. Reading data, accessing R packages, writing functions, debugging, profiling code and organizing and commenting code also are covered. Working examples of topics in statistical data analysis are provided. The course also addresses installation and configuration of software as necessary for a statistical programming environment.

Offered: As needed

BAN 664. Health Care Analytics. 3 Credits.

This course provides a foundation on data analytics in health care and an understanding of the main concepts and issues. Contemporary tools and technologies are applied to develop an analytics solution to selected health care problems.

Offered: As needed

BAN 665. Big Data and Hadoop. 3 Credits.

The concept, principles, issues and techniques for managing Big Data information management resources are covered. The course explores how Big Data fits into an organization's information management strategy. Focus is on the Hadoop platform, emphasizing how it is used to design and maintain Big Data to support analytics.

Offered: As needed

BAN 667. Design and Analysis of Business Information Systems. 3 Credits.

This course considers systems-development methods, analysis and design techniques with a focus on object-oriented analysis and design. The application of systems analysis and design concepts using current tools, techniques and approaches is covered. Students engage in hands-on learning and work in teams to complete a real-world project using contemporary analysis and design methodologies and tools.

Offered: As needed

BAN 668. Python Programming for Data Analysis. 3 Credits.

After briefly covering the basics of Python programming, the course will show how students can use Python for simple text analysis. The course will then delve deeper and cover topics such as acquiring and cleaning data, and analyze the data using various statistical analysis modules that are available for Python. Students will work on independent short Python programming projects, as well as data analysis projects using Python.

Offered: Every year, Fall

BAN 669. Project Management. 3 Credits.

This course develops a foundation of concepts and solutions required for successful completion of a project. Topics include planning, scheduling, controlling, resource allocation and performance measurement.

Offered: As needed

BAN 675. Special Topics. 3 Credits.

Offered: As needed

BAN 688. Business Analytics Independent Study. 3 Credits.

Offered: Every year, All

BAN 689. Business Analytics Independent Study. 1-6 Credits.

Offered: Every year, All

BAN 690. Business Analytics Capstone. 3 Credits.

The capstone course in the MSBA program is designed to enable students to directly utilize what has been learned in the tools and applications courses to analyze and offer solutions for a major business challenge. A definition of the problem, analysis of options and a comprehensive presentation of findings and solutions are required components of the course.

Prerequisites: Take BAN 610, BAN 615, BAN 621, BAN 650, BAN 668.

Offered: Every year, Fall and Summer

Health Management (HM)

HM 201. Introduction to Healthcare Management. 3 Credits.

The course introduces the students to the healthcare systems. This course prepares students to better understand the healthcare policies and the finance of healthcare in the United States. It provides an understanding of healthcare delivery mechanism, the role of different providers and facilities, and access to healthcare from the population perspective.

Offered: Every year, Spring

HM 320. Introduction to Health Insurance. 3 Credits.

This course provides an overview of the design, function, management, and regulation of public and private health insurance plans, including third-party reimbursement and payment methodologies used by private and public insurance programs and payer mix for healthcare managers. Students assess health insurance from the government, business, and consumer perspective by discussing how healthcare reforms and innovations in health insurance deliveries affect the organization and the consumer use of health insurance. It offers an overview of provider contracting, and utilization and quality control methodologies used by health insurance plans.

Offered: As needed

HM 365. Health Care Analysis. 3 Credits.

This course introduces the application and components of healthcare data analytics. The course describes the concepts underlying the healthcare analytic techniques and strategies to identify, measure, and improve healthcare quality, system efficiency, and human resource productivity. Students work with healthcare data and develop and use healthcare indicators. The course provides a foundation for data presentation and visualization of information for decision making.

Offered: As needed

HM 404. Legal Aspects of Health Care Delivery. 3 Credits.

This course presents an overview of the legal and ethical issues that are encountered in the health care industry. It provides students with a basic working knowledge of health law. This is an introductory course that covers a wide variety of health care legal issues. By the end of the course, students should attain a basic knowledge of health law and its application to health care management.

Offered: Every year, Fall and Spring

HM 600. Foundations of Health Care Management. 3 Credits.

This course expands the student's understanding of: 1) the organization and functions of various health services organizations/systems and their interrelationships; 2) basic concepts of management planning, organizing, leading, staffing and controlling as they relate to issues critical to the mission and strategic positioning of the organization/system; and 3) the utilization of scarce resources to deliver optimum health care at reasonable cost.

Offered: Every year, Fall

HM 621. Quality Management in Health Care Facilities. 3 Credits.

This course provides a broad perspective on improving quality in health care facilities. Students gain a working knowledge of accreditation organizations and health care regulatory requirements including the JCAHCO and patient-safety legislation. The course explores patient safety and quality methods as well as the role of consumers in evaluating the quality of the health care services they receive. At course completion, students are able to competently participate in health care quality/patient safety endeavors at all levels of provider, payer, regulatory and accreditation organizations. Students may participate in an onsite project.

Offered: Every year, Fall

HM 626. Epidemiology and Population Health. 3 Credits.

This course familiarizes students with the principles and methods of epidemiology and their application to the study of the health of populations--skills becoming increasingly important for health care managers given the advent of Accountable Care Organizations. Students focus on the determinants and distribution of diseases among groups of people, examining infectious and chronic diseases, including diseases and conditions caused by accidents and violence. Emphasis is placed on using epidemiologic data for planning and managing health care services, including preventive services, developing health policy and measuring the outcomes of health care programs.

Offered: As needed

HM 630. Corporate Compliance in the Health Care Industry. 3 Credits.

This course addresses both the managerial and legal aspects of health care corporate compliance. Essential elements of a compliance program are presented with a focus on various pieces of federal legislation and enforcement initiatives conducted by the U.S. Department of Justice and the Office of Inspector General in the Department of Health and Human Services.

Offered: Every year, Spring

HM 635. Advanced Health Care Compliance: The Legal Issues. 3 Credits.

This course provides an in-depth review of the laws and legal issues facing the health care compliance officer and the health care organization. This course is designed primarily for the non-lawyer who needs a comprehensive understanding of the compliance legal issues facing the health care industry. Lawyers wishing to practice in the health care compliance field would also benefit from this course's analysis of the laws in this area and the application of the laws to specific issues pursued by the U.S. Department of Justice and by the Office of Inspector General in the area of health care compliance.

Offered: As needed

HM 644. Health Care Industry Regulation. 3 Credits.

This course analyzes and discusses the statutory, regulatory and private contract provisions that govern the delivery of health care by licensed providers. The course is graded on a pass/fail basis.

Offered: As needed

HM 646. Law and Medicine. 3 Credits.

A basic, introductory course for students interested in law and medicine, this course covers the legal regulation of the medical profession in such areas as medical education, physician licensure and disciplinary proceedings, hospital organization, alternative structures for providing health care, efforts to control health care costs, the control of drugs and medical devices by the Federal Food and Drug Administration, and the Statutory Regulation of Medical Malpractice Actions. This course is graded on a pass/fail basis.

Offered: As needed

HM 647. Health Care Business Transactions. 3 Credits.

This elective course is for students wishing to study health care private law. The course is structured around a trio of (fairly standard) health care business transactions, pursuant to which: 1) the physicians currently affiliated with a local hospital form a physical practice group; 2) the group and the local hospital create a Physician-Hospital Organization (PHO) that provides various services to the MD group; and 3) the PHO enters into a contract with an HMO to provide medical services to a number of patients. This course is graded on a pass/fail basis.

Offered: As needed

HM 657. Health Care Compliance Law. 3 Credits.

This course illuminates the legal aspects of health care compliance. At both the federal and state levels, the course addresses the statutory, regulatory and case law that comprises the complex legal backdrop in which the health care industry operates. The course introduces the history, purpose and substance of health care regulatory compliance programs and addresses legal doctrines concerning reimbursement law and related fraud and abuse, legal restrictions on physician referral and related anti-kickback laws, antitrust law, compliance issues in health care business transactions, compliance mandates in the Affordable Care Act, and the law governing health care research.

Prerequisites: Take HM 668.

Offered: As needed

HM 660. Human Resource Management in Health Care Administration. 3 Credits.

The policies, organization, procedures and techniques required to develop a positive personnel program and a favorable working climate specific to health care organizations are studied. Labor law for health care facilities is identified as it relates to collective bargaining, unfair labor practices, disputes, union security, reporting and disclosure requirements, contract negotiations and conciliation and mediation procedures. The importance of positive human resource programs in the labor-intensive health care industry is emphasized.

Offered: As needed

HM 663. Integrated Health Systems and Managed Care. 3 Credits.

This course focuses on the integration of provider networks to create more efficient and better coordinated health care systems. The impact of activity on traditional health care provider roles is analyzed. Capitation and other managed care reimbursement techniques and the successes and failures of integrated health systems are examined critically.

Prerequisites: Take HM 600, HM 621.

Corequisites: Take HM 664 - Must be taken either prior to or at the same time as this course.

Offered: Every year, Spring

HM 664. Financial Management in Health Care Organizations. 3 Credits.

This course equips the student with a basic understanding of financial management techniques as well as the application of financial theory to the practice of health care administration. Unique problems of financing health care organizations are covered, with special attention paid to using allocation decisions to develop structured financial management systems.

Offered: Every year, Spring

HM 668. Legal Aspects of Health Care Delivery. 3 Credits.

This course provides a fundamental knowledge of law and the legal system, examining how they affect health care administration. Three areas of law of special importance to the health care setting are emphasized: tort law, contract law and administrative law. The course also examines the legal responsibilities and liabilities of an institution's governing board, its administrators, and its clinical staff. Finally, the course analyzes the legal and ethical rights of the patient and considers the patient's right to informed consent, confidentiality and commitment.

Offered: Every year, Spring

HM 669. Organization and Management of Long-Term Care Facilities. 3 Credits.

This course covers the organization and administration of long-term care facilities. The sociology and psychology of aging as they affect long-term health care also are explored. Concepts of safety and security, labor market trends, city and state codes, and major legislation regulating these facilities are reviewed. The course fulfills the educational requirement for licensure in Connecticut.

Offered: As needed

HM 671. Health Policy and Politics. 3 Credits.

This course is an overview of the federal legislative process and its impact on the healthcare delivery system. Federal healthcare policy influences the cost, access, and quality of the healthcare system. This course is an interdisciplinary immersion course where students will meet and interact with federal healthcare policy stakeholders and influencers. Government agencies, media, advocacy organizations are covered as to their impact on healthcare policy. Students will identify a significant healthcare issue and develop a legislative proposal that offers a solution. Excellent proposals will be presented to our Senators.

Offered: As needed

HM 780. Internship I (degree students only). 3 Credits.

This residency offers field experience under the direction of a qualified preceptor in a health services institution. It is designed primarily for those without significant health services administration experience. It is the responsibility of the candidate to locate a residency opportunity appropriate to his or her interests, although faculty offer suggestions and provide assistance. Minimum of 250 clock hours per semester.

Offered: As needed

HM 790. Residency I (non-degree students only). 4 Credits.

This 450 clock-hour residency (one semester of a two-semester licensure requirement) is required for students who want to take the state nursing home administrator licensure examination through the LTC certificate program.

Offered: As needed

HM 791. Residency II. 4 Credits.

This 450 clock-hour residency (one semester of a two-semester licensure requirement) is required for students who want to take the state nursing home administrator licensure examination through the LTC certificate program.

Offered: As needed

Master Business Administration (MBA)

MBA 601. Foundations for Decision Making. 1 Credit.

This course covers basic elements of statistics, technology (including Excel), financial accounting, managerial accounting, finance and economics as well as other fundamental business concepts. The course must be taken during a student's first semester in the MBA program, but can be completed concurrently with MBA 615. The course is graded on a pass/fail basis.

Offered: Every year, All

MBA 602. Communicating Effectively for Managers. 3 Credits.

This course provides instruction and practice in the various formats and styles of writing required of executives and professionals in a business environment. This course focuses on the ability to communicate clearly, which is necessary for success in the business world. Students are encouraged to organize thoughts logically, plan communications in advance, write in appropriate formats and communicate ideas concisely. Students learn communication skills necessary for leaders in today's global marketplace. International degree students only.

Offered: As needed

MBA 605. Graduate Teaching Practicum. 3 Credits.

This teaching practicum is designed for business students who wish to explore education as part of their professional development. The practicum is a period of intensive development, which will enable students to understand beginning instructional competencies. Practicum students will have the opportunity to become involved with, and actively participate in, many aspects of classroom instruction. Through these experiences, they will learn to link theory and practice, and acquire the understanding of effective presentation in a range of professional situations.

Offered: As needed

MBA 610. Business Decision Analysis. 3 Credits.

This course is an introduction to basic quantitative tools that enable managers to analyze data and make informed decisions. Topics include descriptive analysis of survey data, introductory probability, sampling and sampling distributions, hypothesis testing, simple and multiple regression and decision analysis. Students apply the quantitative decision-making tools to business situations through cases.

Offered: As needed

MBA 615. Skills for Contemporary Business Issues. 3 Credits.

This is an experiential and action-based learning course that covers skills needed to address contemporary business issues. Topics include problem solving, business communication, business research and basic data analysis, cross-cultural awareness and innovation. By the end of the course, students are able to recognize and research business problems, formulate implementable solutions and effectively communicate those solutions to stakeholders.

Offered: Every year, Fall

MBA 620. Financial and Managerial Accounting for Decision Making (AC 620). 3 Credits.

This course provides an introduction to the use of accounting information for decision making in organizations. Topics include reporting and analysis of financial statement information and the use of managerial decision-making tools to support planning and control. Students can receive credit for either AC 620 or MBA 620 but not both.

Prerequisites: Take MBA 615.

Offered: Every year, Spring

MBA 625. Authentic Leadership within Organizations. 3 Credits.

In this experiential course students will consider their individual leadership styles and determine their unique preferences for leadership, motivation, emotional intelligence, and achievement. Additionally, students will experience how communication occurs in organizations to utilize organizational networks, negotiate workplace politics, embrace change, and lead team execution. Students will also recognize that inclusive organizations contribute responsibly keeping legal, ethical, social, and human duties at the forefront of decision making.

Prerequisites: Take MBA 615.

Offered: Every year, Spring

MBA 630. Business Data Analytics. 3 Credits.

This action learning course teaches how to harness the full potential of data and leverage it as a strategic asset. Machine learning and predictive modeling techniques are utilized to provide hands-on experience of working with different models. By the end of the course, students are able to apply decision trees, neural networks, regression and other techniques to recognize patterns in data, compute predictions and recommend a range of actions leading to better decision making.

Offered: Every year, Fall

MBA 635. Supply Chain Management in a New Era. 3 Credits.

This is a problem-based and case-based course that covers concepts, strategies and analytical techniques to improve the efficiency and effectiveness of a firm's supply chain. Topics are related to a firm's supply chain, such as sustainable sourcing, product availability, supply chain network design, distribution channels, coordination of supply chain, and information technology in supply chain. By the end of the course students will be able to understand the key supply chain principles, formulate solutions for supply chain problems, and recognize the technology effect in creating values and enhancing a firm's performance.

Prerequisites: Take MBA 615.

Offered: Every year, Fall

MBA 640. Financial Decision Making. 3 Credits.

This course introduces students to the theory and techniques of financial analysis with application to real-world problems and situations. Topics include risk and return, asset pricing, capital budgeting and corporate investment decisions, capital structure decisions, dividend policy, corporate merger, divestiture and takeover decisions.

Prerequisites: Take MBA 615.

Offered: Every year, Fall

MBA 645. Marketing Decision Making. 3 Credits.

Students learn to formulate, manage and evaluate the marketing strategies that create the firm's products and services and deliver those products and services to the market. Both tactical day-to-day operating decisions and longer range strategic decisions are examined through topics that include buyer behavior, market segmentation, demand estimation, product positioning, product development, branding, pricing, distribution channels, and integrated marketing communications. Students also explore the relationship between the marketing and the overall corporate strategy.

Prerequisites: Take MBA 615.

Offered: Every year, Fall

MBA 650. Strategic Public Relations and Reputation Management. 3 Credits.

The focus of this course is reputation management and its importance to business success. Students analyze the function of corporate communications and examine a range of topics including organizational identity, image and reputation; issues and crisis management; institutional ethics and corporate social responsibility; strategic public relations planning; integrated marketing communication; public relations theories and best practices; and global public engagement. The class also explores specialty public relations practice areas such as media relations, investor relations, employee relations and government relations. Class discussions, case studies, in-class exercises, team projects and essay exams help students improve their critical thinking and reasoning skills, develop research and strategic planning skills and increase diversity awareness and sensitivities that are important to professional and business success.

Offered: As needed

MBA 660. Decision Making in a Global Economy. 3 Credits.

Students come to understand the global trends and issues that create business opportunities in foreign markets as well as the impact of the global environment on domestic business practices and opportunities. Students examine the economic, social and political issues that affect a firm's strategy for entering international markets and how cross-cultural issues affect internal business processes. Some sections of the course include an international travel experience while others include a virtual study abroad experience. BS/MBA students are required to take a section that includes an international travel experience. Part-time and online students are encouraged to take a section with an international travel component; however, part-time and online students who are unable to complete an international travel experience may take a section of the course with a virtual international experience. Additional course fee (travel) applies to all sections except virtual study abroad.

Offered: Every year, Spring

MBA 675. Special Topics - MBA. 3 Credits.

Offered: As needed

MBA 688. Graduate Internship I. 3 Credits.

Internships provide students with opportunities to obtain important experience in fields related to their programs of study under the supervision of a sponsoring faculty member and a practicing manager. Prior academic approval is required before registering for any internship course. Details may be obtained from the graduate business programs office. These courses are normally only open to full-time MBA students. Students must complete a minimum of 150 hours in their internship

Offered: As needed

MBA 689. Graduate Internship II Administration. 3 Credits.

Internships provide students with opportunities to obtain important experience in fields related to their programs of study under the supervision of a sponsoring faculty member and a practicing manager. Prior academic approval is required before registering for any internship course. Details may be obtained from the graduate business programs office. These courses are normally only open to full-time MBA students. Students must complete a minimum of 150 hours in their internship.

Offered: As needed

MBA 690. Strategic Management. 3 Credits.

This is a capstone course in strategic decision making for MBA students. Students learn concepts and theory relevant to the field of strategic management, as well as review and integrate the accumulated functional business knowledge from the other MBA core courses. The course covers such topics as internal and external firm analysis, industry analysis, value chain, competitive strategy, corporate and functional strategy, top management leadership and firm performance evaluation. Emphasis is placed on developing decision-making skills through company and case analyses.

Prerequisites: Take MBA 615, MBA 620.

Offered: Every year, Fall

MBA 695. Action-Based Learning Lab. 3 Credits.

This course is a hands-on, action learning capstone for the MBA that asks students to integrate the knowledge and skills they have gained throughout the program. The course engages students in solving a real-world business problem or developing a new business. By the end of the course, students have further developed their skills in the problem-solving process, business knowledge integration, and written and oral presentation.

Prerequisites: Take MBA 620, MBA 625, MBA 630, MBA 635, MBA 645, MBA 690. Take MBA 640 or FIN 610;

Offered: Every year, Spring

MBA 699. Independent Study. 1-6 Credits.

Offered: As needed

Organizational Leadership (OL)

OL 601. Foundations of Organizational Behavior and Leadership. 3 Credits.

This course explores foundational concepts of leadership through the exploration of traditional leadership theory cultural, emotional and social intelligence, and power and politics. Contemporary issues in leadership provide opportunity for practical application and personal reflection.

Prerequisites: Can only take 1 from list: OL 601, PMBA 622 or MBA 625.

Offered: Every year, All

OL 607. Insights into Emotions and Emotional Intelligence. 3 Credits.

Emotions are pervasive in negotiations and organizations and profoundly influence our decisions, relationships, and outcomes. In this course, we integrate theory and research in psychology, behavioral economics, and decision-making to understand the importance of emotions in negotiations, organizations, and interpersonal interactions. In the process, the course will develop your emotional intelligence and teach you how to harness the power of your emotions and those of others.

Offered: Every year

OL 610. Crucial Conversations as Leaders. 3 Credits.

This course allows for experiential practices of effective communication and conflict management techniques at the corporate and individual levels. Strategic approaches to communication internal and external to the organization and global communication practices are explored.

Prerequisites: Take OL 601.

Offered: Every year

OL 615. Leadership Across Boundaries. 3 Credits.

This course covers the challenges of interacting, managing and leading across cultural differences and national boundaries. The focus is on coordinating and sustaining cooperative activities across various types of boundaries, including cultural, generational, gender, ethnic and regional. Students explore domestic and international differences as well as evaluate the implications of emerging global actors on business practices.

Prerequisites: Take OL 601.

Offered: As needed

OL 620. Leadership in the Digital Organization. 3 Credits.

This course examines organizations in a period characterized by emerging technology breakthroughs such as artificial intelligence, robotics, the internet of things, blockchain technologies, biotechnology, nanotechnology, materials science, data science and big data, gig economy, and quantum computing. The course will provide students with pioneering research, theory, and methodology, in addition to issues students will encounter in a time of profound uncertainty surrounding the development and adoption of emerging technologies. At the end of the semester, students are expected to complete a final project on developing a digital strategy for an organization of their choosing.

Offered: As needed

OL 630. Performance Management and HR Analytics. 3 Credits.

This course focuses on the theoretical and practical application of performance management and HRIS. The importance of an effective performance management system is examined. An effective performance management system includes a continuous process of identifying factors and integrated approaches that align individual and team competencies with organizational goals. Students gain a conceptual understanding of key factors involved in assessing performance management systems in small and large organizations.

Offered: Every year

OL 640. Project Management. 3 Credits.

This course goes beyond basic project management (PM). Students learn key PM techniques for leading complex projects and programs and assessing performance. Experiential application of these skills allows students to produce business/organizational results that require collaborative relationships and critical thinking. Students can receive credit for only one of the following courses: MG 603, OL 640, BAN 669. Students with PMP certification should discuss with their adviser.

Offered: As needed

OL 650. Leading Organizational Change. 3 Credits.

This course examines theoretical concepts and practical techniques of organizational design and change. Students gain a conceptual understanding of leadership skills required for organizational change. The study of leading organizational change includes factors relating to the need for organizational change and the strategy-structure relationship to organizational design with a focus on organizational effectiveness.

Prerequisites: Take OL 601.

Offered: As needed

OL 662. Ethics and Governance. 3 Credits.

This course uses contemporary examples and theoretical perspectives to assess the critical dimensions of ethics in leadership, and explores responsible corporate governance linked to organizational leadership. Students can receive credit for only one of these courses: OL 662 or PMBA 612.

Offered: As needed

OL 681. Strategic Leadership in Human Resources. 3 Credits.

In this course, students are introduced to the principles of human resource management. This course focuses on an introduction to the complex and complicated realm of human resource management through discussions of the strategic and tactical means of institutionalizing mission and vision through the organization. Course will also address challenges associated with multinational HRM, and offer an exposure to HRIS systems.

Offered: As needed

OL 682. Policies, Procedures and Employment Law. 3 Credits.

This course provides an introduction to Human Resource policy and procedures, including inclusivity, bias and employment law.

Offered: As needed

OL 683. Talent Management. 3 Credits.

This course focuses on strategic approaches to the recruiting, selection and retention of talent. Students gain knowledge in the area of training, performance development and talent management principles. Performance appraisal and employee development concepts as well as HRIS systems are explored.

Offered: As needed

OL 684. Benefits and Compensation. 3 Credits.

This course is designed to provide students with knowledge of wage and salary administration in private and public organizations. Students will gain an understanding of total compensation systems; the interrelationship between motivation, employee performance, intrinsic and extrinsic rewards, perceived equitable payments, and employee satisfaction; employee benefits; employee incentive programs.

Offered: As needed

OL 686. Leading Public Service Organizations. 3 Credits.

This course examines the challenges and opportunities of public sector leadership. Course participants examine the chief executive's role as a policy maker; dealing with other community leaders and the media; discipline and ethical conduct, and leading in unionized environments. Critical leadership competencies including authenticity, trust building, exercise of power, organizational behavior, and learning to influence the work environment are also examined.

Offered: As needed

OL 687. Strategic Planning for Public Service Organizations. 3 Credits.

This course develops skills in systematic planning within a variety of public sector organizational settings. Strategic goal setting, mission-driven plans, managing constrained resources and monitoring and modifying strategic plans in a dynamic environment are emphasized. Participants explore the processes of advanced planning through the analysis of an organization's strategic plan.

Offered: As needed

OL 688. Organizational Leadership Special Topics. 3 Credits.

Offered: As needed

OL 689. Project Management for Leadership Consulting. 3 Credits.

This is part 1 of a two-part capstone sequence. In this course, students will learn key techniques for identifying business issues and designing a project to address these issues. Students will attain expertise in project management techniques, decision-making models, risk analysis and assessment. This capstone course should be taken near the end of the program and immediately prior to OL690. Students can receive credit for only one of the following courses: OL 689, MG 603, BAN 669.

Prerequisites: Must have taken 21 credits towards the MSOL program prior to this course.

Offered: Every year

OL 690. Leadership Consulting Capstone. 3 Credits.

This second course in a 2-course capstone pathway integrates the knowledge and skills gained throughout the program. Students move from the project design and scope stage in OL689 to the implementation of a consulting case/project, including a comprehensive analysis of organizational issues, data collection/ discovery phase, and a presentation of appropriate recommendations and implementation plans. The result is a professionally written consulting paper and presentation. As a capstone course, students should take this course as the final course in the program, and immediately following OL 689.

Prerequisites: Take OL 689.

Offered: Every year

Full-Time Master of Business Administration

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The School of Business offers two MBA programs to meet the needs of our students. The Full-Time MBA program is offered on-campus for students who have recently completed an undergraduate degree or for students who want an in-person MBA experience. For students who already have at least 3 years of full-time work experience, the Professional MBA (PMBA) program offers the flexibility of completing an MBA completely online on a part-time basis.

Both programs emphasize the interrelatedness of core business functions, and students learn the theories, principles and strategies necessary to succeed in careers in business, government or nonprofit management. In the MBA, students build their knowledge and skills in areas related to data analytics, decision-making, global business considerations, financial markets and analysis, leadership, organizational behavior, and business strategy.

MBA courses are action-oriented, and students are encouraged to think critically so that they can effectively and immediately apply the competencies and skills acquired in the MBA program to their organizations. Numerous electives are available for students to customize their experience based on their own professional goals and interests.

Graduate Electives ¹		
Select five graduate electives either in a specific concentration/discipline or customized by the student		15
Total Credits		45

MBA students may choose to take elective courses within one area, creating a concentration in a specific discipline, or may choose to take electives across multiple business disciplines, enhancing a broad interdisciplinary perspective.

Electives are available in such areas as business analytics (<http://catalog.qu.edu/courses-graduate/ban/>), finance (<http://catalog.qu.edu/courses-graduate/fin/>), health care management (<http://catalog.qu.edu/courses-graduate/hm/>), international business (<http://catalog.qu.edu/courses-graduate/ib/>), marketing (<http://catalog.qu.edu/courses-graduate/mk/>), strategy (<http://catalog.qu.edu/courses-graduate/str/>), and supply chain management (<http://catalog.qu.edu/courses-graduate/mg/>).

¹ Students in 3+1 and 4+1 programs are required to complete MBA 688 as one of their five electives.

Student Learning Outcomes

Students who graduate from the MBA program will develop and emphasize skills in the following areas:

- Business Analytic Skills:** Demonstrate the ability to understand, interpret and develop data driven approaches for business decision-making, and understand and use business information and metrics to assess business problems, identify opportunities, and offer solutions.
- Managing People and Organizations:** Demonstrate the ability to manage professional relationships and ability to drive organizational growth and change.
- Strategic Integration:** Demonstrate the ability to assess a business situation and identify key dynamics and constraints, and to formulate and implement an effective response.
- Business and Society:** Demonstrate the ability to understand the relationship between business and society, and apply knowledge of ethics, social responsibility, and sustainability to business situations.
- Application of Business Knowledge:** Demonstrate knowledge of core business functions, integrate this knowledge to address business problems and opportunities, and evaluate and apply emerging practices, technologies and ideations that can impact the future of business practices and work.

Master of Business Administration

Dual-Degree Programs

- Accelerated Dual-Degree BS/MBA (3+1) (<http://catalog.qu.edu/graduate-studies/business/business-administration-mba/accelerated-four-year-bsm-ba/>)
- Dual-Degree BA/MBA (4+1) (p. 689)
- Dual-Degree BS/MBA (4+1) (p. 704)

- JD/MBA (Juris Doctor) (p. 705)

MBA Admissions

Admission to Quinnipiac's graduate business programs is competitive. The following criteria apply for admission to the MBA. Please note: Separate admissions requirements apply for Quinnipiac Dual-Degree BS/MBA and BA/MBA (4+1) students and students entering the Accelerated Dual-Degree BS/MBA (3+1) program in the School of Business. Please refer to the appropriate sections of this catalog for further information on these programs.

All prospective MBA students must submit the following:

- Program application (submitted online). Go to Quinnipiac's Graduate Admissions (<http://www.qu.edu/gradhowtoapply/>) webpage.
- Official transcripts from all institutions attended, two letters of recommendation, a current resume and a personal statement.
- GMAT or GRE scores are not required for admission. *Applicants who wish to submit scores may do so as supplemental information on the application.*
- All applicants from non-English-speaking countries must indicate that they have the language capability to understand business instruction in English and must provide official Test of English as a Foreign Language (TOEFL) scores. In general, a minimum TOEFL Internet-based score of 90 is required for admission (or 233 for computer-based, or 575 for paper-based).
In lieu of TOEFL, applicants may submit International English Language Testing System (IELTS) scores. A minimum score of 6.5 on this exam, a B or above on the Certificate of Advanced English or a C or above on the Certificate of Proficiency in English is required. TOEFL and IELTS scores are valid for two years.
- International applicants are required to submit proof of adequate funds to complete their study at Quinnipiac University before an eligibility form (I-20) can be issued. Complete the Statement of Financial Support (<https://www.qu.edu/admissions/graduate/apply/international/>) and submit along with supporting documentation. In addition, a copy of a passport or national ID is required.

Applications for the MBA program are accepted throughout the year for both full- and part-time study. Full-time students may begin their studies in January, May or August. Candidates are encouraged to submit applications as early as possible to ensure consideration for the semester desired.

Accelerated Dual-Degree BS/MBA (3+1)

Program contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The Accelerated Dual-Degree Bachelor of Science/Master of Business Administration (3+1) is designed for outstanding School of Business students—those who rank in the top 20 percent of their high school class and have a combined critical reading and math SAT score of 1200 or a composite ACT of 25. Students enter the program in their first year and learn at an accelerated pace to earn a bachelor's degree in three years and an MBA in the fourth. This select program features total savings over the traditional five-year BS/MBA option and additional features including:

- dedicated first-year housing for students in the program with private study hall

- dedicated resident assistant and academic adviser
- flat tuition and fees for the entire four years with any academic scholarships carrying from the third to the fourth, graduate year

Unique Program Features

- Total savings of up to 30 percent over traditional five-year BS/MBA option
- An optional residential cohort first-year experience with other four-year BS/MBA students
- Dedicated resident assistant and study lounge in first-year cohort housing
- Community-building welcome event in August
- Dedicated program director
- Scholarship carried from year three to year four, subject to a 3.0 GPA and continued program enrollment

This program provides a flat tuition rate that will not increase each year resulting in a substantial savings over four years.

Classes are offered both in a traditional on campus setting as well online in the summer.

The four-year experience includes applied learning experiences such as internships-for-credit and faculty-led international travel in both undergraduate and graduate segments of the program. Options include:

- Undergraduate study abroad, School of Business immersion trips, university seminar travel courses
- Graduate MBA international travel immersion courses

Students in the Accelerated Dual-Degree BS/MBA (3+1) program must live in one of the university's housing options for the three undergraduate years of the program.

Admission Requirements: Accelerated Dual-Degree BS/MBA (3+1)

The Accelerated Dual-Degree BS/MBA (3+1) program does not have a separate application process. Students admitted to the School of Business who meet the program criteria will be invited to enter the program. To be considered for this accelerated program, students generally must be ranked in the top 20 percent of their high school class, and must have a total SAT score (critical reading and math) of 1200 or higher, or an ACT composite score of 27 or higher.

Admission to the university is competitive, and applicants are expected to present a strong college prep program in high school. Prospective first-year students are strongly encouraged to file an application as early in the senior year as possible, and arrange to have first quarter grades sent from their high school counselor as soon as they are available.

For detailed admission requirements, including required documents, please visit the Admissions page (p. 20) of this catalog.

University Honors Program

The University Honors Program has been developed to foster the needs and interests of our most academically talented and committed students. Honors students participate in small seminar courses with instructors dedicated to working cooperatively to mold a unique learning environment. This student-centered approach supports increasingly independent learning and also engages students in the larger campus as well as regional, national and world communities.

Each year, the honors program welcomes incoming first-year students with strong academic records. Entry to the program is by application. Students who have received their acceptance to Quinnipiac may apply for admission to the honors program in February and will learn of their status before May 1. Students also may apply after the February deadline and, if accepted, will be admitted on a wait-list basis. Interested students may inquire with the director or the admissions office at any time during the admissions process and into the summer. After their first or

second semester, students with strong records of achievement and a demonstrated desire to share their intellectual curiosity and engagement with others may apply to join the program.

Visit the University Honors Program (p. 44) page for more information.

Dual-Degree BS/MBA (4+1)

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

Our MBA dual-degree programs are designed for outstanding students who want to reap the benefits of completing a dual degree in less time than it would take to complete the two degrees separately. The path to the dual-degree MBA is completed in five years, and is open to both students enrolled in bachelor of science and bachelor of arts programs. In both the BS/MBA and BA/MBA paths, students begin taking graduate courses during their senior year that count toward both an undergraduate degree and an MBA.

Our dual-degree curriculum emphasizes collaboration and critical thinking, and you'll hone your leadership and presentation skills through group projects. You'll explore the major challenges of today's global business world and examine key topics, such as organizational behavior and financial analysis. Each program fosters the development of both hands-on skills and a global perspective through an experiential learning component and executive study abroad course. With a thorough understanding of business, practical experiences and a foundation in subjects such as economics and finance, you'll graduate with a step up on your competition, ready to excel in a range of careers.

Dual-Degree BS/MBA (4+1) Program of Study

Students in the dual-degree (4+1) program may complete up to 9 credits of graduate courses during their senior year, which also fulfill undergraduate open electives. Students must work with their undergraduate adviser and the MBA director to ensure that the courses fit into both degree programs. Students must present satisfactory performance in their graduate coursework completed during their senior year to be officially admitted into the graduate program upon completion of their BS degree. The BS/MBA curriculum consists of the MBA core courses plus a requirement to complete MBA 660 with an international travel component and MBA 688 MBA Internship.

MBA Program of Study

Code	Title	Credits
Core Business Disciplines (30 credits)		
MBA 615	Skills for Contemporary Business Issues	3
MBA 620	Financial and Managerial Accounting for Decision Making (AC 620)	3

MBA 695	Action-Based Learning Lab	3
Graduate Electives		
Select five graduate electives either in a specific concentration/discipline or customized by the student		15
Total Credits		45

MBA students may choose to take elective courses within one area, creating a concentration in a specific discipline, or may choose to take electives across multiple business disciplines, enhancing a broad interdisciplinary perspective.

Electives are available in such areas as business analytics, computer information systems, finance, health care management, international business, marketing, strategy, and supply chain management.

Interested students must apply for admission to the BS/MBA program during the last semester of the junior year using a special application form available in the School of Business. Admission into the combined program is competitive. Only students who have earned at least 75 credits with an overall GPA of 3.0 are considered. Meeting the minimum criteria for consideration does not guarantee admission.

Dual-Degree JD/MBA

Students may apply for acceptance to both the Quinnipiac School of Law and the MBA program and, upon completion of both programs, receive a business and a law degree. This specialized joint program shortens the length of time necessary to receive the degrees. Four law courses are used to fulfill the four-elective course requirement of the MBA program.

Admissions for these programs are handled separately, but a student should inform both admissions offices of an interest in this joint degree program. Students accepted into the School of Law are not required to take the GMAT or GRE.

Once accepted to both programs, a student typically completes one year of law studies and then begins taking courses from both programs concurrently, finishing both programs' requirements in the same semester. However, students who wish to complete the joint program in three years can accomplish this by starting their MBA courses in the summer before their first year in the School of Law. A student may be admitted to one program and, prior to meeting the graduation requirements for that program, apply for the joint degree program.

More information about this joint program is available on the School of Law JD/MBA page (p. 603).

MBA Requirements for Dual-Degree JD/MBA Program of Study

Students pursuing the JD/MBA dual degree may count four law courses as electives toward the MBA, in addition to 30 MBA core credits and 3 MBA elective credits.

Master of Science in Accounting

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The Master of Science in Accounting program is designed to prepare candidates to satisfy the 150 credit hours requirement and to position them for success in the CPA exam. The program will position successful graduates for careers in professional services firms, business corporations, governmental agencies, and business consulting firms among others. The program provides students with in-depth accounting knowledge and skills necessary to be successful accounting professionals. Notably, there is a large demand for well-trained accounting professionals in public and private accounting, as well as in government. Students have a variety of electives to choose from, or may select a structured set of courses in business analytics.

MS in Accounting Curriculum

Code	Title	Credits
Required Core Courses (18 credits)

BAN 628	Data Mining for Competitive Advantage
BAN 650	Data Visualization for Managers
CIS 600	Information Systems Strategy
EC 600	Managerial Economics
Total Credits	30

¹ BAN 610 is a prerequisite for advanced BAN courses.

Student Learning Outcomes

Students who graduate with this degree will demonstrate:

- Professional Communication:** an ability to communicate complex accounting reports and other financial information in both technical and common language; a proficiency in the use of information technology packages to process information and to effectively complete tasks in applicable areas.
- Business Analytics and Critical Thinking:** proficiency in the use of statistical and analytical tools to analyze complex accounting problems and will be able to make practical and reliable decisions as appropriate in order to resolve problem.
- Business Environment:** the capacity to recognize ethical issues encountered in public and private accounting environments and consider resolutions that are legal and ethical with appropriate consideration on the firms' material stakeholders; knowledge of the issues involved in Multinational Corporation accounting including a strong understanding of the issues in international financial reporting standards.
- Accounting Integration:** knowledge of the principles and standards applied to financial reporting for U.S. corporations (U.S. GAAP) and to financial reporting for specialized industries and organizations such as non-profits and governments; an understanding of the relevant professional standards.

Master of Science in Accounting

- Master of Science in Accounting

Dual-Degree Programs

- Accelerated Dual-Degree BS/MSA (3+1) (p. 706)
- Dual-Degree BS/MSA or BA/MSA (4+1) (p. 708)

Admission

To be admitted to the program, an applicant must have completed an undergraduate degree program with a GPA of at least 3.0. Work experience and recommendations also are strongly considered in the admission process. Standardized test scores (such as GMAT or GRE) submitted by the students in support of the application also are considered, but are not required.

In addition, applicants to the MS in Accounting program must demonstrate that they have successfully completed the following prerequisite course (or must complete these courses before beginning coursework in the MSA program).

- Introduction to Financial Accounting
- Introduction to Managerial Accounting
- Intermediate Accounting I
- Intermediate Accounting II
- Taxation of Individuals
- Business Law and Society

A complete application consists of the following:

- Program application (submitted online). Go to Quinnipiac's How to Apply (<http://www.qu.edu/gradhowtoapply/>) webpage.
- Official transcripts of all undergraduate and graduate work completed.
- A personal statement/letter of intent
- Three letters of recommendation
- A recent resume
- Application fee

International Applicants:

Prospective international students must submit certified translations of official transcripts prepared by World Education Services (WES) [wes.org](http://www.wes.org/) (<http://www.wes.org/>) or another acceptable organization that is approved by Quinnipiac for this purpose.

All applicants from non-English-speaking countries must indicate that they have the language capability to understand business instruction in English and must provide official Test of English as a Foreign Language (TOEFL) scores. In general, a minimum TOEFL Internet-based score of 90 is required for admission (or 233 for computer-based, or 575 for paper-based).

In lieu of TOEFL, applicants may submit International English Language Testing System (IELTS) scores. A minimum score of 6.5 on this exam, a B or above on the Certificate of Advanced English or a C or above on the Certificate of Proficiency in English is required. TOEFL and IELTS scores are valid for two years.

International applicants are required to submit proof of adequate funds to complete their study at Quinnipiac University before an eligibility form (I-20) can be issued. Complete the Statement of Financial Support and submit along with supporting documentation. In addition, a copy of a passport or national ID is required. The Statement of Financial Support can be found online here (<https://www.qu.edu/admissions/graduate/apply/international/>).

Accelerated Dual-Degree BS/MS in Accounting (3+1)

Program contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The Accelerated Dual-Degree Bachelor of Science/Master of Science in Accounting (3+1) is designed for outstanding School of Business students—those who rank in the top 20 percent of their high school class and have a combined critical reading and math SAT score of 1200 or a composite ACT of 25.

The MS in Accounting program is designed to prepare candidates to satisfy the 150 credit hours requirement and to position them for success in the CPA exam. The program will position successful graduates for careers in professional services firms, business corporations, governmental agencies, and business consulting firms among others. The program provides students with in-depth accounting knowledge and skills necessary to be successful accounting professionals. Notably, there is a large demand for well-trained accounting professionals in public and private accounting, as well as in government.

Students enter the program as first-year students and learn at an accelerated pace to earn a bachelor's degree in three years and an MSA in the fourth.

Unique Program Features

- Total savings of up to 30 percent over traditional five-year BS/MSA option
- An optional residential cohort first-year experience with other four-year BS/MSA students
- Dedicated resident assistant and study lounge in first-year cohort housing
- Community-building welcome event in August
- Dedicated program director
- Scholarship carried from year three to year four, subject to a 3.0 GPA and continued program enrollment

This program provides a flat tuition rate that will not increase each year resulting in a substantial savings over four years.

Classes are offered both in a traditional on-campus setting as well online in the summer.

The four-year experience includes an applied learning experience such as internships-for-credit.

Students in the Accelerated Dual-Degree BS/MSA (3+1) program live in one of the university's housing options for the first three years.

Accelerated Dual-Degree BS/MSA (3+1) Program of Study

The MS in Accounting program is designed to prepare candidates to satisfy the 150 credits requirement and to position them for success in the CPA exam. The program will position successful graduates for careers in professional services firms, business corporations, governmental agencies, and business consulting firms among others. The program provides students with in-depth accounting knowledge and skills necessary to be successful accounting professionals. Notably, there is a large demand for well-trained accounting professionals in public and private accounting, as well as in government.

In the first three years, students complete the undergraduate Accounting major (p. 313) or any other undergraduate business major in conjunction with the Accounting minor. (p. 314)

Dual-Degree Bachelor's/MS in Accounting (4+1)

Program contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The Dual-Degree BS/MS and BA/MS in Accounting (4+1) programs respond to the demand for well-trained certified public accountants. The curriculum takes 5 years and provides a foundation in the principles, concepts and technical practices of accounting, with the master of science degree providing advanced skills and accounting theory to support success on the Certified Public Accountant certification exam. The curriculum is designed to help students transition from undergraduate to graduate study to the 150-credit education requirement to sit for the CPA exam. Qualified students from all majors may apply for this program in the spring of their junior year or fall of their senior year.

Dual-degree accounting students have access to the same internship opportunities as the traditional BS, BA and MS program students. They also can take advantage of networking events and career fairs that bring representatives from Big 4 accounting firms and other employers from the public, private and government sectors to campus.

Dual-Degree BS/MSA or BA/MSA (4+1) Program of Study

The MS in Accounting program is designed to prepare candidates to satisfy the 150 credits requirement and to position them for success in the CPA exam. The program will position successful graduates for careers in professional services firms, business corporations, governmental agencies, and business consulting firms among others. The program provides students with in-depth accounting knowledge and skills necessary to be successful accounting professionals. Notably, there is a large demand for well-trained accounting professionals in public and private accounting, as well as in government.

AC 670	Advanced Business Law, Regulation, Ethics and Reporting Environments	3
AC 680	Advanced Federal Income Taxation and Tax Research	3
MSA Elective		3
MSA Elective		3
Total Credits		30

You may refer to the MSA Curriculum (p. 705) page for electives.

Interested students must apply for admission to the BS/MSA or BA/MSA program during the last semester of their junior year or the first semester of their senior year using a special application form available in the School of Business. Admission requires a cumulative GPA of 3.0 in an accounting major or accounting minor. Students not enrolled as an accounting major or accounting minor must meet with the program director to discuss their candidacy for the program.

Meeting the minimum standards as listed above does not guarantee admission to the program. Students are not admitted officially into the MS in Accounting program until they graduate with their bachelor's degree and meet all other requirements. Once admitted, students begin full-time study in the MS in Accounting program.

Master of Science in Business Analytics

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The MS in Business Analytics program is designed to develop the skills to extract, analyze, interpret and present data for business decision making. These skills are critical to decision making in every sector of industry, government and nonprofit organizations. The program emphasizes analytical and statistical tools that enable graduates to use sophisticated means to mine, analyze, evaluate and present data in a variety of organizational environments.

One 600-level Supply Chain elective		

Student Learning Outcomes

Upon completion of the MS in Business Analytics program, students will demonstrate the following competencies:

- Data Analysis:** Evaluate different techniques used to analyze data.
- Data Management:** Explain how data is stored, accessed and retrieved.
- Analytical Reasoning:** Apply business analytics techniques and utilize analytical tools for organizational decision-making.
- Critical Thinking:** Demonstrate skills in interpreting and presenting analytical results.

Master of Science in Business Analytics

Accelerated Dual-Degree BS/MS in Business Analytics (3+1) (p. 710)

Dual-Degree BS/MS or BA/MS in Business Analytics (4+1) (p. 710)

Admission

To be admitted to the program, an applicant must have completed an undergraduate degree program with a GPA of at least 3.0. Work experience and recommendations also are strongly considered in the admission process. Standardized test scores (such as GMAT or GRE) submitted by the students in support of the application also are considered, but are not required.

In addition, applicants to the MS in Business Analytics program must possess an undergraduate major, graduate degree or other significant coursework in a quantitatively oriented area, including but not limited to mathematics, actuarial science, statistics, computer science, engineering, operations management, accounting, finance, economics or the natural sciences.

A complete application consists of the following:

- Program application (submitted online). Go to Quinnipiac's Graduate Admissions (<http://www.qu.edu/gradhowtoapply/>) webpage.
- Official transcripts of all undergraduate and graduate work completed.
- A personal statement.
- Three letters of recommendation, including at least one from a professional contact.
- A recent resume.
- Application fee.

International Applicants:

Prospective international students must submit certified translations of official transcripts prepared by World Education Services (WES) [wes.org](http://www.wes.org/) (<http://www.wes.org/>) or another acceptable organization that is approved by Quinnipiac for this purpose.

All applicants from non-English-speaking countries must indicate that they have the language capability to understand business instruction in English and must provide official Test of English as a Foreign Language (TOEFL) scores. In general, a minimum TOEFL Internet-based score of 90 is required for admission (or 233 for computer-based, or 575 for paper-based). In lieu of TOEFL, applicants may submit International English Language Testing System (IELTS) scores. A minimum score of 6.5 on this exam, a B or above on the Certificate of Advanced English or a C or above on the Certificate of Proficiency in English is required. TOEFL and IELTS scores are valid for two years.

International applicants are required to submit proof of adequate funds to complete their study at Quinnipiac University before an eligibility form (I-20) can be issued. Complete the Statement of Financial Support and submit along with supporting documentation. In addition, a copy of a passport or national ID is required. The Statement of Financial Support (<https://www.qu.edu/4aa378/globalassets/global/media/qu/documents/paying-for-college/undergraduate/statement-financial-support-admissions-form.pdf>) can be found on the Admissions webpage (<https://www.qu.edu/admissions/undergraduate/apply/international/>).

Accelerated Dual-Degree BS/MS in Business Analytics (3+1)

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The Accelerated Dual-Degree Bachelor of Science/Master of Science in Business Analytics (3+1) is designed for outstanding School of Business students—those who rank in the top 20 percent of their high school class and have a combined critical reading and math SAT score of 1200 or a composite ACT of 25.

The Master of Science in Business Analytics Program is designed to provide students with knowledge and skills necessary to become successful data driven leaders capable of storing, managing, analyzing and presenting data effectively to stimulate better business decisions. The program explores the practical qualitative and quantitative skills that serve as the foundation to informed decision making. In-demand skills such as data management, data warehousing, text and data mining, visualization and predictive modeling are at the core of the MS Business Analytics program. Through a partnership with SAS, graduates of the MS Business Analytics program will be issued a Badge in Business Analytics using SAS.

Students enter the program as first-year students and learn at an accelerated pace to earn a bachelor's degree in three years and an MSBA in the fourth.

Unique Program Features

- Total savings of up to 30 percent over traditional five-year BS/MSBA option
- An optional residential cohort first-year experience with other four-year BS/MSBA students
- Dedicated resident assistant and study lounge in first-year cohort housing
- Community-building welcome event in August
- Dedicated program director

- Scholarship carried from year three to year four, subject to a 3.0 GPA and continued program enrollment

This program provides a flat tuition rate that will not increase each year resulting in a substantial savings over four years.

Classes are offered both in a traditional on-campus setting as well online in the summer.

The four-year experience includes an applied learning experience such as internships-for-credit.

Students in the Accelerated Dual-Degree BS/MSBA (3+1) program live in one of the university's housing options for the first three years.

Accelerated Dual-Degree BS/MSBA (3+1) Program of Study

Students are admitted to the graduate portion of the program upon completion of their undergraduate program. The MSBA requires a total of 33 credits, as follows:

Code	Title	Credits
Core Curriculum (24 credits)		
BAN 610	Introduction to Business Analytics	3
BAN 615	Predictive Business Analytics	3
BAN 621	Data Management	3
BAN 622	Data Warehousing	3
BAN 628	Data Mining for Competitive Advantage	3
BAN 629	Text Analytics	3
BAN 650	Data Visualization for Managers	3
BAN 690	Business Analytics Capstone	3
MSBA Electives (Choose 3 electives)		
BAN 663	Business Data Analytics with R	
BAN 664	Health Care Analytics	
BAN 665	Big Data and Hadoop	
BAN 667	Design and Analysis of Business Information Systems	
BAN 668	Python Programming for Data Analysis	
BAN 669	Project Management	
Total Credits		33

This program is designed for accelerated dual-degree (3+1) students pursuing their BS in any business major. Students are invited to the (3+1) program during their undergraduate admission process and have until the end of their second year in the program to declare the MSBA as their intended graduate program. Students must maintain a cumulative GPA of 3.0 over the course of their undergraduate program.

Dual-Degree Bachelor's/MS in Business Analytics (4+1)

Program Contact: D (Christopher.Neidig@qu.edu)'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The Dual-Degree BS/MS and BA/MS in Business Analytics (4+1) programs are designed to provide students with the knowledge and skills

necessary to become successful data driven leaders capable of storing, managing, analyzing and presenting data effectively to stimulate better business decisions. The curriculum takes 5 years and students graduate with both a bachelor's degree and their master of science.

The Master of Science in Business Analytics program explores the practical qualitative and quantitative skills that serve as the foundation for informed decision making. In-demand skills such as data management, data warehousing, text and data mining, visualization and predictive modeling are at the core of the MS in Business Analytics program. Through a partnership with SAS, graduates of the MS in Business Analytics program will be issued a Badge in Business Analytics using SAS.

Dual-Degree BS/MSBA or BA/MSBA (4+1) Program of Study

Students are admitted to the graduate portion of the program upon completion of their undergraduate program. The MSBA requires a total of 33 credits, as follows:

Code	Title	Credits
Core Curriculum (24 credits)		
BAN 610	Introduction to Business Analytics	3
BAN 615	Predictive Business Analytics	3
BAN 621	Data Management	3
BAN 622	Data Warehousing	3
BAN 628	Data Mining for Competitive Advantage	3
BAN 650	Data Visualization for Managers	3
BAN 668	Python Programming for Data Analysis	3
BAN 690	Business Analytics Capstone	3
MSBA Electives (choose 3 electives)		
BAN 629	Text Analytics	3
BAN 663	Business Data Analytics with R	3
BAN 664	Health Care Analytics	3
BAN 665	Big Data and Hadoop	3
BAN 667	Design and Analysis of Business Information Systems	3
BAN 669	Project Management	3
Total Credits		33

This program is designed for outstanding students who have a quantitative background as well as interest and passion for working with data. Admission requires a cumulative GPA of 3.0. Interested students must apply for admission to the Dual-Degree BS/MSBA (4+1) program during the fall of their senior year.

Meeting the minimum standards as listed above does not guarantee admission to the program. Students are not admitted officially into the MS in Business Analytics program until they graduate with their BS and meet all other requirements. Once admitted, students begin full-time study in the MS in Business Analytics program.

Master of Science in Organizational Leadership

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The MS in Organizational Leadership guides working professionals through a process of uncovering and evolving their personal leadership style. Specifically developed for prospective and current leaders with at least 4 years of professional work experience, this program helps students strengthen their leadership toolkit through the learning and application of critical skills necessary to thrive in the new economy. The 30-credit program is delivered in a highly supportive, modern online format and can be completed in under 2 years on a part-time basis.

The core courses of the program focus on identifying personal leadership style in all situations with a flexible curriculum that enables students to explore specific areas of interest such as emotional intelligence, ethics and governance, the digital organization, and human resources. Coursework is rounded out with a hands-on consulting project designed to address a business problem relevant to the student's current role or professional/personal interests. Students are challenged to think critically about this issue before developing, building and implementing an appropriate solution.

MS in Organizational Leadership Program of Study

The program consists of 30 credits, including five required core courses (15 credits) and five elective courses (15 credits).

Code	Title	Credits
Required Core Courses		
OL 601	Foundations of Organizational Behavior and Leadership	3
OL 610	Crucial Conversations as Leaders	3
OL 650	Leading Organizational Change	3
OL 689	Project Management for Leadership Consulting	3
OL 690	Leadership Consulting Capstone	3
Organizational Leadership Electives		
Students may choose specialized electives in organizational leadership, or other graduate business courses. Select five electives from the course list below:		15
OL 607	Insights into Emotions and Emotional Intelligence	3
OL 620	Leadership in the Digital Organization	3
OL 630	Performance Management and HR Analytics	3
OL 662	Ethics and Governance	3
OL 681	Strategic Leadership in Human Resources	3
OL 682	Policies, Procedures and Employment Law	3
OL 683	Talent Management	3

OL 684 Benefits and Compensation

Total Credits

30

Student Learning Outcomes

Upon completion of the MS in Organizational Leadership program, students will demonstrate the following competencies:

- Communication Skills for Leading Individuals and Teams:** Students will demonstrate capabilities with respect to effective communication with varied organizational stakeholders. Additionally, students will develop the ability to analyze group dynamics and practical skills for building and leading effective teams.
- Self Awareness, Growth and Complex Adaptive Leadership:** Students will exhibit an understanding of mechanisms/tools to maintain an ongoing awareness of personal characteristics, how these impact interactions with others and how to re-evaluate these regularly toward continuous improvement as leaders. Students will understand the array of nonmarket forces, including political leaders, NGOs and societal trends, that can have a significant impact on the opportunities and risks faced by business leaders. Students also will be able to evaluate and understand organizational design issues, organizational learning issues and motivation issues toward becoming effective leaders of diverse organizations.
- Digital Literacy and Interpreting Data to Improve Performance:** Students will be exposed to analytical tools applicable to the leadership function in reviewing and enhancing organizational and individual performance. Students will build awareness of the breadth, depth and velocity of the digital era transformation and its multifaceted impact on organizations.
- Ethics, Negotiation and Strategic Decision-Making:** Students will demonstrate understandings of the formulation of strategy and implications for its implementation within diverse organizations. Students will recognize choices in ethical contexts and effectively use frameworks to make decisions as leaders that are ethical. And, students will acquire knowledge to craft a negotiation strategy that aligns to ethical and mutually beneficial outcomes in professional and personal negotiations.

Admission

Applicants to the MSOL program must possess four years of professional, post-bachelor's degree experience.

All prospective MSOL students must submit the following:

- Program application (submitted online). Go to Quinnipiac's Graduate Admissions (<http://www.qu.edu/gradhowtoapply/>) webpage.
- Official transcripts of all undergraduate and graduate programs/courses completed.
- A personal statement.
- A resume demonstrating sufficient work experience.
- Three letters of recommendation (one being from a professional contact).
- Application fee.

International Applicants:

Prospective international students must submit certified translations of official transcripts prepared by World Education Services (<https://www.wes.org/>) (WES) or another acceptable organization that is approved by Quinnipiac for this purpose.

All applicants from non-English-speaking countries must indicate that they have the language capability to understand business instruction in English and must provide official Test of English as a Foreign Language (TOEFL) scores. In general, a minimum TOEFL Internet-based score of 90 is required for admission (or 233 for computer-based, or 575 for paper-based).

In lieu of TOEFL, applicants may submit International English Language Testing System (IELTS) scores. A minimum score of 6.5 on this exam, a B or above on the Certificate of Advanced English or a C or above on the Certificate of Proficiency in English is required. TOEFL and IELTS scores are valid for two years.

International applicants are required to submit proof of adequate funds to complete their study at Quinnipiac University before an eligibility form (I-20) can be issued. Complete the Statement of Financial Support and submit along with supporting documentation. In addition, a copy of a passport or national ID is required. The Statement of Financial Support (<https://www.qu.edu/4aa378/globalassets/global/media/qu/documents/paying-for-college/undergraduate/statement-financial-support-admissions-form.pdf>) can be found on the Admissions webpage (<https://www.qu.edu/admissions/undergraduate/apply/international/>).

Professional Master of Business Administration

Program Contact: D'Lisa McKee (dlisa.mckee@qu.edu) 203-582-7913

The School of Business offers an online Professional MBA (PMBA) for working professionals who have at least three years of prior work experience before entering the program. The PMBA can be fully completed online on either a part-time or full-time basis.

The PMBA program provides students with an integrative approach to the key functional areas of business, and helps students build skills that can be directly applied to the workplace. Recognizing that working professionals need to adapt to an ever-changing business environment, the PMBA prepares students to tackle issues through business analysis, managing people and organizations, innovation, and strategic integration.

The focus of the PMBA curriculum is on integrating knowledge and solving problems with both data and innovative thinking. Students address real-life business problems and opportunities and engage in action-based learning. Numerous electives are also available to students, and they are able to customize their education based on their own professional goals.

Professional MBA Program of Study

Code	Title	Credits
Core Professional MBA Courses (18 credits)		
PMBA 612	Contemporary Issues in Business and Society	3
PMBA 616	Creating Innovation in Organizations	3
PMBA 622	Managing and Leading People in Organizations	3
PMBA 626	Data Driven Decisions with Visual Analytics	3
PMBA 632	Analyzing Financial Information	3

PMBA 636 Strategic Thinking Across Business Functions 3

Professional MBA Electives

Select five graduate electives from business analytics, computer information systems, entrepreneurship, finance, health care management, international business, marketing, organizational leadership, supply chain management, or strategy. 15

Total Credits 33

Student Learning Outcomes

Students who graduate from the MBA program will develop and emphasize skills in the following areas:

a. Business Analysis:

- i. Ability to understand and interpret data driven approaches for business decision-making.
- ii. Ability to understand and use business information and metrics to identify business problems and opportunities.

b. Managing People and Organizations:

- i. Ability to apply best practices and emphasize ethical behavior in leadership and management of people, projects and organizations across diverse settings and cultures
- ii. Ability to understand the nature of persuasion techniques and modern communication tools to achieve business goals.

c. Innovation:

- i. Ability to engage in innovative thinking, and generate and scale creative ideas within an organization or as part of a new venture creation.
- ii. Ability to understand and evaluate emerging technologies and leverage them into powerful business solutions.

d. Strategic Integration:

- i. Ability to assess a business situation, identify key dynamics and constraints, and integrate ideas of corporate social responsibility and sustainability.
- ii. Ability to use strategic concepts and theories to design solutions to problems and capitalize on opportunities to make effective decisions.

Applications for the PMBA program are accepted throughout the year, and students may begin their studies in January, May or August. Applicants are encouraged to submit their application materials as early as possible to ensure consideration for the semester desired. Successful applicants to the PMBA program typically have at least 3 years of prior work experience before entering the program.

Upon acceptance to the PMBA, students without an undergraduate business degree are encouraged to complete the School of Business MBA Foundations course to better prepare them for MBA coursework.

All prospective PMBA students must submit the following:

- a. **Program application** (submitted online). Go to Quinnipiac's Graduate Admissions (<http://www.qu.edu/gradhowtoapply/>) webpage.
- b. **Official transcripts** from all institutions attended, two letters of recommendation, a current resume demonstrating sufficient work experience, and a personal statement.
- c. GMAT or GRE scores are not required for admission. *Applicants who wish to submit scores may do so as supplemental information on the application.*
- d. **International Applicants:**
 - i. *Prospective international students must submit certified translations of official transcripts prepared by World Education Services (WES) wes.org (<http://www.wes.org/>) or another acceptable organization that is approved by Quinnipiac for this purpose. In addition, prospective international students must submit the materials covered in #1, #2 and #3 above.*
 - ii. *All applicants from non-English-speaking countries must indicate that they have the language capability to understand business instruction in English and must provide official Test of English as a Foreign Language (TOEFL) scores. In general, a minimum TOEFL Internet-based score of 90 is required for admission (or 233 for computer-based, or 575 for paper-based).*
 - iii. In lieu of TOEFL, applicants may submit International English Language Testing System (IELTS) scores. A minimum score of 6.5 on this exam, a B or above on the Certificate of Advanced English or a C or above on the Certificate of Proficiency in English is required. TOEFL and IELTS scores are valid for two years.
 - iv. International applicants are required to submit proof of adequate funds to complete their study at Quinnipiac University before an eligibility form (I-20) can be issued. Complete the Statement of Financial Support and submit along with supporting documentation. In addition, a copy of a passport or national ID is required. The Statement of Financial Support can be found online here (<https://www.qu.edu/admissions/graduate/apply/international/>).

School Overview

The School of Communications offers master's degrees in cinematic production management, interactive media and communications, journalism, public relations and sports journalism. The school also has well-established relationships with more than 1,000 private and nonprofit communications organizations, offering advanced students internship opportunities in professional settings. Students are encouraged to explore and advance their educational and professional interests while gaining the critical practical experience and training to develop a portfolio of work before they graduate.

To assist in the twin goals of offering our faculty a high-level view of innovations in the media world as well as offering our students high-quality internships and post-graduation employment, the school has created the Alumni Advisory Board (<https://www.qu.edu/schools/communications/alumni-advisory-board.html>), consisting of media leaders and executives.

On campus, students work in one of the finest university media education facilities in the Northeast – the Ed McMahon Communications Center. The center features a spacious, professional-level, all-digital 4K television studio; a media innovation classroom; 4K collaborative editing suites; and a 7.1 surround sound screening theater. The center is equipped with state-of-the-art technology, including numerous iMac stations running the latest applications for post-production and animation. It includes an automated podcast studio, and is staffed with highly skilled media professionals to instruct and assist our students. Additional classrooms and labs, along with the Quinnipiac University Podcast Studio, the Open-Air Production Studio, "The Agency" (a student-run integrated communications agency offering design, advertising and public relations services to clients), a design studio, a Remote Equipment Depot, the "Hub" student computer center, and independent study facilities are located in the Center for Communications and Engineering, which also houses the school's faculty and administrative offices.

Graduate Studies

Policy on Length of Time to Complete a Graduate Degree

A student enrolled in a School of Communications graduate program has six years to complete the degree requirements, starting with the beginning of the semester the student was matriculated.

A student administratively withdrawn by the university (p. 137) must reapply for readmission. Readmission to the student's program is not guaranteed. All students who are readmitted after an administrative withdrawal must comply with degree program requirements in effect at the time of readmission.

A student who has an approved academic leave of absence (p. 107) does not have to reapply if they return at the conclusion of the leave of absence, but the period while on academic leave will count towards the six-year period to complete the degree. Time spent away from the

university during an approved medical or military leave of absence (p. 107) will not count towards the six-year period.

Master's Degrees

- Master of Arts in Cinematic Production Management (p. 720)
- Master of Science in Interactive Media and Communications (p. 722)
- Master of Science in Journalism (p. 723)
- Master of Science in Sports Journalism (p. 726)
- Master of Science in Public Relations (p. 724)
 - Social Media Track
- Master of Science in Public Relations - Online/Professional Track (p. 725)

Dual-Degrees

- Communications Accelerated Dual-Degree Bachelor's/Master's (3+1) (p. 407)
- Dual-Degree Bachelor's/Master's in Cinematic Production Management (4+1) (p. 727)
- Dual-Degree Bachelor's/Master's in Interactive Media and Communications (4+1) (p. 729)
- Dual-Degree Bachelor's/Master's in Journalism (4+1) (p. 730)
- Dual-Degree Bachelor's/Master's in Public Relations (4+1) (p. 731)
- Dual-Degree Bachelor's/Master's in Sports Journalism (4+1) (p. 733)

Cinematic Production Management (FTM)

FTM 501. Production Reconstruction.

3 Credits.

: This class will teach and expand students' understanding of all aspects of prepping a feature film through lectures, experiential role-playing and weekly assignments. Students will analyze a produced film and will "recreate" all the steps to get into production including scheduling and budgeting through the use of industry standard software.

Offered: Every year, Fall

FTM 502. Advanced Production Management Workflow.

3 Credits.

Students gain an overview of studio, independent, broadcast and streaming platforms content and management workflow needs. Contemporary practices in pre-production and production are stressed. Students pre-produce an episodic television show from the perspective of various production personnel and hold production meetings to gain an understanding of the pre-production and production process workflow for theatrical, TV episodic, TV situation comedy and documentary production including interactions with talent agencies and union signatory contracts.

FTM 503. Creative Development.

3 Credits.

Students learn to shape stories for the screen and gain a comprehensive understanding of concept development, dramatic structuring, character development and dialogue. They learn the mechanics involved in the development of new projects, including script coverage, sourcing material, script notes, creative meetings, packaging a project, and how to effectively navigate the development journey.

Offered: Every year, Spring

FTM 504. Production Scheduling and Introduction to Production Budgeting.

3 Credits.

Students are given a finished but unproduced short screenplay or television episode and learn to break down and fully schedule that project. Theory of scheduling and output of details from the program are stressed.

FTM 505. Entertainment Law and Deal Making Practice. 3 Credits.

Students gain an overview of contemporary entertainment law in regards to production including options, contracts, negotiations, copyright, IP, and licensing. Topics covers include how a producer protects themselves legally, find representation, and how to close deals.

FTM 506. Screenwriting II and Production Workshop. 3 Credits.

Students author a theatrical feature screenplay or a pilot for an episodic television series or the full production plan for a documentary television multi-part series. In addition, they will also author, pre-produce, shoot, edit and distribute a 5-minute micro film.

Offered: Every year, Spring

FTM 507. Production Budgeting. 3 Credits.

Using industry-standard software packages, students plan and budget an unproduced short film. Special attention is paid to: location(s) of shoot; union globals and fringes and non-union and union taxes; contemporary practice in completion bonds. Guild and DGA surety bonds and Insurance requirements are also stressed.

FTM 508. Domestic and Worldwide Distribution and Sales for Film and TV. 3 Credits.

Students gain an overview of contemporary domestic and international production management practices: office administration, paperwork and work flow; carnets, business visas, insurance and surety bond liability and management; industry national and international HR practices and payroll; international, state and local film, television and documentary production rules and regulations; tax incentives and responsibilities; national and international trade unions rules, rates, penalties, common regulations, compliances, visa requirements and international signatory practices.

FTM 509. Principles of Film, Television and Streaming Media Analytics, Sales and Distribution. 3 Credits.

Students gain an overview of film, television and streaming media analytics and their applications. The international sales marketplace is examined with special emphasis agreements for international advertising, distribution and marketing. Students will create a business plan for a production company.

FTM 510. Principles of Post-Production Management. 3 Credits.

Students gain an overview of post-production management including: staff roles and post production responsibilities, data storage and management, directors and authors rights and responsibilities to final cut, licensing, graphics and titling.

FTM 601. Production Management Thesis Production. 6 Credits.

Students polish their screenplay to final draft, schedule and budget their script, finalize their look book and produce a three to four scene sizzle reel of their script. Thesis Paper on topic of film required.

Interactive Media and Communications Courses (ICM)

ICM 500. Special Topics in Interactive Media. 3 Credits.

The subject matter for this course varies depending on industry and professional trends.

Offered: As needed

ICM 501. Foundations in Graduate Studies. 3 Credits.

A sequence of readings, practices and exercises introduces the students to the "deep work" required of master's-level study. Through structured discussions, presentations, projects and readings, students build the knowledge base and critical skills required to formulate methodological research and practice across media. Each student sets up a portfolio site for the collection of research and practice artifacts created throughout the master's coursework.

Offered: Every year, Fall and Spring

ICM 502. Visual Design. 3 Credits.

This course covers the principles and practices associated with graphic design as a way to make complex information easier to understand and use. With a primary focus on typography as the fundamental means of conveying content, the course emphasizes the creative process of organizing and visualizing type and images through hierarchy, spatial organization of grid structures, positive and negative space, depth perception, transparency, and color theory. Readings locate design and typography within the larger history of visual art and graphic design and in relation to technology developments. Students who majored in GID at Quinnipiac as undergraduates, or those with professional graphic design experience should choose another course.

Offered: Every year, Spring and Summer

ICM 504. Motion Across Media. 3 Credits.

This course covers the concepts of motion design across multiple platforms. Students are challenged to analyze and create effective animations using the entire design process, including research, preproduction, storyboarding, and production techniques. Analysis of navigation, storytelling, visual design, and message delivery inform the application of methods. The focus is on communicating ideas to the audience effectively through motion in its many forms, whether on desktops, smart phones, tablets, or kiosks.

Offered: Every year, Fall and Summer

ICM 505. Web Technologies. 3 Credits.

This course introduces the foundational techniques of creating web-based content. Through a series of exercises, participants learn how interactive networks are organized, where to find the information necessary to create standards-based systems, and gain elementary experience designing and building sites.

Offered: Every year, Spring and Summer

ICM 506. Writing for Interactive Media. 3 Credits.

Good writing skills are a necessity for professional communication in spite of the changing media landscape. In this course students create, develop and hone a distinct written voice within varied media environments. Much of professional media work involves creating a consistent voice or presence for a person, organization or company. Participants focus on how to accomplish (or enhance) this process using effective compositional techniques.

Offered: Every year, All

ICM 508. Audio and Video Design. 3 Credits.

This course covers the aesthetic and technical principles and practices used to create video and audio content for cross platform and device delivery. Effective storytelling and message delivery concepts are emphasized while exploring various production techniques including storyboarding, script, an introduction to audio production, cinematography, lighting, interviewing, editing, and effective media distribution.

Offered: Every year, All

- ICM 512. Principles of User Experience Design.** **3 Credits.**
This course explores the ever-changing processes and methods of user experience design. The Human-Centered Design and Design Thinking process are studied through readings and hands-on projects that cover empathy, the psychology of the user, problem definition, and ideation methods.
Offered: Every year, Fall and Spring
- ICM 513. Content Strategy.** **3 Credits.**
Content is critical in today's media landscape, but without a strategic plan, it can remain invisible to the audience you wish to reach. In this course, students learn the best ways to design and implement a content strategy to engage a targeted audience. They are immersed in the planning for the creation and distribution of engaging stories and information. Students become content strategy practitioners who know how to use words, pictures, video, and social and mobile media to build an audience and communicate value.
Offered: Every year, Fall and Spring
- ICM 514. Understanding Your Audience.** **3 Credits.**
Usability is the study of discrepancies between expected and actual user behavior. The course introduces students to empirical user research methods such as contextual inquiry, ethnographic studies, card sorting, and cognitive walkthroughs, that provide the foundation for user-centered interaction and communications design. In addition, students conduct effective usability tests, interviews, and surveys.
Offered: Every year, Fall and Spring
- ICM 517. Ideation, Prototyping and Testing.** **3 Credits.**
Ideation, prototyping and testing teaches students how to use low and high-fidelity sketching, information architecture, flowcharts, wireframes, user interface design, and functional prototypes for a variety of design problems. Through a series of creative projects, students learn various methods for each of these steps in the development of design products.
Offered: Every year, Spring and Summer
- ICM 518. Visual Storytelling.** **3 Credits.**
The course provides an introduction to the concept of visual storytelling and immerses students in the theory and practice of creating and delivering visual narratives in digital environments. The course includes both the history of visual storytelling as well as contemporary approaches used in a variety of information related disciplines. Students analyze examples of work and apply that knowledge to create their own visual narratives
Offered: Every year, Fall and Spring
- ICM 522. Social Media Practice and Techniques.** **3 Credits.**
The widespread use of social media in society has created a communications environment built on platforms that encourage contribution and collaboration through user-created media and interaction. This course explores the underlying concepts, development and management of social media platforms as well as the creation of effective approaches to facilitate a viable social media presence.
Offered: Every year, Fall and Spring
- ICM 524. Social Media Analytics.** **3 Credits.**
This course gives students a working knowledge of the social media analytics process and analytics tools, along with their application to communications objectives within real-world situations.
Offered: Every year, Fall and Summer
- ICM 528. Content Creation.** **3 Credits.**
In this course, we explore the creation of engaging content. Students are guided through the process of planning and creating a suite of related projects in the medium(s) of their choice (writing, video, audio, image making.) The focus is on the conceptual processes and practices used in developing a unique and persuasive body of work to be distributed across mediums. Areas of interest are researched and then developed into a series of related pieces.
Offered: Every year, Spring and Summer
- ICM 529. Data Visualization.** **3 Credits.**
This is a course in finding and telling visual stories from data. Students explore fundamental principles of data analysis and visual techniques, examine chart types and when to use them, and learn how to acquire, process and filter data. Through an understanding of data visualization best practices and audience analysis, students are able to identify and articulate what makes a successful information design. Industry-standard software tools are used to create static and interactive graphics—including charts, maps and diagrams—that make information more accessible to the intended audiences.
Offered: As needed, Fall and Summer Online
- ICM 530. Independent Study.** **3 Credits.**
This is an elective course offered to accommodate students who seek advanced study in an area of the discipline. The topic and scope of the course are developed by the student in consultation with a faculty adviser, subject to approval by the program director and department chair.
Offered: As needed, All
- ICM 531. Graduate Internship.** **3 Credits.**
This elective course provides interactive media students with the opportunity to work in a professional setting to acquire additional skills and insights into their chosen area of study. Students completing this course are required to work in a supervised environment. All internships must be approved by the graduate program director.
Offered: As needed, All
- ICM 540. Interactive Communications Abroad.** **3 Credits.**
This multi-section course introduces students to the worldwide development of communications, including communication practices, infrastructure, environments, and specializations. Students conduct primary and secondary research on communications in a particular country or cross-cultural context. The topics can range from international visual arts through storytelling, global branding, and design, depending on the specialty of the instructor. This course includes a short-term study-abroad component directly related to the topic of the course, where students will be able to expand their skills and knowledge in a new environment. An interactive communications graduate-level final project is required.
Offered: As needed
- ICM 601. Master's Capstone.** **3 Credits.**
Students create a professional quality web portfolio selected from the best work from their courses and experiences in the master's program. Each student is facilitated through the process of identifying and packaging works, creating a consistent message and image using the products of their research and practice.
Offered: Every year, Spring and Summer

Journalism & Sports Journalism Courses (JRN)

JRN 500. Special Topics in Journalism. 3 Credits.

This course consists of seminar-based classes that consider emerging areas of scholarly research or industry developments in journalism, with a particular focus on how a specific research activity or industry development illustrates issues regarding economic, gender and social groups.

Offered: As needed

JRN 501. Reporting and Fact-Checking. 3 Credits.

Students are introduced to the basic practices and tools of journalism, which include interviewing, identifying and accessing public documents, writing leads and constructing organized, balanced stories.

Offered: Every year, Fall

JRN 504. Digital Essentials. 3 Credits.

The capacity to gather information and report the news remains at the core of the journalism profession. This course focuses on the fundamentals of news writing while also engaging students in emerging social media and other tools to present comprehensive news stories to all audiences.

Offered: Every year, Spring

JRN 521. Audio Storytelling. 3 Credits.

Writing for the ear requires skills in preparing scripts, natural sound and audio recording and editing. This course prepares students to compose stories for radio news and podcasts, with a focus on developing the style of conversational broadcast writing common to National Public Radio.

Offered: Every year, Fall

JRN 524. TV Reporting. 3 Credits.

Visual news stories as broadcast by networks, affiliates and cable news channels and in evolving digital formats require skills in both storytelling and technology for shooting and editing video. This course covers the essentials of shooting video, editing and field reporting and producing.

Offered: Every year, Fall

JRN 528. Data Journalism. 3 Credits.

Information graphics are now an integral component of news, conveying big data into readily understood formats such as diagrams and charts. This course teaches students how to visually organize information and apply it to news stories for broadcast or online presentation.

Offered: As needed

JRN 530. Independent Study (ICM530). 3 Credits.

This is a special course offered to accommodate students who seek advanced practical training or advanced research in an area not directly included in the curriculum. The topic and scope of the course is developed by the student in consultation with a faculty adviser, subject to approval by the dean.

Offered: Every year, All

JRN 531. Graduate Internship. 3 Credits.

Experience in association with working professionals is essential to securing career opportunities. Students completing an elective internship to secure such experience are required to work in a supervised environment, approved by the graduate program director.

Offered: Every year, All

JRN 541. Sporting Culture Through Nonfiction. 3 Credits.

It has often been said that sport is a microcosm of society, but many rhetoric scholars have begun to suggest that sport plays a role in constituting society and is "defined by a range of political practices, including allocations of resources, representations of identity, projections of nationalism and globalization, activism and change." This directed readings course examines American culture, as well as comparative values, through nonfictional accounts of sport.

Offered: Every year, Summer Online

JRN 543. Literary Journalism in the '60s. 3 Credits.

The 1960s stand out as an era of change and turbulence in 20th-century America. Throughout the 1960s and 1970s, these nonfiction writers and journalists wrote in a personal style that became known as "Literary Journalism," or "the New Journalism." This directed reading course requires students to analyze the historical and contemporary views of major literary journalists.

Offered: Every year, Summer Online

JRN 545. TV Production. 3 Credits.

This course introduces students to the technical production skills that go into a daily news telecast. Newsroom organization, story development (from idea to the air) and the principles and practices of professional producers are studied.

Offered: Every year, Fall

JRN 546. Digital News Production. 3 Credits.

This course explores topics related to social media, such as the viral video clip from a Tweet or the verified source through social media. Students learn the skills, tools and best practices of digital and video content production, as well as social coordination in the news arena. They also explore logistical and ethical concerns in the social medium.

Offered: Every year, Spring

JRN 552. Media Law and Ethics. 3 Credits.

A thorough knowledge of laws and ethical behavior is essential to the professional practice of journalism. As such, this course covers the legal and ethical dimensions of media communications across platforms, with an emphasis on First Amendment, privacy and copyright issues.

Offered: Every year, Spring

JRN 562. Sports Law and Ethics. 3 Credits.

Federal antitrust law and regulations show that college and professional sports are treated as special components of American culture. This course examines the legal structure that grants special privileges to sports and to the ethical challenges sports journalists confront in going beyond the games to find the story.

Offered: Every year, Spring

JRN 563. Sports Analytics. 3 Credits.

Deciphering the volumes of data produced by high school, college and professional sports teams is an essential part of sports reporting. This course introduces students to the ever-growing volumes of statistics across major sports and shows how to transform such data into useful information.

Offered: Every year, Spring

JRN 564. Presenting and Producing Radio Sports. 3 Credits.

Radio remains an essential and effective medium for listening to games and for engaging the audience with live talk shows that discuss teams, players, sports and the action of the competition. This course presents students with the principles and practices of radio sports.

Offered: Every year, Fall

JRN 565. Presenting and Producing Television Sports: Remote. 3 Credits.

Students in this course write, produce and distribute a 30-minute sports program for broadcast featuring stories that illustrate intriguing and inspiring stories of a Division I college athletic department. Every student engages in shooting, editing, writing, interviewing, presenting and distributing the final product. Additionally, students originate and perform local and national style sports highlight segments along with live in-depth interviews.

Offered: Every year, Spring

JRN 566. Presenting and Producing Television Sports: Studio. 3 Credits.

Pre-game, post-game and intermission reports are among the most important aspects of televised sports, as each reveals and promotes the storylines through which games are covered. This course introduces students to the concepts and content behind the production of studio shows.

Offered: Every year, Fall

JRN 572. Researching and Writing the News Documentary. 3 Credits.

The complexities of producing the news documentary range from finding the right story to pursue to uncovering the proper visuals to help tell it. This course provides students with the skills to research, write, and produce visual nonfiction, long-form projects rooted in history or current events.

Offered: As needed

JRN 573. Sports Literature. 3 Credits.

Sports serve as a critical metaphor for American life in nonfiction works such as "Friday Night Lights," in novels such as "End Zone," in plays such as "Death of a Salesman" and in films such as "Raging Bull." This course examines why sports are prominent in cultural works that attempt to reveal the meaning of America.

Offered: As needed

JRN 574. Crafting the Sports Feature. 3 Credits.

Feature writers capture athletes when they are most noble, frail or otherwise vulnerable or heroic. They also capture the moment when a game means more than that. This course teaches students to apply creative vitality to their ideas and writing on sports outside of game stories.

Offered: Every year, Fall

JRN 588. Business Reporting: Following the Money. 3 Credits.

Students learn methods and tactics of writing about businesses for mass communication. The course covers why and how companies operate and how to write stories about corporate news from public records and other sources.

Offered: Every other year, Spring

JRN 589. Critical Issues in Sports. 3 Credits.

From health concerns to labor conflicts, the workaday world often intrudes on the bubble that protects the mythology of sport. Through reason, analysis and writing, students interact with vital issues that emerge from the seemingly routine day-to-day coverage of games.

Offered: Every year, Spring

JRN 595. Sports Clinical. 3 Credits.

Students completing the sports journalism program must participate in the Sports Clinical. This course focuses on advanced broadcast, multimedia, documentary and long-form reporting and to deepen the experience and training in a given area of specialization in terms of platform and subject matter.

Offered: Every year, Spring

JRN 600. Capstone Proposal. 3 Credits.

Students completing the journalism program conduct research and do preliminary reporting to write a capstone project proposal based on their area of inquiry. The faculty adviser and graduate program director must approve the topic. This course is graded on a pass/fail basis.

Offered: Every year, All

JRN 601. Capstone Project. 3 Credits.

Students completing the journalism program must complete a capstone project. Under the guidance of their faculty adviser, students create an original, in-depth, professional-quality journalism project. This course is graded on a pass/fail basis.

Offered: Every year, All

Public Relations Courses (STC)

STC 501. Principles and Theories of Public Relations. 3 Credits.

Students are introduced to the growing body of knowledge in the discipline and gain expertise that contributes to professional competence in public relations. Students examine the function of public relations in organizations and society, review contemporary and historical roles of public relations professionals and explore the practice of public relations in various public and private settings. Students also learn the latest theoretical approaches to public relations and apply these approaches to contemporary public relations management practices.

Offered: Every year, Fall

STC 502. Public Relations Research Methods. 3 Credits.

This course examines the applied use of research in public relations program development. Students learn methodologies appropriate for conducting secondary analyses and primary research. Both quantitative and qualitative methods are addressed, such as secondary analysis, content analysis, survey research, focus groups, participant observation, case study and experimentation.

Offered: Every year, Fall

STC 504. Law and Ethics in Public Relations. 3 Credits.

Students become familiar with legal and industry standards for legally and ethically practicing public relations. The course aims to instill an appreciation for freedom of expression and the First Amendment; to impart a functional understanding of legal rules and principles relevant to public relations practice in the U.S.; to enhance students' ability to identify the moral and ethical dimensions of issues that arise in public relations practice; and to develop analytical and critical thinking skills that encourage students to make and justify ethical decisions.

Offered: Every year, Fall

STC 505. Public Relations Writing. 3 Credits.

This course helps students develop professional-quality public relations writing skills. Students prepare a variety of public relations materials, such as news releases and other media materials; copy for internal magazines, reports, newsletters, brochures, institutional/advocacy advertising; video/audio scripts; web site copy; and speeches. Upon completion of this course, students have a professional portfolio of public relations writing samples.

Offered: Every year, Spring

STC 506. Public Relations Management. 3 Credits.

This course focuses on the business management aspects of public relations, such as policy formation, project direction, resource management, client relations, budgeting and counseling. Special emphasis is placed on public relations' contribution to an institution's mission and effectiveness.

Offered: Every year, Spring

STC 507. Strategic Planning in Public Relations. 3 Credits.

This course familiarizes students with the public relations strategic planning process. Students examine contemporary case studies that demonstrate the public relations planning process and apply what they have learned to the development and presentation of a public relations campaign plan for a client.

Prerequisites: Take STC 501.

Offered: As needed

STC 510. Crisis Management. 3 Credits.

This course examines institutional crisis communication from a management perspective with an emphasis on crisis prevention, planning and response. Students are required to read and discuss selected articles from the crisis management literature, research and develop case studies of contemporary crises, and participate in simulations designed to develop professional expertise and practical skills in crisis management, including the management of information, management of public communication, strategic planning, problem solving, message production and issues management.

Offered: As needed

STC 511. Global Strategy. 3 Credits.

This course examines concepts, issues and practices in international public relations across the borders and focuses on the challenges, opportunities, and the worldwide development of public relations. The course aims to inform you about the variables that affect public relations practice in the international realm and assist you in understanding of other countries' domestic public relations given the various cultures, geopolitical and socio-economic systems. Participants look closely at how governments, corporations, multinationals and nongovernmental organizations employ international public relations strategies around the world. Students also examine similarities between international public relations and public diplomacy and the effects of international public relations on images of nations.

Offered: As needed

STC 512. Investor Relations. 3 Credits.

Students study the function of investor relations in corporations and examine the role of investor relations specialists charged with communicating financial information about companies to the financial media, SEC, financial analysts, shareholders and others in the financial community. Students learn how to integrate finance, communication, marketing and securities law compliance in efforts to maximize shareholder wealth.

Offered: As needed

STC 513. Health and Strategic Communications. 3 Credits.

In this course, students are exposed to the field of strategic health communications, with particular attention to analysis and practice of health communication relationships and messages. Issues to be discussed include, but are not limited to: history and current challenges of the health communication field; health campaign creation, implementation and evaluation; cultural issues related to health behavior change campaigns; translational research; traditional and social media training for health care professionals; and perspectives of media influence on health attitudes, norms and behaviors.

Offered: As needed

STC 514. Social and Mobile Media. 3 Credits.

This course addresses the impact of social and mobile media on public relations. It focuses on conducting public relations campaigns online and responding to public relations issues via such tools as social networking and bookmarking sites, blogs, podcasts/vodcasts, discussion boards and conferences, wikis, mobile and location-based applications.

Offered: As needed

STC 515. Special Topics in Public Relations. 3 Credits.

This course examines a specific topic or issue in public relations theory and practice. Topics might focus on specific practice areas such as sports public relations, employee relations, political public relations, public diplomacy, nonprofit public relations, or on industry issues and trends, such as the uses and impact of new technologies, professional ethics and corporate social responsibility or the integration of communication practices.

Offered: As needed

STC 516. Branding Strategies. 3 Credits.

This course explores strategies used by planners, communicators, managers and consultants to create, develop, nurture, maintain and reenergize brands. This course helps students understand the main idea of branding: developing, defending and growing brands for companies, agencies or nonprofits. It explores the essential elements of branding, including target audiences and segmentation, brand benefits, brand personality, differentiation and key brand equities. It also surveys conceptual approaches for the diagnosis of brand growth opportunities and for planning integrated brand communications.

Offered: As needed

STC 517. Strategic Communication for Health Professionals. 3 Credits.

In this course, graduate students are exposed to the field of strategic health communication. In particular, students are asked to consider the role of health communication messages in internal, organizational settings, as well as outward-facing messages. Unique to this graduate-level strategic communication course, the students are expected to have minimal to no experience in the field of strategic communication. Instead, the overview of the field provided through this course seeks to encourage understanding of how the theories, practices and evaluations of health communication should be incorporated within their areas of health expertise.

Offered: As needed

STC 518. Measurement and Evaluation. 3 Credits.

This course focuses on the development of knowledge and skills to ensure that students are able to use data to make business decisions. Students consider key concerns of measurement to determine if measurement tools are effective and appropriate for a project's goals, as well as how to make sense of data to measure success of a project and how to display findings for various audiences. The course is focused on the principles and process of utilizing research to best serve your client's or organization's goals. Main topics for the course include measurement development and refinement, online data analytics, audience segmentation, data interpretation and data visualization.

Offered: Every year, Fall and Spring

STC 519. Strategic Public Relations and Reputation Management. 3 Credits.

The focus of this course is reputation management and its importance to business success. Students analyze the function of corporate communications and examine a range of topics including organizational identity, image and reputation; issues and crisis management; institutional ethics and corporate social responsibility; strategic public relations planning; integrated marketing communication; public relations theories and best practices; and global public engagement. The class also explores specialty public relations practice areas such as media relations, investor relations, employee relations and government relations. Class discussions, case studies, in-class exercises, team projects and essay exams help students improve their critical thinking and reasoning skills, develop research and strategic planning skills and increase diversity awareness and sensitivities that are important to professional and business success.

Offered: As needed

STC 520. Sports Public Relations. 3 Credits.

This class is a comprehensive review of sports event planning and management. Students examine such topics as strategic planning, budgeting and time management.

Offered: As needed

STC 521. Corporate Public Relations. 3 Credits.

This course provides students with the knowledge and skills required for positions in the corporate sector. Topics include media relations, employee communication, community relations, investor relations, and crisis communication. Students hone their written communication and critical thinking skills in this class.

Offered: As needed

STC 522. Nonprofit Public Relations. 3 Credits.

This course is appropriate for students who want to learn how to develop and implement comprehensive public relations campaigns for nonprofit organizations. It highlights the structures and nuances of the various types of NPOs and examines case studies and present-day scenarios. The course requires the development of a public relations campaign, and culminates in crafting a case study assessing the effectiveness of an assigned NPO's public relations campaign.

Offered: As needed

STC 523. Media Systems and Planning. 3 Credits.

In this course, students learn about traditional as well as new and emerging technologies, with particular emphasis on their strengths and weaknesses as message carriers. Discussions include an overview of commonly used metrics and sources of data in the advertising and communications industries. Students then use this knowledge to plan and budget for integrated communication plans that capitalize on paid, earned and owned outlets.

Offered: As needed

STC 525. Financial Communications and Business. 3 Credits.

This course provides students with a holistic view of public relations and corporate communications management, as well as strategic planning for organizational change and growth. It covers various styles and functions of management and leadership theory and introduces key principles of marketing, branding, risk management, ethics, and finance. Throughout the course, students develop the ability to work between crucial agency organizational departments.

Offered: As needed

STC 531. Graduate Internship in Public Relations. 3 Credits.

Students complete a minimum of 90 hours of professional fieldwork supervised by the program director and a qualified field supervisor. Approval of the program director is required.

Offered: Every year, All

STC 540. Strategic Communications Abroad. 3 Credits.

This multi-section course introduces students to the worldwide development of communications, including communication practices, infrastructure, environments, and specializations. Students conduct primary and secondary research on communications in a particular country or cross-cultural context. The topics can range from international strategic communication through storytelling, global branding, and design, depending on the specialty of the instructor. This course includes a short-term study-abroad component directly related to the topic of the course, where students will be able to expand their skills and knowledge in a new environment. A strategic communication graduate-level final project is required.

Offered: As needed

STC 547. Entertainment Public Relations. 3 Credits.

This course reviews and applies the established RPIE (Research, Planning, Implementation, and Evaluation) process to the field of entertainment public relations in the context of such industries as music, movies, TV, theater, gaming, and sports. The distinctions between and among advertising, publicity, public relations, marketing, and promotion, in addition to how they can work together to support a specific goal, are highlighted.

Offered: As needed

STC 549. Media Relations. 3 Credits.

Course Description: This course gives students an understanding of the priorities and expectations of various types of contemporary media and how to successfully engage them through research-based strategies and tactics designed to reach key audiences. At the conclusion of the course, students should be well-practiced in various forms of working with journalists and the public via multiple media.

Offered: As needed

STC 605. Public Relations Graduate Capstone. 3 Credits.

Students develop a professional research project under the direction of program faculty. The project work should exhibit KSAs and/or serve as PRSA Readiness Review preparation. The capstone project is a personally designed, independently conducted activity, enabling students to further their knowledge/skill in one or more of the course topics that students have found especially interesting or beneficial. Permission of instructor required.

Offered: Every year, Spring and Summer

STC 606. Independent Study. 3 Credits.

Students develop and implement individual research projects that advance understanding of particular theoretical or practical aspects of public relations. Approval of the program director is required.

Offered: As needed

Master of Arts in Cinematic Production Management

Program Contact: Blythe Frank (Blythe.Frank@qu.edu) 203-582-7624

Film, television and streaming media companies all over the world need professionals who understand and can manage the production cycle from script development through visual post-production editing and international distribution and marketing. The unique, 36-credit Cinematic

Production Management (CPM) program teaches technical skills and practical industry knowledge that gives students a strong overview of industry production history and contemporary professional practice.

Collaborative and heavily project-based, the CPM curriculum was designed with input from Los Angeles-based veterans of the entertainment industry, and culminates in a capstone course wherein students develop, schedule, budget and create pitch materials for a professional-level film, show or documentary developed over the course of their studies. Additionally, the majority of CPM courses are delivered online, making it practical, cost-effective and convenient.

Graduates are fast-tracked to succeed in a range of entry-level management positions, including production coordinator, writer's assistant, showrunner's assistant and assistant location manager, to name a few. The CPM program pairs well with a variety of backgrounds, from business to theater. It also complements several undergraduate majors in the School of Communications, including film, television and media arts, media studies and public relations, making it an ideal choice for students in Quinnipiac's accelerated dual-degree and dual-degree programs.

MA in Cinematic Production Management Program of Study

To earn the master's degree, students must complete 36 credits with a minimum 3.0 GPA and no grades less than a C. Any graduate course with a grade of less than C has to be retaken.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Creative Thinking and Visual Literacy:** Develop the ability to conceptualize and produce visual stories demonstrating aesthetic competence, fluency with visual grammar, and an appreciation of the historical context from which new forms and stories are created.
- Written and Oral Communication:** Acquire the facility to create effective content for visual media, as well as an ability to demonstrate both written and oral proficiency within a variety of professional formats and delivery platforms.
- Critical Thinking and Reasoning:** Develop the skills needed to critically analyze the work of others as a means to problem-solve and better inform students' own original creative output. Achieve a proficiency in creating professional quality work within the parameters and practical limitations of a broad spectrum of production environments. Recognize works of art as visual arguments, and be able to use analytical skills to assess their effectiveness.
- Information Fluency:** Learn to plan and produce effectively across a wide array of technical contexts, demonstrating facility and expertise with pre-production, production and post-production phases of film, television and streaming media creation.
- Social Intelligence:** Demonstrate an ability to work effectively within groups and production teams, to understand and manage collaborations and to act ethically, constructively and responsibly in the process of achieving individual and common goals.
- Diversity Awareness and Sensitivity:** Acquire an understanding of and respect for the similarities and differences among human communities, including a recognition and appreciation for the unique talents and contributions of all individuals.
- Responsible Citizenship:** Learn to recognize and analyze media-related issues and influence decisions and actions at the local, national and global community, and to become engaged as responsible citizens.

Admission

The School of Communications invites applications from prospective students who wish to pursue the professional practice of cinematic production management. Recent graduates of a bachelor's degree program outside of the communications field are welcome to apply, as are prospective students who are presently working and wish to either shift careers or enhance their professional standing.

Admission is based on the following:

- undergraduate degree from a regionally accredited institution with a GPA of 3.0 or greater
- a resume showing experience as either a student or professional
- two academic or professional recommendations
- an original piece of writing (1,000-word maximum) on why the applicant wishes to enter this program

Master of Science in Interactive Media and Communications

Program Contact: John Powers
(john.powers@quinnipiac.edu) 203-582-7939

The Master of Science in Interactive Media and Communications program merges creative, visual, and critical thinking to mold expert digital storytellers and designers who are able to reach audiences on any platform in the world.

The program not only prepares students to design, produce and manage a range of content but also to become strong creative thinkers and visual leaders. Students learn principles of human-centered design to better understand and connect with a wide range of audiences and apply design thinking strategies to solve creative, technical, and business-related obstacles.

The program provides a deep exploration into all aspects of media, including web design and production; social media analytics; digital audio, video, and graphics; and UX and UI.

Regardless of the specialty, the completion of a practice-based portfolio capstone is central to the program experience. This capstone is not a singular project, but a robust, web-based portfolio generated over time that will showcase accumulated work and skill set depth. The student's portfolio is influenced by every course and program experience and can be shown to employers in a range of fields from marketing, public relations, and advertising to journalism, publishing, entertainment, and health care.

The program encourages applications from prospective students who want to apply skills acquired during their undergraduate education or professional careers. Students come from a diverse range of experiences such as journalism, information technology, graphic design, web design/management, game design, broadcasting, filmmaking, media studies, and public relations; as well as liberal arts and sciences.

MS in Interactive Media and Communications Program of Study

To earn the master's degree, students must complete 30 credits with a minimum 3.0 GPA and no grades less than a C. Any course with a grade less than C must be retaken.

The program has 9 credits of required courses and 21 credits of electives. A flexible elective structure allows students to customize the degree to coincide with career goals. Students have the opportunity to enroll in an optional 3-credit internship as part of the program.

A required master's capstone experience is included in the 30 credits. For the capstone, the students create a professional-quality web portfolio selected from the best work from their courses and experiences while in the program.

The program may be completed in 21 months, provided students complete two courses per semester including summer. The program is designed to be completed online. Full-time students can finish in 16 months. Fall and spring starts are available.

Current Quinnipiac undergraduate students may apply for the five-year dual-degree bachelor's/master's program.

Student Learning Outcomes

The Interactive Media and Communications program (ICM) encompasses a wide spectrum of interactive media. The program acknowledges that interactive media is a cultural catalyst that has revolutionized the way people communicate. It prepares students to think and act critically, creatively and ethically. The program provides a rigorous curriculum of research, writing, conceptualization, problem-solving, innovation and creative practice. Students graduating from this program are well prepared to meet the challenges within the field of interactive media and to develop ethical cross-media communication strategies. The areas of study are always evolving and include visual design, web technology, motion graphics, UX, social media, content creation, audio/video design, and writing. The program concludes with a capstone experience that is a culmination of work created throughout the program. The following competencies are critical for interactive media practitioners, and they construct a framework that contributes to the overall effective practice of the discipline.

Upon completion of the program, students should be able to demonstrate the following competencies:

- Conduct In-Depth Research:** Conduct in-depth research using professional methods and terminology that demonstrates fluency in the use of the formal vocabulary and concepts. This includes recognizing the influence of major cultural, historical, technological

and aesthetic trends on contemporary interactive products and services.

- b. **Practice Creative and Critical Thinking:** Practice processes and methods that cover empathy, the psychology of the user, problem definition, and ideation methods. They build a knowledge base and skill set required to practice across media and to conduct the “deep work” required of master’s level study.
- c. **Solve Creative Problems:** Solve creative problems using the synthesis of technical, aesthetic and conceptual knowledge. This is demonstrated by the ability to create and develop visual and written responses to communication problems using research, preproduction, storyboarding and media production techniques.
- d. **Implement Processes:** Use industry standard processes and methods to produce communications that incorporate a high level of strategy, planning, production and distribution. This is exhibited by the ability to solve communication challenges by using analysis, prototyping, user testing and outcome evaluation, among other methods.
- e. **Develop Strategies:** Know how to use words, visuals, video, social media and mobile media to build an audience and deliver content. They create an effective media presence and apply their knowledge to strategic challenges within real-world situations.
- f. **Actualize Concepts:** Actualize technical, aesthetic and conceptual decisions based on using appropriate tools and technology. This includes knowing how to learn techniques with the recognition that technological change is constant.
- g. **Produce Professional Media:** Produce a body of media suitable for seeking professional opportunities in their chosen branch of communication. This is facilitated through the process of identifying and packaging works, creating a consistent message, and using the results of their research and practice. The focus is on a unique and persuasive body of work to be distributed across mediums.

Admission

The School of Communications invites applications from prospective students who wish to pursue the professional practice of interactive media and communications. Recent graduates of a bachelor’s program outside of the communications field are welcome to apply, as are prospective students who are presently working and wish to either shift careers or enhance their professional standing.

Admission is based on the following:

- undergraduate degree from a regionally accredited institution with a GPA of 3.0 or greater
- a cover letter expressing interest in pursuing graduate education
- a resume showing experience either as a student or professional
- two academic or professional recommendations
- an online portfolio of written, visual, media or interactive work
- an original piece of writing (1,000-word minimum). This can be an academic, professional or creative work you have already produced or a new original piece of writing on a topic of your choice. We are looking for depth of thought, depth of research, the ability to formulate ideas, and writing skills.

Master of Science in Journalism

Program Contact: Molly Yanity (Molly.Yanity@quinnipiac.edu)
203-582-5031

The MS in Journalism program emphasizes the command of journalism fundamentals and new technologies—all in the service of effective and innovative storytelling. A core of foundational courses stresses the development and practice of reporting and digital skills, and provides a solid underpinning in media ethics.

The program is designed so that students, in consultation with their adviser, develop areas of inquiry to engage in a deep exploration of current issues. By taking elective courses in communications and other areas of the university, students are equipped with the knowledge and insight that lead to high-quality journalistic work.

Our graduates are nimble and adaptable journalists who excel at gathering facts, conducting interviews, writing and producing informative and engaging stories, and expertly using a variety of digital tools.

Courses and labs are offered in our professional all-digital broadcast production environment. Our facilities include two high-definition studios, two podcast studios, two LiveU units for performing live shots in the field, two 4K video editing suites, HD editing suites for single or group projects and other areas designed to support both studio and remote productions.

Video cameras, audio recorders, lights and other gear required to capture interviews and events in the field are available to students through our well-stocked and expertly maintained equipment inventory.

Prior to entering the program, students who do not have a journalism background must complete the boot camp course.

MS in Journalism Curriculum

The MS in Journalism is offered in collaboration with the College of Arts and Sciences. In the School of Communications, students receive journalism-specific theoretical grounding and skills-based instruction. Once matriculated, students must choose an area of inquiry. In collaboration with their academic advisor, students design a course of study that uses elective courses—selected from a pre-approved menu—to deepen their understanding of particular areas of interest.

To earn the master’s degree, students must complete 30 credits with a minimum 3.0 GPA and no grade less than a C. Any course with a grade of less than C must be retaken. Full-time students can complete the program in two semesters and one summer term.

Sample Full-Time Schedule

JRN 552	Media Law and Ethics	3
The capstone is a two-semester course that culminates with a professional quality master's project.		
JRN 600	Capstone Proposal	3
JRN 601	Capstone Project	3
Electives		
Students will select four courses in a concentration they will determine with their adviser.		12
Total Credits		30

Students may take other electives with permission of their adviser. Electives are offered on an as-needed basis and may not be available during a given student's program of study.

Courses and curriculum requirements are subject to change.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Understand** professional journalistic practices, ethical standards and technologies and be able to apply reason to develop ideas within these structures.
- Analyze** information based on journalistic practices of research, interviews and observation.
- Evaluate** information in determining the story's narrative structure and reach via social media and other applications.
- Report and compose** a story, either visual, multimedia or text, that informs, enlightens, entertains and is useful to the reader or audience within professional journalistic reporting and writing practices and ethical standards.

Admission

To qualify for admission, candidates must have earned a bachelor's degree from a regionally accredited institution of higher learning and have a minimum GPA of 3.0. Journalism experience is not required.

Admission to the MS in Journalism program is competitive and based on undergraduate performance as measured by GPA, experience in any career field for students returning to school and the required documents listed below.

Applications are considered on a rolling basis, and students apply to enter during the fall. Applications are evaluated once all materials are received by Quinnipiac.

A complete application consists of the following:

- application form
- application fee
- two professional recommendations
- personal statement explaining decision to pursue graduate study
- current resume
- portfolio of writing or work samples (i.e., college papers, videos, audio clips or published work of any kind)
- official transcripts of all undergraduate and graduate work

Master of Science in Public Relations

Program Contact: Laura Willis (laura.willis@quinnipiac.edu)
203-582-7805

The Master of Science in Public Relations program offers students the opportunity to pursue an advanced degree in a highly competitive and growing field. The program is designed for those interested in advancing their careers in public relations and/or transitioning into public relations from complementary fields such as (but not limited to) finance, law, health care, technology, human resources, journalism, and marketing. The program helps recent graduates with bachelor's degrees in public relations and other disciplines gain a competitive edge as they enter the workforce. Quinnipiac University undergraduate students may apply for the combined, five-year bachelor's/master's dual-degree program (p. 731).

Graduates of the program are qualified to work as public relations specialists in both the public sector and private sector with expertise and skills applicable to corporate, nonprofit and government institutions. Students study the conceptual and theoretical foundations of public relations, learn how to conduct and analyze public relations research and evaluation, and hone their skills in contemporary public relations practices and techniques. The program stresses professional competence, global consciousness, and professional and social responsibility.

Also available is a Social Media Track for students who want to specialize their degree. Students who choose the Social Media Track take courses that cover social media practices, social and web analytics, and strategic planning. In this track, students learn the fundamental practices that have led to the rise of social media and how to deploy them across multiple platforms and disciplines. Students who complete this track have a firm understanding of the role social media plays in today's communications landscape as well as the tools to deploy new solutions as this media continues to grow and evolve.

MS in Public Relations Program of Study

To earn the master's degree, students must complete 30 credits with a minimum 3.0 GPA and no grades less than a C. Any graduate course with a grade of less than C has to be retaken.

Students have two options to complete the program: fast track or part-time. Students on a fast track complete the 30-credit program in one calendar year. They take 15 credits in the fall and spring terms, respectively. Students may also elect to complete the program on a part-time basis taking between 3 and 12 credits in a semester.

¹ Students pursuing the Social Media track must complete three social media electives such as ICM 513; ICM 522; ICM 524; ICM 529; etc. (Graduate director approval required.)

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Information Fluency and Analysis:** Plan, conduct, analyze and report primary research findings based on a survey, focus group or other appropriate research means, as well as interpret secondary industry research for a client.
- Critical and Creative Thinking:** Propose measurable, attainable objectives for a client based on primary and secondary research findings and produce a campaign strategy designed to help the client achieve its goals.

- Effective Communication:** Demonstrate both written and oral proficiency within a variety of traditional and new industry communication vehicles and message delivery formats.
- Social Intelligence:** Demonstrate an ability to work effectively and responsibly within groups and manage relationships with clients, team members and publics to achieve individual and common goals.
- Quantitative and Qualitative Literacy:** Propose an evaluation of a campaign to measure the campaign's effectiveness.

Admission

Applications are accepted on a rolling basis. Applications are reviewed once all of the required materials have been received. Admission is competitive and based on the following application requirements:

Internal Applicants

Applicants who completed their bachelor's degree program at Quinnipiac University no more than one calendar year prior to the upcoming fall semester are required to submit:

- A completed application
- An official transcript
- A letter of personal intent (approximately 500 words)
- A resume

External Applicants

Applicants who completed their bachelor's degree at an external institution or who completed their bachelor's degree at Quinnipiac University more than one calendar year prior to the upcoming fall semester are required to submit:

- A completed application
- An official transcript
- Two letters of recommendation submitted on your behalf
- A letter of personal intent (approximately 500 words)
- A resume and a portfolio of relevant writing or work samples (i.e., college papers, videos, audio clips or published work of any kind)

Master of Science in Public Relations – Online/Professional Track

Program Contact: Laura Willis (laura.willis@quinnipiac.edu)
203-582-7805

The Master of Science in Public Relations—online/professional track is geared toward early- to mid-career professionals who are interested in advancing their careers in public relations and/or transitioning into public relations from complementary fields such as finance, health, technology, human resources, journalism, marketing and law.

The overriding goal of the program is to develop professionally competent, socially responsible and globally conscious graduates who are familiar with the conceptual and professional foundations of public relations, capable of assessing and applying public relations research, and skilled in contemporary public relations practices and techniques. In keeping with Quinnipiac University's mission, graduates of this online program will be prepared to make contributions as responsible professionals and community leaders in a culturally diverse society.

The online program prepares students for the Accreditation in Public Relations (APR) exam from the Public Relations Society of America. The

core courses are aligned with the 10 Knowledge, Skills and Abilities (KSA) areas tested in the APR exam.

Students admitted to the Master of Science in Public Relations – online/professional track enroll on a part-time basis. Students must complete a 3-credit Capstone project.

MS in Public Relations – Online/ Professional Track Program of Study

To earn the master's degree, students must complete 30 credits with a minimum 3.0 GPA and no grades less than a C. Any graduate course with a grade of less than C must be retaken.

- two professional or academic recommendations
- online samples of written, visual, media or interactive work
- a 500-word personal statement (see application)

Master of Science in Sports Journalism

Program Contact: Molly Yanity (Molly.Yanity@quinnipiac.edu)
203-582-5031

The Master of Science in Sports Journalism prepares students from all academic and professional backgrounds for careers in broadcast/multimedia sports and in traditional and emerging media companies that focus on reporting and analysis of sports.

The program features training in the principles, tools, craft, history and ethics of contemporary sports journalism in the context of innovative approaches to reporting and presenting information via social media and other forms. Our goal is simple: to transform a lifelong passion for sports into a successful career.

The curriculum prepares students for careers in local, cable and network television news and for websites with a strong visual component.

Students are challenged to develop story ideas through reasoning and observation, to analyze data and public documents, to wisely conduct interviews, to learn the technical skills to acquire and edit video and audio, and, above all, to write with discipline, poise and creative vitality. In short, our program prepares students for the daily test-of-strength that is sports reporting in the 21st century regardless of the distribution platform.

Students who successfully complete the program will be properly trained for a number of career opportunities including on-camera reporters and anchors for broadcast, cable and network television news, play-by-play announcers, analysts, and talk show hosts for terrestrial, online and satellite radio, producers for broadcast, cable and network television

news, producers for news websites, and writers for broadcast news and websites.

Courses and labs are offered in our professional all-digital broadcast production environment. Our facilities include two high-definition studios, two podcast studios, two LiveU units for performing live shots in the field, two 4K video editing suites, HD editing suites for single or group projects and other areas designed to support both studio and remote productions.

Video cameras, audio recorders, lights and other gear required to capture interviews and events in the field are available to students through our well-stocked and expertly maintained equipment inventory. In addition, students will have access to the People's United Center for the coverage of games and interviews.

MS in Sports Journalism

To earn the master's degree, students must complete 36 credits with a minimum 3.0 GPA and no grade less than a C. Any course with a grade of less than C must be retaken. Full-time students can complete the program in one calendar year. Part-time students can do it in two.

- portfolio of writing or work samples (i.e., college papers, videos, audio clips or published work of any kind)
- official transcripts of all undergraduate and graduate work

Dual-Degree Bachelor's/Master's in Cinematic Production Management (4+1)

Program Contact: Blythe Frank (Blythe.Frank@qu.edu) 203-582-7624

Quinnipiac offers a five-year Dual-Degree Bachelor's/Master's in Cinematic Production Management (4+1) program for students who are currently enrolled in any Quinnipiac undergraduate program and would like to pursue graduate studies at the university. If accepted, students can take up to 6 credits of graduate courses during their senior year beginning in the fall semester. Those credits can be applied to both undergraduate and graduate programs. Applications for the dual-degree program are available through the School of Communications.

Film, television and streaming media companies all over the world need professionals who understand and can manage the production cycle from script development through visual post-production editing and international distribution and marketing. The unique, 36-credit Cinematic Production Management (CPM) program teaches technical skills and practical industry knowledge that gives students a strong overview of industry production history and contemporary professional practice.

Collaborative and heavily project-based, the CPM curriculum was designed with input from Los Angeles-based veterans of the entertainment industry, and culminates in a capstone course wherein

students develop, schedule, budget and create pitch materials for a professional-level film, show or documentary developed over the course of their studies. Additionally, the majority of CPM courses are delivered online, making it practical, cost-effective and convenient.

Graduates are fast-tracked to succeed in a range of entry-level management positions, including production coordinator, writer's assistant, showrunner's assistant and assistant location manager, to name a few. The CPM program pairs well with a variety of backgrounds, from business to theater. It also complements several undergraduate majors in the School of Communications, including film, television and media arts, media studies and public relations, making it an ideal choice for students in Quinnipiac's accelerated dual-degree and dual-degree programs.

Dual-Degree Bachelor's/Master's (4+1) Program of Study

Current Quinnipiac undergraduate students may apply for the five-year dual-degree program in their junior year.

Students in the Dual-Degree Bachelor's/Master's in Cinematic Production Management (4+1) program complete 6 credits of graduate courses during their senior year, which also fulfills undergraduate electives. Students must work with their undergraduate adviser to ensure that the courses fit into their degree programs.

To earn the master's degree, students must complete 36 credits with a minimum 3.0 GPA and no grades less than a C. Any graduate course with a grade of less than C has to be retaken.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Creative Thinking and Visual Literacy:** Develop the ability to conceptualize and produce visual stories demonstrating aesthetic competence, fluency with visual grammar, and an appreciation of the historical context from which new forms and stories are created.
- Written and Oral Communication:** Acquire the facility to create effective content for visual media, as well as an ability to demonstrate both written and oral proficiency within a variety of professional formats and delivery platforms.
- Critical Thinking and Reasoning:** Develop the skills needed to critically analyze the work of others as a means to problem-solve and better inform students' own original creative output. Achieve a proficiency in creating professional quality work within the parameters and practical limitations of a broad spectrum of production environments. Recognize works of art as visual arguments, and be able to use analytical skills to assess their effectiveness.
- Information Fluency:** Learn to plan and produce effectively across a wide array of technical contexts, demonstrating facility and expertise with pre-production, production and post-production phases of film, television and streaming media creation.
- Social Intelligence:** Demonstrate an ability to work effectively within groups and production teams, to understand and manage collaborations and to act ethically, constructively and responsibly in the process of achieving individual and common goals.
- Diversity Awareness and Sensitivity:** Acquire an understanding of and respect for the similarities and differences among human communities, including a recognition and appreciation for the unique talents and contributions of all individuals.
- Responsible Citizenship:** Learn to recognize and analyze media-related issues and influence decisions and actions at the local, national and global community, and to become engaged as responsible citizens.

Admission

Quinnipiac University students from any undergraduate major may apply to the dual-degree bachelor's/master's program during their junior year. The deadline is the third Friday in February. Students must have a cumulative GPA of 3.0 or greater by the end of their junior year.

An application should be submitted to the graduate programs director in the School of Communications and consists of the following:

- application form
- resume
- two letters of reference (one from a professor in the student's major)
- a personal statement

Dual-Degree Bachelor's/ Master's in Interactive Media and Communications (4+1)

Program Contact: John Powers
(john.powers@quinnipiac.edu) 203-582-7939

Quinnipiac offers a five-year Dual-Degree Bachelor's/Master's in Interactive Media and Communications (4+1) program for students who are currently enrolled in any Quinnipiac undergraduate program and wish to pursue graduate studies at the university. If accepted, students can take up to 6 credits of graduate courses during their senior year beginning in the fall semester. Those credits can be applied to both undergraduate and graduate programs. Applications for the dual-degree program are available through the School of Communications.

The Master of Science in Interactive Media and Communications program merges creative, visual and critical thinking to mold expert digital storytellers and designers who are able to reach audiences on any platform in the world.

The program not only prepares students to design, produce and manage a range of content but also to become strong creative thinkers and visual leaders. Students learn principles of human-centered design to better understand and connect with a wide range of audiences and apply design thinking strategies to solve creative, technical and business-related obstacles.

The program provides a deep exploration into all aspects of media, including web design and production; social media analytics; digital audio, video and graphics; and UX and UI.

Regardless of the specialty, the completion of a practice-based portfolio capstone is central to the program experience. This capstone is not a singular project, but a robust, web-based portfolio generated over time that will showcase accumulated work and skill set depth. The student's portfolio is influenced by every course and program experience and can be shown to employers in a range of fields from marketing, public relations and advertising to journalism, publishing, entertainment and healthcare.

Dual-Degree Bachelor's/Master's (4+1) Program of Study

Current Quinnipiac undergraduate students may apply for the five-year dual-degree program in their junior year.

Students in the Dual-Degree Bachelor's/Master's in Interactive Media and Communications (4+1) program complete up to 6 credits of graduate courses during their senior year, which also fulfills undergraduate electives. Students must work with their undergraduate advisers to ensure that the courses fit into their degree programs.

To earn the master's degree, students must complete 30 credits with a minimum 3.0 GPA and no grades less than a C. Any course with a grade less than C must be retaken.

The program has 9 credits of required courses and 21 credits of electives. A flexible elective structure allows students to customize the degree to coincide with career goals. Students have the opportunity to enroll in an optional 3-credit internship as part of the program.

Students create a master's blog, to keep a unique record of their research, perspectives and work through the program.

A required master's capstone experience is included in the 30 credits. For the capstone, the students create a professional-quality web portfolio, selecting the best work from their courses and experiences.

Student Learning Outcomes

The Interactive Media and Communications program (ICM) encompasses a wide spectrum of interactive media. The program acknowledges that interactive media is a cultural catalyst that has revolutionized the way people communicate. It prepares students to think and act critically, creatively and ethically. The program provides a rigorous curriculum of research, writing, conceptualization, problem solving, innovation and creative practice. Students graduating from this program are well

prepared to meet the challenges within the field of interactive media and to develop ethical cross-media communication strategies. The areas of study are always evolving and include visual design, web technology, motion graphics, UX, social media, content creation, audio/video design and writing. The program concludes with a capstone experience that is a culmination of work created throughout the program. The following competencies are critical for interactive media practitioners, and they construct a framework that contributes to the overall effective practice of the discipline.

Upon completion of the program, students should be able to demonstrate the following competencies:

- a. **Conduct In-Depth Research:** Conduct in-depth research using professional methods and terminology that demonstrates fluency in the use of formal vocabulary and concepts. This includes recognizing the influence of major cultural, historical, technological and aesthetic trends on contemporary interactive products and services.
- b. **Practice Creative and Critical Thinking:** Practice processes and methods that cover empathy, the psychology of the user, problem definition and ideation methods. They build a knowledge base and skill set required to practice across media and to conduct the “deep work” required of master’s level study.
- c. **Solve Creative Problems:** Solve creative problems using the synthesis of technical, aesthetic and conceptual knowledge. This is demonstrated by the ability to create and develop visual and written responses to communication problems using research, pre-production, storyboarding and media production techniques.
- d. **Implement Processes:** Use industry-standard processes and methods to produce communications that incorporate a high level of strategy, planning, production and distribution. This is exhibited by the ability to solve communication challenges by using analysis, prototyping, user testing and outcome evaluation, among other methods.
- e. **Develop Strategies:** Know how to use words, visuals, video, social media and mobile media to build an audience and deliver content. They create an effective media presence and apply their knowledge to strategic challenges within real-world situations.
- f. **Actualize Concepts:** Actualize technical, aesthetic and conceptual decisions based on using appropriate tools and technology. This includes knowing how to learn techniques with the recognition that technological change is constant.
- g. **Produce Professional Media:** Produce a body of media suitable for seeking professional opportunities in their chosen branch of communication. This is facilitated through the process of identifying and packaging works, creating a consistent message, and using the results of their research and practice. The focus is on a unique and persuasive body of work to be distributed across mediums.

Admission

Quinnipiac University students from any undergraduate major may apply to the dual-degree bachelor's/master's in Interactive Media and Communications (ICM) program during their junior year. The deadline is the third Friday in February. Students must have a cumulative GPA of 3.0 or greater by the end of their junior year.

An application should be submitted to the ICM program director in the School of Communications and must consist of the following:

- application form
- resume

- a cover letter that explains your decision to pursue graduate education
- an original piece of writing (1,000-word minimum). This can be an academic, professional or creative work you have already produced or a new original piece of writing on a topic of your choice. We are looking for depth of thought, depth of research, ability to formulate ideas, and writing skills.
- two letters of reference (one from a professor in the student's major)

Dual-Degree Bachelor's/Master's in Journalism (4+1)

Program Contact: Molly Yanity (Molly.Yanity@quinnipiac.edu)
203-582-5031

Quinnipiac offers a five-year Dual-Degree Bachelor's/Master's in Journalism (4+1) for students who are currently enrolled in any Quinnipiac undergraduate program and wish to pursue graduate studies at the university. If accepted, students can take up to 6 credits of graduate courses during their senior year beginning in the fall semester with the permission of the graduate program director. Those credits can be applied to both undergraduate and graduate programs. Applications for the dual-degree program are available through the School of Communications.

The MS in Journalism program emphasizes the command of journalism fundamentals and new technologies—all in the service of effective and innovative storytelling. A core of foundational courses stresses the development and practice of reporting and digital skills, and provides a solid underpinning in media ethics.

The program is designed so that students, in consultation with their adviser, develop areas of inquiry to engage in a deep exploration of current issues. By taking elective courses in communications and other areas of the university, students are equipped with the knowledge and insight that lead to high-quality journalistic work.

Our graduates are nimble and adaptable journalists who excel at gathering facts, conducting interviews, writing and producing informative and engaging stories, and expertly using a variety of digital tools.

Courses and labs are offered in our professional all-digital broadcast production environment. Our facilities include two high-definition studios, two podcast studios, two LiveU units for performing live shots in the field, two 4K video editing suites, HD editing suites for single or group projects and other areas designed to support both studio and remote productions.

Video cameras, audio recorders, lights and other gear required to capture interviews and events in the field are available to students through our well-stocked and expertly maintained equipment inventory.

Prior to entering the program, students who do not have a journalism background must complete the boot camp course.

Dual-Degree Bachelor's/Master's in Journalism (4+1) Program of Study

Current Quinnipiac undergraduate students may apply for the five-year dual-degree bachelor's/master's program in their junior year.

Students in the dual-degree program complete up to 6 credits of graduate courses during their senior year, which also fulfills undergraduate

electives. Students must work with their undergraduate adviser to ensure that the courses fit into their degree programs.

The MS in Journalism is offered in collaboration with the College of Arts and Sciences. In the School of Communications, students receive journalism-specific theoretical grounding and skills-based instruction. Once matriculated, students must choose an area of inquiry. In collaboration with their academic adviser, students design a course of study that uses elective courses—selected from a pre-approved menu—to deepen their understanding of particular areas of interest.

To earn the master's degree, students must complete 30 credits with a minimum 3.0 GPA and no grade less than a C. Any course with a grade of less than C must be retaken. Full-time students can complete the program in two semesters and one summer term.

Courses and curriculum requirements are subject to change.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Understand** professional journalistic practices, ethical standards and technologies and be able to apply reason to develop ideas within these structures.
- Analyze** information based on journalistic practices of research, interviews and observation.
- Evaluate** information in determining the story's narrative structure and reach via social media and other applications.
- Report and compose** a story, either visual, multimedia or text, that informs, enlightens, entertains and is useful to the reader or audience within professional journalistic reporting and writing practices and ethical standards.

Admission

Quinnipiac University students from any undergraduate major may apply to the dual-degree bachelor's/master's program during their junior year. The deadline is the third Friday in February. Students must have a cumulative GPA of 3.0 or greater by the end of their junior year.

An application should be submitted to the graduate programs director in the School of Communications and consists of the following:

Dual-Degree Bachelor's/Master's in Public Relations (4+1)

Program Contact: Laura Willis (laura.willis@quinnipiac.edu)
203-582-7805

Quinnipiac offers a five-year Dual-Degree Bachelor's/Master's in Public Relations (4+1) program for students who are currently enrolled in any Quinnipiac undergraduate program and wish to pursue graduate studies at the university. If accepted, students typically take 6 credits of graduate courses during their senior year beginning in the fall semester. Those credits can be applied to both undergraduate and graduate programs. Applications for the dual-degree program are available through the School of Communications.

The Master of Science in Public Relations program offers students the opportunity to pursue an advanced degree in a highly competitive and growing field. The program is designed for those interested in advancing their careers in public relations and/or transitioning into public relations from complementary fields such as (but not limited to) finance, law, health care, technology, human resources, journalism and marketing. The program helps recent graduates with bachelor's degrees in public relations and other disciplines gain a competitive edge as they enter the workforce.

Graduates of the program are qualified to work as public relations specialists in both the public sector and private sector with expertise and skills applicable to corporate, nonprofit and government institutions. Students study the conceptual and theoretical foundations of

public relations, learn how to conduct and analyze public relations research and evaluation, and hone their skills in contemporary public relations practices and techniques. The program stresses professional competence, global consciousness, and professional and social responsibility.

Also available is a Social Media Track for students who want to delve deeper into social media. Students who choose the Social Media Track take courses that cover social media practices, social and web analytics, and strategic planning. In this track, students learn the fundamental practices that have led to the rise of social media and how to deploy them across multiple platforms and disciplines. Students who complete this track have a firm understanding of the role social media plays in today's communications landscape as well as the tools to deploy new solutions as this media continues to grow and evolve.

Dual-Degree Bachelor's/Master's (4+1) Program of Study

Current Quinnipiac undergraduate students may apply for the five-year dual-degree program in their junior year.

Students in the Dual-Degree Bachelor's/Master's in Public Relations (4+1) program complete 6 credits of graduate courses during their senior year, which also fulfills undergraduate electives. Students must work with their undergraduate adviser to ensure that the courses fit into their degree programs.

To earn the master's degree, students must complete 30 credits with a minimum 3.0 GPA and no grades less than a C. Any graduate course with a grade of less than C has to be retaken.

Student Learning Outcomes

Upon completion of the program, students should be able to demonstrate the following competencies:

- Information Fluency and Analysis:** Plan, conduct, analyze and report primary research findings based on a survey, focus group or other

appropriate research means, as well as interpret secondary industry research for a client.

- b. **Critical and Creative Thinking:** Propose measurable, attainable objectives for a client based on primary and secondary research findings and produce a campaign strategy designed to help the client achieve its goals.
- c. **Effective Communication:** Demonstrate both written and oral proficiency within a variety of traditional and new industry communication vehicles and message delivery formats.
- d. **Social Intelligence:** Demonstrate an ability to work effectively and responsibly within groups and manage relationships with clients, team members and publics to achieve individual and common goals.
- e. **Quantitative and Qualitative Literacy:** Propose an evaluation of a campaign to measure the campaign's effectiveness.

Admission

Quinnipiac University students from any undergraduate major may apply to the dual-degree bachelor's/master's program during their junior year. The deadline is the third Friday in February. Students must have a cumulative GPA of 3.0 or greater by the end of their junior year.

An application should be submitted to the graduate programs director in the School of Communications and consists of the following:

- application form
- resume
- cover letter

Dual-Degree Bachelor's/Master's in Sports Journalism (4+1)

Program Contact: Molly Yanity (Molly.Yanity@quinnipiac.edu)
203-582-5031

Quinnipiac offers a five-year Dual-Degree Bachelor's/Master's in Sports Journalism (4+1) for students who are currently enrolled in any Quinnipiac undergraduate program and wish to pursue graduate studies at the university. If accepted, students can take up to 6 credits of graduate courses during their senior year beginning in the fall semester with the permission of the graduate sports journalism director. Those credits can be applied to both undergraduate and graduate programs. Applications for the dual-degree program are available through the School of Communications.

The Master of Science in Sports Journalism prepares students from all academic and professional backgrounds for careers in broadcast/multimedia sports and in traditional and emerging media companies that focus on reporting and analysis of sports.

The program features training in the principles, tools, craft, history and ethics of contemporary sports journalism in the context of innovative approaches to reporting and presenting information via social media and other forms. Our goal is simple: to transform a lifelong passion for sports into a successful career.

Students are challenged to develop story ideas through reasoning and observation, to wisely conduct interviews, to write thoughtful stories, to learn the technical skills to acquire and edit video and audio, as well as the behind-the-scenes work that goes into producing shows. In short, our

program prepares students for the daily test-of-strength that is sports reporting in the 21st century regardless of the distribution platform.

Students who successfully complete the program are properly trained for a number of career opportunities including on-camera reporters and anchors for broadcast, cable and network television news, play-by-play announcers, analysts, and talk show hosts for terrestrial, online and satellite radio, producers for broadcast, cable and network television news, producers for news websites, and writers for broadcast news and websites.

Courses and labs are offered in our professional all-digital broadcast production environment. Our facilities include two high-definition studios, two podcast studios, two LiveU units for performing live shots in the field, two 4K video editing suites, HD editing suites for single or group projects and other areas designed to support both studio and remote productions.

Video cameras, audio recorders, lights and other gear required to capture interviews and events in the field are available to students through our well-stocked and expertly maintained equipment inventory. In addition, students have access to the People's United Center for the coverage of games and interviews.

Dual-Degree Bachelor's/Master's (4+1) Program of Study

Current Quinnipiac undergraduate students may apply for the five-year dual-degree bachelor's/master's program in their junior year.

Students in the Dual-Degree Bachelor's/Master's in Sports Journalism (4+1) program complete up to 6 credits of graduate courses during their senior year, which also fulfills undergraduate electives. Students must work with their undergraduate adviser to ensure that the courses fit into their degree programs.

To earn the master's degree, students must complete 36 credits with a minimum 3.0 GPA and no grade less than a C. Any course with a grade of less than C must be retaken.

Dual-Degree Program

- Dual-Degree BA/MS or BS/MS in Cybersecurity (p. 440) (4+1)

Cybersecurity (CYB)

CYB 501. Foundations of Cyber Security.

1 Credit.

This course introduces students to fundamental security principles and security defense. Students learn the concepts of information security risks, vulnerabilities, assets and threats.

Offered: Every year, Fall and Spring

- CYB 502. Introduction to Cyber Threats.** 1 Credit.
This course introduces students to the analysis of cyber threats. Students learn to identify bad actors in cyberspace and assess their resources, capabilities, techniques and motivations. Students learn to describe different types of cyber attacks and their characteristics.
Corequisites: Take CYB 501.
Offered: Every year, Fall and Spring
- CYB 503. Introduction to Cyber Defense.** 1 Credit.
Students learn about cyber defense tools and techniques. This course covers how to apply cyber defense tools and techniques to prepare a system to repel attacks.
Corequisites: Take CYB 502.
Offered: Every year, Fall and Spring
- CYB 506. Introduction to Programming for Security Professionals.** 1 Credit.
This course introduces students to basic scripting and programming concepts needed for security defense. Course topics include writing scripts for Windows and Linux; understanding basic programming security concepts; basic programming constructs, such as variables, types, loops, functions and data structures.
Offered: Every year, Summer
- CYB 509. Operating Systems Security.** 1 Credit.
This course introduces students to operating systems and the software to support these systems. Topics include operating system security configuration, control objectives, control maintenance and forensics. The course includes hands-on implementation of security controls, including access management, file and process security configuration, and security monitoring.
Offered: Every year, Spring
- CYB 517. Introduction to Cryptography.** 1 Credit.
This course introduces students to cryptography algorithms, protocols and applications. Topics include history; applications, such as SSL and SSH; and protocols, such as hash functions, symmetric and asymmetric cryptography, and attack-vectors for systems.
Offered: Every year, Spring
- CYB 524. Relational Database Security.** 1 Credit.
This course introduces students to different relational database management systems (DMS) and DMS security concerns and methods. Topics covered include hashing and encryption, database access controls, unauthorized access, data corruption and injection.
Offered: Every year, Spring
- CYB 526. Non-Relational Database Security.** 1 Credit.
This course introduces students to the theory, application and security of nonrelational database systems. It focuses on data management, query and security aspects of nonrelational databases. Topics include a comparison between relational and nonrelational database models, NoSQL storage types for different databases such as MongoDB, Hadoop, Amazon DynamoDB, document-based databases and graph databases.
Corequisites: Take CYB 524;
Offered: Every year, Spring
- CYB 540. Introduction to Secure Networking.** 1 Credit.
This course introduces students to the theoretical and practical aspects of designing, developing and defending computer networks. Topics include network models, media, architectures, devices, protocols, services, applications and use of network security tools.
Offered: Every year, Spring
- CYB 550. Cyber Policy.** 3 Credits.
There are three parts to this course. The first part covers the applicable federal and state laws and policies related to cyber defense, pertaining to the storage and transmission of data. In the second part, students analyze and develop enterprise security policies. Finally, students learn how to implement machine security policies.
Corequisites: Take CYB 503.
Offered: Every year, Fall and Summer
- CYB 610. Hands-on HIPAA Compliance Risk Management.** 1 Credit.
This course introduces students to the HIPAA Privacy, Security and Breach Notification Regulations. The focus is on regulations and compliance. Students will be able to assess the HIPAA privacy, security and breach notification compliance of their own organizations or a model healthcare organization described within the course. Students will get hands-on experience using cloud-based security and privacy assessment tools.
Prerequisites: Rising senior status minimum. Previous exposure to health organizations necessary, either through academic course work or professional work.
Offered: Every year, Summer
- CYB 611. Hands-On HIPAA Security Risk Analysis and Risk Management.** 1 Credit.
This course will teach the theory and practice of Enterprise Cybersecurity Risk Management. The focus will be on risks associated with healthcare organizations. These risks go beyond compliance risks and include risks related to safeguarding the exploding quantities of healthcare data, systems, and devices. Students will learn best practices for risk analysis, what the Office for Civil Rights demands in a risk analysis and will conduct a risk analysis of a model healthcare organization created for the course. Students will get hands-on experience using cloud-based risk analysis tools.
Prerequisites: Rising senior status minimum. Previous exposure to health organizations necessary, either through academic course work or professional work.
Offered: Every year, Summer
- CYB 612. Enterprise Cybersecurity Risk Management in Healthcare.** 1 Credit.
This course will cover what it takes to establish, implement, and mature an Enterprise Cybersecurity Risk Management (ECRM) program. ECRM is a part of enterprise risk management and supports the business needs and mission of the organization. We will cover case studies of healthcare organizations and how they did or did not secure their health information. Lessons learned from actual breach events will be discussed along with lessons learned from organizations with effective ECRM programs. Students will learn how to organize for effective security defense including: governance, people, process, technology, and engagement. Students will get hands-on experience using cloud-based risk management tools.
Prerequisites: Rising senior status minimum. Previous exposure to health organizations necessary, either through academic course work or professional work.
Offered: Every year, Summer
- CYB 660. Programming for Security Analytics.** 1 Credit.
This course introduces students to basic command-line methods used in machine data analytics. Student learn how to collect machine logs, search log data, and identify anomalies in logs.
Corequisites: Take CYB 506.
Offered: Every year, Summer

- CYB 661. Programming for Security Automation.** **1 Credit.**
 This course focuses on programming methods that are applicable to security automation. Students gain experience in automation using Python and Cloud native CLI to facilitate such tasks as automated code scanning; automated application scanning in testing and staging; automated network, server, container configuration checks; and continuous monitoring of development pipeline components and job scheduling.
Corequisites: Take CYB 660.
Offered: Every year, Summer
- CYB 662. Secure Web Applications Design.** **1 Credit.**
 This course covers the design and architecture of secure web applications, such as: traditional three-tier architectures, SOA, microservices, FaaS; application protocols; authentication and session management; client and server-side controls; input-based vulnerabilities and web application attack trends.
Corequisites: Take CYB 661.
Offered: Every year, Summer
- CYB 663. Secure Web Applications Engineering.** **1 Credit.**
 In this course, students learn processes and practices needed to secure applications within the Software Development Life Cycle (SDLC). The course covers traditional SDLC processes and methods to secure modern Cloud native development processes and using concepts of DevSecOps.
Corequisites: Take CYB 662.
Offered: Every year, Summer
- CYB 664. Web Applications Security Testing.** **1 Credit.**
 This course introduces students to web application security testing. Topics include application security metrics, selecting the right testing tool and integrating the results into the development life cycle. Students gain hands-on experience using these tools in practical settings.
Corequisites: Take CYB 663.
Offered: Every year, Summer
- CYB 665. Workforce Access Security.** **1 Credit.**
 This course focuses on authentication and user access technologies and practices within the enterprise. Topics include Active Directory services and architecture, and enterprise network access protocols.
Offered: Every year, Fall
- CYB 667. B2C Access Security.** **1 Credit.**
 This course focuses on authentication and user access technologies and practices within B2C access. Topics include standards-based B2C authentication and access management protocols.
Corequisites: Take CYB 665.
Offered: Every year, Fall
- CYB 669. B2B Access Security.** **1 Credit.**
 This course covers access concepts based on B2B communication APIs, such as standard-based protocols and B2B on-boarding, for mobile, social and IoT applications.
Corequisites: Take CYB 667.
Offered: Every year, Fall
- CYB 670. IoT Security.** **1 Credit.**
 This course covers security as it pertains to embedded devices, embodied by the growth of the Internet of Things (IoT). Students learn about the specific security issues related to embedded devices, including Linux malware, DDoS attacks, botnets, cryptography and personal privacy.
Corequisites: Take CYB 526.
Offered: Every year, Spring
- CYB 675. Ethical Hacking and Penetration Testing.** **2 Credits.**
 This course will introduce students to concepts and practices of ethical hacking and penetration testing. Students will learn how to plan, organize, and perform penetration testing on a simple network.
Offered: Spring
- CYB 680. Introduction to Cloud Security.** **1 Credit.**
 In this course, students learn fundamentals of Cloud computing and Cloud security. This course covers topics such as shared responsibility models for IaaS, PaaS, SaaS and FaaS, and Cloud Security Alliance CCM. Students get hands-on experience creating secure systems within a commercial Cloud vendor environment.
Offered: Every year, Fall
- CYB 681. Securing Workloads in AWS.** **1 Credit.**
 This course covers concepts and practices for securing AWS workloads. Students are introduced to security controls, such as access controls using IAM, logging and auditing, and other AWS security services.
Corequisites: Take CYB 680.
Offered: Every year, Fall
- CYB 682. Securing Workloads in Azure.** **1 Credit.**
 This course covers concepts and practices for securing Azure workloads. Students are introduced to security controls, such as access controls using IAM, logging and auditing, and other AWS security services.
Corequisites: Take CYB 680.
Offered: Every year, Fall
- CYB 683. Resilient System Design and Development.** **1 Credit.**
 This course introduces students to the concepts of secure system design and cyber resilience. The content of this course includes best security processes recommended in NIST 800-160 and techniques and technologies needed for secure system design and development.
Prerequisites: Take CYB 680.
Offered: Every year, Spring
- CYB 684. Resilient System Testing.** **1 Credit.**
 This course introduces students to state-of-the-art concepts and methods to evaluate cyber resiliency. Topics include breach and attack simulation, configuration assessment and compliance. Hands-on experience with systems testing tools is part of this course.
Corequisites: Take CYB 683.
Offered: Every year, Spring
- CYB 685. Operating Resilient Systems.** **1 Credit.**
 This course includes hands-on experience with tools for security activities such as intrusion detection and cloud security monitoring. Other topics this course covers include Site Reliability Engineering (SRE), maintaining situational awareness and dynamic threat.
Corequisites: Take CYB 684.
Offered: Every year, Spring
- CYB 691. MS Cybersecurity Capstone.** **3 Credits.**
 This capstone course is designed to enable students to directly utilize what has been learned in the tools and applications courses in order to analyze and offer solutions for a major cybersecurity challenge. A definition of the problem, analysis of options and a comprehensive presentation of findings and solutions are required components of the course.
Prerequisites: Permission of the Program Director.
Offered: Every year, Spring and Summer

Badge in Enterprise Cybersecurity Risk Management in Healthcare

Program Contact: Frederick Scholl
(frederick.scholl@qu.edu) 203-582-7394

This badge will cover what it takes to establish, implement and mature an Enterprise Cybersecurity Risk Management (ECRM) program. ECRM is a part of enterprise risk management and supports the business needs and mission of the organization. Students will cover case studies of healthcare organizations and how they did or did not secure their health information. Lessons learned from actual breach events will be discussed along with lessons learned from organizations with effective ECRM programs. Students will learn how to organize for effective security defense including: governance, people, process, technology and engagement. Students will get hands-on experience using cloud-based risk management tools.

This badge is offered as an elective (CYB 612) to students within the MS Cybersecurity degree program.

Badge in Ethical Hacking and Penetration Testing

Program Contact: Frederick Scholl
(frederick.scholl@qu.edu) 203-582-7394

Students will be able to plan, organize and perform penetration testing on a simple network. Students will be able to write a formal penetration testing report on those tests. Students will be able to: discuss legal and ethical requirements to conduct penetration tests; be able to scope a pen test project; be able to describe the different types of pen tests including advantages and disadvantages; be able to execute basic commands in Kali Linux; be able to collect open-source intelligence against a target; be able to explain the difference between active and passive scanning; be able to scan a network using Nmap.

This badge is offered as an elective (CYB 675) to students within the MS Cybersecurity degree program.

Badge in Hands-On HIPAA Compliance Risk Management

Program Contact: Frederick Scholl
(frederick.scholl@qu.edu) 203-582-7394

This badge introduces students to the HIPAA Privacy, Security and Breach Notification Regulations. The focus is on regulations and compliance. Learning Objectives: (1) Be able to list the principal requirements of the HIPAA Privacy Rule, Security Rule and Breach Notification Rule; (2) Be able to evaluate security, privacy and breach notification compliance of an organization using an automated tool. Students will be able to assess the HIPAA Privacy, Security and Breach Notification compliance of their own organizations or a model healthcare organization described within the course. Students will get hands-on experience using cloud-based security and privacy assessment tools.

This badge is offered as an elective (CYB 610) to students within the MS Cybersecurity degree program.

Badge in Hands-On HIPAA Security Risk Analysis and Risk Management

Program Contact: Frederick Scholl
(frederick.scholl@qu.edu) 203-582-7394

This badge will teach the theory and practice of Enterprise Cybersecurity Risk Management. The focus will be on risks associated with healthcare organizations. These risks go beyond compliance risks and include risks related to safeguarding the exploding quantities of healthcare data, systems and devices. Students will learn best practices for risk analysis, what the Office for Civil Rights demands in a risk analysis of a model healthcare organization created for the course. Students will get hands-on experience using a cloud-based risk analysis tool.

This badge is offered as an elective (CYB 611) to students within the MS Cybersecurity degree.

Master of Science in Cybersecurity

Program Contact: Frederick Scholl (frederick.scholl@qu.edu)
203-582-7394

The Master of Science in Cybersecurity program is a fully online program within the School of Computing and Engineering. It is a technical degree program designed to prepare a wide range of students to operate as cyber defenders for present-day and future information systems and networks.

The 30-credit Master of Science in Cybersecurity includes up-to-date security knowledge and skills in demand in today's workplace. These include principles of risk management, software security, cloud security and resilient systems. Both security theory and hands-on skills are developed, utilizing current security tools in cloud and on-ground environments. The coursework also embodies the knowledge units set forth by the National Centers of Academic Excellence in Cyber Defense Education (CAE-CDE). Degree coursework culminates with a capstone project that challenges students to examine the architecture of a complex system, identify vulnerabilities and determine the specific security defenses that should be employed.

For individuals working in the field seeking to fine tune their current skill sets without immediately pursuing a complete degree, you may take any of the 1-credit courses, subject to program director approval. Any course taken will count as a stackable credential.

Master of Science in Cybersecurity Program of Study

The following courses are core requirements of the Cybersecurity program:

Code	Title	Credits
Risk Management Coursework (6 credits)		
CYB 501	Foundations of Cyber Security	1
CYB 502	Introduction to Cyber Threats	1
CYB 503	Introduction to Cyber Defense	1
CYB 550	Cyber Policy	3
Security Technology Coursework (3 credits)		
CYB 509	Operating Systems Security	1
CYB 517	Introduction to Cryptography	1

CYB 540	Introduction to Secure Networking	1
Data Security Coursework (3 credits)		
CYB 524	Relational Database Security	1
CYB 526	Non-Relational Database Security	1
CYB 670	IoT Security	1
Software Security Coursework (6 credits)		
CYB 506	Introduction to Programming for Security Professionals	1
CYB 660	Programming for Security Analytics	1
CYB 661	Programming for Security Automation	1
CYB 662	Secure Web Applications Design	1
CYB 663	Secure Web Applications Engineering	1
CYB 664	Web Applications Security Testing	1
Access Security Coursework (3 credits)		
CYB 665	Workforce Access Security	1
CYB 667	B2C Access Security	1
CYB 669	B2B Access Security	1
Cloud Security Coursework (3 credits)		
CYB 680	Introduction to Cloud Security	1
CYB 681	Securing Workloads in AWS	1
CYB 682	Securing Workloads in Azure	1
Resilient Systems Security Coursework (3 credits)		
CYB 683	Resilient System Design and Development	1
CYB 684	Resilient System Testing	1
CYB 685	Operating Resilient Systems	1
Capstone Project (3 credits)		
CYB 691	MS Cybersecurity Capstone	3
Total Credits		30

- c. Have at least 2 years of applicable work experience or military service including experience with network technology, database management and programming; OR
- d. Receive approval from the program director

Student Learning Outcomes

The mission of the MS in Cybersecurity program is to equip students to succeed as effective cyber defenders in a rapidly changing business and technology environment. Specific objectives include:

- a. **Train** students to be able to apply risk management concepts to cybersecurity challenges.
- b. **Enable** students to use and evaluate software to manage cybersecurity risk.
- c. **Create** the next generation of cloud native security professionals.
- d. **Enable** students to design, build and operate resilient systems that meet business objectives.

Admission

To qualify for admission into the MS Cybersecurity program, a student must have completed a bachelor's degree from a regionally accredited institution and meet *one of the following criteria*:

- a. Have an undergraduate degree in computer engineering, software engineering or computer science; OR
- b. Have an undergraduate degree in another area with applicable coursework or certificates in network technology, database management and programming; OR

SCHOOL OF EDUCATION

North Haven Campus

Main Office: 203-582-3354

Administrative Officers

Title	Name	Phone	Email
Dean	Anne Dichele	203-582-3463	anne.dichele@qu.edu
Associate Dean	Beth Larkins-Strathy	203-582-3510	beth.larkins-strathy@qu.edu
Director, Master of Arts in Teaching	Christina Pavlak	203-582-3192	christina.pavlak@qu.edu
Director, Instructional Design and Technology	Ruth Schwartz	203-582-8419	ruth.schwartz@qu.edu
Director, Special Education	Judith Falaro	203-582-8868	judith.falaro@qu.edu
Educational Leadership	Anne Dichele	203-582-3463	anne.dichele@qu.edu

Mission Statement

The mission of the School of Education is to lead our graduates to acquire the knowledge, skills and dispositions to serve successfully in their role as *educator* and *school leader*. The school defines the concept of educator as three-dimensional in nature, and believes that successful educators are *teachers*, *learners* and *leaders*. Graduates of the School of Education are expected to be *teachers* who establish conditions for all students to learn, *learners* who continue to learn as they continue their professional careers, and *leaders* who influence the culture of their schools in ways that support best practices in teaching and learning. Inherent in our mission is a commitment to graduate educators who recognize the potential of schooling to promote social change required for social justice.

Master of Arts in Teaching

- Dual-Degree BA/MAT or BS/MAT in Elementary Education (4+1) (p. 684)
- Dual-Degree BA/MAT or BS/MAT in Secondary Education (4+1) (p. 687)
- Graduate MAT Degree in Elementary Education (p. 456)
- Graduate MAT Degree in Secondary Education (p. 458)
- Graduate MAT Degree in Special Education (p. 460)

Master of Science

- Dual-Degree BA/MS or BS/MS in Instructional Design and Technology (p. 455)
- MS in Instructional Design and Technology (p. 462) (online-only program)
- MS in Special Education (p. 463) (online-only program)

Sixth-Year Diploma

- Sixth-Year Diploma in Educational Leadership (p. 465)

Certificate

- Certificate in Social and Emotional Learning and School Climate (p. 454)
- Special Education Certificate of Completion (p. 467)
- Online Course Design Certificate (p. 465)

Education (ED)

ED 140. Introduction to Public Education and the Teaching Profession.

1 Credit.

This course is open to all first-year students and sophomores who are interested in public education in the United States. The course is required for students who plan to enroll in the five-year dual-degree MAT program, as it provides basic knowledge of public education and the teaching profession including current functions, trends and future expectations. The course also addresses issues related to the teaching profession including licensure, interstate certification, dual and cross-endorsements and teacher and pupil demographics across the U.S. Finally, the course provides opportunities for applicants to practice and refine writing skills essential for success in the dual-degree MAT program. Course is graded pass/fail.

Offered: Every year, Fall and Spring

ED 220. Introduction to Education Studies.

3 Credits.

This course is required for students pursuing an Interdisciplinary Studies major in the College of Arts and Sciences with a concentration in Education Studies. The course explores a multidisciplinary understanding of global and American Education. Students consider the role of education in creating a more equitable society by analyzing the policies and philosophies that have shaped and are shaping schooling in the U.S. and throughout the world. Historical changes in education, critical analyses of policy debates in current education, the effects of legal policies in the classroom, the influences of cultural shifts and contemporary issues are all considered. Students also are introduced to basic concepts and terminology in the educational discipline, and develop a critical lens for evaluating educational resources, texts and data. Only IDS majors may register for this course. Students are not allowed to receive credit for more than one of the following courses: ED 220 and ED 260.

Prerequisites: Take ED 140.

Offered: Every year, Spring

ED 250. Diversity, Dispositions and Multiculturalism.

3 Credits.

This course examines the social, economic and political organization of public education in the United States, with a particular emphasis on the implications for historically marginalized populations. This course is required for all dual-degree MAT students. The course explores diversity and multiculturalism on the individual as well as institutional level, with a focus on concepts such as privilege, discrimination, racism and social transformation.

Prerequisites: Take EN 101 or EN 103H.

Offered: Every year, Fall and Spring

UC: Social Sciences, Intercultural Understand

ED 251. Global Engagement in Education. 3 Credits.

This course provides a faculty-led opportunity for students to spend their spring break studying education in Guatemala. The course meets throughout the spring semester in preparation for the trip and post-spring break to reflect and learn from the experience. Topics include the history and culture of the country to be visited, intercultural complexity and cultural humility, frameworks of global engagement, peer-to-peer learning with local educators and the exploration of global educational models. All students must apply for this course in the fall semester through the Office of Global Engagement prior to registration. Enrollment is limited.

Prerequisites: Take ED 140.

Offered: Every year, Spring

ED 252. Antiracism and Anti Bias Through the Lens of Empathy: Broadening Perspective Through Literature Written for Children and young Adults. 3 Credits.

Participants in this course will study literature written for children and young adults through the lens of empathy using the Teaching Tolerance Social Justice Standards as a framework for considering identity, diversity, justice, and action. The course will begin with introspective work around our own identities because who we are impacts how we engage with texts. We will study books with a critical lens and analyze perspective and bias to contextualize the experiences of others in the hopes that we will become more empathetic.

Prerequisites: Take EN 101;

Offered: As needed, Fall

UC: Humanities

ED 253. Higher Education in Prison: Teaching and Learning in the Carceral Setting. 3 Credits.

This course will provide an introduction to the growing field of higher education in prison. The authors, researchers, and practitioners explored have contributed tremendously to a field that reaches back to 1877 but have only recently received mainstream attention. With the help of reflective writing, literary analysis, and guest lectures from field thought leaders across the country and globe, this course is offered to help further cultivate a solid understanding of the work being done, both domestically and internationally.

Prerequisites: Take EN 101 or ED 140;

Offered: As needed, Fall

UC: Social Sciences

ED 260. Social and Philosophical Foundations of Education. 3 Credits.

This course introduces students to the social and philosophical principles that underlie the education system in the United States. This course is required for all Dual-Degree MAT students. Education is defined in the broad sense to refer to not only what happens in schools and universities, but also in the family, when people interact with media, with their social groups and so forth. The course examines a wide range of philosophical questions related to education and schooling in the U.S., including: What is the purpose of schooling? What does it mean to be educated? And what role should educational institutions play in our lives? Students are not allowed to receive credit for more than one of the following courses: ED 220 and ED 260.

Prerequisites: Take EN 101 or EN 103H.

Offered: Every year, Fall and Spring

UC: Humanities

ED 341. Learning and Teaching the Developing Child. 3 Credits.

This course provides an introduction to the basic concepts of cognitive, social and emotional development of school-age children (ages 4-18) and how the pedagogy of learning and teaching is designed to enhance and support this development. Major topics of inquiry include brain-based learning research, motivation, engagement of learners, lesson planning and curriculum development. Enrollment in the dual-degree MAT program is required.

Prerequisites: Take ED 140, ED 250 and ED 260 or ED 220.

Corequisites: Take ED 341L.

Offered: Every year, Fall

ED 341L. Learning and Teaching: Pedagogy Field Lab I. 1 Credit.

The Pedagogy Field Lab is taken in conjunction with ED 341. Teacher candidates complete a minimum of 20 hours of classroom observation and fieldwork that coincides with topics studied in ED 341. Weekly field hours, case study analyses, observation analyses and reflective journals provide opportunities to enhance the translation of theory to practice.

Corequisites: Take ED 341.

Offered: Every year, Fall

ED 342. Advanced Learning and Teaching. 3 Credits.

This course focuses on advanced concepts and skills related to teaching and learning. Topics include elementary-level learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.

Prerequisites: Take ED 341, ED 341L.

Corequisites: Take ED 342L.

Offered: Every year, Spring

ED 342L. Advanced Learning and Teaching: Assessment Field Lab II. 1 Credit.

The Assessment Field Lab is taken in conjunction with ED 342. It provides practical applications of advanced concepts. Teacher candidates complete a minimum of 20 hours of classroom fieldwork that coincides with topics studied in ED 342. Weekly field hours, data team discussions, analyses of research-based practices, observation and case studies highlighting differentiated instructional practices, as well as reviews of standards-based curriculum are considered.

Prerequisites: Take ED 341, ED 341L.

Corequisites: Take ED 342.

Offered: Every year, Spring

ED 343. Advanced Learning and Teaching in Secondary Classrooms. 3 Credits.

This course focuses on advanced concepts and skills related to teaching and learning. Topics include adolescent learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.

Prerequisites: Take ED 341, ED 341L.

Corequisites: Take ED 343L.

Offered: Every year, Spring

ED 343L. Advanced Learning and Teaching: Secondary Assessment Field Lab II. 1 Credit.

The assessment field lab is taken in conjunction with ED 343. It provides practical applications of advanced concepts for secondary educators. Teacher candidates complete a minimum of 20 hours of classroom fieldwork that coincides with topics studied in ED 343. Weekly field hours, data team discussions, analyses of research-based practices, observation and case studies highlighting differentiated instructional practices, as well as reviews of standards-based curriculum are considered.

Prerequisites: Take ED 341.

Corequisites: Take ED 343.

Offered: Every year, Spring

ED 350. Quads Mentor Seminar. 1 Credit.

This course is for students who are QUADS Mentors (Quinnipiac University Advancing Diversity in Science) to support them in developing the mindsets and skills needed to engage in the challenging, intrapersonal work associated with addressing implicit bias, racism, and social justice. This seminar will provide shared space for growth, reflection, and problem solving as QU students simultaneously engage in facilitating a caring and student-centered learning experience at local high schools. Through the seminar, we will explore and apply equity-based science pedagogical principles (community-based phenomenon, multi-generational learning, cultural pedagogies, diverse sense-making, and place-based science education (PBSE)). Mentors will facilitate the design of meaningful after-school opportunities for local high school students to enhance and contextualize their college readiness and learn science while moving towards social justice, culminating in week-long summer experience on QU campus, with added support from high school science teachers and QU faculty.

Offered: As needed, All Online

ED 380. Research Methods in Education Studies. 3 Credits.

This course is required for students pursuing an Interdisciplinary Studies major in the College of Arts and Sciences with a concentration in Education Studies. The course is an upper-level UG education research course, intended to equip students with an understanding of the primary genres of educational research including action research, theoretical/conceptual research, case studies and ethnography. While quantitative inquiry also is addressed in the course, the focus is on qualitative research methods, given their important role and purpose in education. This course serves as an important preparatory course for ED 550, a graduate-level research course required of candidates who choose to pursue an MAT in Elementary or Secondary Education at Quinnipiac.

Prerequisites: Take IDS 200 and; ED 220 or ED 260.

Offered: Every year, Fall

ED 409. Reading and Writing Across the Curriculum. 3 Credits.

This course develops the secondary teacher's understanding of reading and writing as essential skills across the disciplines. Students explore literacy strategies that enhance the comprehension and interpretation of the various disciplines. The focus is on how to integrate literacy skills into content-based curricular instruction.

Prerequisites: Take ED 343.

Corequisites: Take ED 409L.

Offered: Every year, Spring

ED 409L. English Language Arts Field Lab III. 1 Credit.

This language arts lab is taken in conjunction with ED 409. It provides opportunities to observe and apply literacy skills to various disciplinary areas. Teacher candidates are required to complete a minimum of 20 hours of fieldwork that coincides with topics discussed in ED 409, such as comprehension development, academic vocabulary instruction, nonfiction reading and writing development and research skills.

Prerequisites: Take ED 343.

Corequisites: Take ED 409.

Offered: Every year, Spring

ED 436. Teaching Literacy in the Primary Grades. 3 Credits.

This course provides knowledge of diagnosis, assessment and instructional strategies for the development of early literacy in Grades K-3 and knowledge of the Common Core State Standards for early language arts instruction. Emphasis is on the development of teaching strategies necessary for the success of early readers and writers.

Prerequisites: Take ED 342.

Offered: Every year, Spring

ED 436L. English Language Arts Integration Field Lab IV. 1 Credit.

This language arts field lab is taken in conjunction with ED 466 and ED 436. It provides opportunities to observe and apply literacy skills while teaching social studies content. Participants are required to complete a minimum of 20 hours of fieldwork that coincides with topics discussed in ED 466 and ED 436, such as comprehension development, academic vocabulary instruction, nonfiction reading and writing development and research skills.

Prerequisites: Take ED 342.

Offered: Every year, Spring

ED 452L. Inclusive Classroom Secondary Field Lab IV. 1 Credit.

This inclusive classroom field lab is taken in conjunction with SPED 552. It provides opportunities to observe and apply the pedagogy of an inclusive classroom through the secondary candidates' fieldwork. Candidates are required to complete a minimum of 20 hours of fieldwork that coincides with the topics and understandings presented in SPED 552. For dual-degree secondary candidates only.

Corequisites: Take SPED 552.

Offered: Every year, Spring

ED 458. Teaching Science in the Primary Grades. 3 Credits.

This course focuses on the methods and materials of teaching elementary-level science. The course covers scientific concepts, scientific inquiry, active investigation methods and a deep understanding of the influence of the Next Generation Science Standards on contemporary science education.

Prerequisites: Take ED 342.

Corequisites: Take ED 468L.

Offered: Every year, Fall

ED 462. Facilitating the Arts in the Elementary Classroom. 3 Credits.

This course focuses on incorporating the arts into the elementary classroom, and the integration of the arts into other content areas. Teacher candidates explore a variety of media, materials and activities to promote an understanding of the relationship of the arts to teaching and learning.

Prerequisites: Take ED 341.

Offered: Every year, Spring

ED 466. Teaching Social Studies in the Primary Grades. 2 Credits.

This course provides elementary teacher candidates with the information, strategies and knowledge of the pedagogy of teaching social studies. The course focuses on the integration of the social studies curriculum with other disciplines to create a multidisciplinary understanding of history, economics, civics and society.

Prerequisites: Take ED 342.

Corequisites: Take ED 436L.

Offered: Every year, Spring

ED 468. Teaching Mathematics in the Primary Grades. 3 Credits.

This course introduces teacher candidates to the instructional methods and curricular materials used to enhance the instruction of mathematics in the primary grades and knowledge of the Common Core State Standards for primary-level mathematics instruction. Pre-service teachers learn to develop lesson plans and assessment methods that positively affect the learning of mathematics in grades K-3. Candidates are required to apply this knowledge within their field placement to better understand the relationship of theory and practice in the instruction of mathematics in the lower elementary grades.

Prerequisites: Take ED 342.

Corequisites: Take ED 468L.

Offered: Every year, Spring

ED 468L. Primary Math and Science STEM Field Lab III. 1 Credit.

This STEM field lab is taken in conjunction with ED 468 and ED 458. It provides opportunities to observe and apply the integrated teaching of STEM (science, technology, engineering and math) into the elementary-level curriculum. Teacher candidates are required to complete a minimum of 20 hours of fieldwork that coincides with topics discussed in ED 468/ED 458.

Prerequisites: Take ED 342.

Corequisites: Take ED 468 ED 458.

Offered: Every year, Fall

ED 477. Teaching English Language Learners in the Mainstream Classroom. 3 Credits.

This course is designed to introduce the pre-service teacher candidate to knowledge and skills needed to provide effective instruction to English language learners in the mainstream 1-12 classroom. Topics of study include instructional methods across content areas, the influence of language and culture on learning, teaching and assessment, history and legislation related to English as a Second Language and bilingual education in the U.S., and second language acquisition.

Prerequisites: Take ED 343.

Offered: Every year, Fall

ED 499. Independent Study. 1-6 Credits.

Offered: As needed

ED 500. Internship and Seminar I. 1 Credit.

This course provides the first-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching. Taken in conjunction with ED 576, Teacher Discourse in the Secondary Classroom, this course allows students to begin to acquire strategies for maintaining classroom environments that are conducive to learning. Admission to the MAT program is required.

Offered: Every year, Fall

ED 501. Internship and Seminar II. 1 Credit.

This course provides the second-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching.

Prerequisites: Take ED 500.

Offered: Every year, Spring

ED 502. Teaching Methods in Secondary Biology. 3 Credits.

This course is designed for pre-service teachers who are planning to teach high school biology. It touches on numerous aspects of biology classrooms including: assessing students' prior conceptions, designing a curriculum, planning lessons, determining and adapting appropriate teaching methods, promoting the Next Generation Science Standards three-dimensional science teaching, scientific literacy, using technology in science teaching, and assessing students' learning.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 502L. Science Laboratory Safety Course. 1 Credit.

Science activities, laboratory investigations and demonstrations are essential for high-quality science instruction. These activities provide experiences for students to engage in science as a sense-making endeavor. Inherent in conducting science activities, however, is the potential for injury. This course is designed to improve the safety awareness and increase the knowledge of relevant safety regulations, practices and procedures that directly impact biology teachers. The emphasis throughout the course is on best practices.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 503. Advanced Teaching Methods in Secondary Science. 3 Credits.

This course is designed for future science teachers prior to the onset of student teaching. The goal is to prepare students for success as a secondary science teacher. The focus is on junior high and high school science classrooms and identifying attributes of teaching and learning science that are critical to effective instruction. This course continually builds on knowledge of effective teaching strategies to plan for standards-based units of instruction. Students engage in authentic scientific investigations, design science learning experiences for students, write and implement unit plans, read and reflect. They also assemble a collection of science education resources supportive of science teaching. The course concludes with the creation of a research-based rationale for teaching science.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 504. Methods II: Teaching Secondary English. 3 Credits.

This course explores pedagogical theories and their practical application to the teaching of English language arts on the secondary level. The course prepares the teacher candidate to use a variety of strategies in the classroom instruction of reading, writing and the critical examination of literature. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of English.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 505. Methods II: Teaching Secondary History/Social Studies. 3 Credits.

This course provides the teacher candidate with a theoretical and practical foundation for the teaching of history/social studies on the secondary level. It examines the issues, practices and materials involved with the study of the discipline. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of history/social studies, technology and the assessment of students.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 506. Methods II: Teaching Secondary Mathematics. 3 Credits.

This course prepares teacher candidates to teach mathematics on the secondary level. Central concepts, tools of inquiry, and the structure of the discipline are addressed through the development of instructional units and lesson plans. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of mathematics, technology and the assessment of students.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 507. Methods II: Teaching a Secondary World Language. 3 Credits.

This course examines the current philosophies, objectives and methods of teaching a world language on the secondary level. Teacher candidates examine theories of second language acquisition and develop instructional units and lesson plans across the broad range of world language curriculum. The course emphasizes the Connecticut Common Core of Teaching, as well as national and state standards for the teaching of a world language, technology and the assessment of students.

Prerequisites: Take ED 573 or ED 409.

Offered: Every year, Fall

ED 509. Reading and Writing Across the Curriculum. 3 Credits.

This course presents an overview of language arts development in the secondary grades with an emphasis on reading and writing across the curriculum. Teacher candidates explore literacy strategies to help all students learn and apply current theories of integrated learning, i.e., the reading-writing-thinking connection. Attention is given to the particular needs of students for whom English is a second language.

Prerequisites: Take ED 573.

Offered: Every year, Fall

ED 510. Adolescent Development. 3 Credits.

The major theories of human development are studied in order to provide an understanding of the normative and exceptional development patterns of adolescents and pre-adolescents. The social, emotional, cognitive and physical changes of adolescence are addressed from the perspective of their implications for education.

Prerequisites: Take ED 500.

Offered: Every year, Spring

ED 512. Disciplinary Core Ideas, Scientific and Engineering Practices, and Crosscutting Concepts. 2 Credits.

In this course, students explore teaching and learning of science, especially as they connect to the implementation of the Next Generation Science Standards (NGSS) and the new vision for K-12 Science Education. This vision is described in the underlying policy document from the National Academy of Sciences: A Framework for K-12 Science Education Practices, Crosscutting Concepts, and Core Ideas. Participants inquire into the relationship among equity and diversity in science education, key concepts of the NGSS, and how each contribute to the reimagining of science teaching.

Prerequisites: Master of Arts in Teaching: take ED 573 or ED 409.

Offered: Every year, Summer

ED 514. Internship I. 1 Credit.

This course aims to support teacher candidates who are working as interns in secondary schools through discussion of the issues and challenges they experience. Students examine issues of leadership, ethics and social justice. The goal is to help teachers understand what it means to be a leader or change agent in schools in the current climate of educational reform.

Prerequisites: Take ED 409.

Offered: Every year, Fall

ED 515. Internship and Career Development Seminar. 1 Credit.

This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.

Corequisites: Take ED 601.

Offered: Every year, Spring

ED 521. Social and Philosophical Foundations of Education. 3 Credits.

This course is an inquiry into the institutional structures, social values and philosophical foundations of education. Teacher and student reflections focus on issues pertaining to the teaching-learning process, including freedom/authority/discipline; cultural diversity; multiplicity of learning modes; mind-body integration; community; alienation/violence; sexism/racism/elitism; and teacher/student roles. Admission to the MAT program is required.

Offered: Every year, Fall

ED 525. Diversity in the Classroom. 3 Credits.

This course helps teacher candidates understand that teaching is a social enterprise laden with moral responsibility and that, as teachers, they must be willing to act as agents for social justice in their classrooms and in their schools. This course helps students acquire the dispositions, cultural knowledge and competencies to adapt their curriculum and instructional skills for culturally responsive classroom practice. Admission to the MAT program or permission of program director is required.

Offered: Every year, Spring

ED 535. Elementary Internship and Seminar I. 1-3 Credits.

This course provides the first-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching. Taken in conjunction with ED 525 Diversity in the Classroom, this course allows students to study first-hand the issues surrounding diversity and multiculturalism in actual practice through their observations, reflections and participation in school settings. Admission to the MAT program is required.

Offered: Every year, Fall

ED 544. Developing Literacy in the Primary Grades. 3 Credits.

This course is designed to provide pre-service teachers with the knowledge of the Common Core State Standards in the language arts, and diagnostic assessment and instructional strategies for the development of early literacy. Emphasis is on the development of teaching strategies necessary for the success of early readers and writers.

Prerequisites: Take ED 571.

Offered: Every year, Spring

- ED 545. Elementary Internship and Seminar II. 1 Credit.**
This course provides the second-semester intern with supervision of the internship placement, as well as a weekly seminar that focuses on developing skills of reflective practice, mindfulness and intentional teaching.
Prerequisites: Take ED 535.
Offered: Every year, Spring
- ED 550. Issues and Research in Education. 2 Credits.**
This course introduces students to some of the primary genres of educational research, including quantitative research, qualitative research and action-based teacher research. Special emphasis is placed on helping students become familiar with the notion of "problems of practice," and on how teachers can research these problems, analyze the evidence and design interventions to improve their teaching.
Prerequisites: Take ED 468L, ED 409L, ED 501 or ED 545.
Offered: Every year, Summer
- ED 554. Internship and Seminar I. 2 Credits.**
This course aims to support teacher candidates who are working as interns in elementary schools through discussion of the issues and challenges they experience. Students examine issues of leadership, ethics and social justice. The goal is to help teachers understand what it means to be a leader or change agent in schools in the current climate of educational reform.
Prerequisites: Take ED 575.
Offered: Every year, Fall
- ED 555. Internship and Career Development Seminar. 1 Credit.**
This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.
Corequisites: Take ED 601.
Offered: Every year, Spring
- ED 556. Teaching Literacy in Grades 4-6. 3 Credits.**
This course provides teacher candidates with the knowledge of the Common Core State Standards in the language arts, and diagnostic assessment and instructional strategies for the development of literacy in grades 4-6. Emphasis is on the development of teaching strategies necessary for the success of readers and writers in grades 4-6.
Prerequisites: Take ED 436 or ED 544.
Offered: Every year, Fall
- ED 558. Elementary School Science: Content and Pedagogy. 3 Credits.**
This course leads students to an understanding of science concepts and scientific inquiry at the elementary school level through active investigations with common phenomena and everyday materials. Topics include: inquiry-based science focused on national standards and integration with the Common Core State Standards; increased knowledge of resources for science learning; and management considerations in such areas as material preparation, groupings and safety.
Prerequisites: Take ED 571.
Offered: Every year, Summer
- ED 562. Facilitating the Arts in the Elementary Classroom. 2 Credits.**
This course focuses on the development of the teacher-as-facilitator in incorporating the arts into the elementary classroom. An emphasis is placed on the relationship of the arts to teaching, learning and the integration of the arts into other content areas. Students explore a variety of media, movement, music and theatrical skills for selecting materials and activities appropriate to a child's age/stage of development. Attention also is given to the music and art of many peoples, with particular emphasis on developing a repertoire representative of different cultures and languages.
Prerequisites: Take ED 571.
Offered: Every year, Summer
- ED 566. Elementary School Social Studies: Content and Pedagogy. 2 Credits.**
This course provides elementary teacher candidates with information, strategies and knowledge of the pedagogy of teaching social studies. The course incorporates other disciplines with Common Core State Standards and expands views of civic education. Students work collaboratively and independently to build understandings of the field of social studies and learn how to teach it creatively and effectively in a diverse community.
Prerequisites: Take ED 571.
Offered: Every year, Summer
- ED 568. Teaching Mathematics in the Primary Grades. 3 Credits.**
This course introduces teacher candidates to the Common Core State Standards in mathematics and the instructional methods and curricular materials used to enhance the instruction of mathematics in the primary grades. Candidates learn to develop lesson plans and assessment methods that positively affect the learning of mathematics in grades K-3. Students are required to apply this knowledge within their field placement to better understand the relationship of theory and practice in the instruction of mathematics in the lower elementary grades.
Prerequisites: Take ED 535 or ED 571
Offered: Every year, Spring
- ED 569. Teaching Mathematics in Grades 4-6. 3 Credits.**
This course introduces pre-service teachers to the Common Core State Standards in mathematics and the instructional methods and curricular materials used to enhance the instruction of mathematics in grades 4-6. Teacher candidates learn to develop lesson plans and assessment methods that positively affect the learning of mathematics in grades 4-6. Candidates are required to apply this knowledge within their field placement to better understand the relationship of theory and practice in the instruction of mathematics in the upper elementary grades.
Prerequisites: Take ED 468 or ED 568.
Offered: Every year, Fall
- ED 571. Learning and Teaching the Developing Child. 3 Credits.**
This course provides an introduction to the basic concepts of cognitive, social and emotional development of school age children (Ages 4-18) and how the pedagogy of learning and teaching is designed to enhance and support this development. Major topics of inquiry include brain-based learning research, motivation, engagement of learners, lesson planning and curriculum development. This course is taken during the first internship semester and includes field-based assignments and analyses. Admission to the MAT program is required.
Offered: Every year, Fall

- ED 572. Advanced Learning and Teaching. 3 Credits.**
This course focuses on advanced concepts and skills related to teaching and learning elementary-level learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.
Prerequisites: Take ED 571.
Offered: Every year, Spring
- ED 573. Advanced Teaching and Learning - Secondary. 3 Credits.**
This course focuses on advanced concepts and skills related to teaching and learning. Topics include adolescent learners, assessment strategies and assessment-driven instructional practices, error analyses and data-driven decision making, work sampling, testing and measurement, differentiation of instructional practices, standards-based practices and research-based instruction.
Prerequisites: Take ED 571.
Offered: Every year, Spring
- ED 575. Teacher Discourse: Language and Communication Issues in the Elementary Classroom. 3 Credits.**
The course provides the teacher candidate with the knowledge and skills necessary to design classroom environments that enhance and support the social and emotional development of elementary-level learners. This course examines the communication systems of educational settings—in particular the communication systems of the classroom, the school/family dynamic and the individual developing child. The course analyzes and considers instructional language and its impact on the classroom community, student learning and student behavior. Candidates also focus on teacher communication with parent/guardian populations and its impact on student learning. Enrollment in the MAT program is required.
Offered: Every year, Fall and Summer
- ED 576. Teacher Discourse in the Secondary Classroom. 3 Credits.**
The course provides the teacher candidate with the knowledge and skills necessary to design classroom environments that enhance and support the social and emotional development of adolescent learners. The course analyzes instructional language, the language of discipline and how teacher language influences the climate of contemporary classrooms. The impact of teacher discourse on the classroom community, student learning and student behavior are all considered. The major focus is on managing classroom behaviors and supporting and respecting adolescent learners to enhance academic achievement. Enrollment in the MAT program is required.
Offered: Every year, Fall and Summer
- ED 577. Teaching English Language Learners in the Mainstream Classroom. 3 Credits.**
This course introduces the pre-service teacher candidate to the knowledge and skills that are needed to provide effective instruction to ELs in the mainstream 1-12 classroom. Topics of study include instructional methods across content areas, the influence of language and culture on learning, teaching, and assessment history and legislation related to ESL and bilingual education in the United States, and second language acquisition.
Prerequisites: Take ED 572, ED 573 or ED 436.
Offered: Every year, Fall and Summer
- ED 599. Independent Study. 1-6 Credits.**
Offered: As needed
- ED 601. Student Teaching. 6 Credits.**
This 10-week student teaching placement at the elementary, middle or secondary level allows students to demonstrate the skills, understandings and dispositions needed to assume full responsibility as a classroom teacher.
Prerequisites: Take ED 501, ED 514, ED 545 or ED 554.
Offered: Every year, Spring
- ED 614. Elementary Education Internship III. 1 Credit.**
This online course is designed for interns in the graduate, five-semester elementary education program. It aims to help teacher candidates develop the leadership skills needed to serve as agents of change in elementary schools. The course focuses on issues of leadership, ethics and social justice in the current climate of educational reform and increased levels of teacher accountability.
Prerequisites: Take ED 545.
Offered: Every year, Fall
- ED 615. Internship and Career Development Seminar. 1 Credit.**
This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.
Corequisites: Take ED 601.
Offered: Every year, Spring
- ED 616. Secondary Education Internship III. 1 Credit.**
This online course is designed for interns in the graduate, five-semester secondary education program. It aims to help teacher candidates develop the leadership skills needed to serve as agents of change in secondary schools. The course focuses on issues of leadership, ethics and social justice in the current climate of educational reform and increased levels of teacher accountability.
Prerequisites: Take ED 501.
Offered: Every year, Fall
- ED 617. Internship and Career Development Seminar. 1 Credit.**
This course provides clinical support for teacher candidates who are completing their final residency/internship semester. In addition, the course provides a series of seminars to support candidates in their transition to a career as a teacher. Finding and securing a teaching position is the primary focus of the seminars. Seminars prepare teacher candidates in areas such as resume and cover letter writing, team interviews, mock interviews, interview preparation, certification and licensure procedures.
Corequisites: Take ED 601.
Offered: Every year, Spring
- ED 693. Research I. 2 Credits.**
In this course, teacher candidates collaborate with an intern adviser about a problem of practice. They identify, define and begin to investigate the problem.
Prerequisites: Take ED 550.
Offered: Every year, Fall

ED 694. Research II. 2 Credits.

In this course, teacher candidates create an intervention plan based on research that was done in ED 693 and conversations with an intern adviser. They then implement the intervention plan, reflect on the results of the plan and share their results in the school setting.

Prerequisites: Take ED 550, ED 693.

Offered: Every year, Spring

Educational Leadership (EDL)

EDL 509. Leading School Improvement. 6 Credits.

This course analyzes the characteristics of effective schools and the leadership theories and concepts related to the change process. Participants examine the application of these theories and concepts to the practice of improving the work of the school and the achievement of students. Case studies focus on the analysis of schools in need of improvement, the specific issues facing the schools, data analysis techniques, effective leadership practices, strategic planning, financing improvement plans, and evaluation processes. The role of teacher-leaders within the school improvement process is emphasized.

EDL 601. Leading and Managing the Contemporary School. 6 Credits.

Introduction to leadership, management theories and concepts and how school leaders apply them to address problems and issues facing schools today. Case studies focus on the development and analysis of school policies, practices and resources related to contemporary educational issues such as social justice, diversity, student wellness and equity and the leadership and management styles required to implement them. The course includes a field-based experience involving the analysis of successful school leadership and district policies, practices and resources related to closing one or more identified opportunity gaps.

Offered: Every year

EDL 603. Leading and Managing the Instructional Program for Equitable Outcomes. 6 Credits.

Explored through the lens of equitable outcomes, this course is an examination of contemporary, standards-based curriculum designs, teaching/learning/assessment models and the leadership processes directed toward developing, implementing and supervising instructional programs to improve student learning. The course includes a field-based experience involving a curriculum audit, a formal classroom supervision, an analysis of state generated assessment data and accountability reports, and an overview of the school's technology program. It culminates in recommendations for program improvement that are attentive to differential outcomes for historically underserved students.

Offered: Every year

EDL 605. Leading and Managing School Improvement. 6 Credits.
